GUIDE TO EMERGENCY MANAGEMENT AND RELATED TERMS, DEFINITIONS, CONCEPTS, ACRONYMS, ORGANIZATIONS, PROGRAMS, GUIDANCE, EXECUTIVE ORDERS & LEGISLATION

A Tutorial on Emergency Management, Broadly Defined, Past and Present

B. Wayne Blanchard, Ph.D., CEM
October 22, 2008
(Date of Last Modification)

"Not until terms and concepts have been clearly defined can one hope to make any progress in examining the question clearly and simply and expect the reader to share one's views."
(**Carl Von Clausewitz**, *On War*, Princeton University Press, 1976, p. 132)

NOTE: This is not a comprehensive, definitive, exhaustive or official treatment of "emergency management" and related terms, definitions, acronyms, programs or legislation. It is simply a collection of terms, definitions, acronyms, and program and legislative descriptions and pulled together into a single document as time and opportunity have allowed to be assembled.

The original "Emergency Management-Related Terms and Definitions Guide" was developed as a student handout in an Introduction to Emergency Management college course taught by the author in 1999 and has been maintained as time allows for the authors' own purposes, one of which is to continue supporting collegiate emergency management courses. Another is as an aid to quickly accessing hard-to-remember terms, definitions and acronyms, etc., particularly when not used on a regular basis.

At the time of original development the primary purpose was to demonstrate to the students the very wide range of definitions and meanings given to such words as "hazards," disasters," "emergencies," "risk," "vulnerability," and "emergency management." In the classroom productive time was spent trying to come to a group consensus on the variables comprising a definition of each word.

The thought then and now was that words make a difference and that an indicator of a profession and of professionalism is a shared understanding of (better yet, general consensus on) key terms, definitions, concepts and principles that are part of a body of knowledge for a profession. A shared understanding of key terms, definitions, concepts and principles is also a constituent element for the development of the academic discipline of Emergency Management.

The reception by Emergency Management collegiate faculty and students (as well as Emergency Management Professionals), over time, was such that a decision was made to expand the scope of the handout into other, mostly U.S. specific, emergency management and related terms and definitions.

After the creation of the Department of Homeland Security, and FEMA's incorporation into the DHS, the scope broadened again and also changed to incorporate references to relevant legislation, programs and organizations.

More recently, as discussion of the development of international principles of disaster/emergency management seems to have gained momentum, a modest effort has been extended to the incorporation of international terms and definitions, particularly those originating from hazards-related United Nations organizations and bodies.

Note 1: Obsolete and historical terms, definitions, etc. are included as an aid to understating such terms when encountered.

Note 2: A bibliography of sources cited is at that the end of the document. All within-text citation sources have been included in this bibliography.

Note 3: Use of this material for educational and professional purposes is unrestricted provided that proper attribution is provided.

Terms, Definitions, Acronyms, Programs, Concepts, Organizations, Guidance, Legislation Alphabetically Organized – Full References at the End

A Zone: "A Zone is defined as the Special Flood Hazard Area shown on a community's Flood Insurance Rate Map. The A Zone is the area subject to inundation during a 100-year flood, which is the flood elevation that has a 1-percent chance of being equaled or exceeded each year. There are several categories of A Zones, including AO (shallow sheet flow or ponding; average flood depths are shown); AH Zones (shallow flooding; base flood elevations are shown); numbered A and AE Zones (base flood elevations are shown); and unnumbered A Zones (no base flood elevations are provided because detailed hydraulic analyses were not performed)." (**FEMA**, *Reducing Damage from Localized Flooding – A Guide for Communities* (FEMA 511), 2005, vii)

A-Bomb: "An abbreviation for atomic bomb." (**Glasstone**, *Effects of Nuclear Weapons*, 1977, Glossary, p. 629)

ACADA: Automatic Chemical Agent Detection and Alarm. (**FEMA**, *FAAT List*, 2005, p. 2)

ACAMS: Automated Critical Asset Management System. (**DHS,** *NIPP*, 2006, p. 101)

ACBIRC: Advanced Chemical and Biological Integrated Response Course, DOD.

ACC: Acute Care Center. (**CA EMSA**. *Hospital Incident Command Sys. Guidebook*, 2006, 206)

ACC: Agency Command Center. (**FEMA**, *FAAT List* (FEMA 524), 2005, p. 2)

Acceleration: "A change in velocity with time; in seismology and in earthquake engineering, it is expressed as a fraction of gravity (g), with reference to vibrations of the ground or of a structure." (**UN DHA**, *Glossary, Disaster Management*, 1992, p. 16)

Acceptable Down Time: "The period of time a function or activity can be disrupted without significant impact to production, customer service, revenue, or public confidence. Each business activity must develop its individual maximum allowable down time. Also referred to as Maximum Allowable Recovery Time." (Jones, *Critical Incident Protocol*, 2000, p. 37)

Acceptable Risk: "**AN ACCEPTABLE LEVEL OF RISK** for regulations and special permits is established by consideration of risk, cost/benefit and public comments. Relative or comparative risk analysis is most often used where quantitative risk analysis is not practical or justified. Public participation is important in a risk analysis process, not only for enhancing the public's understanding of the risks associated with hazardous materials transportation, but also for insuring that the point of view of all major segments of the population-at-risk is included in the analyses process. Risk and cost/benefit analysis are important tools in informing the public about the actual risk and cost as opposed to the perceived risk and cost involved in an activity. Through such a public process PHMSA [Pipeline and Hazardous Materials Safety Administration] establishes hazard classification, hazard communication, packaging, and operational control standards." (**DOT**, *Risk Management Definitions*, Office of Hazardous Materials Safety, 2005)

Acceptable Risk: That level of risk that is sufficiently low that society is comfortable with it. Society does not generally consider expenditure in further reducing such risks justifiable. (**Australian National** 1994)

Acceptable Risk: Degree of humans and material loss that is perceived as tolerable in actions to minimize disaster risk. (**Nimpuno** 1998)

Acceptable Risk: Risk tolerance.

Given that the provision of absolute safety is impossible, there is great sense in trying to determine the level of risk which is acceptable for any activity or situation. Thus, when a hazard is being managed, the financial and other resources allocated to the task should theoretically match the degree of threat posed by the hazard, as indicated by the rank of the risk….

One must always specify acceptable *to whom* and that implies a conscious decision based on all the available information….

The 1993 floods in the upper Mississippi river basin had an estimated return period of more than one in 200 years, yet some people who were flooded asserted that this event should now be regarded as an unacceptable risk. Such arguments ignore both the economic and social benefits derived by those communities from their floodplain location over the previous 100 years or so, when few flood losses occurred, and the cost to the taxpayer implied in protecting floodplain basins against a flood of the 1993 magnitude. (**Smith** 1996, 57)

Acceptable Risk: Degree of human and material loss that is perceived by the community or relevant authorities as tolerable in actions to minimize disaster risk. (**UN DHA**, *Internationally Agreed Glossary of Basic Terms Related to Disaster* Management, 1992, p.16)

Acceptable Risk: "The level of loss a society or community considers acceptable given existing social, economic, political, cultural, technical and environmental conditions." (**UN ISDR**, *Terminology: Basic Terms of Disaster Risk Reduction*, 2004, p. 1)

Accepted Risk: "An approach that does nothing with a risk, but rather prepares for and deals with the consequences of a risk should it occur. No risk management resources are expended in dealing with accepted risks." (**DOA**, *Infrastructure Risk Management (Army)*, 2004, p. 12)

Access Disaster Risk Assessment Model: "A model that explores how an individual or groups relative resilience to disasters is impacted by differences in access to the economic or political resources needed to secure a livelihood. The strengths of the model are that it provides a broad view of vulnerability including root causes, it gives weight to natural hazards, and it provides a framework for looking at livelihoods and vulnerability. The limitation of the model, is that it is a tool for explaining vulnerability, not for measuring it. The model cannot be applied operationally without a great deal of data collection and analysis." (**UN Disaster Assessment Portal**, *Techniques Used in Disaster Risk Assessment*, 2008)

Accident: "The word 'accidental' carries with it the connotations of both something that occurs by chance and something non-essential or incidental…. The thesis that 'accidents will happen' and that therefore nothing can be done to prevent their occurrence reaches its logical fulfillment in the thesis of Charles Perrow that accidents are so inevitable and therefore non-preventable that we are even justified in calling them 'normal'" (**Allinson** 1993 15-16).

Accident: "Unintended damaging event, industrial mishap" (**D&E Reference Center** 1998).

Accident: "An unexpected or undesirable event, especially one causing injury to a small number of individuals and/or modest damage to physical structures. Examples would be automotive accidents or damage from lightning striking a house." (**Drabek** 1996, Session 2, p. 3)

Accident: "…situations in which an occasion can be handled by…emergency organizations. The demands that are made on the community are within the scope of domain responsibility of the usual emergency organizations such as police, fire, medical and health personnel. Such accidents create needs (and damage) which are limited to the accident scene and so few other community facilities are damaged. Thus, the emergency response is delimited in both location and to the range of emergency activities. The primary burden of emergency response falls on those organizations that incorporate clearly deferred emergency responsibility into their domains. When the emergency tasks are completed, there are few vestiges of the accident or lasting effects on the community structure" (**Dynes** 1998, 117).

Accident: "An unexpected occurrence, failure or loss with the potential for harming human life, property or the environment." (**European Environment Agency**, *EEA Environmental Glossary)*

Accident: "The very language used to describe the [TMI] accident revealed the very diverse perceptions that enter such interpretations. Was it an accident or an incident? A catastrophe or a mishap? A disaster or an event? A technical failure or a simple mechanical breakdown?" (**Nelkin** 1981, 135).

Accident: An event which only requires the response of established organizations – expansion or actions such as going to extra shifts is not called for. (**Quarantelli** 1987, 25)

Accident: "The evidence…suggests that accidents are not the product of divine caprice, nor of a set of random chance events which are not likely to recur, but that they are incidents, created by people, which can be analyzed, and that the lessons learned from that analysis, if implemented, will help to prevent similar events from taking place again." (**Toft** 1992, 58)

Accident, Technological: "Technological accidents…are almost never understood as the way the world of chance sorts itself out. They provoke outrage rather than acceptance or resignation. They generate a feeling that the thing ought not have happened, that someone is at fault, that victims deserve not only compassion and compensation but something akin to what lawyers call punitive damages." (**Erikson**, 1989, 143)

Accountability: "Everyone, including private individuals and organizations and government agencies and officials, should be accountable for their actions before, during and after an emergency." (**ACLU**, *Pandemic Preparedness*, 2008, 7)

Accreditation: "Empowers certifying/qualifying organizations with the authority to declare an individual/organization capable of performing critical tasks and capabilities." (**Capital Health Region**, *ICS100: Incident Command System Training Student* Manual, March 2007, p. 50)

ACE: Army Corps of Engineers (correct acronym usage is USACE).

ACECenter: Assessment of Catastrophic Events Center, Defense Threat Reduction Agency, Fort Belvoir, VA. (**DTRA/DOD**, *ACECenter Public Page*)

ACEHR: Advisory Committee on Earthquake Hazards Reduction.

ACEP: American College of Emergency Physicians.

ACF: Alternate Care Facility. (**FEMA**, *FAAT List* (FEMA 524), 2005, p. 2)

ACFM: Advanced Certified Floodplain Manager. (**FEMA**, *FAAT List* (FEMA 524), 2005, 2)

AC/IC: Area Command/Incident Command. (**DHS**, *JFO Activation and Operations*, 2006, 1)

Acid Rain: "Rain containing dissolved acidic compounds, resulting from chemical pollution of the atmosphere by sulphur and nitrogen compounds. When deposited these increase the acidity of the soil and water causing agricultural and ecological damage." (**UNDHA**, *DM Glossary*, 1992, 16)

ACP: Alternate Command Post. (**FEMA**, *FAAT List* (FEMA 524), 2005, p. 3)

ACP: Area Command Post. (**FEMA**, *FAAT List* (FEMA 524), 2005, p. 3)

ACP: Area Contingency Plan. (**FEMA**, *FAAT List* (FEMA 524), 2005, p. 3)

ACP: Association of Contingency Planners.

ACPSEM: Advisory Council on Professional Standards for Emergency Managers. (**FEMA**, *FAAT List* (FEMA 524), 2005, p. 3)

ACS: Alternative Care Sites. (**Trust for America's Health**, *Ready or Not? 2007*, p. 64)

ACT: Area Command Team. (**Little Hoover Com**., *Safeguarding the Golden Gate*, 2006, 22)

ACTFAST: Agent Characteristics and Toxicity – First Aid and Special Treatment. (**FEMA**, *Compendium of Federal Terrorism Training Courses*, 2003, p. 6)

ACTIC: Arizona Counter-Terrorism InforCenter.

Action Officer (AO): "An individual assigned by a Federal agency to manage a specific mission assignment issued to that Federal agency." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007. p. 55)

Action Request Form (ARF): "The Action Request Form (ARF) is the form that the State, Federal agencies, and FEMA managers use for requesting Federal assistance that may result in a mission assignment, the amendment of an existing mission assignment, or the issuance of a mission assignment task order." (**FEMA**, *Mission Assignment SOPs…Draft*, July 2007. p. 16)

Action Tracker (AT): "The AT is assigned to the Operations Section (NRCC, RRCC and JFO) and is responsible for maintaining a log of all Action Request Forms (ARFs) that are submitted to the Operations Section." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, 6)

Actions: "Actions are specific actions that help you achieve your goals and objectives. For example:

- Elevate three historic structures located in the downtown district.
- Sponsor a community fair to promote wildfire defensible space.
- Retrofit the police department to withstand high wind damage." (**FEMA**, *Developing the Mitigation Plan* (FEMA 386-3), 2003, p. 1-1)

Activation: "The implementation of business continuity capabilities, procedures, activities, and plans in response to an emergency or disaster declaration; the execution of the recovery plan. Similar terms: Declaration, Invocation." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 45)

Activity Process Flow Map: "An Activity Process Flow Map shows the major activities that are performed with the capability and how the capability links to other capabilities." (**DHS**, *TCL*, 2007, p. 8)

Acts of God: Natural disasters or freak accidents. (**Birkland** 1997, 2.)

> "When society seems to have formed a consensus that the event was an 'act of God,' such as a natural disaster or freak accident, our attention turns to what we can do to help the victims. But when the disaster is the result of human failings – poor design, operator error, 'corporate greed,' or 'government neglect' – our attention turns to the voluntary acceptance of responsibility for an event or to the more coercive process of fixing blame. Boards of inquiry are formed, legislatures hold hearings, and reports are issued, all in hopes of 'learning something from this incident' to ensure that something similar does not happen again or in the case of 'unavoidable' disasters, in hopes of improving our preparation for and response to disasters" (**Birkland** 1997, 2).

Acts of God: A fatalistic "syndrome whereby individuals feel no personal responsibility for hazard response and wish to avoid expenditure on risk reduction" (**Smith** 1996, 70).

Actual Event: "A disaster (natural or man-made) that has warranted action to protect life, property, environment, public health or safety. Natural disasters include earthquakes, hurricanes, tornadoes, floods, etc.; man-made (either intentional or accidental) incidents can include chemical spills, terrorist attacks, explosives, biological attacks, etc." (**FEMA**, *NIMS Compliance Metrics Terms of Reference* (For Fiscal Year 2007), October 23, 2006, p. 1)

Actual Risk: "Actual risk reflects the combination of…two factors…(1) probability, the likelihood, quantitative or qualitative, that an adverse event would occur; and (2) consequences, the damage resulting from the event, should it occur." (**GAO**, *Protection of Chemical and Water Infrastructure*, 2005, p. 24-25)

Acute Exposure: "A contact between an agent and a target occurring over a short time, generally less than a day." (**European Environment Agency**, *EEA Environmental Glossary*)

Acutely Toxic Chemicals: "Chemicals that can cause severe short- and long-term health effects after a single, brief exposure (short duration). These chemicals (when ingested, inhaled, or absorbed through the skin) can cause damage to living tissue, impairment of the central nervous system, severe illness, or, in extreme cases, death." (**EPA**, *Technical Guidance for Hazards Analysis: Emergency Planning for Extremely Hazardous Substances*, 1987, p. A-4)

ADA: Americans with Disabilities Act.

ADAMS: Automated Disaster Assistance Management System. (Defunct)

Adaptive Planning: ADAPTIVE PLANNING allows combatant commanders to produce plans significantly faster and to a higher level of quality. Rapid planning and greater efficiency are achieved through clear, "up-front" strategic guidance; iterative dialogue among senior leaders; parallel plan development and collaboration across multiple planning levels; and a suite of net-centric and execution tools with real-time access to relevant data. Participation by the Joint Planning and Execution Community (JPEC) is still a requirement (**Figure 1-1)** so development of the plan, in-progress reviews (IPRs), coordination among supporting commanders, agencies, and Services, reviews by the Joint Staff, and conferences of JPEC members can take as few as four months, or the full two- year planning cycle." (**JFSC**, *Joint Transition Course: Planning Primer*, 2005, p. 1-9)

Adaptive Planning: "*Adaptive Planning* is the joint capability to create and revise plans rapidly and systematically, as circumstances require. It occurs in a networked, collaborative environment, requires the regular involvement of senior leaders, and results in plans containing a range of viable options that can be adapted to defeat or deter an adversary to achieve national objectives. At full maturity, AP will form the backbone of a joint adaptive system supporting the development and execution of plans, preserving the best characteristics of present-day contingency and crisis planning with a common process."

[Background] "On December 13, 2005, Secretary of Defense Donald Rumsfeld approved the Adaptive Planning (AP) Roadmap and directed its "expeditious implementation." This act represented a significant shift in the way the Department of Defense (DOD) thinks about military planning. The impetus for change was a recognition that the accelerating pace and complexity of military operations require that the President, Secretary of Defense, and combatant commanders have the ability to respond quickly to new threats and challenges."] (**Klein**, "Adaptive Planning," 2007, p. 84)

ADDIE Model of Instructional Design: Analysis, Design, Development, Implementation, and Evaluation. (ODP, *Approach for Blended Learning*. Washington, DC: ODP, DOJ.

ADPC: Asian Disaster Preparedness Center, Bangkok, Thailand.

ADRC: Asian Disaster Reduction Center, Kobe Japan.

Advance Readiness Activities (NRF): "There are times when we are able to anticipate impending or emergent events that will require a national response, such as an upcoming hurricane season, a potential pandemic, or a period of heightened terrorist threat. We must capitalize on this critical window of opportunity to increase readiness activities. For example, we can pre-identify needs and fill gaps in our current capabilities or resources that will be required to address the specific nature of the forthcoming incident. We also will pre-position commodities such as water, ice, emergency meals, tarps, and other disaster supplies so they will be readily available for use. Additional advance readiness activities include establishing contracts with the private sector prior to an incident and developing pre-negotiated agreements with Federal departments and agencies to ensure that appropriate Federal resources are available during a crisis." (**White House**, *National Strategy for Homeland Security*, October 2007, p. 34)

Advanced National Seismic System (ANSS): "The mission of ANSS is to provide accurate and timely data and information products for seismic events, including their effects on buildings and structures, employing modern monitoring methods and technologies. This mission serves a basic function of the National Earthquake Hazards Reduction Program (NEHRP), and drives the four basic goals of the planned system:

- Establish and maintain an advanced infrastructure for seismic monitoring throughout the United States that operates with high performance standards, gathers critical technical data, and effectively provides information products and services to meet the Nation's needs. An Advanced National Seismic System should consist of modern seismographs, communication networks, data processing centers, and well-trained personnel; such an integrated system would constantly record and analyze seismic data and provide timely and reliable information on earthquakes and other seismic disturbances.

- Continuously monitor earthquakes and other seismic disturbances throughout the United States, including earthquakes that may cause a tsunami or precede a volcanic eruption, with special focus on regions of moderate to high hazard and risk.

- Thoroughly measure strong earthquake shaking at ground sites and in buildings and critical structures. Focus should be in urban areas and near major active fault zones to gather greatly needed data and information for reducing earthquake impacts on buildings and structures.

- Automatically broadcast information when a significant earthquake occurs, for immediate assessment of its impact. Where feasible, for sites at distance from the epicenter, broadcast an early warning seconds before strong shaking arrives. Provide similar capabilities for automated warning and alert for tsunamis and volcanic eruptions.

"To achieve these goals, ANSS will establish nationwide network of over 7000 earthquake sensor systems, serving all areas of the country subject to earthquake hazards and providing dense coverage in 26 at-risk urban areas (see map). Sensors will be located both in the ground and in buildings and other structures. The system will provide real-time earthquake information for emergency response personnel, provide engineers with information about building and site

response to strong shaking, and provide scientists with high-quality data needed to understand earthquake processes and structure and dynamics of the solid earth." (**USGS**, *ANSS*, 2007)

Adverse Selection, Insurance: "…only the customers posing the highest risks purchase the insurance." (*Financial Services Roundtable*, *Nation Unprepared for Mega-CATS*, 2007, 45)

Adverse Selection, Insurance: "Adverse selection' occurs when insurers cannot distinguish between less risky and more risky properties, although homeowners can. When premiums do not reflect differences in risk that are known to potential policyholders, those who buy insurance are often at greatest risk for the hazards covered. Adverse selection in the market for natural catastrophe suggests that homeowners who are at the highest risk of experiencing a natural catastrophe will buy available insurance." (**GAO**, *Natural Disasters: Public.…*, Nov 2007, 3)

ADVISE: Analysis, Dissemination, Visualization, Insight, and Semantic Enhancement.

Advisory Committee on Earthquake Hazards Reduction: "This Committee is charged with assessing trends and developments in the science and engineering of earthquake hazards reduction; the effectiveness of NEHRP; the need to revise NEHRP; and the management, coordination, and implementation of NEHRP." (**NEHRP**, *Annual Report*, 2007, p. 3)

Advisory Panel to Assess Domestic Response Capabilities for Terrorism Involving Weapons of Mass Destruction (Gillmore Commission). Established by Section 1405 of the National Defense Authorization Act for Fiscal Year 1999, Public Law 105–261 (H.R. 3616, 105th Congress, 2nd Session) (October 17, 1998). Led to publication of: *I. Assessing the Threat*. December 15, 1999, 123 pages, and, *II. Toward a National Strategy for Combating Terrorism*. December 15, 2000, 191 pages.

From 2nd annual report on five imperatives:

> We are impelled by the stark realization that a terrorist attack on some level inside our borders is inevitable and the United States must be ready. We are similarly convinced, however, that much of the legitimate fear associated with the prospect of a terrorist attack can be substantially reduced…. Specifically, we must:
> • craft a truly "national" strategy to address the threat of domestic terrorism—conventional, cyber, chemical, biological, radiological and nuclear—from the perspectives of deterrence, prevention, preparedness and response;
> • empower a senior authority to be in charge of our overall planning and preparation in the Federal Executive Branch, with special emphasis on preserving our civil liberties in a time of emergency;
> • consolidate the Congressional approach to legislation governing domestic preparedness for such attacks;
> • concentrate much more serious attention on state and local concerns and capabilities; and
> • strengthen functional capabilities across all levels of government for intelligence collection and information sharing; planning; training, equipping and exercising;

> research and development; health and medical; and across all first responder stakeholders—fire, law enforcement, emergency medical services and emergency management." (Note "To Our Readers.")

On "Enhanced" FEMA:

> "We considered the prospect of providing additional authority and responsibility to the Federal Emergency Management Agency. The "FEMA Option" was appealing because of its designation as the Lead Federal Agency for "consequence management," and its existing statutory and regulatory authority for disaster response. But we likewise discounted that option for three reasons:
>
> ♦ Domestic Only Responsibility—FEMA has a domestic-only focus. Once we made the determination that the Federal coordinating entity should have both foreign and domestic responsibility, this is not a viable option.
> ♦ Autonomy and Neutrality Issues—Even if FEMA were given additional authority to oversee the programs and budgets of other Federal agencies for combating terrorism (including the authority to direct other agencies to detail personnel to FEMA), it is likely be the case that the exercise of that authority would be viewed by other agencies as parochial, creating the type of interagency "turf" issues that have arisen in other contexts. By the same token, the person in FEMA with the responsibility for this coordination would be answerable to an internal hierarchy and not likely, therefore, to have the requisite autonomy.
> ♦ Lack of Visibility and Access—Injecting the responsibility for coordinating programs to combat terrorism into an existing agency with other programs was an issue. FEMA's responsibilities are much broader than simply consequence management for domestic terrorist attacks. Terrorism issues might be subordinated to FEMA's other programs. Moreover, the "director" of this activity in FEMA would not have the same measure of direct access to the President, as would the director of an entity in the Executive Office." (pp. E-1, E-2)

ADVON: Advanced Element, National Guard WMD Civil Support Teams. (**DA**, *WMD CST Operations*, 2007, p. 2-1)

AEC: Agency Emergency Coordinators. (**USACE**, *CDRP, Anchorage*, 2005, p. Y-1-3)

AEL: Authorized Equipment List. (**DHS**, *FY 2005 Homeland Security Grant Program: Introduction to Program Guidance*, 8 Dec 2004, slide 13)

AEM: Associate Emergency Manager (IAEM managed credential).

AER: Animal Emergency Response. (**FEMA**, *AER Positions Credentials*, 25 Oct 2007)

AFG: Assistance to Firefighters Grant. (**FEMA**, *FEMA Region III Annual Report FY 2007*)

AFIMS: Air Force Incident Management System. (**McGuire AFB**, *AF Implements IMS*, Feb 16, 2007)

AFMIC: Armed Forces Military Intelligence Center.

AFO: Area Field Office. (DHS *Joint Field Office Activation and Operations: Interagency Integrated Standard Operating Procedure, Appendixes and Annexes Version 8.3*, April 2006, 1)

AFR: Analysis of Federal Requirements.

AFRRI: Armed Forces Radiobiology Research Institute, DOD.

After Action Report/Improvement Plan (AAR/IP): "An After Action Report/Improvement Plan (AAR/IP) is the final product of an exercise. The AAR/IP has two components: an AAR, which captures observations and recommendations based on the exercise objectives as associated with the capabilities and tasks; and an IP, which identifies specific corrective actions, assigns them to responsible parties, and establishes targets for their completion. The lead evaluator and the exercise planning team draft the AAR and submit it to conference participants prior to an After Action Conference (see below). The draft AAR is distributed to conference participants for review no more than 30 days after exercise conduct. The final AAR/IP is an outcome of the After Action Conference and should be disseminated to participants no more than 60 days after exercise conduct." (**FEMA**, *About HSEEP*, 2008)

After Action Reports: "Reports that summarize and analyze performance in both exercises and actual events. The reports for exercises may also evaluate achievement of the selected exercise objectives and demonstration of the overall capabilities being exercised." (**FEMA**, *NIMS Compliance Metrics Terms of Reference* (For Fiscal Year 2007), October 23, 2006, p. 1)

After Action Reports: "While after action reports can help emergency responders and managers tune their strategies, experienced emergency managers assert privately that these reports have become pro forma. Few officials are willing to publicly highlight their mistakes. None are authorized to question the wisdom of local or state policies that may have increased threats, vulnerabilities and consequences." (**Little Hoover**, *Safeguarding Golden*…, 2006, 58)

[Note: See, also, "Post Incident Critique"]

Aftershock: "Earthquakes that follow the largest shock of an earthquake sequence. They are smaller than the "mainshock" and can occur over a period of weeks, months, or years. In general, the larger the mainshock, the larger and more numerous the aftershocks and the longer they will continue." (**USGS**, *Putting Down Roots in Earthquake Country*, 2007, Glossary)

AGAUS: Adjutants General Association of the United States.

Agency for Toxic Substances and Disease Registry (ATSDR): "The Agency for Toxic Substances and Disease Registry is a federal public health agency. Its mission is to prevent exposure and adverse human health effects and diminished quality of life associated with

exposure to hazardous substances from waste sites, unplanned releases, and other sources of pollution present in the environment." (**CDC/ATSDR**, *Principles of Community Engagement*, 1997, Contributors section)

Agenda 21 (United Nations Conference on Environment and Development, 1992): "*Agenda 21* was adopted by more than 178 Governments at the popularly named Earth Summit held in Rio de Janerio, Brazil, in June 1992. As the whole of Agenda 21 is about the linkages between environment and development it is not surprising that there are many relevant sections in the document relating to disaster management: from addressing the uncertainties of climatic change (Chapter 9), to specific actions to manage fragile environments (i.e. Chapter 13 on Mountains, which includes an objective, paragraph 13.5, to generate information to establish databases and information systems to facilitate an evaluation of environmental risks and natural disasters in mountain ecosystems). Overall the most relevant chapter is the one on Promoting Sustainable Human Settlement Development (Chapter 7) which refers to *developing a "culture of safety" in all countries, especially those that are disaster-prone* (paragraph 7.60). Specific activities include, for example,: *7.29. All countries should consider, as appropriate, undertaking a comprehensive national inventory of their land resources in order to establish a land information system in which land resources will be classified according to their most appropriate uses and* ***environmentally fragile or disasterprone areas will be identified for special protection measures***." (WWF, Natural Security, 2008, p. 103)

Agents of Mass Injury: "Chemical, biological, and radiological agents should not be regarded as weapons of mass destruction, but potential agents of mass injury. In this respect, they differ completely from nuclear weapons. The link between injury caused by CBR agents and loss of life can be broken or mitigated by the provision of equipment, organization and training for emergency responders." (**World Association for Disaster and Emergency Medicine**, "The Provision of Care for Victims of Chemical, Biological, Radiological, and Nuclear Releases…,: Jan-Feb 2008, pp. 95-96)

AGR: Active Guard and Reserve.

Agroterrorism: "Agroterrorism is the deliberate introduction of a chemical or a disease agent, either against livestock/crops or into the food chain, for the purpose of undermining stability and/or generating fear." (**Florida Office of Agricultural Emergency Preparedness**, *About Us*, Accessed October 23, 2007; see, also, **CRS**, *Agroterrorism: Threats and Preparedness*, 2004)

AHA: American Hospital Association.

AHIMT: All Hazard Incident Management Team. (**USFA**, *AHIMT Technical Assistance Pgm*.)

AHRQ: Agency for Health Research and Quality.

AI: Area of Interest. (**Dept. of the Army**, *WMD-CST Operations*, December 2007, p. 1-3)

Aidmatrix: "Aidmatrix – a nationwide donations management system designed to organize and track goods and resources. In cooperation with FEMA since 2006, the Aidmatrix Foundation

launched its web-based system to support states and members of the Voluntary Organizations Active in Disaster (VOAD). The network connects government, the private sector and nonprofit organizations to a database which tracks available resources in real time. (**FEMA**, *Preventing the "Second Disaster" – Aidmatrix Streamlines Post-Disaster Donations Process*, Jan 30, 2008)

Aidmatrix Foundation: "Leveraging leading-edge technologies from the corporate world, the Aidmatrix Foundation created a system which provides a simple but effective means of connecting donors with relief organizations. The system communicates offers and needs up and down the humanitarian relief supply chain, helping to get the right aid where it is needed at the appropriate time. The basic system was provided grant funding by FEMA/DHS and made available to States at no cost. States are encouraged to set up and be trained on the system before the need arises. Additional customizations can be performed at a reduced cost to the State or their designated foundation. Aidmatrix's training and customization services will be provided at discounted rates. To further reduce costs, States may seek private corporate sponsorships.

FEMA also is providing each State with the standard FEMA design. States also have the option of customizing and branding their website. Basic program functionality is available at no cost to each State's donations management lead agency and its voluntary networks as outlined above. Each State will have autonomy over its installation. Recognizing that connecting to the nonprofits on the ground is critical, the system includes links to the State Voluntary Organizations Active in Disaster (VOAD) member organizations. Customization options allow States to add additional nonprofit organizations, cities, and governmental agencies. Aidmatrix provides onsite user training, documentation, and demo environments. Aidmatrix Network provides several modules that cover a wide range of humanitarian aid relief donations coordination. These features will be phased in over time, and include:

• *In-Kind Donations Management* – The System allows States to establish a call center and national in-kind and State portals via the web.

• *Unaffiliated Volunteer Management* **–** the tool helps States manage the volunteer response and connects offers to agencies with needs efficiently and effectively. It enables smaller, often overlooked agencies to take advantage of the supply of volunteers and alleviate the pressure on the larger agencies and governments to provide more opportunities to help. (This feature is funded by FEMA in Phase II.)

• *Online Relief Warehouse Management* – Based on nonprofit warehouse management best practices, the tool leverages leading edge technology in a simple, user-friendly way to provide real-time visibility into relief warehouse activity and status for all stakeholders involved in a relief effort.

• *Financial Donations Management* **–** Allows States to quickly fundraise in response to specific disasters. The tool promotes the offering of financial donations by individuals and educates the general public on the most critical needs. In addition, the tool facilities workplace and group-based giving campaigns and can easily be customized for rapid response. This component is optional and intended to support a State's disaster cash donations plan. Each of these aspects of the Aidmatrix system for donations and volunteer management offers specific advantages to

consumers and end users." (**FEMA**, *Statements of William Eric Smith and Carlos J. Castillo,* July 31, 2008, pp. 9-10)

Aiming Area Concept: "A new planning concept of area vulnerability, the 'Aiming Area Concept,' was developed by FCDA during 1957. It is a more realistic basis for planning nonmilitary defenseive measures in line with the destructive power of nuclear weapons. It recognizes the fact that many geographical areas in the United States contain multiple potential targets. Advisory Bulletin 214 defined an 'aiming area' as a geographical area in which an emeny would probably place one or more nuclear weapons to assure the destruction of the target." (**FCDA**, *1957 Annual Report*, p. 1)

Air and Marine Operations Center, DHS. See Department of Homeland Security, A&MOC.

Air Burst: "The explosion of a nuclear weapon at such a height that the expanding fireball does not touch the earth's surface when the luminosity is a maximum (in the second pulse)." (**Glasstone**, *The Effects of Nuclear Weapons* (3rd Edition), 1977, Glossary, p. 629)

Air Domain: "Air Domain" is defined as the global airspace, including domestic, international, and foreign airspace, as well as all manned and unmanned aircraft operating, and people and cargo present in that airspace, and all aviation-related infrastructure" (DHS, *Domestic Outreach Plan*, 2007, 2)

Air Force Emergency Management (EM) Program: "Protection of Air Force personnel and operational resources is essential to successful Air Force operations. The primary missions of the Air Force Emergency Management (EM) program (formally known as full-spectrum threat response) are to save lives; minimize the loss or degradation of resources; and continue, sustain, and restore operational capability in an all-hazards physical-threat environment at Air Force installations worldwide. Ancillary missions of the EM program are to support homeland defense civil support operations and to provide support to civil and host-nation authorities IAW DOD directives and through the appropriate COCOM. Major program elements of the EM program include warning and reporting, command and control (C2), planning, equipping, organizing, training, exercising, evaluating, response operations, and incident management." (**Maxwell AFB**, *AU-2: Guidelines for Command*, Sep 5, 2007 Draft, p. 19)

Air Force Incident Management System (AFIMS): "In 2006, Secretary of the Air Force Michael W. Wynne issued the memorandum introducing the AFIMS. This action was a direct response to two initiatives created under HSPD-5 -- the National Response Plan and the National Incident Management System -- work together to unify emergency management practices at all governmental levels. NRP and NIMS create a comprehensive approach to incident management that enhances the nation's ability to plan for, prevent, prepare for, respond to, and recover from terrorist attacks, major disasters and other emergencies. Secretary Wynne's memorandum outlined an all-hazards approach to organization and integration of emergency responders at Air Force installations throughout the world. Implementing AFIMS will involve the revision of Air Force directives to parallel existing NIMS and NRP policies and procedures and will require close coordination and communication within our responder community to ensure support to civil authorities. The Air Force will fully implement AFIMS by December 2009. The initial step

is application of the Air Force Emergency Management program by Air Force personnel. This newly designated program replaced the Full Spectrum Threat Response program Jan. 1, 2006; AFEM incorporates and applies key elements of NIMS and NRP across the Air Force.

The present practice of response agencies conducting individual tasks will change. AFIMS employs a unified response between responders at all levels, both civilian and military, and applies to Air Force installations and responders located within and outside the continental United States. (**McGuire AFB**, *AF Implements IMS*, Feb 16, 2007)

Alabama Insurance Underwriting Association (Alabama Beach Pool): "Alabama Insurance Underwriting Association (Alabama Beach Pool) is a voluntary unincorporated nonprofit association established to provide essential residential and commercial insurance coverage to the beach area counties of Baldwin and Mobile. Twelve percent of Alabamans live on the coast. Every licensed property insurer in the state is a member of the Alabama Beach Pool. The Beach Pool offers two types of policies: fire and extended coverage, and wind and hail. The Beach Pool offers coverage limits on residential buildings up to a maximum of $500,000, combined dwelling and contents. A hurricane deductible of 5 percent ($1,000 minimum) is applicable in the event of a named storm. Policies covering property located in certain areas may opt for a 2 percent hurricane deductible for an additional premium. The standard deductible for all other perils is $500. Buildings must conform to the Southern Standard Building Code…" (**GAO**, *Natural Disasters, Public Policy Options…*, Nov 2007, p. 69; see, also, p. 70)

ALARA: As low as reasonably achievable (relates to decontamination). (**Dept. of the Army**, *WMD-CST Operations*, December 2007, p. B-3)

Alarm: "Signal giving warning of danger." (**UNDHA**, *DM Glossary*, 1992, p. 17)

ALE: Annual Loss Exposure/Expectancy. (**DigitalCare**, *State of OR BC Workshop*, 2006, 47)

Alert: "Notification that a potential disaster situation exists or has occurred; direction for recipient to standby for possible activation of disaster recovery plan. A formal notification that an incident has occurred, which may develop into a disaster." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 46)

Alert: "The term 'alert' refers to any text, voice, video, or other information provided by an authorized official to provide situational awareness to the public and/or private sector about a potential or ongoing emergency situation that may require actions to protect life, health, and property. An alert does not necessarily require immediate actions to protect life, health, and property and is typically issued in connection with immediate danger." (**DHS**, *TCL*, 2007, 421)

Alert: "Advisory that hazard is approaching but is less imminent than implied by warning message. See also 'warning'." (**UNDHA,** *Disaster Management Glossary*, 1992, p. 17)

Alert America Convoy Program: "…developed during the later months of 1951. Operated by the Valley Foundation, Inc., in cooperation with FCDA, they are intended to carry civil defense information directly to the American people and to spearhead local civil defense education and

participation for recruitment. The exhibits offer highly dramatic visualizations of the entire civil defense problem. Through photographs, movies, three-dimensional mock-ups, and scientific action-dioramas they depict the possible uses of atomic energy in both peace and war…. Three of these exhibits, each mounted on a 10-truck convoy, will visit target cities in many States." (**FCDA**, *Annual Report 1951*, 1952, p. 27)

All-Effects Survey: "During the fiscal year [1973], an all-effects survey was developed and tested. This all-effects survey, which includes direct weapons effects and natural disaster protection, is being implemented during the summer of 1973. Also during the year, contracts were negotiated with several States to fund engineering personnel to conduct State shelter surveys. This action was in keeping with the adjusted national program designed to better meet State and local needs." (**DCPA**, *Foresight, DCPA Annual Report FY 73*, 1974, pp. 15-16)

All Disasters/Emergencies Are Local: "In recognition that all incidents begin locally, the agency must particularly work to strengthen the all-hazards response, planning, preparedness, mitigation and prevention capabilities at the local level." (**FEMA**, *FEMA Strategic Plan, Fiscal Years 2008-2013,* January 2008, p. 8)

All Disasters/Emergencies Are Local: "Local officials – more so than their state or federal counterparts – are familiar with the culture and needs of their community, where vulnerable residents reside, the resources and geography of the area and the threats and vulnerabilities facing their region…. The emergency plan recognizes that most emergency events truly are local and do not require more than the support of neighboring jurisdictions." (**Little Hoover Commission**, *Safeguarding the Golden State*…, 2007, 7)

All Hands Network: "All Hands is both an emergency management community and consulting consortium. All Hands was developed to support a network of emergency management, homeland security, and business continuity professionals who join together to share information and resources. The All Hands community includes public sector employees, consultants, volunteers and other professionals involved in emergency management, homeland security and business continuity." (**All Hands Consulting – All Hands Network**, *About All Hands*, 2006)

All-Hazard: "Any incident or event, natural or human caused, that requires an organized response by a public, private, and/or governmental entity in order to protect life, public health and safety, values to be protected, and to minimize any disruption of governmental, social, and economic services." (**USCG**, *IM Handbook*, 2006, Glossary 25-1)

All Hazard Civil Preparedness: "In keeping with President Nixon's desire to make the Federal Government more responsive to the needs of State and local governments, the Defense Civil Preparedness Agency (DCPA) program takes into account all of the hazards and dangers which confront the Nation's population today." (**DCPA**, "All-Hazard Civil Preparedness," *Foresight*, **1974**, p. 1)

All Hazard Incident Management Team (AHIMT): "A multi-agency/multi-jurisdiction team for extended incidents formed and managed at the State, regional or metropolitan level. Deployed as a team of 10-20 trained personnel to manage major and/or complex incidents

requiring a significant number of local, regional, and state resources, and incidents that extend into multiple operational periods and require a written IAP. May be utilized at incidents such as a tornado touchdown, earthquake, flood, or multi-day hostage/standoff situation, or at planned mass-gathering events. May initially manage larger, more complex incidents prior to arrival of and transition to a Type 2 or Type 1 IMT." (**USFA**, *About Incident Management Teams*, 2007)

All Hazard Incident Management Team (AHIMT) Technical Assistance Program: "The goal is to support the development of one All-Hazard IMT in each DHS Urban Area Security Initiative (UASI) region, each State, and other high-risk areas. DHS has identified the UASI regions as high-threat areas, and generally are comprised of major metropolitan areas. Those UASI regions setting up Multi-agency, multi-jurisdictional IMTs can request the training, as can States setting up similar IMTs. Funding, delivery support, and appropriate student cadre availability are also considerations. In addition, any area falling under the guidelines that have been addressed by DHS as having an immediate potential threat or hosting a National Special Security Event will get immediate consideration." (**USFA**, *AHIMT Technical Assistance Program*, 2007)

All Hazard Survey: This "activity conducted on-site (at the locality) consists of surveying local needs and making an 'all-hazard' evaluation, i.e., determining what type of natural or other disaster the locality has experienced or might experience in the future." (**DCPA**, *On-Site Assistance* (MP 63), 1974, p. 10)

All-Hazards: "The spectrum of all types of hazards including accidents, technological events, natural disasters, terrorist attacks, warfare, and chemical, biological including pandemic influenza, radiological, nuclear, or explosive events." (**DHS**, *Fed. Cont. Direct. 1*, 2007, p. P-1)

All-Hazards: "Definition. Grouping classification encompassing all conditions, environmental or manmade, that have the potential to cause injury, or death; damage to or loss of equipment, infrastructure services, or property; or alternately causing functional degradation to societal, economic or environmental aspects. Annotation: All hazards preparedness ensures that if disaster occurs, people are ready to get through it safely, and respond to it effectively. FEMA began development of an Integrated Emergency Management System with an all-hazards approach that included 'direction, control and warning systems which are common to the full range of emergencies from small isolated events to the ultimate emergency – war." (**DHS**, *Lexicon*, October 23, 2007, p. 1)

All-Hazards: "Our fire services are the original "all-hazards" agencies – responding to everything from forest fires to toxic chemical spills to medical emergencies. Your unparalleled experience has been a critical asset as we have worked to shape our own "all-hazard" Department and build capacities to prepare, prevent and respond to all manner of threats – whether man-made or natural disasters." (**DHS**, *Remarks by Secretary Michael Chertoff, U.S. Department of Homeland Security at the International Association of Fire Chiefs Leadership Summit*, November 4, 2005)

All-Hazards: "An approach for prevention, protection, preparedness, response, and recovery that addresses a full range of threats and hazards, including domestic terrorist attacks, natural and manmade disasters, accidental disruptions, and other emergencies." (**DHS,** *NIPP*, 2006, p. 103)

All Hazards: "Any incident, natural or manmade, that warrants action to protect life, property, environment, public health or safety, and minimize disruptions of government, social, or economic activities." (**FEMA**, *NIMS* (FEMA 501/Draft), August 2007, p. 147; see as well. National Response Framework Resource Center Glossary/Acronyms, September 2007 draft.)

All Hazards: "All-Hazards refers to preparedness for domestic terrorist attacks, major natural or man-made disasters, and other emergencies." (**NCR**, *National Capital Region Homeland Security Strategic Plan 2007-2009 – Overview*, August 2006, p. 4)

All Hazards Approach: Since 9/11, the…Administration has adopted an all-hazards, one-size-fits-all approach to disaster planning. By assuming that the same preparedness model can be applied to any kind of disaster —whether biological, chemical, explosive, natural or nuclear— the all-hazards approach fails to take into account essential specifics of the nature of the virus or bacteria, how it is transmitted, and whether infection can be prevented or treated." (**ACLU**, *Pandemic Preparedness*, 2008, 6)

"Unfortunately, this approach is virtually useless, if not counterproductive. That is because each hazard has its own unique features. Planning for levee protection in New Orleans will not help prepare for an earthquake in San Francisco or a terrorist explosion in New York or Washington, D.C., anymore than planning for a chemical or nuclear attack will help prepare us for a bird flu pandemic or a smallpox attack. Nor are generic all-hazards plans for a public health emergency, including "model" laws to implement mass quarantines, of any use in a storm, flood, fire, earthquake, chemical attack, or nuclear or conventional arms attack. The effect of the one-size-fits-all approach is to suggest that no matter what happens, be it flu or bioterrorism, a law enforcement/national security approach is required…. In principle, the idea that the country should be prepared for all types of potential emergencies is sound. In practice, however, planning for "all hazards" has failed to take into account the most important factor that drives disasters—the particular hazard itself, whether biological, chemical, explosive or nuclear." (**ACLU**, *Pandemic Prep*., 2008, 16)

All Hazards Approach: "The Civil Preparedness program of the seventies will emphasize the total spectrum of activities that local jurisdictions require and will place greater stress on the use and development of resources applicable to peacetime as well as wartime emergencies. The emphasis of the Defense Civil Preparedness Agency will be to help local governments improve their readiness for any type of emergency. This includes an all-hazards approach to emergency planning with consideration of all contingencies that a disaster may generate, including sudden or gradual onset of the disaster." (**DCPA**, *Local Disaster Preparedness Course Syllabus*, June **1973**, Preface)

All-Hazards Approach: "Emergency management must be able to respond to natural and manmade hazards, homeland security-related incidents, and other emergencies that may threaten the safety and well-being of citizens and communities. An all-hazards approach to emergency

preparedness encourages effective and consistent response to any disaster or emergency, regardless of the cause." (**DHS/ODP**, *FY2006 EMPG Program Guidance*, 2005, p. 6)

All-Hazards Approach: "The "all-hazards" approach to preparedness means we need to weigh the likelihood and consequences of a broad array of threats. These include, but are not limited to: extremes in weather, industrial hazards, viral pathogens, and of course, terrorism that can take many forms." (**Metropolitan Washington Council of Governments**, *National Capital Region Homeland Security Strategic Plan 2007-2009*, August 2006)

All-Hazards Approach: "An integrated hazard management strategy that incorporates planning for and consideration of all potential natural and technological hazards." (**National Science and Technology Council** 2005, 17)

All-Hazards Approach: "ALL-HAZARDS APPROACH.—In carrying out the responsibilities under this section, the Administrator shall coordinate the implementation of a risk-based, all-hazards strategy that builds those common capabilities necessary to prepare for, protect against, respond to, recover from, or mitigate against natural disasters, acts of terrorism, and other man-made disasters, while also building the unique capabilities necessary to prepare for, protect against, respond to, recover from, or mitigate against the risks of specific types of incidents that pose the greatest risk to the Nation." (**Post-Katrina Emergency Management Reform Act of 2006**, Title VI, Sec. 503, pp.1399-1400 of DHS Appropriations Act, 2007)

All-Hazards Approach: "The commonalities among all types of technological and natural disasters suggest that many of the same management strategies can apply to all such emergencies." (**Zymanek**, *Comprehensive Emergency Management*, 2007, p. 4)

All-Hazards Focus: "*Employ an "all-hazards" focus.* Hospitals must be prepared to respond to any type of emergency or disaster facing their communities, not just bioterrorism. Therefore, the title of and provisions in the law regarding how hospital readiness funding may be used should reflect this "all-hazards" planning focus." (**American Hospital Association**, *Protecting and Improving Care for Patients and Communities: Emergency Readiness*, 2006, p. 1)

All-Hazards Preparation: "As is often the case, what we predicted, worried about, doesn't come to pass; and what we don't think about, does come to pass -- which underscores the importance of all-hazards preparation. You're not necessarily going to know what the hazard is, but there will be a hazard, and you've got to be ready to deal with it." (**DHS**, *Remarks by Secretary Michael Chertoff to the National Congress for Secure Communities*, December 17, 2007)

All-Hazards Preparedness: "The term 'all-hazards preparedness' refers to preparedness for domestic terrorist attacks, major disasters, and other emergencies." (**WH,** *HSPD-8*, p.1, Dec. 2003)

All-Hazards Public Health System: "An all-hazards public health system is one that is able to respond to and protect citizens from the full spectrum of possible public health emergencies, including bioterrorism and naturally occurring health threats. An all-hazards system recognizes that preparing for one threat can have benefits that will help prepare public health departments for all potential threats. Under an all-hazards approach, the public health system prepares for and

is able to respond to unique concerns posed by different threats." (**Trust For America's Health**, *Ready or Not?* 2007, 11)

All-Hazards Taxonomy: (See, also Four Phases)

- Prevent
  - Detect Terrorist Threats
  - Control Access
  - Eliminate Threats
- Protect
  - Protect Physical/Cyber Assests & Systems
  - Mitigate Risks to Human & Animal Health
- Respond
  - Evaluate Incident
  - Minimize Impact
    - Manage Incident
    - Respond to Hazard
    - Implement Protective Acrtions
    - Conduct Search and Rescue
  - Care for Public
- Recover
  - Assist Public
  - Restore Environment
  - Restore Infrastructure. (FEMA, *National Preparedness System: Current Prototype & Proposed Implementation Approach*, August 2, 2007, slide 7)

All Perils Homeowners Insurance: An "all-perils homeowners insurance policy—would help create broad participation and could provide a private sector solution. But this option could also require subsidies for low-income residents and thus potentially create substantial costs for the federal government that would have to be balanced against money saved from reduced disaster relief." (**GAO**, *Natural Disasters: Public Policy Options*…, Nov 2007, 33)

All Risks: "…attack, man-made, and natural, in a federal-state-local partnership." (**NGA**, *CEM: A Governor's Guide*, 1979, p. 11)

All-WME: All Weapons of Mass Effect. (**DHS/OIG**, *ADVISE Report*, June 2007, Abbreviations)

Alluvial Fan: "An area at the base of a valley where the slope flattens out, allowing the floodwater to decrease in speed and spread out, dropping sediment over a fan-shaped area." (**ASFPM**, *National Flood Programs and Polices in Review—2007*, 2007, p. 92)

Alluvial Fan Flooding: "Flooding occurring on the surface of an alluvial fan or similar landform which originates at the apex and is characterized by high-velocity flows; active processes of erosion, sediment transport, and deposition; and unpredictable flowpaths. Alluvial fan flooding is depicted on a Flood Insurance Rate Map (FIRM) as Zone AO, with a flood depth and velocity." (**FEMA**, *Alluvial Fan Flooding*, 2007)

Alpha Particle: "A particle emitted spontaneously from the nuclei of some radioactive elements. It is identical with a helium nucleus, having a mass of four units and an electric charge of two positive units." (**Glasstone**, *The Effects of Nuclear Weapons*, 3rd Ed., 1977, Gloss., 629)

ALS: Analytical Laboratory System. (**DA**, *WMD-CST Operations*, Dec. 2007, Glossary 1)

Alternate Facilities: "Locations, other than the primary facility, used to carry out essential functions, particularly in a continuity situation. "Alternate facilities" refers to not only other locations, but also nontraditional options such as working at home ("teleworking"), telecommuting, and mobile-office concepts." (**DHS**, *Fed. Cont. Direct. 1*, Nov 2007, p. P.1)

Alternate Site: "An alternate operating location to be used by business functions when the primary facilities are inaccessible. 1) Another location, computer center or work area designated for recovery. 2) Location, other than the main facility, that can be used to conduct business functions. 3) A location, other than the normal facility, used to process data and/or conduct critical business functions in the event of a disaster. Related Terms: Cold Site, Hot Site, Interim Site, Internal Hot site, Recovery Site, Warm Site." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 46)

Alternate Work Area: "Office recovery environment complete with necessary office infrastructure (desk, telephone, workstation, and associated hardware, communications, etc.); also referred to as Work Space or Alternative work site." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 46)

Alternative Care Sites: "Alternative care sites generally are defined as "locations, preexisting or created, that serve to expand the capacity of a hospital or community to accommodate or care for patients or to protect the general population from infected individuals during mass casualty incidents." [1]The Joint Commission on Accreditation of Healthcare Organizations lists 3 types of alternative care sites:

■**Facilities of opportunity**, which are defined as non-medical buildings which, because of their size or proximity to a medical center, can be adapted into surge hospitals;
■ **Mobile medical facilities**, which are mobile surge hospitals based on tractor-trailer platforms with surgical and intensive care capabilities; and
■ **Portable facilities**, which are mobile medical facilities that can be set up quickly and are fully equipped, self-contained, turnkey systems usually stored in a container system and based on military medical contingency planning."[2] (Trust for America's Health, Ready or Not 2007, p. 64)

AMAS: Alabama Mutual Aid System.

Amateur Radio Disaster Services (ARDS). Previously Amateur Radio Emergency Services.

American Homeland: "'American homeland' or 'homeland' means the United States, in a geographic sense." (**Homeland Security Act of 2002**, p. 3)

American Red Cross: "The American Red Cross is a supporting agency to the mass care functions of Emergency Support Function (ESF) #6. While it does not direct other NGOs, the American Red Cross takes the lead in integrating the efforts of the national NGOs that provide mass care services during response operations." (**DHS**, *NRF*, Jan 2008, 20)

American Red Cross: "The American Red Cross serves as the primary support agency to DHS for coordinating mass care support with other non-government organizations during disaster relief and CM operations. Support may include shelter, feeding, emergency first aid, disaster welfare information, bulk distribution, supportive counseling, blood, and blood products." (**JCS/DoD**, *Homeland Security* (JP 3-26)), 2005, p. II-21)

American Society for Testing and Materials (ASTM): ASTM International is one of the largest voluntary standards development organizations in the world….originally known as the American Society for Testing and Materials (ASTM), was formed over a century ago... Today, ASTM continues to play a leadership role in addressing the standardization needs of the global marketplace. Known for its best in class practices for standards development and delivery, ASTM is at the forefront in the use of innovative technology to help its members do standards development work, while also increasing the accessibility of ASTM International standards to the world." (**ASTM**, *About ASTM International*, 2007)

AMP: Acquisition Management Process. (**DHS**, *IPG FY 2011-2015 Draft*, Oct 2008, p. 6)

Amplitude: "The difference between zero level and peak of any wave such as a seismic wave." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 17)

AMS: Area Maritime Security.

AMSC: Area Maritime Security Committee. (**GAO**, *Maritime Security*, December 2007, p. iv)

AMSP: Area Maritime Security Plan. (**GAO**, *Maritime Security*, December 2007, p. 55)

Analysis: "An appraisal of the information and conclusions drawn from one or more assessments." (**DOA**, *Infrastructure Risk Management (Army)*, 2004, p. 12)

Analysis: "The comprehensive and systematic examination, assessment and evaluation of collected, processed and exploited information/data in order to identify significant facts and derive valid conclusions." (**FEMA**, *IIFOG Version 3 Draft*, Feb 2008, p. 34)

Analysis, Dissemination, Visualization, Insight, and Semantic Enhancement System. See Department of Homeland Security, ADVISE.

Analytical Laboratory System (ALS): "A C-130 air-transportable system that uses commercial, off-the-shelf equipment to conduct analysis of chemical warfare agents, toxic

industrial materials, and biological warfare agents at the incident site. It has the capability of establishing communications to local, state, and federal laboratories and other agencies for confirmatory analysis of the suspect agent." (**DA**, *WMD-CST Operations*, 2007, Glossary-7)

Analytical Red Teaming: "In *Prevention* Exercises, analytical red teaming is a *discussion-based* technique used to employ an adversary's perspective to advance security by providing an alternative view of threats, vulnerabilities, and countermeasures." (**FEMA**, *HSEEP Glossary*)

Anemometer: "Instrument which measures wind speed or wind speed and direction." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 17)

ANGI: Air National Guard Instruction. (**DA**, *WMD-CST Operations*, Dec 2007, Glossary 1)

Animal Emergency Response Credentials (AER): (**FEMA**, *AER… Credentials*, 25 Oct 2007)

Annual Flood: "Highest peak discharge in a year." (**UNDHA**, *DM Glossary*, 1992, p. 18)

Annualized Loss Expectancy (ALE): "The Annualized Loss Expectancy (ALE) is the expected monetary loss that can be expected for an asset due to a risk over a one year period. It is defined as: ALE = SLE * ARO -- where SLE is the Single Loss Expectancy and ARO is the Annualized Rate of Occurrence.

An important feature of the Annualized Loss Expectancy is that it can be used directly in a cost-benefit analysis. If a threat or risk has an ALE of $5,000, then it may not be worth spending $10,000 per year on a security measure which will eliminate it.

One thing to remember when using the ALE value is that, when the Annualized Rate of Occurrence is of the order of one loss per year, there can be considerable variance in the actual loss. For example, suppose the ARO is 0.5 and the SLE is $10,000. The Annualized Loss Expectancy is then $5,000, a figure we may be comfortable with." (**Risky Thinking** (Risk Management, Disaster Recovery, and Business), *A Glossary of Risk Related Terms*, 2007)

Annualized Loss Exposure/Expectancy (ALE): "A risk management method of calculating loss based on a value and level of frequency." (**DigitalCare**, *State of OR BC Wkshop*, 2006, 47)

Annualized Rate of Occurrence: "The probability that a risk will occur in a particular year. For example, if insurance data suggests that a serious fire is likely to occur once in 25 years, then the annualized rate of occurrence is 1/25 = 0.04." (**Risky Thinking** (Risk Management, Disaster Recovery, and Business), *A Glossary of Risk Related Terms*, 2007)

Annex I to Homeland Security Presidential Directive 8, National Planning. "This Annex is intended to further enhance the preparedness of the United States by formally establishing a standard and comprehensive approach to national planning. It is meant to provide guidance for conducting planning in accordance with the Homeland Security Management System in the National Strategy for Homeland Security of 2007. (**White House**, *Annex I to HSPD*-8, 2007)

Anniversary Effect: "`As often happens immediately following a major flood event, the number of flood insurance policies in force… [increase]… But our experience…has shown many

of those new policies are not renewed after the first year or two if no new floods occur… People tend to forget how bad it was or think that something that bad couldn't possibly occur in the same place again. But they are sadly mistaken. These big flood events will happen again'." [Quote is that of FEMA NFIP Deputy Administrator Howard Leikin in 2002] "NFIP studies have documented the drop-off in policy counts when these policies reach their first or second anniversary of purchase, a phenomenon that has been termed the "anniversary effect." In many cases, the policy count returns to its pre-disaster level or below… flood insurance policies in force in the upper Midwest increased by an astounding 60.7 percent within a few months after the Upper Midwest Flood of April 1997, but a year later dropped dramatically to less than the number of policies in force the month before the flood." (**FEM**A, *FEMA Warns*…, 2002)

ANSS: Advanced National Seismic System. (**USGS**, *ANSS*, 2007)

Antecedent Precipitation Index: "Weighted summation of past daily precipitation amounts, used as an index of soil moisture." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 18)

Anticyclone: "(area of high pressure, high): A region where barometric pressure is high or relative to that in the surrounding regions at the same level." (**UNDHA**, *DM Glossary*, 1992, 17)

Antimicrobial: "An antimicrobial is a substance that kills or inhibits the growth of microbes such as bacteria, fungi, or viruses." (**GAO**, *Homeland Security: First Responders*, June 2008, 10)

Anti-Social Behavior: "With the exception of one suicide which was attributed to Hurricane Audrey [July 1957], there is no positive evidence of self-destructive acts. However, there is an abundance of evidence of anti-social behavior associated with the disaster

Anti-Terrorism: "AntiTerrorism - preventive in nature. I t entails using "passive and defensive measures... such as education, foreign liaison training, surveillance, and countersurveillance, designed to deter terrorist activities." It is an "integrated, comprehensive approach … to counter the terrorist threat The concept has two phases: proactive and reactive. The proactive phase encompasses the planning, resourcing, preventive measures, preparation, awareness education, and training that take place before a terrorist incident. The reactive phase includes the crisis management actions taken to resolve a terrorist incident."[3] (**DHS**, *The ODP Guidelines*…, 2003, Glossary, p. 1 (28))

Antiterrorism: "…generally used to describe passive or defensive measures against terrorism…" (**Sauter & Carafano** 2005, 261) See, also, Counterterrorism.

Anti-Terrorism CPTED Target Hardening:

- Assess threat, risk, and vulnerability;
- Balance CPTED strategies against the threat, risk, and
- vulnerability;
- Employ the appropriate CPTED [Crime Prevention through Environmental Design] measures, given the level of threat, risk, and vulnerability. Measures may include:

[3] Cites: Joint Tactics, Techniques, and Procedures for Antiterrorism Joint Pub 3-07.2. 17 March 1998.

- Install adequate security lighting;
- Use planters and bollards as impediments or obstacles to prevent cars or trucks from driving into or parking close to potential targets;
- Use security cameras in key locations;
- Increase police presence at sensitive locations;
- Use random inspection of trucks/vans entering target-rich environments;
- Establish protocol for searches of people and their possessions when entering large gatherings;
- Adopt biometric technology, where applicable, to enhance access control and identification. (**DHS**, *The ODP Guidelines*…, 2003, p. 15)

AO: Area of Operation. (**Dept. of the Army**, *WMD-CST Operations*, December 2007, p. 1-3)

AO: Action Officer. (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 17)

AOR: Area(s) of Responsibility.

AP: Adaptive Planning.

APA: American Planning Association.

APCO. Association of Public Safety Communications Officials.

APHL: Association of Public Health Laboratories.

APHS/CT: Assistant to the President for Homeland Security and Counterterrorism (also serves as the National Continuity Coordinator). (**White House,** *HSPD-20*, May 9, 2007)

APIC: Association for Professionals in Infection Control and Epidemiology.

APIO: Advanced Public Information Officer Course. FEMA resident course taught at the Emergency Management Institute, Emmitsburg, MD.

APNSA: Assistant to the President for National Security Affairs. (**DHS**, *FCD 1*, Nov 2007, 13)

APO: Accountable Property Officer. (**FEMA**, *Mission Assignment SOPs Draft*, July 2007, 6)

Application Recovery: "The component of Disaster Recovery that deals specifically with the restoration of business system software and data after the processing platform has been restored or replaced. Similar terms: Business System Recovery." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 46)

Applied Technology Council (ATC): "…an organization which develops engineering resources for use in mitigating the effects of natural and other hazards on the built environment…" (**NEHRP**, *Annual Report*, 2007, p. 13; ATC, http://www.atcouncil.org/)

APTS: Association of Public Television Stations. (**FEMA**, *IPAWS Update*, June 2007, 4)

ARC: American (National) Red Cross.

Architects and Engineers Professional Development Program: "In recognition of the greater need for preparedness to meet the full spectrum of disasters – natural as well as nuclear – DCPA initiated a broader program during fiscal year 1973. A new professional development course titled Multi-Protection Design was developed and pilot-tested during the year, with a total of more than 600 architects and engineers in attendance. These courses emphasized slanting techniques to be used during the design phase in new construction or in the remodeling of existing structures at little or no additional cost to the building owner. Application of these techniques could result in lifesaving shelters to protect people from the effects of natural disasters such as hurricanes, earthquakes, and tornadoes, as well as from the effects of nuclear attack…. To provide architects, engineers, and others with technical information on environmental hazards and natural disasters as well as the effects of nuclear weapons, new technical reports were developed and disseminated. New buildings providing protection against such hazards as vandalism, noise or pollution, floods, tornadoes, hurricanes, as well as fallout radiation, and electromagnetic pulse (EMP) were illustrated and described in various technical publications to show architects and their consulting engineers how protection against these hazards can be accomplished at little cost." (**DCPA**, *Foresight, Annual Report FY73*, 1974, 16)

Ardent Sentry 2006: US Northern Command Exercise based on Category III hurricane in the eastern United States. (**DHS**, *Statement by Peter Verga*, July 19, 2007, p. 13

Ardent Sentry 2007: "…during the month of May 2007, OPS and other DHS components participated in the DOD exercise Ardent Sentry which was designed to test and validate DOD Homeland Defense operations and Defense Support to Civil Authorities (DSCA) operations. Ardent Sentry consisted of numerous scenarios for which OPS had established roles and responsibilities. Two scenarios provided significant OPS participation including a hurricane making landfall in Rhode Island and a 10 kiloton nuclear detonation in Indianapolis, Indiana." (**DHS**, *Statement of Frank DiFalco, Director, National Operations Center*, June 20, 2007, 9)

Ardent Sentry-Northern Edge 07 (AS-NE 07): "…a Joint Chiefs of Staff-directed, U.S. Northern Command (USNORTHCOM) sponsored homeland defense and Defense Support of Civil Authorities (DSCA) exercise that…[took] place 30 April – 17 May 2007. The Homeland Security Council has designated ARDENT SENTRY-NORTHERN EDGE (and associated exercises VIGILANT GUARD, ALASKA SHIELD, INDIANA SENTRY, BLUE FLAG, POSITIVE RESPONSE, and the 2007 National Hurricane Preparedness Exercise) as a National Level Exercise for 2007. This exercise includes Canada Command as a full partner, and is the largest (number of personnel, length of exercise, number of venues, and cost) and most complex exercise undertaken in the exercise series.
Purpose: To provide local, state, federal, Department of Defense (DOD), and non-governmental organizations and agencies involved in homeland security emergency management the opportunity to participate in a full range of training scenarios that will better prepare participants to respond to a national crisis. The participating organizations will conduct a multi-layered, civilian-led response to a national crisis.

Objectives:
- Demonstrate multi-agency, multi-jurisdictional unity of effort in support of a civilian-led response to a national crisis through collaboration with local, state, and federal responders.
- State leaders are provided an opportunity to orchestrate and lead response efforts within their state to include the use of state assets, emergency management assistance compacts, and support from federal resources, including active duty military forces.
- The National Guard is provided with an opportunity to exercise with USNORTHCOM, other federal agencies, and representatives from local, state, and non-governmental organizations involved in homeland security.
- USNORTHCOM is provided an opportunity to exercise support of civil authorities in the execution of DOD Chemical, Biological, Radiological, Nuclear, or High-yield Explosive (CBRNE) response plans and Joint Task Force operations.
- North American Aerospace Defense Command (NORAD) will exercise against a variety of threats.
- Improve coordination with Canadian partners in cross-border events.

- Explore seams in homeland defense and DSCA processes with DOD, U.S. Pacific Command, U.S. Strategic Command, and non-DOD government agencies.
- Build on previous exercises and real-world lessons learned." (**NORTHCOM**, *Fact Sheet*, 2007)

Area Command (Unified Area Command): An organization established (1) to oversee the management of multiple incidents that are each being handled by an ICS organization or (2) to oversee the management of large or multiple incidents to which several Incident Management Teams have been assigned. Area Command has the responsibility to set overall strategy and priorities, allocate critical resources according to priorities, ensure that incidents are properly managed, and ensure that objectives are met and strategies followed. Area Command becomes Unified Area Command when incidents are multijurisdictional. Area Command may be established at an emergency operations center facility or at some location other than an incident command post." (**DHS**, *NIMS*, 2004, p. 127)

Area Command. An element of the Incident Command System. "If necessary, an Area Command may be established to oversee the management of multiple incidents being handled by separate Incident Command Posts or to oversee management of a complex incident dispersed over a larger area. The Area Command does not have operational responsibilities and is activated only if necessary, depending on the complexity of the incident and incident management span-of-control considerations. The Area Command or Incident Command Post provides information to, and may request assistance from, the local emergency operations center." (**DHS,** *National Response Framework* (Comment Draft), September 10, 2007**,** p. 48)

Area Command: "An organization established to: (1) oversee the management of multiple incidents that are each being handled by an ICS Incident Management Teams (IMT) organization or (2) oversee the management of large or multiple incidents to which several IMTs have been assigned. Area Command has the responsibility to set overall strategy and priorities, allocate critical resources according to priorities, ensure that incidents are properly managed, and ensure

that objectives are met and strategies followed. (See also: Unified Area Command). (**USCG**, *IM Handbook*, 2006, Glossary 25-2)

Area Command Team (ACT): "An Area Command Team is an organization established to assist an Agency Administrator by: Overseeing the management of multiple incidents that are each being handled by an incident management team organization (IMT); Overseeing the management of a very large incident that has multiple IMTs assigned to it; Assisting an agency administrator due to the complexity of incidents(s)/issues; and/or Reducing a span of control that has exceeded the local agency administrator(s) ability or desire to manage while still overseeing their unit." (Wild Fire Lessons Learned Center)

Area Contingency Plan (ACP): "Describes what needs to be protected in the event of an emergency and how to protect it, what resources are available to respond, and the desired outcomes from the spill response." (**GAO**, *Maritime Security*, Dec 2007, p. 56)

Area Joint Information Center (JIC): "An area JIC supports multiple-incident ICS structures that are spread over a wide geographic area. It is typically located near the largest media market and can be established on a local, State, or multi-state basis. Multiple States experiencing… damage may participate in an area JIC." (**FEMA**, *Basic Guidance for PIOs*, Nov 2007, 16)

Areal Precipitation: "The average amount of precipitation which has fallen over a specific area." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 18)

ARES: Amateur Radio Disaster Services (previously Amateur Radio Emergency Services)

ARF: Action Request Form. (Senate HSGA, *Hurricane Katrina: A Nation Still Unprepared*, p. 631)

Arid Zone: "An area in which the water resources from ground water and rainfall are insufficient to counterbalance the evaporation." (**UNDHA**, *DM Glossary*, 1992, p. 18)

ARIO: Advanced Radiation Incident Operations. (**FEMA**, *Compendium of Federal Terrorism Training Courses*, 2003, p. 252)

ARNG: Army National Guard.

A-ROC: Alternate Regional Operations Center. (**FEMA**, *FAAT List*, 2002. p. 4)

ARS: Acute radiation syndrome. (See "Ionizing Radiation")

As Low As Reasonably Achievable (ALARA): "A radiation safety principle for minimizing radiation doses and releases of radioactive materials by employing all reasonable methods." (DA, WMD-CST Operations, 2007, Glossary-8)

ASCE: American Society of Civil Engineers.

Aseismic: "Nonseismic; used to designate an area free from seismic activity or a tectonic deformation process not accompanied by seismic events. (**UNDHA**, *DM Glossary*, 1992, p. 19)

ASPH: Association of Schools of Public Health.

ASFPM: Association of State Floodplain Managers.

Ash Flow: "Pyroclastic flow including a liquid phase and a solid phase composed mainly of ashes." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 19)

ASIS: American Society for Industrial Security.

ASIS International: "ASIS International (ASIS) is…for security professionals, with more than 35,000 members worldwide. Founded in 1955, ASIS is dedicated to increasing the effectiveness and productivity of security professionals by developing educational programs and materials that address broad security interests, such as the ASIS Annual Seminar and Exhibits, as well as specific security topics. ASIS also advocates the role and value of the security management profession to business, the media, governmental entities, and the public." (**ASIS**, *About ASIS*, 2007)

ASP: Advanced Spectroscopic Portal. (**DHS**, *Remarks of DHS Secretary Chertoff*, July 14, 2007)

ASPR: Assistant Secretary for Preparedness and Response, HHS.

Assembly Area: "The designated area at which employees, visitors, and contractors assemble when evacuated from their building/site." (**DigitalCare**, *State of OR BC Workshop* 2006, 46)

Assessment: "The process of compiling and examining information and data from various sources and drawing conclusions about the object of the assessment." (**DOA**, *Infrastructure Risk Management (Army)*, 2004, p. 12)

Assessment: Survey of a real or potential disaster to estimate the actual or expected damages and to make recommendations for preparedness, mitigation and relief action. (**Ref. Center** 1998)

Assessment: "Survey of a real or potential disaster to estimate the actual or expected damages and to make recommendations for prevention, preparedness and response." (**UNDHA,** *DM Glossary*, 1992, p. 19)

Assessment: "The evaluation and interpretation of measurements and other information to provide a basis for decision-making." (**USG**, *USG Interagency Domestic Terrorism CONPLAN*, Jan. 2001, Appendix B: Definitions, p. 1); see also **DHS**, *NIMS*, 2004, p. 127; **FEMA,** *NIMS* (Draft), August 2007, p. 147)

Asset: "An item of property and/or component of a business activity/process owned by an organization. There are three types of assets: physical assets (e.g. buildings and equipment),

financial assets (e.g. currency, bank deposits and shares) and non-tangible assets (e.g. goodwill, reputation)." (**DigitalCare**, *State of OR BC Workshop* 2006, 46)

Asset: "For the purpose of infrastructure risk management, there are four types of assets: infrastructure, non-infrastructure, mission-essential, and symbolic. Infrastructure assets are public, private, and governmental (Federal and military) interdependent cyber and physical networks and systems available to support national security. Non-infrastructure assets are units, individuals, and materiel required to support Army missions. Mission-essential assets are infrastructure and non-infrastructure systems and assets fundamental to the accomplishment of the Army core competencies. Symbolic assets are those national objects having cultural significance and the capacity to excite or objectify a response." (**DOA**, *Infrastructure Risk Management (Army)*, 2004, p. 12)

Asset: "Property (tangible or intangible) which is owned by an organization. Assets are generally divided into three classes: Physical Assets (buildings, equipment, inventory); Financial Assets (cash, bank deposits, accounts receivable); Intangible Assets (reputation, brand names, etc.)." (**Risky Thinking**, *A Glossary of Risk Related Terms*, 2007)

Asset (Infrastructure): "A distinguishable network entity that provides a service or capability. Assets are people, physical entities, or information located either within or outside the United States and owned or operated by domestic, foreign, public, or private sector organizations." (**DoD**, *DCIP*, 2005, p. 11)

Assistance to Firefighters Grant Program (AFG): "The purpose of these grants is to enhance the safety of the public and firefighters with respect to fire and fire-related hazards. The primary goal of the AFG Program's Fire Prevention and Safety Grant is to reach high-risk target groups in order to mitigate the high incidences of death and injuries. Additionally, the authorization remains that includes funding for Firefighter Safety Research and Development." (**DHS/ODP**, *FY 2006 EMPG Program Guidance*, November 2005, p. 11)

Assistant Secretary for Preparedness and Response (ASPR), HHS: "ASPR is headed by the Assistant Secretary for Preparedness and Response who reports directly to the Secretary and whose office includes the following components: Immediate Office (IO); Biomedical Advanced Research & Development Authority (BARDA); Office of Medicine, Science and Public Health (OMSPH); Office of Preparedness and Emergency Operations (OPEO); and the Office of Policy and Strategic Planning (OPSP). ASPR is a component of the Public Health Service (PHS) and is responsible for ensuring a One-Department approach to developing public health and medical preparedness and response capabilities and leading and coordinating the relevant activities of the HHS Operating Divisions (OPDIVs). The principal areas of program emphasis are (1) enhancement of State and local public health and medical preparedness - primarily health departments and hospitals; (2) development and use of National and Departmental policies and plans relating to the preparedness for and response to public health and medical threats and emergencies (e.g. Emergency Support Function (ESF) 8 of the National Response Plan (NRP), Homeland Security Presidential Directives (HSPD) 5 and 10, HHS' Concept of Operations Plans (CONOPS) for Public Health and Medical Emergencies and for the Incident Response Coordination Team (IRCT); (3) coordination with relevant entities inside and outside HHS such

as State, local and Tribal public health and medical officials, the private sector, the Departments of Homeland Security (DHS), Defense (DOD), Veterans Affairs (VA), Justice (DOJ), the Homeland Security Council (HSC), and the National Security Council, (NSC), other ESF 8 partner organizations and others within the National security community; (4) rapid public health and medical support to Federal, State, local and Tribal governments who may be responding to incidents of national significance or public health and medical emergencies; (5) coordination, support of, and participation in research, development and procurement activities related to public health emergency medical countermeasures destined for the Strategic National Stockpile, including under Project BioShield; (6) leadership in international programs, initiatives, and policies that deal with public health and medical emergency preparedness and response related to naturally occurring treats such as infectious diseases and deliberate threats for biologic, chemical, nuclear and radiation sources and (7) leadership and oversight on medical, science, and public health policies, issues, and programs." (**HHS**, Job Announcement HHS-OS-2008-0169, Program Specialist (Watch Officer), Dec 2007.

Assistant Secretary of Defense for Homeland Defense: "The Office of ASD(HD) is within the office of the Under Secretary of Defense for Policy [USD(P)]. ASD(HD) is responsible for the overall supervision of all DOD HD related activities. Within CS, ASD(HD) has been delegated the duties and authorities associated with principal staff assistant for MSCA and MACDIS. ASD(HD) ensures internal coordination of DOD policy direction, assists SecDef in providing guidance, through the Joint Staff, to combatant commanders for MSCLEA and conducts coordination with DHS…..The principal duty of ASD(HD) is to provide overall supervision of the HD and CS mission areas within DOD. In that role, ASD(HD) serves as the principal staff assistant and advisor to the USD(P) and Secretary and Deputy Secretary of Defense on HD and CS on matters including, but not limited to:
(a) Preparedness to execute the national security missions of DOD pertaining to the defense of US sovereignty, territory, domestic population, and defense critical infrastructure against direct threats and aggression.
(b) Military support to civil authorities.
(c) Defense Critical Infrastructure Program.
(d) DOD domestic antiterrorism and force protections in accordance with DOD Directive 2000.12.
(e) DOD installation preparedness.
(f) DOD domestic counterterrorism activities, less those involving special operations forces.
(g) DOD continuity-related activities, to include COOP, COG, and Enduring Constitutional Government managed under the Defense Continuity Program.
(h) Domestic crisis management including planning and response to man-made and natural disasters including the consequences of incidents involving weapons of mass destruction.
(i) Policy guidance on homeland defense-related education, training, and professional development programs." (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. II-5)

Assistant Secretary Level Domestic Readiness Group (A/S DRG, DHS): "The A/S DRG develops and coordinates implementation of preparedness and response policy and in anticipation of or during crises such as natural disasters and domestic terrorist attacks to address issues that cannot be resolved at lower levels and provide strategic policy direction for the Federal response." (**DHS**, *National Planning and Execution System*, 2007 Draft, p. 3-5)

Assistant to the President for Homeland Security and Counterterrorism: The first such Assistant was Frances Fragos Townsend, appointed by President George W. Bush on May 28, 2004. From White House release:

> Ms. Frances Fragos Townsend was appointed Homeland Security Advisor by the President on May 28th, 2004. Ms. Townsend chairs the Homeland Security Council and reports to the President on United States Homeland Security policy and Combating Terrorism matters. She previously served as Deputy Assistant to the President and Deputy National Security Advisor for Combating Terrorism.
>
> Ms. Townsend came to the White House from the U. S. Coast Guard, where she had served as Assistant Commandant for Intelligence. Prior to that, Ms. Townsend spent 13 years at the U. S. Department of Justice in a variety of senior positions, her last assignment as Counsel to the Attorney General for Intelligence Policy. Ms. Townsend began her prosecutorial career in 1985, serving as an Assistant District Attorney in Brooklyn, New York. (**White House**, *Ms. Frances Fragos Townsend*…)

Assistant to the President for Homeland Security and Counterterrorism: Currently, Kenneth L. Wainstein. President Bush announced Mr. Wainstein's appointment in a March 19, 2008 White House Press Release:

> I am pleased to announce that I have selected Kenneth L. Wainstein to serve as Assistant to the President for Homeland Security and Counterterrorism. Ken is a proven leader and a dedicated public servant with nearly two decades of law enforcement experience, including as United States Attorney for the District of Columbia. As Assistant Attorney General for National Security, he helped improve our ability to confront the threats of a new era. His experience at the Federal Bureau of Investigation as General Counsel and Chief of Staff has provided him with a clear understanding of the dangers we face and the importance of ensuring that we have the necessary tools to protect America.
>
> In his new role, Ken will coordinate our Nation's homeland security efforts to ensure that we continue to make progress on combating terrorism, securing our borders, and strengthening our emergency preparedness. I look forward to working with Ken to make America safer. (**White House**, *President Bush Announces*…, March 19, 2008)

Associate Business Continuity Planner (ABCP): "The Associate Business Continuity Planner (ABCP) or Associate level [offered by DRII], is for individuals with at least a specified minimum level of knowledge in business continuity/disaster recovery planning, but who have not yet attained the two years of experience required for CBCP. Individuals can also qualify if they work in positions related to--but not actually in--business continuity/disaster recovery planning." (**ISSA**, *Certifications*, 2007)

Association of Contingency Planners. ACP is a "non-profit trade association dedicated to the advancement of business continuity professionals. ACP provides…peer-to-peer networking and

learning environment for its members through chapters across the country." **ACP Website**: http://www.acp-international.com/

Association of State Floodplain Managers (ASFPM): "The Association of State Floodplain Managers is an organization of professionals involved in floodplain management, flood hazard mitigation, the National Flood Insurance Program, and flood preparedness, warning and recovery. ASFPM has become a respected voice in floodplain management practice and policy in the United States because it represents the flood hazard specialists of local, state and federal government, the research community, the insurance industry, and the fields of engineering, hydrologic forecasting, emergency response, water resources, and others." (**ASFPM**, 2007)

Assurance: "Proactive risk management actions intended to mitigate or prevent the destruction or incapacitation of the infrastructure." (**DOA**, *Infrastructure Risk Mgmt. (Army)*, 2004, p. 12)

ASTHO: Association of State and Territorial Health Officials.

ASTM: American Society for Testing and Measurement.

Asynchronous Replication: "Data replication or mirror in which the application is allowed to continue while the data is mirrored to another site. In this case, the application data can represent a prior state of the application. It is critical to use ordered asynchronous mirroring for real-time applications. This means that each write is applied in the same order at the second or backup site as it was written in the primary site, even if the network has re-ordered the arrival of the data. Associated term: synchronous replication." (**DigitalCare**, *State of OR Business Continuity Workshop*, 2006, 46)

AT: Action Tracker. (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 6)

At-Risk Individuals: "…the term `at-risk individuals' means children, pregnant women, senior citizens and other individuals who have special needs in the event of a public health emergency, as determined by the Secretary [HHS]." (***Pandemic and All-Hazards Preparedness Act,*** January 3, 2006, Sec. 2802, (b) (4).)

At Risk Populations: "At-risk populations include groups whose needs are not fully addressed by traditional service providers or those who feel they cannot comfortably or safely use the standard resources offered in disaster preparedness, relief, and recovery. They include those who are physically or mentally disabled (blind, deaf, hard-of-hearing, cognitive disorders, or with mobility limitations), people with limited English language skills, geographically or culturally isolated people, homeless people, elderly individuals, and children.

"Following a widespread emergency, people may find themselves stranded, displaced, destitute, homeless, or sick; or they may experience challenges from the emergency that leave them newly vulnerable or suddenly outside of mainstream communications in ways they did not experience before the emergency. These factors can create *new* at-risk populations during an emergency." (**CDC/HHS**, *Locating and Reaching At-Risk Populations in an Emergency*, 2007, p. 3)

This report identifies "five broad, descriptive groupings for characteristics that put people at risk:

- Economic Disadvantage
- Limited Language Proficiency
- Disability (physical, mental, cognitive, or sensory)
- Isolation (cultural, geographic, or social)
- Age

The key to this approach is that it allows you to examine the nature of the vulnerability that might put someone at higher risk in an emergency. You avoid defining an individual or group based upon their vulnerabilities or using terminology to describe people as being vulnerable - a label that no one wants to have." (Ibid)

ATD: Advanced Technology Demonstration. (**DHS**, *Statement of Vayl Oxford*, 8Mar07, p. 5)

Atmospheric Pollution: "Contamination of the atmosphere by large quantities of gases, solids and radiation produced by the burning of natural and artificial fuels, chemicals and other industrial processes and nuclear explosions. (**UNDHA**, *Disaster Mgmt Glossary*, 1992, p. 19)

ATSDR: Agency of Toxic Substances and Disease Registry, CDC.

Attack (Nuclear or Conventional): "Any hostile action taken against the United States by foreign forces which results in destruction of military and/or civilian targets through use of nuclear or conventional weapons." (**FEMA**, *HICA MYDP* (CPG 1-34), 1985, p. A-2)

Attack Tree: "The attack tree is a tool used during *Prevention* Exercises that provides the *exercise planning team* with a visual representation of the anticipated and potential paths an adversary can take to execute an attack. It is useful for both planning and evaluating exercises. **(FEMA**, *HSEEP Glossary*, 2008)

Audit: "The process by which procedures and/or documentation are measured against pre-agreed standards." (**DigitalCare**, *State of OR Business Continuity Workshop*, 2006, 46)

Authority: "A right or obligation to act on behalf of a department, agency or jurisdiction. (Capital Health Region, Edmonton Area, *ICS100: Incident Command System Training Student Manual.* Edmonton, Canada: CHR Office of Emergency Preparedness, March 2007, p. 50)

Authority Having Jurisdiction (AHJ). "The phrase "authority having jurisdiction," or its acronym AHJ, is used in NFPA documents in a broad manner, since jurisdictions and approval agencies vary, as do their responsibilities. Where public safety is primary, the authority having jurisdiction may be a federal, state, local, or other regional department or individual such as a fire chief; fire marshal; chief of a fire prevention bureau, labor department, or health department; building official; electrical inspector; or others having statutory authority. For insurance purposes, an insurance inspection department, rating bureau, or other insurance company representative may be the authority having jurisdiction. In many circumstances, the property owner or his or her designated agent assumes the role of the authority having jurisdiction; at

government installations, the commanding officer or departmental official may be the authority having jurisdiction." (**NFPA 1600**, 2007. p. 11)

Autonomous Pathogen Detection System (APDS): "About seven years ago, Livermore researchers received seed funding from the Laboratory Directed Research and Development Program to develop an instrument that counters bioterrorism by providing a rapid early warning system for pathogens, such as anthrax. (See *S&TR,* January/February 2002, Rapid Field Detection of Biological Agents.) That instrument, the Autonomous Pathogen Detection System (APDS), is now ready for deployment to better protect the public from a bioaerosol attack, and the development team has been honored with a 2004 R&D 100 Award.

The lectern-size APDS can be placed in airports, office buildings, performing arts centers, mass transit systems, sporting arenas—anywhere an attack might be launched. APDS was designed to get results fast and get them right, without false positives. Biological scientist Richard Langlois, who spearheaded the APDS development effort, explains, "The system provides results on the spot. Faster results allow a faster emergency response, which in the end means saving lives.

The Autonomous Pathogen Detection System (APDS) monitors the air continuously for biological threat agents and uses two identification technologies to reduce the probability of false alarms. It can measure up to 100 different agents per sample and reports identified agents within an hour." (**Lawrence Livermore National Laboratory**, "Detecting Bioaerosols When Time Is of the Essence," *Science & Technology*, October 8, 2004)

Avalanche: "A moving mass of snow or ice typically occurring in mountainous terrain on slopes of 20 degrees or more. Extensive avalanche hazard areas exist in the western States and Alaska. The 6800 avalanche flows estimated to occur yearly in these areas result in a mean annual death toll of seven and property losses in excess of $500,000. Changes in land cover and continued development in avalanche hazard areas are expected to result in an increase in loss of life and property." (**FEMA**, *IEMS HICA MYDP* (CPG 1-34, 1985, p. A-1)

Avalanche: "The rapid and sudden sliding and flowage of masses of usually incoherent and unsorted mixtures of snow/ice/rock material. (**UNDHA**, *DM Glossary*, 1992, p. 20; cites OFDA)

Avalanche: Mass of snow and ice falling suddenly down a mountain slope and often taking with it earth, rocks and rubble of every description. (**WMO** 1992, 66)

Avoidance: "A mitigation strategy that eliminates the threat of a specific risk, usually by eliminating its potential cause." (**DOA**, *Infrastructure Risk Management. (Army)*, 2004, p. 12)

AWAP: All-Hazard Web Alert Portal. (**FBO** [FedBizOps] *Daily.com*, 27Aug05, FBO #1370)

Awareness: "The continual process of collecting, analyzing, and disseminating intelligence, information, and knowledge to allow organizations and individuals to anticipate requirements and to react effectively." (**DHS**, *National Response Plan* (Draft #1), 25Feb04, p. 73 (Glossary)

AWN: Alerts, Warnings and Notifications. (**DHS**, *IPG FY 2011-2015 Draft*, 2008, p. 22)

B Zone, NFIP: "B Zone is defined as an area of moderate flood hazard, usually depicted on Flood Insurance Rate Maps as between the limits of the base flood and 500-year flood of the primary source of flooding. B Zones may have local, shallow flooding problems. B Zones are also used to designate areas protected by levees and base floodplains of little hazard, such as those with average flood depths of less than 1 foot." (**FEMA**, *Reducing Damage from Localized Flooding – A Guide for Communities*, 2005, vii)

Backup (Data): "A process by which data, electronic or paper based, is copied in some form so as to be available and used if the original data from which it originated is lost, destroyed or corrupted." (**DigitalCare**, *State of OR Business Continuity Workshop*, 2006, p. 47)

Backwater: "A rise of water level in a stream caused by a natural or artificial obstruction." (**UNDHA**, *DM Glossary*, 1992, p. 20)

BARDA: Biomedical Advanced Research and Development Authority, Office of the Assistant Secretary for Preparedness and Response (ASPR), Office of the Secretary of Health and Human Services, HHS.

Barometer: "Instrument for measuring atmospheric pressure." (**UNDHA**, *DM Gloss.*, 1992, 20)

Barometric Pressure: "The pressure exerted by the atmosphere as a consequence of the force of gravity." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 20)

Barrage: "Barrier across a stream provided with a series of gates or other control mechanisms to control the water-surface level upstream, to regulate the flow or to divert water supplies into a canal." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 20; cites OFDA)

Base: "The location at which primary Logistics functions for an incident are coordinated and administered. There is only one Base per incident. (Incident name or other designator will be added to the term Base.) The Incident Command Post may be co-located with the Base." (**FEMA**, *NIMS* (FEMA 501/Draft), 2007, p. 148)

Base Flood: A term used in the National Flood Insurance Program to indicate the minimum size flood to be used by a community as a basis for its floodplain management regulations; presently required by regulation to be "that flood which has a one-percent chance of being equaled or exceeded in any given year." Also known as a 100-year flood or one-percent chance flood.

Base Flood: "The flood having a one percent chance of being equaled or exceeded in any given year. This is the regulatory standard also referred to as the "100-year flood." The base flood is the national standard used by the NFIP and all Federal agencies for the purposes of requiring the purchase of flood insurance and regulating new development. Base Flood Elevations (BFEs) are typically shown on Flood Insurance Rate Maps (FIRMs)." (**FEMA**, *Base Flood*, 2007)

Base Flood Elevation (BFE): "…the elevation of the crest of the base or 100-year flood, which is the level of flood that has a 1% chance of being equaled or exceeded in any given year. Also referred to as BFE." (**ASFPM,** *National Flood Programs and Polices in Review—2007*, p. 92)

Base Flood Elevation (BFE): "The computed elevation to which floodwater is anticipated to rise during the base flood. Base Flood Elevations (BFEs) are shown on Flood Insurance Rate Maps (FIRMs) and on the flood profiles. The BFE is the regulatory requirement for the elevation or floodproofing of structures. The relationship between the BFE and a structure's elevation determines the flood insurance premium." (**FEMA**, *Base Flood Elevation*, 2007)

Base Flood Elevation (BFE): "Elevation of the base flood in relation to a specified datum, such as the National Geodetic Vertical Datum of 1929. The Base Flood Elevation is used as a standard for the National Flood Insurance Program." (**FEMA**, *Developing the Mitigation Plan* (FEMA 386-3), 2003, p. a-1)

Baseline Assessment: "The initial set of probability and impact assessments usually made when risks are first identified. Initial assessments describe risks under the initial baseline plan and may indicate areas for needed risk management. Subsequent events, risk management actions, and new information will always change the assessment, which will ultimately be adopted as the baseline." (**DOA**, *Infrastructure Risk Management. (Army)*, 2004, p. 12)

Basic Public Information Officers Course The FEMA Emergency Management Institute *Basic Public Information Officers Course* "is aimed at the new or less experienced PIO including those individuals who have function as a secondary responsibility. Course topics include an overview of the job of the PIO, understanding the media, interview techniques, writing a news release and conducting public awareness campaigns. This course is conducted by the States. Contact your State Emergency Management Agency to find out when and where the course will be offered." (FEMA, http://training.fema.gov/EMIWeb/EMICourses/E388.asp, January 18, 2007 update)

Basic Responsibilities Paper: "The *Basic Responsibilities Paper*, outlining the roles of the Department of Defense, Office of Defense Mobilization, and FCDA, and an accompanying Memorandum of Understanding on the regional roles of ODM and FCDA in an emergency, was developed and distributed as [FCDA] Advisory Bulletin 210, dated March 1, 1957." (**FCDA**, *1957 Annual Report*, p. 1)

Basic Responsibilities Paper: "There is a document in the Government now, known as our Basic Responsibilities Paper, that was approved by the President. For a long time it was available only in a classified form and with a limited circulation. In effect we tried to operate it in 1956 without having circulated it, and that's a good trick if you can do it.l That's one of the reasons we have some confusion. This paper is an agreement between the Secretary of Defense and the Director of ODM and the Administrator of FCDA, approved by the President. So in effect it's a Presidential order. FCDA becomes a claimant, among its other responsibilities, for the entire civilian economy in the United States following the attack. DOD claims for the military in the United States. ODM acts as the umpire for the President." (**ICAF**, *Civil Defense Today*, 1957, p. 21)

Battle Rhythm in Emergency Response Communications Modeling: "Information flow has a rhythm that reflects the battle rhythm." (**Jain and Corley**, *User Requirements Working Group*, March 13, 2003, slide 9)

Battle Rhythm in Long War on Terror: "…I think there's no question that the tide is turning, and as the President said, al Qaeda is diminished, but is not destroyed. Tides that turn also have a way of trying to return so they can continue to spread whatever waves they can. And that is why there is an ebb and flow to wars. There is a battle rhythm to wars. And in this long battle against terrorism, the United States has been very successful in rounding up and arresting such prominent leaders of the al Qaeda organization as Khalid Sheik Mohammed, many of the other top operators around the world. The fact of the matter is, the situation has been made much more dire, much more difficult for the terrorists, but it is not impossible for the terrorists" (**White House** Press Briefing with Ari Fleischer, May 20, 2003)

Battle Rhythm in Pandemic Preparedness: A reporters question during White House Press Conference on Pandemic Preparedness: "I was just wondering in the different areas that you work in whether or not you're seeing any preparedness fatigue, given that we're two years into it and will probably go -- continue for a few more years before anything probably happens. But just wondering if you've seen any preparedness fatigue, and if you haven't, what are your thoughts about how you should deal with it, once it starts surfacing in years to come?" Answer from Dr. Jeff Runge, DHS Chief Medical Officer: "I appreciate you pointing this out… you know, we need to reach a battle rhythm of a state of preparedness that is higher than it was before the President made this a priority, and the absence of any hyperventilation but more as a marathon." (**White House**, *Press Briefing on National Strategy for Pandemic Influenza Implementation Plan: One Year Summary*, July 17, 2007)

Battle Rhythm in Reporting in Hurricane Katrina Response: From US Coast Guard Incident Action Plan for Operational Period 0700 12Sep05 to 0700 13Sep05: "Continue to build and maintain adequately staffed 24/7 operations/planning organization to ensure all reporting and battle rhythm requirements are met."

Battle Rhythm Management: "The purpose of battle rhythm management is the maintenance of synchronized activity and process among distributed warfighters. It is most critical in rapidly evolving situations or in highly distributed operations. Successful battle rhythm implies the synergism of procedures, processes, technologies, individual activities and collective actions at warfighter, staff level, command node, and unit levels in order to facilitate military operations. The concept is ubiquitous in daily military operations (particularly at the operational level of command), but little exists to define it at the tactical level or substantiate its existence in the experimental or analytical literature." (**Duffy**, *A Model of Tactical Battle Rhythm*, June 04, 170)

BC: Business Continuity. (**DigitalCare**, *State of Oregon BC Workshop*, 2006, p. 8)

BCCP: Business Continuity Certified Planner.

BFE: Base Flood Elevation. (**FEMA**, *Base Flood*, 2007)

BIA: Business Impact Analysis. (**DHS**, *FCD 1*, Nov. 2007, p. D-4)

Biodefense for the 21st Century (HSPD-10): "…we conducted a comprehensive evaluation of our biological defense capabilities to identify future priorities and actions to support them. The results of that study provide a blueprint for our future biodefense program, Biodefense for the 21st Century, that fully integrates the sustained efforts of the national and homeland security, medical, public health, intelligence, diplomatic, and law enforcement communities….

The United States will continue to use all means necessary to prevent, protect against, and mitigate biological weapons attacks perpetrated against our homeland and our global interests. Defending against biological weapons attacks requires us to further sharpen our policy, coordination, and planning to integrate the biodefense capabilities that reside at the Federal, state, local, and private sector levels. We must further strengthen the strong international dimension to our efforts, which seeks close international cooperation and coordination with friends and allies to maximize our capabilities for mutual defense against biological weapons threats.

While the public health philosophy of the 20th Century .- emphasizing prevention .- is ideal for addressing natural disease outbreaks, it is not sufficient to confront 21st Century threats where adversaries may use biological weapons agents as part of a long-term campaign of aggression and terror. Health care providers and public health officers are among our first lines of defense. Therefore, we are building on the progress of the past three years to further improve the preparedness of our public health and medical systems to address current and future BW threats and to respond with greater speed and flexibility to multiple or repetitive attacks.

Private, local, and state capabilities are being augmented by and coordinated with Federal assets, to provide layered defenses against biological weapons attacks. These improvements will complement and enhance our defense against emerging or reemerging natural infectious diseases.

The traditional approach toward protecting agriculture, food, and water .- focusing on the natural or unintentional introduction of a disease -- also is being greatly strengthened by focused efforts to address current and anticipated future biological weapons threats that may be deliberate, multiple, and repetitive.

Finally, we are continuing to adapt United States military forces to meet the biological weapons challenge. We have long recognized that adversaries may seek biological weapons to overcome our conventional strength and to deter us from responding to aggression. A demonstrated military capability to defend against biological weapons and other WMD strengthens our forward military presence in regions vital to United States security, promotes deterrence, and provides reassurance to critical friends and allies. The Department of Defense will continue to ensure that United States military forces can operate effectively in the face of biological weapons attacks, and that our troops and our critical domestic and overseas installations are effectively protected against such threats." (**White House**, HSPD-10, April 28, 2004.)

Biodefense for the 21st Century Pillars: "The essential pillars of our national biodefense program are: Threat Awareness, Prevention and Protection, Surveillance and Detection, and Response and Recovery." (**White House**, HSPD-10, April 28, 2004.)

Biodefense Knowledge Center (BKC), DHS (at Lawrence Livermore National Laboratory). "The Laboratory is home to the Biodefense Knowledge Center (BKC) for the Department of Homeland Security (DHS). This national resource provides rapid-turnaround and in-depth analyses of biodefense issues. BKC assessments and knowledge-discovery tools help the homeland security community understand scientific trends that may be exploited by adversaries to develop biological weapons. Assessments also assist in the development of an integrated national effort to respond to emerging threats and help guide the prioritization of national investments in biodefense-related R&D, planning, and preparedness." (**LLNL**, *Global Threats and Security*, 2007, p. 19 (5))

Biological Agent(s): "(1) Biological agents are microorganisms that cause disease in personnel, plants, or animals or cause the deterioration of material. Biological agents are divided into two broad categories; pathogens and toxins.

(a) Pathogens are infectious organisms that cause disease or illness in their host and include bacteria, viruses, rickettsias, protists, fungi, or prions.
(b) Toxins are biologically derived poisonous substances produced as by-products of microorganisms, plants, or animals. They can be naturally or synthetically produced.

"(2) Examples of biological agents and their associated diseases are Bacillus anthracis (anthrax), AIV H5N1 (avian influenza), Clostridium botulinum (botulism), Shigella species (food borne illness), Hantavirus (pulmonary syndrome), Legionella pneumophila (Legionnaire's disease), Histoplasma capsulatum (histoplasmosis), Yersinia pestis (bubonic and pneumonic plague), Variola virus (smallpox), Francisella tularensis (tularemia), and Ebola virus (viral hemorrhagic fever).

"(3) Infectious biological organisms represent one of the greatest potential threats due to their reproductive ability and the time delay from infection to symptom. An infectious biological attack may remain undetected for several days to weeks after release due to the incubation periods that biological agents may have. Diagnosis may be slow as many infectious agents have a slow onset and present with nonspecific symptoms that rapidly escalate in severity. Another compounding problem is that patients may simultaneously present in geographically separated areas. Depending on the pathogen, preventive measures and treatment will be difficult to implement due to factors such as large number of casualties, restriction of movement, and quarantine. Finally, first responders may be among the first casualties, rapidly overwhelming local and state support systems." (**JCS/DoD**, *CBRNE CM* (JP 3-41), 2006, p. I-6)

Biological Agent (s): "Biological agents are organisms or toxins that can kill or incapacitate people, livestock and crops. The three basic groups of biological agents that would likely be used as weapons are bacteria, viruses and toxins. Most biological agents are difficult to grow and maintain. Many break down quickly when exposed to sunlight and other environmental factors, while others, such as anthrax spores, are very long lived. Biological agents can be dispersed by spraying them into the air, by infecting animals that carry the disease to humans and by contaminating food and water." (**FEMA**: *Biological Fact Sheet*, June 2007, p. 1)

Biological Attack, 1953 Assessment: "It is accepted that the Soviet Union is now capable of striking any target within the United States. It is assumed for planning purposes that such an attack, if it comes, will consist principally of nuclear weapons delivered by air, and detonated above ground during normal working hours. It is further assumed that high explosive and incendeiary bombs will also be used, that sabotage will be employed, and that biological and chemical weapons will be used. Psychological warfare techniques of all kinds also will be used to disrupt defense programs, impair production, create panic, and weakin our will to resist overt attacks." (**FCDA**, *1953 Annual Report*, p. 9)

Biological Common Operating Picture (BCOP): "HSPD-9 dated 30 January 2004 and HSPD-10 dated 21 April 2004 directs DHS to establish a National Biosurveillance Integration System (NBIS) to provide early detection and situational awareness of biological events of potential national consequence by acquiring, integrating, analyzing, and disseminating existing human, animal, plant, and environmental biosurveillance system data into a common operating picture (COP) that represents a comprehensive depiction of the global biosurveillance security

environment (GBSE). The National Biosurveillance Group (NBSG), comprising of representatives from all member agencies, will integrate and analyze all-agency/source biosurveillance information to recognize unusual biological events and provide situational awareness to the NBIS community and decision-makers through the development of a biosurveillance COP (BCOP) and targeting reporting. The BCOP will augment the DHS National Operation Center's COP, which provides a consistent, integrated picture of biosurveillance situational awareness throughout the country. The NBIS will facilitate collaborative interagency analysis to ensure fully-integrated biosurveillance situational awareness and provide near-real time awareness to the Incident Management Group (IMG) and the DHS National Operations Center (NOC). The resulting improved information sharing and enhanced situational awareness facilitates national decision-making to enable timely response." (**DHS**, *DHS Exhibit 300 Public Release BY09…NBIS…(2009)*, 8Feb08)

Biological Hazard: "Processes of organic origin or those conveyed by biological vectors, including exposure to pathogenic micro-organisms, toxins and bioactive substances, which may cause the loss of life or injury, property damage, social and economic disruption or environmental degradation." (UN/ISDR, *Terminology: Basic Terms of Disaster Risk Reduction*, 2004, p. 1)

Biological Warfare Agents, Categories of: There are four basic categories of biological warfare agents... They are—

- *Pathogens.* Pathogens are disease-causing bacteria, viruses, and rickettsiae. These agents could be used to target food supplies, port facilities, or population centers. Of particular concern is the threat of contagious diseases such as smallpox. Agents that have a long incubation period can infect a large number of people in a short period of time without immediate symptoms or warning signs.
- *Toxins.* Toxins are poisons formed as specific secreting products by vegetable or animal organisms such as plants, snakes, spiders, and sea creatures. Toxins act faster and are more stable than live pathogens. Many toxins can be easily produced.
- *Bioregulators.* Bioregulators are chemical compounds that are essential for normal psychological and physiological functions. A wide variety of bioregulators is normally present in the human body in extremely minute concentrations. However, these compounds can produce a wide range of harmful effects if they are introduced into the body at higher than normal concentrations or if they are altered. Psychological effects could include exaggerated fear and pain; physiological effects could include rapid unconsciousness and—depending on factors such as dose and route of exposure—could even be lethal. Unlike pathogens that take hours or days to act, bioregulators can produce reactions in minutes.
- *Prions.* Prions are composed entirely of microscopic proteins similar to viruses, but without nucleic acid. They are believed to be the infectious agents responsible for degenerative diseases of the nervous system. They infect and propagate by abnormally refolding into a structure which is able to convert normal molecular proteins into abnormally structured forms. Mad cow disease is an example of the effect of prions." (**Dept. of the Army**, *WMD-CST Operations*, December 2007, pp. 3-5, 3-6)

Biological Warfare Defense: Section in the 1951 FCDA Annual Report: "An Epidemic Intelligence Service has been set up by the Public Health Service for the prompt detection of biological warfare attacks…The public has been warned of the possibility of such attacks in an information booklet entitled 'What You Should Know About Biological Warfare'….By recommendation of the National Advisory Council of the Public Health Service, 12 civilian laboratories will be set up throughout the United States to coordinate laboratory diagnosis and research facilities for defense against biological warfare." (**FCDA**, *Annual Report 1951*, 1952, pp. 54-55)

Biological Warfare Defense: "Biological Warfare Defense. The Federal Civil Defense Administratin, the Department of Health, Education, and Welfare, and the Department of Agriculture in the summer of 1953 entered into an agreement to implement a system for improving the reporting of diseases of man, animals, and cropss, to make a joint evaluation of the unusual occurrence, in number or in kind, of diseases of man, animals, and crops, and to make a joint decision as to biological warfare implications. A civil defense technical manual TM-11-10, *Civil Defense Against Biological Warfare*, was prepared and distributed. This manual contains an appraisal of the biological warfare hazards and details a program of defense for man, animal, and crops. This is the first technical manual on biological warfare published by FCDA. Stockpiles of wide-spectrum antibiotic, biologic, and chemotherapeutic drugs have been increased to provide treatment for biological warfare casualties. Progress has been made with the collaboration of the Sectional Research Program of the National Institute of Microbiology in developing a nationwide system to provide for laboratory identification of biological warfare agents and for the rapid diagnosi of disease. Some of the supplies and equipment needed for training health laboratory technicians in this field have been made available through the Federal contributions program. Close liaison has been maintained with the Department of Defense; Department of Health, Education, and Welfare; Department of Agriculture; Central Intelligence Agency; and other Federal agencies in problems related to biological warfare defense…." (**FCDA**, *1953 Annual Report*, pp. 135-136)

Biomedical Advanced Research and Development Authority (BARDA): "The Biomedical Advanced Research and Development Authority (BARDA), within the Office of the Assistant Secretary for Preparedness and Response in the U.S. Department of Health and Human Services, provides an integrated, systematic and approach to the development and purchase of the necessary vaccines, drugs, therapies, and diagnostic tools for public health medical emergencies. BARDA manages Project BioShield, which includes the procurement and advanced development of medical countermeasures for chemical, biological, radiological, and nuclear agents, as well as the advanced development and procurement of medical countermeasures for pandemic influenza and other emerging infectious diseases that fall outside the auspices of Project BioShield. In addition, BARDA manages the Public Health Emergency Countermeasures Enterprise (PHEMCE)." (**HHS**, *Biomedical Advanced Research and Development Authority*, November 2, 2007)

Bio Restoration Demonstration Project: "In January 2006, a two-day demonstration held at the San Francisco International Airport (SFO) laid out the response and restoration protocols that would be undertaken if a biological attack occurred. This demonstration was the culmination

of the three-year, $10 million DHS Bio Restoration Demonstration Project. In this project, researchers from Lawrence Livermore and Sandia national laboratories developed restoration plans that integrated technologies and procedures so that airports hit by a biological terrorist attack could be quickly decontaminated and reopened. As part of this effort, scientists developed a test for determining within a few hours the viability of the biological agent (e.g., anthrax spores)." (**LLNL**, *Global Threats and Security*, 2006, p. 19) "Included in the airport restoration templates are: protocols for characterizing an area through sampling and analysis after an attack; decontamination options; approaches for allowing public re-use of facilities and the possible application of longer-term monitoring." (**Sandia National Laboratories**, *Bio-Restoration Demonstration*, 2006)

BioShield: See "Project BioShield."

Biosurveillance: "The term "biosurveillance" means the process of active data-gathering with appropriate analysis and interpretation of biosphere data that might relate to disease activity and threats to human or animal health – whether infectious, toxic, metabolic, or otherwise, and regardless of intentional or natural origin – in order to achieve early warning of health threats, early detection of health events, and overall situational awareness of disease activity." (**White House**, *HSPD 21*, October 18, 2007)

Bioterrorism: "A bioterrorism attack is the deliberate release of viruses, bacteria, or other germs (agents) used to cause illness or death in people, animals, or plants. These agents are typically found in nature, but it is possible that they could be changed to increase their ability to cause disease, make them resistant to current medicines, or to increase their ability to be spread into the environment. Biological agents can be spread through the air, through water, or in food. Terrorists may use biological agents because they can be extremely difficult to detect and do not cause illness for several hours to several days. Some bioterrorism agents, like the smallpox virus, can be spread from person to person and some, like anthrax, can not." (**CDC**, *Bioterrorism Overview*. February 12, 2007 update)

Bioterrorism Act: See Public Health Security and Bioterrorism Preparedness and Response Act of 2002.

Bioterrorism and Epidemic Outbreak Response Model (BERM), AHRQ, HHS: "This computer model predicts the number and type of staff needed to respond to a major disease outbreak or bioterrorism attack on a given population…. BERM allows planners to formulate realistic mass antibiotic dispensing and vaccination contingency plans for their target populations. Such a model provides numerical estimates and forces critical examination of assumptions about prophylaxis clinic design and about the availability of human and materiel resources." (**AHRQ**, *Computer Staffing Model for Bioterrorism Response*, 2005)

Bioterrorism Training and Curriculum Development Program (BTCDP), HRSA/HHS: "The Bioterrorism Training and Curriculum Development Program (BTCDP) provides support to health professions schools, health care systems, and other educational entities to equip a workforce of health care professionals to address emergency preparedness and response issues. The program consists of two discrete foci: (1) provision of continuing

education for practicing health care providers; and (2) curriculum development and enhancement and training in health professions schools." (**DHS/ODP**, *FY06 EMPG*, p. 11)

BioThrax: An anthrax vaccine.

BioWatch. See Department of Homeland Security, BioWatch.

BKC: Biodefense Knowledge Center**,** DHS (at Lawrence Livermore National Laboratory).

Blackout: "Complete loss of commercial electrical power, lasting for hours or days over a large geographical area." (**Businessdictionary.com**)

Blast Wave: (See Shock Wave). "A shock wave in the air is generally referred to as a 'blast wave' because it resembles and is accompanied by a very strong wind." (**Glasstone**, *The Effects of Nuclear Weapons* (3rd Ed.), 1977, p. 1, Chapter I)

Blended Learning: "…a "Blended Learning" approach…provide{s} modular training content in a variety of mediums (including, but not limited to, traditional, Web-based, Computer-based, and Interactive Video Teletraining) to keep pace with current needs. By balancing distributed learning with traditional training methods, Blended Learning will improve support for First Responders in measurable ways. Office for Domestic Preparedness." (**ODP**, *Approach for Blended Learning*)

Blended Learning: "Blended Learning technologies:

- Increase the quality, consistency, and accessibility of training (any time, any place)
- Maximize content sharing and reuse among sister organizations
- Reduce classroom time by providing prerequisite learning materials via alternative media
- Increase training effectiveness and throughput by institutionalizing best practices

Blended Learning will ultimately provide the means to sustain First Responder performance levels over time." (**ODP**, *ODP Approach for Blended Learning*, 2 Feb 2003, p. 3)

BLEVEs: "Boiling Liquid Expanding Vapor Explosions (BLEVEs) are among the most feared events when tanks of hazardous materials are exposed to fire or physical damage or other events that cause excessive pressures within the tank. A BLEVE could occur when flames impinge upon the vapor space (unwetted internal surface) of the tank where there is no liquid to absorb heat. As the vapor space is heated, the pressure inside the tank (even after the relief valve opens) becomes so great that it eventually vents itself through the weakest area of the tank. As the pressure inside is increasing, the flames weaken the structural integrity of the tank, thus creating the conditions for venting. This sudden venting of pressure and vaporization of product involves the violent rupture of the container, with rocketing fragments. If the container stored a flammable liquid or gas, a large rising fireball will form, the size of which will vary with the amount of hazardous material present." (**EPA**, *Technical Guidance for Hazards* Analysis, 1987. p. F-1)

Blister Agents (Vesicants): "Substances that cause blistering of the skin. Exposure is through liquid or vapor contact with any exposed tissue (eyes, skin, lungs). Mustard (H), Distilled Mustard (HD), Nitrogen Mustard (HN) and Lewisite (L) are blister agents. Symptoms: Red

eyes, skin irritation, burning of skin, blisters, upper respiratory damage, cough, hoarseness." (**DOT**, *Emergency Response Guidebook*, 2004, p. 358)

Blizzard: "A blizzard is defined by the U.S. National Weather Service as winds over 16 m s^{-1} [35 mph] and falling or blowing snow causing visibility less than 400 m lasting for at least 3 h." (**Schwartz and Schmidlin**, Climatology of Blizzards, July 2002)

Blizzard: Violent winter storm, lasting at least 3 hours, which combines below freezing temperatures and very strong wind laden with blowing snow that reduces visibility to less than 1 km. (**WMO** 1992, 86)

Blood Agents: "Substances that injure a person by interfering with cell respiration (the exchange of oxygen and carbon dioxide between blood and tissues). Hydrogen cyanide (AC) and Cyanogen chloride (CK) are blood agents. Symptoms**:** Respiratory distress, headache, unresponsiveness, seizures, coma." (**DOT**, *Emergency Response Guidebook*, 2004, p. 358)

Blue Cascades I: A regional interdependencies tabletop exercise held June 12, 2002 in Welches, OR. "The exercise focused on the linkages between and among infrastructures that could make the Pacific Northwest vulnerable to cascading impacts in the event of an attack or disruption, and which could complicate expeditious response and recovery. Critical infrastructures participating in the exercise included energy (electric power, oil, and natural gas), telecommunications, transportation, water supply systems, banking and finance, emergency services, and government services. Federal, state/provincial, and local government agencies, including emergency management organizations, were also well-represented. BLUE CASCADES was expressly designed to help stakeholders assess the current state of their understanding and preparedness, particularly from the perspective of infrastructure interdependencies. It also was aimed at identifying their needs, priorities, and resource requirements for incorporation into an Action Plan to assist the eight jurisdictions within PNWER to become a disaster-resistant/resilient region." (**PNWER**, *"Blue Cascades" Infrastructure Interdependencies Tabletop*, 2002, p. 1, Executive Summary)

Blue Cascades II: A regional interdependencies tabletop exercise held September 8, 2005 in Seattle WA. "The overall goal of BLUE CASCADES II was to raise awareness of interconnections among the region's critical infrastructures and organizations and associated vulnerabilities… centered on cyber events as well to meet stakeholder needs to learn more about cyber threats, disruptions and impacts." (**PNWER**, *Blue Cascades II*. 2004, p. 2)

Blue Cascades III: A regional interdependencies tabletop exercise held March 1-2, 2006 in Bellevue, WA focused on a 9.0 magnitude earthquake along the Cascadia Subduction Zone. (**PNWER**, *Blue Cascades III: Managing Extreme Disasters – Infrastructure Interdependencies Tabletop Exercise*, March 1-2, 2006, p. i)

Blue Cascades IV: A "regional interdependencies tabletop exercise, held January 25, 2007 in Seattle, WA. Participants included more than 250 representatives from public, private sector, non-profit, academic, community and other organizations. The overall goal of the exercise was to

raise awareness of impacts on critical infrastructures and essential services from a pandemic and of stakeholder preparedness plans and resources; illuminate issues related to roles and missions; and gauge the effectiveness of regional communications and coordination. A major objective of Blue Cascades IV was to enable participants to identify shortfalls and potential solutions that could be incorporated into a regional pandemic preparedness Action Plan." **(PNWER**, *Blue Cascades IV: Critical Infrastructure and Pandemic Preparedness*…, 2007, p. ii)

Blue Team: "In *prevention* exercises, the Blue Team consists of briefed players and other organizations and agencies participating in a prevention-focused exercise that are not part of the *Red Team*." (**FEMA**, *HSEEP Glossary*, 2008)

BOCA: Building Officials and Code Administrators International, Inc.

BoO: Base of Operations. (**FEMA**, *US&R IST In Federal Disaster Operations,* Jan 2000, p. 1)

BOS: Basic Operating Situations. (**DCPA**, *Attack Environment Manual*, 1973, Panel 20)

BPA: Blanket Purchase Agreement. (**FEMA**, *Mission Assignment SOPs Draft*, 2007, p. 55)

BPA: Business Process Analysis. (**DHS**, *FCD 1*, Nov. 2007, p. 16)

BPAT: Building Performance Assessment Team, FEMA.

Brainstorming: Brainstorming techniques are free-flowing, non-attribution discussions. The following are brainstorming rules in a 2006 Pandemic Tabletop Exercise:

- Non-attribution is in effect
- Promote maximum group interaction
- Keep issues on a high level
- Offer imputs based on facts; avoid hearsay
- Non-constructive criticism is not permitted
- Focus on solutions, not blame
- Respect all ideas and comments
- Participate **(FEMA,** *Determined Accord Tabletop Exercise November 2006*, Office of National Security Coordination, slide 12)

Branch (ICS/NIMS): "The organizational level having functional or geographical responsibility for major aspects of incident operations. A branch is organizationally situated between the section and the division or group in the Operations Section, and between the section and units in the Logistics Section. Branches are identified by the use of Roman numerals or by functional area." (**DHS**, *NIMS*, 2004, pp. 127-128)

Breach: "When a levee or structure loses its normal crest elevation (fails). A breach can be a 1 ft depression or a big gap in a levee. Breaches can occur through erosion or foundation failure; water flows through the breach until it equalizes (a breach causes much deeper water than simple overtopping)." (**USACE/IPET**, *Definitions*, 2008)

BRP: Business Resumption Planning. (**Paul Rosenthal**, *BRP*)

BSI: Build Security In, DHS. (**DHS**, *Build Security In Home*)

BSIR: Bi-annual Strategy Implementation Report. (**DH**S, *BZPP* Update, March 2005, p. 3)

BSL: Biosafety Level.

BSSC: Building Seismic Safety Council.

BTCDP: Bioterrorism Training and Curriculum Development Program.

Buffer Zone Protection Program (BZPP): See Department of Homeland Security Buffer Pgm.

Build Security In Home (BSI), DHS: "Build Security In (BSI) contains and links to best practices, tools, guidelines, rules, principles, and other resources that software developers, architects, and security practitioners can use to build security into software in every phase of its development. BSI content is based on the principle that software security is fundamentally a software engineering problem and must be addressed in a systematic way throughout the software development life cycle. Build Security In is a project of the Software Assurance program of the Strategic Initiatives Branch of the National Cyber Security Division (NCSD) of the U.S. Department of Homeland Security. The Software Engineering Institute (SEI) was engaged by the NCSD to provide support in the Process and Technology focus areas of this initiative. The SEI team and other contributors develop and collect software assurance and software security information that helps to create secure systems." (**DHS**, *BSI*, 18Feb2008)

Building Block Approach: "The building-block approach focuses on exposing participants to a cycle of training and exercises that escalates in complexity, with each exercise designed to build upon the last, in terms of scale and subject matter. For example, a building-block series of exercises may include a *seminar*, which leads to a *tabletop exercise (TTX)*, which leads to a *full-scale exercise (FSE)*." (**FEMA**, *HSEEP Glossary*, 2008)

Building Code: "Codes that architects, builders, and developers use that are in compliance with agreed upon safety standards in a specific area. A building code is a regulation that determines the design, construction, and materials used in building." (**MortgageLoan.com**, 2007)

Building Code Effectiveness Grading Schedule (BCEGS): "The Building Code Effectiveness Grading Schedule (BCEGS) assesses the building codes in effect in a particular community and how the community enforces its building codes, with special emphasis on mitigation of losses from natural hazards. The concept is simple: municipalities with well-enforced, up-to-date codes should demonstrate better loss experience, and insurance rates can reflect that. The prospect of lessening catastrophe-related damage and ultimately lowering insurance costs provides an incentive for communities to enforce their building codes rigorously — especially as they relate to windstorm and earthquake damage. The anticipated upshot: safer buildings, less damage, and lower insured losses from catastrophes. The BCEGS program

assigns each municipality a BCEGS grade of 1 (exemplary commitment to building-code enforcement) to 10. ISO develops advisory rating credits that apply to ranges of BCEGS classifications (1-3, 4-7, 8-9, 10). ISO gives insurers BCEGS classifications, BCEGS advisory credits, and related underwriting information. ISO began implementing the program in states with high exposure to wind (hurricane) hazards, then moved to states with high seismic exposure, and then continued through the rest of the country." (**ISO**, *ISO's BCEGS*, 2008)

Building Partnership Capacity: "Targeted efforts to improve the collective capabilities and performance of the Department of Defense and its partners." (DOD, *Building Partnership Capacity: QDR Execution Roadmap*, May 22, 2006, p. 4)

Building Performance Assessment Teams (BPAT) and Process: "In response to hurricanes, floods, earthquakes, and other disasters, the Federal Emergency Management Agency (FEMA) often deploys Building Performance Assessment Teams (BPATs) to conduct field investigations at disaster sites. The members of a BPAT include representatives of public and private sector entities who are experts in specific technical fields such as structural and civil engineering, building design and construction, and building code development and enforcement. BPATs inspect disaster induced damages incurred by residential and commercial buildings and other manmade structures; evaluate local design practices, construction methods and materials, building codes, and building inspection and code enforcement processes; and make recommendations regarding design, construction, and code issues. With the goal of reducing the damage caused by future disasters, the BPAT process is an important part of FEMA's hazard mitigation activities." (**FEMA**, B*uilding Performance Assessment Report: Hurricane Georges in Puerto Rico*, March 1999, p. 2)

Building Seismic Safety Council (BSSC): "The BSSC was established in 1979 as a Council of the National Institute of Building Sciences. Developed as an entirely new type of instrument, the BSSC deals with the complex regulatory, technical, social, and economic issues involved in developing and promulgating building earthquake risk mitigation regulatory provisions that are national in scope. By bringing together all of the needed expertise and relevant public and private interests, it was believed that issues related to the seismic safety of the built environment could be resolved and jurisdictional problems overcome through authoritative guidance and assistance backed by a broad consensus." (**BSSC**, *About BSSC*, http://www.bssconline.org/ab/index.html)

Business Continuity: "The ability of an organization to continue to function before, during, and after a disaster." (**DHS,** *NIPP*, 2006, p. 103)

Business Continuity: "The process of identifying the impact of potential losses on an organization's functional capabilities; formulating and implementing viable recovery strategies; and developing recovery plans, to ensure the continuity of organizational services in the event of an event, incident, or crisis." (**DOA**, *Infrastructure Risk Management. (Army)*, 2004, p. 12)

Business Continuity: "The ability of an organization to ensure continuity of service and support for its customers and to maintain its viability before after and during an event. (DRII and OR-DAS [Oregon Depart. Of Admin Services] definitions are identical)." (**DigitalCare**, *State of OR Business Cont. Workshop*, 2006, 47)

Business Continuity: Business continuity – emphasis on "continuity" – is the ability of a business to continue operations in the face of a disaster condition…. Business continuity means:

- identifying critical business functions
- identifying risks to critical functions
- identifying ways to avoid or mitigate the risks
- having a plan to continue business in the event of a disaster condition
- having a plan to quickly restore operations to 'business as usual'.

Disaster recovery is an integral part of business continuity. Business continuity does not replace insurance. It is a form of insurance, and should include insurance for life, health, facilities, product and business interruption." (**Glenn**, *What Is BC Planning?* 2002)

Business Continuity: "An ongoing process supported by senior management and funded to ensure that the necessary steps are taken to identify the impact of potential losses, maintain viable recovery strategies, recovery plans, and continuity of services." (**NFPA 1600**, 2007, p.7)

"In the public sector, this phrase is also known as *continuity of operations* or *continuity of government*. Mission, vision, and strategic goals and objectives are used to focus the program. (**NFPA 1600**, 2007, p.11)

Business Continuity: "…the term business continuity encompasses the gamut of mechanisms that maintain continuity in business, including all forms of problem resolution and preventive mechanisms like quality assurance and security." (**Wainschel** 2006, 54)

Business Continuity, Disaster Recovery & Contingency Planning Differences: "A person builds a house on an ocean beach. A storm washes away the beach. The house collapses.

Business continuity would suggest building a barrier reef or moving the house farther inland.

Disaster recovery rebuilds the house in time for the next storm.

Contingency planning takes the same scenario and says: 'A storm will come ashore and damage the house; make sure there is someplace to live while the house is rebuilt'." (**Glenn**, *What Is BC Planning?* 2006, p. 18)

Business Continuity Certified Planner (BCCP): "The BCCP recognizes practitioners who are involved in developing, implementing and maintaining BC procedures and processes for their business sub-units; as well as for senior and middle management involved in BCM." (**ISSA,** *Certifications*, 2007)

Business Continuity Coordinator: "Designated individual responsible for preparing and coordinating the business continuity process. Similar term: disaster recovery coordinator, business recovery coordinator." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 47)

Business Continuity Management (BCM): "Business Continuity Management is an holistic management process that identifies potential impacts that threaten an organisation and provides a framework for building resilience and the capability for an effective response that safeguards the interests of its key stakeholders, reputation, brand and value creating activities." (**BCI,** *Good Practice Guidelines*, 2007)

Business Continuity Management (BCM): "Business Continuity Management (BCM) planning focuses on assuring continuous business processes and is a major factor in an organization's survival during and after a disruption. BCM is a key component of Comprehensive Emergency Management. Companies that don't have good business continuity plans often fail to survive a business disruption. Good continuity planning can make the difference -- and in the long run make you more profitable." (**Davis Logic**, *BCM*, 2005)

Business Continuity Management (BCM): "A holistic management process that identifies potential impacts that threaten an Organization and provides a framework for building resilience with the capability for an effective response that safeguards the interests of its key stakeholders, reputation, brand and value creating activities. The management of recovery or continuity in the event of a disaster. Also the management of the overall program through training, rehearsals, and reviews, to ensure the plan stays current and up to date." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 47)

Business Continuity Management (BCM): "Business continuity management is the process by which an organization prepares for future incidents that could jeopardize the organization's core mission and its long-term viability. Such incidents include local events like building fires, regional events like earthquakes, or national events like pandemic illnesses." (**IIA**, *Business Continuity Management*, July, 2008, p. 3)

Business Continuity Management (BCM): "The process of developing plans to cope with disruptive incidents…" (**UK Cabinet Office**, *The Risk Register*, 2008, 31)

Business Continuity Management (BCM) Components: "The Key Components of the BCM are:

- **Management Support** — Management must show support to properly prepare, maintain, and practice a business continuity plan (BCP) by assigning adequate resources, people, and budgeted funds.
- **Risk Assessment and Risk Mitigation** — Potential risks due to threats such as fire, flood, etc., must be identified, and the probability and potential impact to the business must be determined. This must be done at the site and division level to ensure the risks
- of all credible events are understood and appropriately managed.
- **Business Impact Analysis (BIA)** — The BIA is used to identify business processes that are integral to keeping the business unit functioning in a disaster and to determine how soon these integral processes should be recovered following a disaster.
- **Business Recovery and Continuity Strategy** — This strategy addresses the actual steps, people, and resources required to recover a critical business process.
- **Awareness and Training** — Education and awareness of the BCM program and BC plans are critical to the execution of the plan.

- **Exercises** — Employees should participate in regularly scheduled practice drills of the BCM program and BC plans.
- **Maintenance** — The BCM capabilities and documentation must be maintained to ensure that they remain effective and aligned with business priorities." (**IIA**, *Business Continuity Management*, July, 2008, p. 3)

Business Continuity Management (BCM) Goal: "The goal of BCM is to enable an organization to restore critical business processes after a disaster has been declared. BCM is a simple matter of risk management designed to create business continuity capabilities to match likely risks based on business value." (**IIA**, *Business Continuity Management*, July, 2008, p. 1)

Business Continuity Management (BCM) Process: "The Business Continuity Institute's BCM process (also known as the BC Life Cycle) combines 6 key elements: 1) Understanding Your Business 2) Continuity Strategies 3) Developing a BCM Response 4) Establishing a Continuity Culture 5) Exercising, Rehearsal & Testing 6) The BCM Management Process." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 47)

Business Continuity Management (BCM) Program: "An ongoing management and governance process supported by senior management and resourced to ensure that the necessary steps are taken to identify the impact of potential losses, maintain viable recovery strategies and plans, and ensure continuity of products/services through exercising, rehearsal, testing, training, maintenance and assurance." (**DigitalCare**, *State of OR BC Workshop*, 2006, pp. 47-48)

Business Continuity Management (BCM) Program Maintenance: "One of the most common obstacles preventing organizations from obtaining BC readiness is neglect. Frequently, organizations invest great time and expense in developing plans that are never maintained thereafter. Like any operational plan, BC and CM plans atrophy over time and become less effective as changes in business priorities, people, processes, technology, and operating environment fail to be reflected in the plans. In some cases, "maintenance" is limited to changing the dates on a plan without changing the content. In all cases, the focus of the internal audit group should be on the maintenance of the BC/CM capability, not simply updating a document." (**IIA**, *Business Continuity Management*, 2008, p. 14)

Business Continuity Management (BCM) Program Maintenance Evaluation: "Some techniques to evaluate the maintenance of BC include:

- Evaluating the document change history to determine whether updates to the document are recorded.
- Reviewing maintenance requirements to ensure component maintenance is assigned to specific individuals and management provides guidance to enable the individuals to be effective at maintaining BC capabilities.
- Reviewing BC assumptions to ensure they align well with current operating requirements. BC assumptions should change to address new issues such as additional locations, new concentrations of risk (e.g., a new disaster scenario becomes credible), reliance on new/different third parties, or operations in new countries.
- Reviewing changes in BC assumptions to ensure each change has a basis.

- Reviewing the date of the BIA to ensure the foundation for the BC plans is current enough to provide adequate direction.
- Contacting people responsible for tasks in the plan to determine their understanding of the requirements and confidence that they can perform well. In many cases, people named in plans (especially plans that have existed for several years) are simply replacements for their predecessors in name only and have not been provided the same training as when the BCM program and/or BC plan was initially introduced.
- Reviewing the BC document structure/setup to determine how accurately it reflects the current organizational model and structure.
- Scanning for words such as "current" and "today's" and evaluating whether the associated content is truly keeping pace with the organization, especially if a document is available electronically.
- Reviewing exercise/test results and associated action reports for exceptions (e.g., gaps) requiring remediation.
- Assessing the BCM program and BC recovery capabilities to ensure they have been updated to correct necessary gaps and have been implemented effectively." (**IIA**, *Business Continuity Management*, 2008. pp. 14-15)

Business Continuity Plan: "The Business Continuity Plan pulls together the response of the whole organisation to a disruptive incident. Those using the plan should be able to analyze information from the response team concerning the impact of the incident, select and deploy appropriate strategies from those available in the plan and direct the resumption of business units according to agreed priorities. The components and content of a Business Continuity Plan will vary from organisation to organisation and will have a different level of detail based on the culture of the organisation and the technical complexity of the solutions." (**BCI**, *Good Practice Guide* 2007)

Business Continuity Plan (BCP): "Advance arrangements and procedures that enable an organization to respond to an event in such a manner that critical business functions continue with planned levels of interruption or essential change. SIMILAR TERMS: Contingency Planning, Planning, Business Resumption Planning, Continuity Planning, Continuity of Operation Plans (COOP)." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 48)

Business Continuity Plan (BCP) Testing: "Exercise/test requirements should be documented either inside the plan itself or in the entity-level BCM policy. Most of the standards used to govern BCM programs require three basic elements of a testing regime:

- Tests must be held at periodic intervals. The actual period between the events is determined by the BCM Steering Committee and is based on the program goals and objectives.
- Tests should address a variety of threats/scenarios and different elements within the BCM program. It is possible to address these issues in a series of broadly-based annual exercises or through more targeted site or component-level testing.
- There must be some method to track issues and gaps uncovered in the test and track their resolution." (**IIA**, *Business Continuity Management*, 2008, p. 15)

Business Continuity Plan Administrator: "The designated individual responsible for plan documentation, maintenance, and distribution." (**DigitalCare**, *State of OR BC Wkshop*, 2006, 47)

Business Continuity Planning (BCP): "Business continuity planning involves ensuring that a business is sustainable through a period of significant business interruption caused by a disaster or any other unforeseen disruptive event. It is essential for all types of scenarios ranging from system or component failure caused by a software upgrade to a man-made or natural disaster that broadly impacts a firm's physical assets, buildings and/or people." (**AT&T**, *Business Continuity Preparedness Handbook*, April 2007, p. 2)

Business Continuity Planning (BCP): "Process of developing advance arrangements and procedures that enable an organization to respond to an event in such a manner that critical business functions continue with planned levels of interruption or essential change. SIMILAR TERMS: Contingency Planning, Disaster Recovery Planning, Business Resumption Planning, Continuity Planning." (**DigitalCare**, *State of OR Business Continuity Workshop*, 2006, 48)

Business Continuity Planning (BCP): "Business continuity planning (BCP) is a technique that is designed to help organizations quickly return to normal operations after a crisis. Originally, BCP largely focused on ensuring that an organization's data stores would be preserved in the event of a crisis. Now, however, many view BCP as including all essential aspects of the organization." (**Light**, *Predicting Organizational Crisis Readiness*, 2008, 20)

Business Continuity Planning (BCP): "Assessment of risk to an organization's processes, and the creation of policies, plans, and procedures to minimize the impact of those risks." (**Risky Thinking**, *A Glossary of Risk Related Terms*, 2007)

Business Continuity Planning Options: "Once critical functions and risks to those functions are identified, planners have three options:

- Avoid a risk, typically through redundancy.
- Mitigate a risk by implementation of 'work-arounds'.
- Absorb the risk.

The decision to avoid, mitigate, or absorb is a management decision. The planner makes recommendations based on cost vs. effectiveness and efficiency." (**Glenn**, *What is BC Planning*, 2002)

Business Continuity Planning Phases:

- Project Initiation
- Business Analysis
- Design and Development (Designing the Plan
- Implementation (Creating the Plan)
- Testing
- Maintenance (Updating the Plan) (**DigitalCare,** *State of OR BC Workshop*, 2006, p. 20)

Business Continuity Practice Subject Areas and DRII Professional Practices:

1. Project Initiation and Management

2. Risk Evaluation and Control
3. Business Impact Analysis
4. Developing Business Continuity Strategies
5. Emergency Response and Operations
6. Developing and Implementing Business Continuity Plans
7. Awareness and Training Programs
8. Maintaining and Exercising Business Continuity Plans
9. Public Relations and Crisis Coordination
10. Coordination with Public Authorities.
(**DRJ & DRII**, *GAP for BC Practitioners*, 2007, p. 3)

Business Continuity Program: "An on-going program to ensure business continuity and recovery requirements are addressed, resources are allocated, and processes and procedures are completed and rehearsed. Most effective with management sponsorship and through regular rehearsals." (**DigitalCare,** *State of OR Business Continuity Workshop*, 2006, p. 48)

Business Continuity (BC) Risk Mitigation Strategies: "Developing and deploying BC risk mitigation strategies will help to minimize the impact of disruptive events and will improve response capabilities. Examples of risks and their corresponding mitigation strategies include:

- **Safety risks for various disasters:** Leverage ER and/or Health, Safety, and Environmental team and/or operational plans.
- **Operational failures:** Leverage standard operating procedures and normal maintenance activities.
- **Loss of primary office:** Arrange to move staff members to an alternative office or enable them to work at home, assuming their home is likely to be functional (i.e. not damaged if the event is regional, and home has necessary resources like equipment, computer, network connection, etc.)
- **Loss of IT network connectivity:** Develop IT system and information recovery (disaster recovery) plans to create network redundancy or recovery.
- **Loss of IT data center:** Develop plan to manually perform work processes until IT systems can be restored. Also, develop IT disaster recovery plans to restore IT systems at alternative site." (**IIA**, *Business Continuity Management*, July, 2008, pp. 9-10)

Business Continuity Steering Committee: "A committee of decision makers, business owners, technology experts and continuity professionals, tasked with making strategic recovery and continuity planning decisions for the organization." (**DigitalCare,** *State of OR BC Workshop*, 2006, p. 48)

Business Continuity Strategy: "An approach by an organization that will ensure its recovery and continuity in the face of a disaster or other major outage. Plans and methodologies are determined by the organizations strategy. There may be more than one solution to fulfill an organization's strategy. Examples: Internal or external hot-site, or cold-site, Alternate Work Area reciprocal agreement, Mobile Recovery, Quick Ship / Drop Ship, Consortium-based solutions, etc." ." (**DigitalCare,** *State of OR BC Workshop*, 2006, p. 48)

Business Crisis: "Any problem or disruption that triggers negative stakeholder reactions that could impact the organization's financial strength and ability to do what it does." (**Institute for Crisis Management**, *Annual ICM Crisis Report*, March 2008, p. 1)

Business Emergency Preparedness: "Emergency preparedness is no longer the sole concern of businesses located in earthquake- or tornado-prone areas of the world. Preparedness must now account for man-made disasters, such as terrorist attacks, in addition to pandemics and natural disasters. Knowing what to do during an emergency is an important part of being prepared and may make all the difference when seconds count. The goal of preparedness is to resume business operations with as much transparency, from the customer's perspective, as possible." (**IIA**, *Business Continuity Management*, July, 2008, p. 4)

Business Executives for National Security (BENS): "Business Executives for National Security, a nationwide, non-partisan organization, is the primary channel through which senior business executives can help enhance the nation's security. BENS members use their business experience to drive our agenda, deliver our message to decision makers and make certain that the changes we propose are put into practice. BENS has only one special interest: to help make America safe and secure." (**BENS**, *Mission Statement*, 2006)

Business Impact Analysis (BIA): "The Business Impact Analysis is the foundation on which the whole BCM [Business Continuity Management] process is built. It identifies, quantifies and qualifies the business impacts of a loss, interruption or disruption of business processes so that management can determine at what point in time these become intolerable (after an interruption). This is called the 'Maximum Tolerable Period of Disruption' (MTPD). It therefore provides the data from which appropriate continuity strategies can be determined." (**BCI**, *Good Practice Guide* 2007)

Business Impact Analysis (BIA): "A risk management methodology…" (**FEMA**, *MEF*, 70)

Business Impact Analysis (BIA): "The BIA:
• identifies business functions critical to the business' survival
• identifies risks to those functions
• rates (prioritizes) risks by probability of occurrence and impact on the business
• identifies ways to avoid or mitigate identified risks
• prioritizes recommended avoidance and mitigation options." (**Glenn**, *What is BC Planning*, 2002)

Business Impact Analysis (BIA): "A method of identifying the effects of failing to perform a function or requirement." (**HSC**, *National Continuity Policy Implementation Plan,* 2007, 60)

Business Impact Analysis (BIA) — "The BIA is used to identify business processes that are integral to keeping the business unit functioning in a disaster and to determine how soon these integral processes should be recovered following a disaster. (**IIA**, *Business Continuity Management*, July, 2008, p. 3)

Business Impact Analysis (BIA): "Business impact analysis, a component of the business continuity program, assesses the potential impact on business operations resulting from damage to, interruption of, or failure of processes, systems, utilities, or equipment from a natural or manmade hazard." (**NFPA**, *Implementing NFPA 1600*, 2007, p. 6)

Business Impact Analysis (BIA): "Analysis which identifies the resources critical to an organization's continued existence, identifies threats posed to those resources, assesses the likelihood of those threats occurring, and the impact of each of those threats on the organization. One output of a business impact analysis is a prioritized list of the risks which should be addressed." (**Risky Thinking**, *A Glossary of Risk Related Terms*, 2007)

Business Impact Analysis (BIA) Factors: "Some of the factors that must be evaluated to better understand the scope and impact of the potential event include the:

- **Geographic extent of the impact:** A single building (e.g., fire), entire facility complex (e.g., chemical spill), metropolitan area (e.g., transportation strike), large region (e.g., earthquake), or potentially the world (e.g., pandemic flu).
- **Days of impact:** Number of days before operations will likely return to 75 percent functionality, which means 75 percent of people, resources, and production are functioning. Days of impact may be the period before the organization can replace lost resources, like renting a new building and making it functional after a building fire.
- **Availability of staff (by days):** Percentage of staff that likely would be able to work based on each likely disaster event (by days: 0, 3, 7, 14, or 30). Staff may need to go home for an extended period for some disasters like earthquakes that may damage homes.
- **Availability of operations and/or offices:** Likely percentage of operations and/or office space that is functional (during the days of impact).
- **Availability of IT (during the days of impact):** Likely availability of key IT components for each disaster event. This includes IT infrastructure (logon capabilities), IT network, IT applications, etc." (**IIA**, *Business Continuity Management*, 2008, p. 9)

Business Impact Analysis (BIA) Risk Assessment: "The Business Impact Analysis/ Risk Assessment is a process designed to identify critical business functions and workflow determine the qualitative and quantitative impacts of a disruption, and to prioritize and establish recovery time objectives. SIMILAR TERMS: Business Exposure Assessment, Risk Analysis." (**DigitalCare,** *State of OR Business Continuity Workshop*, 2006, pp. 47-48)

Business Impact Analysis (BIA) Steps:

- *Identifying the Business Processes* -- The first step in a BIA is to identify the business processes performed by the functional team, the resources needed to perform the function, and the critical staff performing the work….
- *Determining RTO and RPO Based on Business Impact* -- The second step in a BIA is to identify the type of business impact if the business process cannot be performed. Below are some types of business impacts:
    - Health and safety (e.g., injury).
    - Environmental (e.g., spill).
    - Customer service (e.g., loss of customers).
    - Financial (e.g., penalties).

  - Regulatory/legal (e.g., governmental action).
  - Reputation (e.g., loss of image)….
- *Identifying the Other Parties and Physical Resources* -- The third step of the BIA is to identify the other parties and physical resources that are critical to the business process, which could include other departments, vendors, other third parties, critical equipment, and physical records.
- **Obtaining Sponsor and Manager Approval of BIA** -- The BCM sponsor and managers of each team must review and approve the BIA for their scope of operations. Since managers throughout the organization are responsible for ensuring the business continuity and recovery solutions are implemented, they must own the BIA for their team." (**IIA**, *Business Continuity Management*, 2008, pp. 10-11)

Business Interruption: "Any event, whether anticipated (i.e., public service strike) or unanticipated (i.e., blackout) which disrupts the normal course of business operations at an organization's location. Similar terms: outage, service interruption. Associated terms: business interruption costs, business interruption insurance." (**DigitalCare,** *State of OR Business Continuity Workshop*, 2006, p. 48)

Business Interruption Coverage: "Commerical property insurance policies often provide "business interruption" coverage that protects against many economic losses, including those from hurricanes. Business interruption coverage usually includes the costs that you incur when you have to relocate your business for a specified period of restoration.." (*Insure.com.* "Hurricane Gustav Losses at Least $4 Billion." September 2, 2008)

Business Interruption Civil Authority Coverage: "*Civil Authority* coverage often applies whenever you lose business income because access to your premises is prohibited as the direct result of damage to or destruction of property belonging to others, as long as it's caused by a covered peril." (*Insure.com.* "Hurricane Gustav Losses at Least $4 Billion," September 2, 2008)

Business Interruption Extra Expense Coverage: "*Extra Expense* coverage indemnifies your business for any increased cost of business operations above the norm because of a peril covered by your policy. One example would be the purchase of a generator to continue to operate because of an interruption of power caused by the hurricane." (*Insure.com.* Sept. 2, 2008)

Business Interruption Gross Earnings Coverage: "*Gross Earnings* coverage reimburses you for the amount of gross earnings minus normal expenses that you would have earned but for the interruption of its business (profits). Insurers may reduce the amount to be paid by any savings that your business gains because of the business interruption." (*Insure.com.* September 2, 2008)

Business Interruption Profit and Commission Coverage: "*Profit and Commission* coverage applies when your business inventory has been destroyed or damaged and you have been deprived of the opportunity to sell that inventory to the public." (*Insure.com.* Sept. 2, 2008)

Business Process Analysis (BPA): "The method of examining, identifying, and mapping the functional processes, workflows, activities, personnel expertise, systems, data, and facilities inherent to the execution of a function or requirement.

- When preparing the BPA for your organization consider the following:
- The four pillars of continuity capability (leadership, staff, facilities and communications)
- Necessary resources
- External interdependencies
- Internal interdependencies." (**FEMA**, *MEF/PMEF Workshop, Unit 5*, 2008, slide 131)

Business Process Analysis (BPA): "A method of examining, identifying, and mapping the functional processes, workflows, activities, personnel expertise, systems, data, and facilities inherent to the execution of a function or requirement." (**HSC**, *National Continuity Policy Implementation Plan*, August, 2007, p. 60)

Business Process Mapping (BPM): A business process map is a visual representation of a process – sequentially illustrating each step in the process, who completes each step, and the time taken to complete each step… The basic steps to process mapping are:

- Establish the scope or your project
- Map the current business process
- Identify opportunities to improve
- Redesign the business process
- Identify assumptions and tools required for success (these will be the starting point for implementation planning. (**Government of British Columbia**, *Regulatory Reform Initiative*, no date)

Business Recovery and Continuity Strategies: "Business recovery and continuity strategies must be developed for critical business processes identified during the BIA….The business recovery and continuity strategies may include some of the following types of solutions:

- **Manual work processes:** Work can be done manually while IT systems are down.
- **Outsourcing:** Some work can be performed by external companies, competitors (reciprocal agreement), or secondary vendors.
- **Disaster recovery for IT:** An IT recovery solution will be needed for critical systems, but because these can be very expensive, manual work processes may be used initially following a disaster.
- **Alternative staffing:** Identify other staff members who can perform the job function.
- **Alternative facilities:** Identify alternative facilities where the primary staff can work." (**IIA**, *Business Continuity Management*, 2008, p. 11)

Business Resilience: "The ability to rapidly adapt and respond to risks and opportunities in order to maintain continuity of business operations, remain a trusted partner and enable growth." (**iJET** Intelligent Risk Systems, "Business Resiliency for the Global Marketplace: Transorming Operating Risk into Competitive Advantage," 2008)

Business Resumption Planning (BRP): "The BRP is a plan activated during or immediately after an emergency and is aimed at permitting the rapid and cost effective resumption of an organization's essential operations in order to maintain continuity of service to its clients. (**Manitoba Emergency Measures Organization**, *Business Resumption Planning*, 1996, p. 9)

Business Resumption Planning (BRP): "Modern organizations have a large variety of operational and managerial functions whose continuous operations are critical to the organizations continuing viability. Business Resumption Planning (BRP) involves arranging for emergency operations of these critical business functions and for resource recovery planning of these functions following a natural or man-made disaster. Business Resumption Plans are needed for all such organizational units, including data centers, information systems (IS) supported functions, and those organizational functions which are performed manually…. Business resumption planning should be an integrated portion of a total security program. The security program should cover physical security of facilities and equipment, data security of automated files and manual records, protection of all levels of personnel, and business resumption planning." (**Paul Rosenthal**, *BRP*)

Business Risk Assessment: "BU [business unit] or regional management should complete a BC [business continuity] risk assessment for each of its business functions and associated sites (city or region). The purpose of this exercise is to identify likely risks that could disrupt critical business processes performed at specific locations of operation. The BC risk assessment is used to shape the overall BCM program scope by providing a list of likely events and associated consequences that should be addressed in a risk mitigation plan (e.g., prevention) and the BCM program. There is no way to predict all risks or to mitigate all known risks that may need to be accepted. Participants in the BC risk assessment should include individuals such as staff from the business as well as staff from the health, safety, and environment group; facilities management; legal; human resources; and personnel from the medical field…. When evaluating disruptive events, it's important to identify those that are credible and look for all potential events that may impact business operations. Possible methods for predicting future disruptive events include:

- Looking at historical data associated with similar organizations in the same region.
- Using government or industry data concerning possible risks.
- Using subject matter experts when the business model changes or limited data is available to perform a detailed risk assessment. (**II**A, *Business Continuity Management*, July, 2008, pp. 8-9)

BWEEP: BioWatch Exercise and Evaluation Program. (**DHS/OIG**, *DHS' Management of BioWatch*, 2007, p. 12)

C Zone, NFIP: "C Zone is defined as an area of minimal flood hazard, usually depicted on the Flood Insurance Rate Map as above the 500-year flood level of the primary source of flooding. C Zones tend to have local, shallow flooding problems. B and C Zones may have flooding that does not meet the criteria to be mapped as a Special Flood Hazard Area, especially ponding, localized drainage problems, and streams that drain smaller watersheds." *(***FEMA,** *Reducing Damage from Localized Flooding – A Guide for Communities*, 2005, vii)

CAAP: Critical Asset Assurance Program (DoD Directive No. 5160.54, January 20, 1998). ; [Note: Replaced "DoD Key Asset Program (KAPP)," June 26, 1989.]

Calamity: "A massive or extreme catastrophic disaster that extends over time and space." Notes the Black Death of the 14th century as an example. (**Drabek** 1996, Session 2, p.4)

California Catastrophic Earthquake Readiness Response Plan (CCERP), FEMA: "The planning for California Catastrophic Earthquake Readiness Response Plan (CCERRP) started in July, 2007. This endeavor, which will include the contribution and participation of Federal, State and local government as well as other critical emergency management partners, will create an overall operational plan for a response to a catastrophic event in the State of California. The first phase will produce a Concept of Operations (CONOP) that will clarify authorities between Federal and State partners, integrate the doctrine and policy of the National Incident Management System and California's State Emergency Management System, and provide a statewide all hazards framework for responding to a catastrophic event that exceeds California's considerable capabilities. (**Maxwell**, *Report to NEMA*, October, 2007)

California Earthquake Authority (CEA): "The CEA is structured with many different layers of capital:

• Initial layers from private insurers who were permitted not to offer earthquake coverage in exchange for their voluntary participation in capitalizing the CEA and covering the next limited layer of earthquake losses
• Various layers of reinsurance
• A layer financed by state revenue bonds
• A top layer funded by post-event assessments on participating private insurers. The coverage provided by the CEA is capped, currently at approximately $8.2 billion. This means that in a future earthquake, insured parties would bear any losses exceeding the CAT limit (unless they bought additional coverage on their own)."[4] (**Financial Services Roundtable**, *Nation*, 2007, 47)

California Earthquake Authority (CEA): "…the California Earthquake Authority was formed in 1996 in response to a crisis in the residential property insurance market following the Northridge earthquake in 1994. According to the Insurance Information Institute, California insurers had collected only $3.4 billion in earthquake premiums in the 25-year period prior to the Northridge earthquake but had paid out more than $15 billion on Northridge claims alone. Moreover, insurers representing about 95 percent of the homeowners insurance market in California began to limit their exposure to earthquakes by writing fewer or no new homeowners insurance policies, triggering a crisis that threatened California's housing market and stalled the state's recovery from recession." (**GAO**, *Natural Disasters: Public Policy Options*…, Nov 2007, 18 see, also, pp. 57-59)

Call Tree: "A document that graphically depicts the calling responsibilities and the calling order used to contact management, employees, customers, vendors, and other key contacts in the event of an emergency, disaster, or severe outage situation." (**DigitalCare,** *State of OR Business Continuity Workshop*, 2006, p. 48)

CAMEO (Computer-Aided Management of Emergency Operations): "CAMEO ® is a system of software applications used widely to plan for and respond to chemical emergencies. It is one of the tools developed by EPA's Chemical Emergency Preparedness and Prevention Office (CEPPO) and the National Oceanic and Atmospheric Administration Office of Response and Restoration (NOAA), to assist front-line chemical emergency planners and responders. They can use CAMEO to access, store, and evaluate information critical for developing emergency plans. In addition, CAMEO supports regulatory compliance by helping users meet the chemical inventory reporting requirements of the Emergency Planning and Community Right-to-Know Act (EPCRA, also known as SARA Title III). CAMEO also can be used with a separate software application called LandView ® to display EPA environmental databases and demographic/economic information to support analysis of environmental justice issues.

---

[4] The FSR notes, however, that "Unlike the vast majority of homeowners in states exposed to hurricanes who purchase coverage for this risk (and are typically required to do so by their lenders), no more than a third of California homeowners have purchased earthquake insurance. Currently, the take-up rate is less than 14 percent. Two reasons are generally given for this low rate of purchase: Californians generally don't believe they will suffer from significant earthquake damage while they own their homes, or if they do, that the loss will be small. In addition, the standard deductible under the CEA policy is 15 percent of the replacement cost of the structure, which for many homes is a large sum of money. Given the price even for this coverage (and the even higher premiums for a policy with a lower 10 percent deductible), most homeowners choose not to purchase the insurance.") (Ibid)

The CAMEO system integrates a chemical database and a method to manage the data, an air dispersion model, and a mapping capability. All modules work interactively to share and display critical information in a timely fashion. The CAMEO system is available in Macintosh and Windows formats." (**EPA**, *What is CAMEO?*, February 12 2007 update)

Camp: "A geographic site, within the general incident area, separate from the Incident Base, equipped and staffed to provide food, water, sleeping and sanitary facilities for incident personnel." (Capital Health Region, Edmonton, *ICS100: Incident Command System Training Student Manual*, Canada: CHR Office of Emergency Preparedness, March 2007, p. 50)

Camps (ICS): "Camps are separate from the Incident Base and are located in satellite fashion from the Incident Base where they can best support incident operations. Camps provide certain essential auxiliary forms of support, such as food, sleeping areas, and sanitation. Camps may also provide minor maintenance and servicing of equipment. Camps may be relocated to meet changing operational requirements." (**DHS**, *NIMS*, 2004, ICS Annex, p. 94)

Canada/United States Agreement on Emergency Planning (1987): *The Agreement Between the Government of Canada and the Government of United States of America on Cooperation in Comprehensive Civil Emergency Planning and Management,* 28 April 1986 is designed to strengthen cooperation between Canada and the United States, encouraging a more effective response to peacetime emergencies. The agreement sets out principles of cooperation and establishes a joint consultative group to foster comprehensive emergency planning and management. The Treaty can be found at the following address: http://www.treaty-accord.gc.ca/ViewTreaty.asp?Treaty_ID=103615 (**Transport Canada**, *Cross-Border Emergency Response Guide* (3rd Edition), 2007, p. 10)

CANUS: Canada-United States. (**JCS/DOD**, *CBRNE CM*, 2006, p. IV-16)

CANUS Joint Radiological Emergency Response Plan (JRERP): "After the nuclear accidents at Three Mile Island, Pennsylvania in 1979 and at Chernobyl, Ukraine in 1986, Canada and the US recognized the need for cooperation in development of a response plan for radiological events. Consequently, the two countries developed a joint plan to deal effectively with a potential or actual peacetime radiological event that could affect both countries or be of a magnitude that would require assistance from the neighboring country. The CANUS JRERP is currently being rewritten to incorporate the Department of Homeland Security and Public Safety and Emergency Preparedness Canada. The CANUS JRERP, is designed to do the following:

(a) Alert the appropriate federal authorities within each country of the existence of a threat from a potential or actual radiological event.

(b) Establish a framework of cooperative measures to reduce, to the extent possible, the threat posed to public health, safety, property, and the environment.

(c) Facilitate coordination between the federal government in each country in providing support to provinces and states affected by a potential or actual radiological event." (**JCS/DOD**, *CBRNE Consequence Management* (JP 3-41), 2006, p. IV-16)

CAP: Capabilities Assessment Pilot(s). (**DHS**, 2006)

CAP: Capabilities Assurance Process. (**FEMA**, *CHER-CAP Fact Sheet*, May 8, 2007)

CAP: Crisis Action Planning. (**DoD**, *DOD Dictionary of Military and Related Terms*, 2007)

CAP: Crisis Action Process. DOD.

CAP-SSSE: Community Assistance Program – State Support Services Element**.** (**FEMA**)

Capabilities: "Capabilities are defined as providing: *…the means to accomplish a mission or function and achieve desired outcomes by performing critical tasks, under specified conditions, to target levels of performance*." (**DHS**, *NPG, Appendix B, Capabilities-Based Preparedness Overview*, 2007, p. 30)

Capabilities: "Capabilities…

- provide the means to achieve measurable outcomes
- through the performance of critical tasks
- under specified conditions
- to target levels of performance
- with any combination of properly planned, organized, equipped, trained and exercised personnel that achieves the desired outcome." (**FEMA**, *National Preparedness System: Current Prototype & Proposed Implementation Approach*, August 2, 2007, slide 4)

Capabilities-Based Planning: "**Capabilities-Based Planning…is All-Hazards Planning."** (**DHS** {Gruber}, *HSPD-8 "National Preparedness" Status Update*, December 7, 2004, slide 6)

Capabilities-Based Planning: "Capabilities-based planning is defined as planning, under uncertainty, to build capabilities suitable for a wide range of threats and hazards while working within an economic framework that necessitates prioritization and choice. It addresses uncertainty by analyzing a wide range of realistic *scenarios* to identify required *capabilities*, and it is the basis for guidance such as the *National Preparedness Goal*, *Target Capabilities List (TCL)*, and *Universal Task List (UTL)*." (**FEMA**, *HSEEP Glossary*, 2008)

Capabilities-Based Planning: "This planning approach focuses on available personnel and resources that can be applied to address significant incidents. Requirements and capabilities are

derived from the National Planning Scenarios, the *National Homeland Security Plan,* strategic planning, risk assessments, concepts of operations, and threat information. This capabilities-based planning approach and the *National Preparedness Guidelines* foster vertical and horizontal integration of Federal, State, local, and Tribal plans allowing State, local and Tribal capability assessments to inform Federal requirements and capabilities planning." (**FEMA**, *Interim IPS* (Draft 2.3), July 3, 2008 copy, pp. 2-10, 2-11)

Capabilities-Based Planning Process:

1. Convene Working Group
2. Determine Capability Requirements
3. Assess Current Capabilities Levels
4. Identify Needs and Methods to Fill Gaps
   a. Develop Options
   b. Analyze Options
   c. Choose Options
5. Update Strategies/Submit Investment Justifications
6. Review Justifications/Allocate Funds
7. Update and Execute Program Plans
   a. Plan
   b. Equip
   c. Train
   d. Exercise
8. Assess and Report
   a. Capability
   b. Compliance
   c. Performance (**DHS**, *Development of the Capabilities Assessment Pilots*, 2006)

Capabilities-Based Planning Process and Tools:

- Threat Analysis – National Planning Scenarios
- Mission Area Analysis – Task Taxonomy
- Task Analysis – Universal Task List
- Capabilities Development -- Target Capabilities List
- Assessment and Strategy Development -- Assessment, Exercises, Nantional Prep Stm

(**FEMA**, *National Preparedness System: Current Prototype & Proposed Implementation Approach*, August 2, 2007, slide 5)

Capabilities-Based Planning Process: A process "…"that integrates strategic planning with activities such as threat and vulnerability assessment, mission analysis, risk assessment, investment strategy development, resource allocation, program planning performance-based assessment, and system requirements analysis." (**HSI,** *HS Strategic Planning*, March 2007, 3)

Capabilities-Based Preparedness: "The *Guidelines* establish a capabilities-based approach to preparedness. Simply put, a capability provides the means to accomplish a mission. The

Guidelines address preparedness for all homeland security mission areas: prevention, protection, response, and recovery." (**DHS**, *National Preparedness Guidelines*, September 13, 2007, p. 4)

Capabilities-Based Preparedness: "Capabilities-Based Preparedness encourages flexibility and requires collaboration. More importantly, it helps to ensure that operations planners and program managers across the Nation can use common tools and processes when making planning, training, equipment, and other investments, and can produce measurable results." (**DHS**, *National Preparedness Guidelines*, September 13, 2007, p. 10)

Capabilities-Based Preparedness: "Capabilities-Based Preparedness is a form of all-hazards planning…. Capabilities-Based Preparedness is defined as:

> *…preparing, under uncertainty, to provide capabilities suitable for a wide range of challenges while working within an economic framework that necessitates prioritization and choice.*

Capabilities-Based Preparedness is a way to make informed choices about how to manage the risk and reduce the impact posed by potential threats. It focuses decision making on building and maintaining *capabilities* to prevent and protect against challenges (e.g., intelligence analysis, critical infrastructure protection, etc.) and to respond and recover when events occur (e.g., onsite incident management, medical surge, emergency public information, and economic recovery). The process rests on a foundation of multi-disciplinary, cross-governmental, and regional collaboration to determine measurable capability targets, to assess current levels of capabilities, and to find ways to close the gaps. As entities make choices in preparedness programs and activities, they will be able to improve their own preparedness, focus available assistance on areas of greatest need, and collaborate with others using a common reference framework." (**DHS**, *NPG, Appendix B, Capabilities-Based Preparedness Overview*, 2007, p. 30)

Capabilities-Based Preparedness Process: "The Capabilities-Based Preparedness process…involves homeland security partners in a systematic and prioritized effort to accomplish the following:

- Convene working groups;
- Determine capability requirements;
- Assess current capability levels;
- Identify, analyze, and choose options;
- Update plans and strategies;
- Allocate funds;
- Update and execute program plans; and
- Assess and report.

The process emphasizes collaboration to identify, achieve, and sustain target levels of capability that will contribute to enhancing overall national levels of preparedness…. The core of the Capabilities-Based Preparedness approach is the comparison of current capabilities with risk-based target capability levels." (**DHS**, *National Preparedness Guidelines, Appendix B*, 2007, pp. 32-34)

Capabilities-Based Preparedness Working Groups: "The preparedness process should begin with formation of a chartered, representative working group. It is strongly encouraged that, wherever possible, previously established working groups be used for this process. The working group should be multi-disciplinary, multi-agency, and multi-jurisdictional. Where appropriate, working groups should include the private sector and nongovernmental partners. The intent is to bring together regional practitioners from across disciplines so that they can be effective advisors to the senior decision-makers who formulate strategies, set priorities, and allocate funds." (**DHS**, *National Preparedness Guidelines, Appendix B*, 2007, p. 34)

Capability: "…a capability provides the means to accomplish a mission." (**DHS**, *National Preparedness Guidelines*, September 13, 2007, p. 4) "A capability consists of the combination of elements required to deliver the desired outcome. (**DHS**, *National Preparedness Guidelines*, September 13, 2007, p. 5) "A capability provides the means to accomplish a mission or function resulting from the performance of one or more critical tasks, under specified conditions, to target levels of performance. A capability may be delivered with *any* combination of properly planned, organized, equipped, trained, and exercised personnel that achieves the desired outcome." (**DHS**, *National Preparedness Guidelines*, September 13, 2007, p. 40)

Capability: "A capability is provided with proper planning, organization, training, equipment, and exercises." (**DHS**, *TCL*, 2007, p. 8)

Capability: "A capability provides the means to accomplish one or more tasks under specific conditions and to specific performance standards. A capability may be delivered with any combination of properly planned, organized, equipped, trained, and exercised personnel that achieves the intended outcome." (**DHS**, *Universal Task List, 2.1*, 2005, p. B-1 (142))

Capability Analysis: "The process of identifying and drawing conclusions about the functional capabilities of an adversary's ability to disrupt the infrastructure and the Army's capabilities to ensure continuity of business operations under all conditions." (**DOA**, *Infrastructure Risk Management. (Army)*, 2004, p. 13)

Capability and Hazard Identification Program (CHIP), FEMA: "Instituted in 1989 to replace IEMS [Integrated Emergency Management System], FEMA established a national database of information on the status of emergency preparedness and the impact of FEMA funds on State and local government operations. Emergency management data were collected for 3,300 communities and maintained in a comprehensive and easily accessible database. However, a drawback of the 'self-assessment' was the lack of consistent criteria for reporting, which resulted in incomplete and inaccurate information. Through regular updates of the CHIP database, local government officials provided information on natural hazards in their areas, including the likelihood and frequency of events and the impacts on local population and property. They also provide information on local emergency management expenditures, including totals expended and the sources of funding. By answering questions separated into five topic areas, local governments provided information to allow assessment of their capability to deal with disasters. The five topic areas are: planning, logistics, training and education, operations, and administration. On the Federal level, the information from CHIP was used to prepare reports to the U.S. Congress on the status of emergency management capabilities. It also

was used to evaluate the effectiveness of FEMA programs in delivery of financial and technical assistance to State and local governments. At the local level CHIP was used as a planning tool, guiding local jurisdictions through a logical sequence: identify hazards; assess capabilities to address those hazards; set priorities for improving those capabilities; and schedule process activities to improve those capabilities." (**FEMA**, *Multi Hazard Identification and Risk Assessment*, 1997, p. xxii)

Capability and Resource Availability: Capability and resource availability fall into four categories: *Organic, Assigned, Earmarked*, and *Potential*.

- *Organic Capabilities*. Organic capabilities are those that are an integral part of the basic structure of an organization, and are thus immediately responsive to the leadership of that organization. Organization leadership is responsible for developing, sustaining, and employing these organic capabilities.

- *Assigned Capabilities*. Assigned capabilities are those that supporting entities have agreed to allocate to a supported organization for agreed upon purposes in agreed upon situations. Assignment to supported organizations is automatic once predetermined and pre-agreed situation thresholds are reached. Assignment agreements are regarded as binding.

- *Earmarked Capabilities*. Earmarked capabilities are those that organizations *intend* to allocate to a supported organization at some future time and situation. Earmarked capabilities are allocated to support other organizations as the situation permits, but their commitment has not been prearranged. These capabilities are often formed into a pool of available resources, none of which have been allocated to a given organization. Resources and assistance available under the Emergency Management Assistance Compact (EMAC) are an example of earmarked capabilities.

- *Potential Capabilities*. Potential capabilities are those that *might* be allocated to a supported organization in specified circumstances. Potential capabilities should not be regarded as a highly reliable resource. Their accessibility is determined on a case-by-case basis. (**FEMA**, *(Interim) Integrated Planning System (IPS) for Homeland Security (Draft Version 2.3)*, July 3, 2008, pp. 2-3. 3-4)

Capability Assessment: After conducting a Hazards Analysis, **"**[t]he next step for the jurisdiction is to assess its current capability for dealing with the hazards that have been identified… Current capability is determined against standards and criteria FEMA has established as necessary to perform basic emergency management functions, e.g., alerting and warning, evacuation, emergency communications. The resulting information provides a summary of the capabilities that exist and upon which current plans should be prepared…and leads to the identification of the jurisdiction's weaknesses." (**FEMA**, *IEMS Process Overview*, 1983, p. 7)

Capability Assessment for Readiness (CAR): "The Federal Emergency Management Agency (FEMA) and the National Emergency Management Association (NEMA) are working together aggressively to reduce losses from disasters. As an important component of this effort, FEMA

and NEMA joined together in 1997 to develop the CAR, an assessment process and tool that States, Territories, and Insular Areas can use to evaluate their own operational readiness and capabilities in emergency management. The CAR was implemented first in 1997 and has matured into a sophisticated and accepted, automated, self-assessment tool that helps the States, Territories, and Insular Areas establish sound mitigation, preparedness, response, and recovery practices, establish priorities, and analyze program performance.
"The CAR was revised after its initial implementation in 1997, and a second self-assessment is underway this year. The CAR is available in automated or manual versions and is divided into 13 Emergency Management Functions (EMF) common to emergency management programs: 1) laws and authorities; 2) hazard identification and risk assessment; 3) mitigation; 4) resource management; 5) planning; 6) direction, control, and coordination; 7) communications and warning; 8) operations and procedures; 9) logistics and facilities; 10) training; 11) exercises, evaluation, and corrective actions; 12) crisis communications, public education, and information; and 13) finance and administration.
"Each EMF is divided into broad criteria called attributes, and the attributes are subdivided further into more detailed criteria called characteristics, to facilitate the self-assessment. Using the CAR, the States will develop a self-profile of strengths and weaknesses in their emergency management programs that then can be used for strategic planning and budgeting. The FEMA uses the aggregate data from this process to produce a national report. Work is underway to develop a CAR process for local jurisdictions and Indian Tribal Governments to use in assessing their emergency management programs." (**Hampton**, *CAR, Prehospital Dis. Med., 15(3)*, 2000)

Capability Assessments: "Capability assessments measure the current level of capability against the target levels of capability from the TCL [Target Capabilities List] applicable to the respective level of government." (**DHS**, *National Preparedness Guidelines*, 2007, p. 34)

Capability Elements: "…capability elements define the resources needed to perform the critical tasks to the specified levels of performance, with the recognition that there is rarely a single combination of capability elements that must be used to achieve a capability." (**DHS**, *TCL*, 2007, p. 8)

"The Capability Elements serve as a guide for identifying and prioritizing investments when working to establish a capability. Further, existing programs and activities represented as Capability Elements have been included for reference purposes only, and are subject to change in response to an evolving threat environment and competition for scarce resources." (**DHS**, *TCL*, 2007, p. 9)

Capability Elements (TCL):

Planning
Organization and Leadership
Personnel
Equipment and Systems
Training
Exercises, Evaluations, and Corrective Actions. (**DHS**, *TCL*, 2007, p. 9)

Capability Shortfall: "The difference between current capability…and the optimum capability…" (**FEMA**, *IEMS Process Overview*, 1983, p. 8)

Capacity: "A combination of all the strengths and resources available within a community, society or organization that can reduce the level of risk, or the effects of a disaster. Capacity may include physical, institutional, social or economic means as well as skilled personal or collective attributes such as leadership and management. Capacity may also be described as capability. (**UN/ISDR**, *Terminology: Basic Terms of Disaster Risk Reduction*, 2004, p. 1)

Capacity, Adaptive: "…a combination of a society's ex ante vulnerability to damages from natural hazards and its ex post resilience or ability to cope with the damages that result." (**Dayton-Johnson**, *Natural Disasters and Adaptive Capacity,* 2004)

Capacity, Adaptive and Coping: "While the concept of coping capacity is more directly related to an extreme event (e.g. a flood or a winter storm), the concept of adaptive capacity refers to a longer time frame and implies that some learning either before or after an extreme event is happening. The higher the coping capacity and adaptive capacity, the lower the vulnerability of a system, region, community or household. Enhancement of adaptive capacity is a necessary condition for reducing vulnerability, particularly for the most vulnerable regions and socioeconomic groups." (**Peltonen**, *Coping Capacity and Adaptive Capacity*, 2006)

Capacity, Coping: "…a function of: perception (of risk and potential avenues of action… the ability to cope is information contingent); possibilities (options ranging from avoidance and insurance, prevention, mitigation, coping); private action (degree to which special capital can be invoked); and public action…" (**IPCC**, *Climate Change 2001. Synthesis Report. A Contribution of Working Groups I, II, and III to the Third Assessment Report of the Intergovernmental Panel on Climate Change*, 2001)

Capacity, Coping: "The manner in which people and organisations use existing resources to achieve various beneficial ends during unusual, abnormal and adverse conditions of a disaster phenomenon or process." (**UNDP**, *Reducing Disaster Risk…Global Report*, 2004)

Capacity, Coping: "The ability to cope with threats includes the ability to absorb impacts by guarding against or adapting to them. It also includes provisions made in advance to pay for potential damages, for instance by mobilizing insurance repayments, savings or contingency reserves. (**UNEP,** *Global Environment Outlook 3 Past, Present and Future Perspectives*, 2002)

Capacity, Coping: "The coping capacity of human society is a combination of all the natural and social characteristics and resources available in a particular location that are used to reduce the impacts of hazards (IATFDR 2001). These include factors such as wealth, technology, education, information, skills, infrastructure, access to resources and management capabilities." (**UNEP**, *Global Environment Outlook (GEO-3)*, Chapter 3, Human Vulnerability to Environmental Change, p. 303)

Capacity, Coping: "The means by which people or organizations use available resources and abilities to face adverse consequences that could lead to a disaster. In general, this involves managing resources, both in normal times as well as during crises or adverse conditions. The strengthening of coping capacities usually builds resilience to withstand the effects of natural and human-induced hazards." (**UN/ISDR**, *Living with Risk*... 2004 version)

Capacity Building: "Improving and building the technical and managerial skills and resources within an organisation." (**European Environment Agency**, *EEA Environmental Glossary*, 2007)

Capacity Building: "Building capacities for prevention, preparation and recovery means learning to assess vulnerabilities, reinforcing expertise in relevant technical, social and scientific institutions, and establishing partnerships of mutual learning that extend from communities and districts to central authorities…" (**Fagen and Martin** 2005, 12)

Capacity Building: "Efforts aimed to develop human skills or societal infrastructures within a community or organization needed to reduce the level of risk. *In extended understanding, capacity building also includes development of institutional, financial, political and other resources, such as technology at different levels and sectors of the society.*" (**UN/ISDR**, *Terminology: Basic Terms of Disaster Risk Reduction*, March 31, 2004, p. 1)

Capacity for Disaster Reduction Initiative (CADRI): "CADRI was created in 2007 as a joint programme of the United Nations Development Programme's Bureau for Crisis Prevention and Recovery (UNDP/BCPR), the United Nations Office for the Coordination of Humanitarian Affairs (UN OCHA), and the secretariat of the International Strategy for Disaster Reduction (ISDR)…. CADRI succeeds the UN Disaster Management Training Programme (DMTP), a global learning initiative, which trained United Nations, government and civil society professionals between 1991-2006. DMTP is widely known for its pioneering work in developing high quality resource materials on a wide range of disaster management and training topics. More than twenty trainers' guides and modules were developed and translated. CADRI's design builds upon the success and lessons learned from the DMTP. While the importance of capacity is now widely recognized, lessons of experience have demonstrated that the development of capacity is far more complex than previously thought. Capacity development goes beyond training or the transfer of technology, requiring local ownership and political leadership.

CADRI's design also reflect the significant growth in training and related organizational learning throughout the world and it is these resources that CADRI seeks to draw upon and expand, thereby making effective use of the wealth of capacity development experience and expertise that resides within the broader ISDR system and making use of the advances in technology for networking and learning purposes. CADRI's design also recognizes the critical role that the UN system plays at the national level in supporting government's efforts to advance disaster risk reduction. …The three organizations that comprise CADRI provide oversight for its strategic direction and management." (**Capacity for Disaster Reduction Initiative**, *Who We Are*, 2007)

CAPRA: Critical Asset and Portfolio Risk Analysis. (**Ayyub**, *CAPRA*, 2007, 789)

CAR: Capability Assessment for Readiness.

Cargo Advanced Automated Radiography System (CAARS): Provides "Automatic detection of high density shielding that might be used to avoid passive detection." (**DHS/DNDO**, *DNDO Overview*, April 20, 2006, slide 13)

Cargo Advanced Automated Radiography System (CAARS) Goals:

- Develop and deploy a radiography system that automatically detects threat materials in mixed commerce without impeding the flow of commerce
- Conduct radiographic inspection of 50% of all incoming cargo
- Improved penetration capability. (**DHS/DNDO**, *DNDO Overview*, April 2007, slide 15)

CARRI: Community and Regional Resilience Initiative. (**ORNL**, *CARRI*, 2007)

CARRS: Cargo Advanced Automated Radiography System. (**DHS**, *Opening Statement of Vayl Oxford*, March 2007, p. 3)

Cascadia Region Earthquake Workgroup (CREW): "The Cascadia Region Earthquake Workgroup (CREW) is a coalition of private and public representatives working together to improve the ability of Cascadia Region communities to reduce the effects of earthquake events…. In less than 50 years, a number of great Cascadia-like earthquakes have occurred around the Pacific Rim, including Chile (1960), Alaska, (1964) and Mexico (1985). A unique aspect of a great Cascadia earthquake is the strong likelihood that the three greater metropolitan areas of Portland, Seattle, and Vancouver will simultaneously feel the effects of strong and sustained ground shaking. This wide-spread ground shaking combined with accompanying elevation changes and the likely generation of a tsunami along the Pacific coast, will cause loss of life, property damage, and business interruption in vulnerable locations through out southwestern British Columbia, Washington, Oregon, and northwestern California. The broad geographic distribution of damaging impacts will generate special challenges and severely stress the response and recovery resources of the three Pacific states and British Columbia.
of Pacific Rim trade involving Ports like Vancouver, Seattle, Tacoma, and Portland.

Goals

- *Promote* efforts to reduce the loss of life and property.
- *Conduct* education efforts to motivate key decision makers to reduce risks associated with earthquakes.
- *Foster* productive linkages between scientists, critical infrastructure providers, businesses and governmental agencies in order to improve the viability of communities after an earthquake event." (**CREW**, *About CREW*," accessed November 4, 2007)

CAT: Catastrophe.

CAT: Crisis Action Team. (**DHS**, *DHS Ops. Coordination: IMP: CAP*, Jan 2008, slide 20)

Catastrophe: An event in which a society incurs, or is threatened to incur, such losses to persons and/or property that the entire society is affected and extraordinary resources and skills are required, some of which must come from other nations.

Catastrophe: "A catastrophic disaster is one that so overwhelms response agencies that local, state, and federal resources combined are insufficient to meet the needs of the affected public." "**Bissell**, Catastrophe Workshop, EM Hi-Ed Conference, 2005)

Catastrophe: "In catastrophic disasters, tens-or-hundreds of thousands of lives are immediately at risk, State and local resources may well be exhausted from the onset, and government leaders unable to determine or communicate their priority needs." (**Carafano** 2005, 2)

Catastrophe: "Mark Brandenburg, MD, FACEP, FAAEM, Associate Professor, Director of Emergency Medicine Student Programs, University of Oklahoma College of Medicine-Tulsa… noted a difference between disasters (such as the Oklahoma City bombing) and complex emergencies/catastrophes (such as Hurricane Katrina) which are events that overwhelm resources. Looking back on response performance, one must put the hurricane catastrophe in context. This catastrophe was along the lines of Hiroshima and by mere definition as a catastrophe was expected to overwhelm resources." (**Center for Community Research and Development**, 2005)

Catastrophe: "You see, one of the lessons I think we have learned from last year's hurricanes is, we've got to look at the challenge of the catastrophic event, not only at the point where the catastrophe hits, but in all the areas around that point that are going to receive the collateral or cascading effects of that catastrophe.

When we have a major event, whether it be a terrorism event or a natural disaster, that causes a lot of people to move out of a particular area, they're going to go someplace. And a lot of them are going to go to your cities or your towns, and you're going to have to be able to deal with that challenge.

So one dramatic change we've made in the wake last year's hurricanes and in anticipation of this hurricane season and whatever else is coming in the course of this coming year, is we're looking now at planning not only for managing the emergency in the location where the emergency occurs, but managing the emergency all over the country. **(Chertoff,** *Remarks by Secretary Michael Chertoff at the National League of Cities Congressional City Conference*, Washington, DC: League of Cities, March 2\14, 2006)

Catastrophe: "How is "catastrophic" different than all other major disasters? There are fundamental differences in all respects between disasters that impact a business, a group of businesses or even businesses across a region, and a disaster that involves all businesses to varying degrees across a nation and the world. As evidenced with major natural disasters including, Hurricanes Andrew and Katrina, and the tsunami in Southeast Asia in 2004, a natural disaster can quickly evolve from a local or regional event into a national or international tragedy in a matter of hours or minutes. These devastating major natural disasters demand planning and response capabilities far beyond most natural disasters. While these major disasters affected businesses well beyond their impact zone, their impacts still pale to the potential catastrophic effects from a major terrorist event with weapons of mass destruction or a pandemic influenza.

There is a fundamental difference in the preparation, complexity, quality of effort, and scope of catastrophic disaster as opposed to a major natural disaster. For a catastrophic disaster, the CI/KR business not only must strive to sustain itself, but as impacts worsen it may be called upon to adjust and consolidate its typical essential processes so that it may survive as an economic entity. Yet, through good planning and an agile response, it will adapt and cope sufficiently to continue providing the most essential goods and services necessary to sustain the community and the nation." (**DHS**, *Pandemic Influenza CIKR Guide*, 2006, p. 30)

Catastrophe: An example would be the 1985 Earthquakes in Mexico City and other Mexican cities. Thousands of people—estimates vary markedly—died and tens of thousands were injured. At least 100,000 building units were damaged; reconstruction costs exceeded five billion dollars (with some estimates running as high as $10 billion). Over sixty donor nations contributed to the recovery through programs coordinated by the League of Red Cross and Red Crescent Societies." (**Drabek** 1996, Session 2, p. 4; citing Russell R. **Dynes**, E.L. Quarantelli, and Dennis Wenger. 1990. *Individual and Organizational Response to the 1985 Earthquake in Mexico City, Mexico. Newark, Delaware: Disaster Research Center, University of Delaware*)

Catastrophe: "…any disaster that overwhelms the ability of state, local, and volunteer agencies to adequately provide victims with such life-sustaining mass care services as food, shelter, and medical assistance within the first 12 to 24 hours." (**GAO**, *Disaster Management*, 1993, p. 1)

Catastrophe: "Catastrophic events are different in the severity of the damage, number of persons affected, and the scale of preparation and response required. They quickly overwhelm or incapacitate local and/or state response capabilities, thus requiring coordinated assistance from outside the affected area. Thus, the response and recovery capabilities needed during a catastrophic event differ significantly from those required to respond to and recover from a 'normal disaster'." (**GAO**, *Emergency Preparedness and Response*, 2006, p. 15)

Catastrophe: "Hurricane Rita caused a major disaster, Hurricane Katrina caused a catastrophe. The difference between the two was a matter of the scale of the natural phenomena, the size and vulnerability of the population at risk, the preparedness of the public and government, and the effectiveness of decision-making prior to and during the crisis stages of the event. Henry Quarantelli, the founder of the University of Delaware, has pointed out that a catastrophe and disaster are qualitatively different. A catastrophe such as Katrina damages the physical infrastructure systems, government systems, and social systems to the extent that local officials cannot function and mutual aid from neighboring communities and states is impossible." (**Harrald**, 2005)

Catastrophe: "The term "catastrophe" in the property insurance industry denotes a natural or man-made disaster that is unusually severe. An event is designated a catastrophe by the industry when claims are expected to reach a certain dollar threshold, currently set at $25 million, and more than a certain number of policyholders and insurance companies are affected." (III, *Catastrophes: Insurance Issues* (Update), Jan 2008)

Catastrophe: "…an event that causes $25 million or more in insured property losses and affects a significant number of property-casualty policyholders and insurers." (**Insurance Services Office** 2000, 2)

Catastrophe: "One of the most important issues that Hurricane Katrina revealed…the difference between catastrophe planning and disaster planning. In catastrophes, there is a need for a more agile, adaptable and creative emergency management. Following the "rule-book" (bureaucratic pattern) will inevitably bring a slow response, problematic communication, and finally great frustration to the people for not meeting their needs and their expectations. Extreme events are better managed when responding authorities are able to adjust promptly their response efforts to the environment, fine tune their communication channels (according to the severity of the event), and also modify the decision making process for the immediate life saving interventions. That does not imply that the NRP should be ignored in the event of a catastrophe or that the ICS should be detoured. The challenging concepts of improvisation, adaptability, creativity and agility do not encompass anarchy or chaos (2). The structured control and command system will not be affected negatively; it will be simplified for better response and recovery. And these changes are indispensable for making clear that emergency responders do not manage catastrophes just as being simply big disasters.

In addition, success or failure of managing a catastrophe is based largely on leadership. In the case of Katrina, the lack of presence of a leader who was or seemed to be in control of the situation, who showed interest in getting the best to people, following a code of values-ethics and indicating unquestionably integrity was obvious; and that stigmatized the gloomy picture of the devastated New Orleans. What is needed is a leader who will have those qualities and competencies to agonize the Scylla of overwhelming disasters and the Charybdis of media. A leader who "recognizes the threats" in time, "prioritizes those threats appropriately" and "mobilizes effectively" is not a leader who will be blamed for failure (3). A leader who puts people first, builds very good teams by getting the "right people on the bus" (4), establishes good communication networks in multiple levels, promotes a learning process from past events, evaluates and improves the system on an ongoing basis, and is not reluctant when it comes to self criticism, is the one who can guide and introduce the required changes that need to be adopted for improving the emergency management system." (**Kastrioti**, 2006

Catastrophe: "Despite no consensus on definitions for these terms, experts report that emergencies, disasters and catastrophes differ on more than just scale. Each requires unique response strategies as a consequence of their impact on communities and how emergency responders and resources must be mobilized. The most challenging of events are catastrophes.

Catastrophes stand apart. During catastrophes, most or all infrastructure is damaged and may be inoperable. Residents in impacted communities – including emergency responders – are unable to undertake normal roles. Large numbers of residents and responders are victims. Most or all traditional functions – including government operations – are completely or partially shut down. Local mutual aid strategies are ineffective, because of the distribution of impacts on neighboring jurisdictions and communities. The loss of water and sewer services and local law enforcement and interruptions in the supply of shelter, food and medical care create additional victims even beyond those impacted by the original event.

Catastrophes require different operating procedures. The loss of functional infrastructure halts the use of traditional communication, transportation and power networks. Local responders familiar with community needs and resources often are unavailable, necessitating reliance on external responders with little knowledge of local geography, cultures and possibly languages. Resource demands far outstrip supplies, creating competition and political pressure for scarce response capacity. Reliance on an expanding circle of mutual aid networks results in far more complex management challenges to integrate disparate areas of expertise, equipment, policies and procedures, and response strategies. The scale of impacts and the number of responders involved increases errors in assessments and conflicting information regarding needs and resources.

Catastrophes require regional, statewide or federal authority. The scale of impacts during catastrophes, the number of responders required, the political jurisdictions affected and the range of organizations called upon to respond, require a regional, statewide or national authority to manage. Local officials generally cannot manage catastrophic response because the authority needed to do so exceeds their jurisdiction." (**Little Hoover Com**., *Safeguarding*…, 2007, 14)

Catastrophe: "Catastrophes, by definition, tend to occur in large metropolitan regions due to the concentration of people and infrastructure. For example, a category 5 hurricane striking an undeveloped coast will generate less damage than a category 3 hurricane hitting a major city. Recent catastrophes include the 1989 Loma Prieta Earthquake (San Francisco), the 1994 Northridge Earthquake (Los Angeles), Hurricane Hugo (1989), Hurricane Andrew (1992), Hurricanes Katrina and Rita (2005), the Midwest Floods of 1993, and the September 11 attacks of 2001." (**Moss and Shalhamer**, *The Stafford Act: Priorities for Reform.*…, 6Sep2007, p. 14)

Catastrophe: "Unfortunately, one of the biggest shortcomings of the Stafford Act is that it only recognizes two levels of disasters – emergencies and major disasters. Emergencies are normally smaller, limited scale events. The second category - major disasters – is intended for larger events, but this can run the gamut from a blizzard in Buffalo to a major earthquake in California that impacts millions. A third category should be created to differentiate catastrophes from major disasters." (**Moss and Shalhamer**, *The Stafford Act: Priorities for Reform.*…, 6Sep2007, p. 15)

Catastrophe: "The group discussed the definition of catastrophe. After reviewing many variables, it was determined that a catastrophe is defined by the magnitude of the event on an area, the capacity and ability to respond, and the time to recover. Several stressed that catastrophes don't just happen to large numbers of people. A catastrophe can occur in a small area. It was discussed that having a clear definition of catastrophe determines the process of response." (**NHSC**, *National Homeland Security Consortium* Meeting, December 1-2, 2005)

Catastrophe: An event of such impact upon a community that new organizations must be created in order to deal with the situation. (**Quarantelli** 1987, 25)

Catastrophe: "Even two decades ago some researchers were saying that there were "disasters" and that there were "disasters that were beyond typical disasters." The latter came to be called "catastrophes."…. The distinction we draw between catastrophes and disasters is not just an academic exercise… What is crucial is that catastrophes require some different kinds of planning

and managing than do even major disasters. This is true whether the focus is on the planning for mitigation, preparedness, response or recovery…. The differences that appear between disasters and catastrophes can be especially seen at the organizational, community and societal levels. For our purposes here, let us illustrate at least six general ways in which disasters and catastrophes differ. In a catastrophe compared to a disaster:

1. Most or all of the community built structure is heavily impacted…. In addition, in catastrophes, the facilities and operational bases of most emergency organizations are themselves usually hit.

2. Local officials are unable to undertake their usual work role, and this often extends into the recovery period. Related to the observation just made, local personnel specializing in catastrophic situations are often unable for some time, both right after impact and into the recovery period, to carry out their formal and organizational work roles. This is because some local workers either are dead or injured, and/or unable to communicate with or be contacted by their usual clients or customers and/or are unable to provide whatever information, knowledge or skills, etc. they can usually provide….

3. Help from nearby communities cannot be provided. In many catastrophes not only are all or most of the residents in a particular community affected, but often those in nearby localities are also impacted…. In short, catastrophes tend to affect multiple communities, and often have a regional character. This kind of crisis, for instance, can and does affect the massive convergence that typically descends upon any stricken community after a disaster. In a disaster there is usually only one major target for the convergence after a disaster. In a catastrophe many nearby communities not only cannot contribute to the inflow, but they themselves can become competing sources for an eventual unequal inflow of goods, personnel, supplies and communication….

4. Most, if not all, of the everyday community functions are sharply and concurrently interrupted. In a catastrophe, most if not all places of work, recreation, worship and education such as schools totally shut down and the lifeline infrastructures are so badly disrupted that there will be stoppages or extensive shortages of electricity, water, mail or phone services as well as other means of communication and transportation…. In such kinds of situations, the damage to residential areas tends to be correlated with similar destruction of nonresidential areas. Among other things, it means that there are far more "social" facilities and activities that need to be restored to "normal" functioning after a catastrophe than after a disaster. Even in major disasters, there is no such massive-across the board disruption of community life even if particular neighborhoods may be devastated….

5. The mass media system especially in recent times socially constructs catastrophes even more than they do disasters. All disasters evoke at least local mass media coverage. Some major disasters can attract attention from outside the community media, but usually only for a few days…. In catastrophes compared to disasters, the mass media differ in certain important aspects. There is much more and longer coverage by national mass media. This is partly because local coverage is reduced if not totally down or out. There is a shift from the command point of view

that prevails in disasters to an Ernie Pyle approach ("six feet around the foxhole") in catastrophes, especially by the electronic media….

6. Finally, because of the previous five processes, the political arena becomes even more important. All disasters of course involve, at a minimum, local political considerations. But it is a radically different situation when the national government and the very top officials become directly involved. Even in very major disasters, a symbolic presence is often all that is necessary. In catastrophes, that symbolism is not enough, particularly for the larger society. Part of this stems from the fact that catastrophes as happened in Katrina force to the surface racial, class and ethnic differences that are papered over during routine times. It is easy to take partisan political advantage of such uncoverings especially when they go against widely held cultural values and norms in democratic societies. Another reason is that organizational weaknesses of responding organizations come even more to the surface. The structural weakness of the Federal Emergency Management Agency (FEMA) as a result of its subordinate position in the Department of Homeland Security (DHS), as some disaster researchers had predicted for at least three years, became a major problem in the response. The considerable expertise that still existed in the lower level professional ranks in FEMA could not make up for the badly organized FEMA-DHS interface.

"…the qualitatively different demands and needs that surface in catastrophes compared to disasters means that innovative and creative actions and measures will be required far more in the former than the latter. Actually any kind of crisis requires imagination in responding. But the most is required by a catastrophe because there will be more contingencies and unusual aspects in such occasions." (**Quarantelli**, *Catastrophes are Different from Disasters*, 2006)

Catastrophe: "The difference between a disaster and a catastrophe is that while disaster is when needs exceed resources, catastrophe is when needs exceed all ability to respond." (**Ramirez** 2007)

Catastrophe: "The difference between a catastrophe and a disaster is crucial: State and local officials can be counted on to assess their needs and direct federal response to a disaster. A catastrophe, however, over-whelms state and local governments and requires a federal response that anticipates needs instead of waiting for requests from below." (**Rood**, 2005)

Catastrophe: "…for a given society might be defined as an event leading to 500 deaths or $10 million in damages. These figures, however, are arbitrary since levels of impact mean different things to different people in different situations. Furthermore, we cannot ignore the element of scale. It would be a catastrophe for a small community if every building were totally destroyed by flooding (as occurred in 1993 in Valmeyer, Illinois), but at the global scale, it would be an insignificant event if only 350 houses were involved…Similarly, $10 million in damage to some communities would be devastating…, especially in less wealthy societies, but others would be able to cope relatively easily" (**Tobin and Montz** 1997, 7).

> "…a catastrophe not only disrupts society, but may cause a total breakdown in day-to-day functioning. One aspect of catastrophes, is that most community functions disappear; there is no immediate leadership, hospitals may be damaged or destroyed, and the damage may be

> so great and so extensive that survivors have nowhere to turn for help (Quarantelli, 1994).[5] In disaster situations, it is not unusual for survivors to seek help from friends and neighbors, but this cannot happen in catastrophes. In a disaster, society continues to operate and it is common to see scheduled events continue…" **Tobin and Montz** 1997, 31).

Catastrophe, Routine: "…tornadoes, most floods, forest fires, and the like – which inevitably adversely affect many Americans in every part of the country throughout every year. (**FSR**, *Nation Unprepared*, 2007, 3)

Catastrophe Bonds: "Catastrophe bonds are risk-based securities that pay relatively high interest rates and provide insurance companies with a form of reinsurance to pay catastrophe losses, such as those caused by a major hurricane. They allow insurance risk to be sold to institutional investors in the form of bonds, thus spreading risk." (**GAO**, *Natural Disasters: Public Policy Options*…, Nov 2007, 43)

Catastrophe-Linked Bonds: "…unsecured obligations that pay substantially higher interest rates than government or high-grade corporate bonds of equivalent maturity, but whose principal or interest is cancelable upon certain events or "triggers": those based on catastrophe claims paid by the specific insurer (indemnity CAT bonds) and those based on some general indicator of catastrophe losses (index CAT bonds). The cancellation feature is what gives the insurer protection and can make the bond the functional equivalent of capital or reserves. The issuer puts the proceeds of the bond issue "in the bank", as it were, and doesn't have to pay the money back if a catastrophe trips the trigger." (**Financial Services Roundtable** *Nation Unprepared* 2007, 50)

Catastrophe Planning (1955): "This assumption is a major premise in the operation of civil defense. The capabilities of nuclear and other weapons are so great that an attack, if successful, will result in damage and casualties far beyond the resources of any community. Assistance to attacked communities must come from outside and possibly from great distances. It must be organized in advance of an attack in order to be available when required. This means that available resources of the entire country, outside potential target areas as well as within them, must be geared into the civil defense system." (**FCDA**, *1955 Annual Report*, 1956, p. 17)

Catastrophic Disaster: An event that results in large numbers of deaths and injuries; causes extensive damage or destruction of facilities that provide and sustain human needs; produces an overwhelming demand on State and local response resources and mechanisms; causes a severe long-term effect on general economic activity; and severely affects State, local, and private-sector capabilities to begin and sustain response activities. Note: the Stafford Act provides no definition for this term. (**FEMA,** *FRP Appendix B*, 1992)

Catastrophic Disaster: "A Catastrophic Disaster is defined by: a sudden event which results in tens of thousands of casualties and tens of thousands of evacuees; response capabilities and resources of the State and local jurisdiction will be overwhelmed; characteristics of the

---

[5] E.L. Quarantelli. 1994. *Disaster Stress*. Paper presented at the After Everyone Leaves: Preparing for, Managing and Monitoring Mid- and Long-Term Effects of Large-Scale Disasters Conference, Minneapolis Minnesota.

precipitating event will severely aggravate the response strategy and further tax the capabilities and resources available to the area; and life saving support from outside the area will be required, and time is of the essence; and likely to have long-term impacts within the incident area as well as, to a lesser extent, on the Nation." (**Maxwell**, *Report to NEMA on Disaster Operations Catastrophic Disaster Planning*, October 2007, 1)

Catastrophic Disaster: "…the term `catastrophic incident' means any natural disaster, act of terrorism, or other man-made disaster that results in extraordinary levels of casualties or damage or disruption severely affecting the population (including mass evacuations), infrastructure, environment, economy, national morale, or government functions in an area;…" (**Public Law 109-295** (120 Stat. 1394), *Department of Homeland Security Appropriations Act, 2007*, p. 40)

Catastrophic Disaster Planning: "Planning for catastrophic disasters that would immediately overwhelm existing capabilities. Key Objectives:

- Identify highest risk areas
- Examine loss estimates
- Assess current disaster response capabilities
- Identify anticipated response shortfalls and gaps
- Develop comprehensive planning strategies." (**FEMA**, *Disaster Operations Directorate Briefing: Joint Task Force State Commanders',* Jan 2008, Slide 27)

Catastrophic Disaster Planning Initiative, FEMA: "The Catastrophic Disaster Planning initiative is focused solely on catastrophic disasters and, in cooperation with affected state and local governments will identify the highest risk areas and examine loss estimates, current response capabilities, anticipated response shortfalls, and comprehensive planning strategies for addressing the shortfalls, to include new legislative and executive action if necessary…. Information technology and modeling are being leveraged as part of the project to develop interactive tools, services, and products to assist federal, state, and local officials in catastrophic planning and operational response. Products will include incident-specific response plans for pre-selected geographic regions, based upon loss estimating models and capability inventories of affected local, state and federal responders, as well as planning templates that can be used for planning for catastrophic incidents in other areas." (**Maxwell**, *Report to NEMA on Disaster Operations Catastrophic Disaster Planning*, October 2007, pp. 1-2) [See CDRP Initiative]

Catastrophic Disaster Response Group (CDRG): "The Catastrophic Disaster Response Group (CDRG) — represents all FRP signatory departments and agencies at the senior headquarters policy level." (**FEMA**, *US&R Incident Support Team Training* (Instructor Guide Module 1), p.7; see also, **USACE**, *Response Planning Guide*, 1995, p. 1-4)

Catastrophic Disaster Response Plan/Planning (CDRP): "HQUSACE will: **…**Establish policies and procedures in support of requirements for Catastrophic Disaster Response Planning (CDRP) for scenario specific events." (**USACE**, *Response Planning Guide*, 1995, p. 1-2)

Catastrophic Disaster Response Planning Initiative: The "FEMA Catastrophic Disaster Response Planning Initiatives are currently focused on four specific geographic areas: Southeast

Louisiana, New Madrid Seismic Zone (NMSZ), the State of Florida, and the State of California." (**FEMA**, "Catastrophic Disaster Planning." FEMA Disaster Operations Directorate, 10May07)

Catastrophic Disaster Response Planning Initiative: "Using funding appropriated for catastrophic planning in Fiscal Year 2006 and 2007, FEMA implemented a Catastrophic Disaster Response Planning Initiative (Initiative) that is designed to ensure that FEMA and its Federal, Tribal, State, and local partners plan and prepare to effect an appropriate, timely, and efficient response to a catastrophic disaster. This Initiative will significantly enhance Federal disaster response planning activities by focusing on catastrophic disasters: those disasters that by definition will immediately overwhelm the existing disaster response capabilities of Tribal, local and State governments. In cooperation with State and local governments, this initiative will identify high risk areas, develop loss estimates for such incidents, assess and inventory current disaster response capabilities, anticipate response shortfalls, and develop comprehensive planning strategies for addressing such shortfalls and enhancing capabilities. Products developed by the Initiative will include incident-specific response plans for pre-selected geographic regions, based upon loss estimating models and capability inventories of affected Tribal, local, State, and Federal responders." (**FEMA**, *Statement of Glenn Cannon*, December 3, 2007, p. 1)

Catastrophic Earthquake National Policy, 1982: "It is the policy of the United States to develop systems and plans to reduce the loss of life, destruction of property, economic instabilities, and the adverse impact on our national defense capability that would result from a catastrophic earthquake. The program can reduce the effects of a catastrophic earthquake by improving earthquake prediction, hazard and risk assessment, warning systems, public education and awareness, response and recovery; by developing further and applying earthquake resistant design and construction techniques, and land use planning. The initial action will be focused on California, but attention will be focused later on other regions in consideration of their relative risk from an earthquake. The program will increase capabilities to:

- Evaluate current earthquake prediction activities, foster the application of advanced scientific and engineering techniques for prediction and mitigation, increase and accelerate basic and applied research efforts;
- Develop a coordination and integration mechanism between Federal and State governments;
- Identify and allocate financial, medical, transportation, shelter, communications, and other resources necessary to assist recovery operations;
- Reduce the negative effects on military installations and defense related industries;
- Ensure more effective public awareness programs to equip all levels of the populace with specific information to help them survive;
- Promote international cooperation to increase scientific and engineering knowledge in applying mitigation measures;
- Provide for the preparation, implementation, and exercising of preparedness procedures; and
- Ensure the adequacy of current Federal legislation and regulations to facilitate an effective response." (**White House**, *NSDD-47*, July 22, 1982, pp. 8-9)

Catastrophic Emergency: "Any incident, regardless of location, that results in extraordinary levels of mass casualties, damage, or disruption severely affecting the U.S. population, infrastructure, environment, economy, or government functions." (**HSC**, *National Continuity Policy Implementation Plan*, August 2007, p. 60; **DHS**, *FCD 1*, Nov 2007, p. P-1))

Catastrophic Emergency: "Catastrophic Emergency' means any incident, regardless of location, that results in extraordinary levels of mass casualties, damage, or disruption severely affecting the U.S. population, infrastructure, environment, economy, or government functions." (**White House,** *HSPD-20*, May 9, 2007)

Catastrophic Event: "For purposes of this plan [NRP 2004], a catastrophic event is any natural or manmade incident, including terrorism, which leaves extraordinary levels of mass casualties, damage and disruption severely affecting the population, infrastructure, environment, and economy. A catastrophic event results in sustained national impacts over a prolonged period of time; exceeds resources normally available in the local, State, Federal, and private sectors; and significantly interrupt governmental operations and emergency services to such an extent that national security could be threatened. In contrast to a Major Disaster or Emergency as defined in the Stafford Act, a catastrophic event is characterized as an incident of low or unknown probability but extremely high consequences." (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, p. 60)

Catastrophic Event: "Any natural or man-made incident, including terrorism, which results in extraordinary levels of mass casualties, damage, or disruption severely affecting the population, infrastructure, environment, economy, national morale, and/or government functions." (**DoD**, *DOD Dictionary of Military and Related Terms*, 2007)

Catastrophic Event: "What is a Catastrophic Event?

- Tens of thousands of casualties and tens of thousands evacuees
- Over taxed response capabilities and resources of numerous State and local jurisdictions
- Significant need for life saving support from outside the immediate area.
- Long term recovery impacts within the incident area as well as on the nation." (**FEMA**, *Planning for the "Big One,"* November 28, 2007, slide 4)
- "Will have National Economic Impacts
- A catastrophic event can not be address by pedaling faster…
- Current Policies will inhibit a cohesive & unified response across all disciplines
- A catastrophic event requires ALL stakeholders
    - To change the way business in conducted
    - To be better prepared for longer (citizens)
    - To utilize solutions from unexpected sources." (**FEMA**, *Catastrophic Disaster Planning IAEM Presentation*, November 12, 2007, slides 24-25)

Catastrophic Health Event: "The term "catastrophic health event" means any natural or manmade incident, including terrorism, that results in a number of ill or injured persons sufficient to overwhelm the capabilities of immediate local and regional emergency response and health care systems." (**White House**, *HSPD 21*, October 18, 2007)

Catastrophic Incident: "The NRP identifies catastrophic incidents as high-impact, low-probability incidents, including natural disasters and terrorist attacks that result in extraordinary levels of mass casualties, damage, or disruption and severely affect the population, infrastructure, environment, economy, national morale, and/or government functions." (**DHS**, 2007)

Catastrophic Incident: "Any natural or manmade incident, including terrorism, which results in extraordinary levels of mass casualties, damage, or disruption severely affecting the population, infrastructure, environment, economy, and national morale and/or government functions. A catastrophic event could result in sustained national impacts over a prolonged period of time; almost immediately exceeds resources normally available to State, local, tribal, and private sector authorities; and significantly interrupts governmental operations and emergency services to such an extent that national security could be threatened. All catastrophic incidents are considered Incidents of National Significance." (**DHS** *National Response Plan*, 2004, x)

According to DHS National Response Plan:

"A catastrophic incident results in large numbers of casualties and/or displaced persons;

The incident may cause significant disruption of the area's critical infrastructure, including transportation, telecommunications, and public health and medical systems;

Response activities may have to begin without the benefit of a detailed or complete situation and needs assessment because a detailed, credible operating picture may not be possible for 24 to 48 hours of longer after the incident;

The federal government may have to mobilize and deploy assets before local and state governments request them via normal protocols because timely federal support may be necessary to save lives, prevent suffering, and mitigate severe damage; and,

Large numbers of people may be left temporarily or permanently homeless and require temporary or longer-term interim housing." (**DHS** *National Response Plan* 2004, at CAT-3)

Catastrophic Incident: "An urban or metropolitan area, or more expansive geographical area encompassing a large aggregate population, suffers a sudden, catastrophic incident resulting (either immediately or over time) in tens of thousands of casualties (dead, dying, and injured) and producing tens of thousands of evacuees and/or affected-in-place. The response capabilities and resources of the local jurisdiction (to include mutual aid from surrounding jurisdictions and response support from the State) will be profoundly insufficient and quickly, if not immediately, overwhelmed. In addition, characteristics of the precipitating event, such as severe damage to critical and public infrastructure and contamination concerns or other public health implications, will severely aggravate the response strategy and further tax the capabilities and resources available to the venue. Life saving support from outside the area will be required, and time is of the essence. A catastrophic incident is also likely to have long-term impacts within the incident area as well as, to a lesser extent, on the Nation." (**DHS**, (NRP) *Catastrophic Incident Supplement to the National Response Plan*, April 2005, p. 6)

Catastrophic Incident: "A Catastrophic Incident is defined by:
• A sudden event which results in tens of thousands of casualties and tens of thousands of evacuees
• Response capabilities and resources of the state and local jurisdictions will be overwhelmed
• Characteristics of the precipitating event will severely aggravate the response strategy and further tax the capabilities and resources available to the area
• Life saving support from outside the area will be required, and time is of the essence
• Likely to have long-term impacts within the incident area as well as, to a lesser extent, on the Nation." (**FEMA**, *New Madrid Seismic Zone Catastrophic Planning: Project Overview*, 2007)

Catastrophic Incident: "A catastrophic incident is a sudden event that results in tens of thousands of casualties and tens of thousands of evacuees. Due to the magnitude of the event, State and local resources will be automatically overwhelmed and the precipitating event will severely aggravate the response strategy and further tax the capabilities and resources available to the area. The event will likely have long-term impacts within the incident as well as, to a lesser extent, on the Nation." (**FEMA**, *Strategic Plan*, October 10, 2007 Draft, p. 1)

Catastrophic Incident: "…the term 'catastrophic incident' means any natural disaster, act of terrorism, or other man-made disaster that results in extraordinary levels of casualties or damage or disruption severely affecting the population (including mass evacuations), infrastructure, environment, economy, national morale, or government functions in an area." (**Post-Katrina Emergency Management Reform Act of 2006**, Title VI, Sec. 602 October 4, 2006, p. 1394)

Catastrophic Incident: "State and local governments are the first line of emergency response in disasters. State and local governments have fire, police, emergency medical services (EMS) and emergency management agencies dedicated to disaster response. The recent White House report on the Federal response to Hurricane Katrina described the situation when normal emergency response to a disaster becomes a response to a catastrophic incident:

> "However, in some instances, the State and local governments will be overwhelmed beyond their ability to satisfy their traditional roles in this system. Indeed, in some instances, State and local governments and responders may become victims themselves, prohibiting their ability to identify, request, receive, or deliver assistance. This is the moment of catastrophic crisis—the moment when 911 calls are no longer answered; the moment when hurricane victims can no longer be timely evacuated or evacuees can no longer find shelter; the moment when police no longer patrol the streets, and the rule of law begins to break down." (**White House**, *The Federal Response to Hurricane Katrina – Lessons Learned*. February 2006, p. 18)

(**DOT,** *Catastrophic Hurricane Evacuation Plan Evaluation: Report to Congress*, 2006, p. 2-1)

Catastrophic Incident Annex (NRP 2004), Federal Response Guiding Principles: "Guiding principles for a proactive Federal catastrophic incident response include the following:

a. The primary mission is to save lives, protect property and critical infrastructure, contain the event, and protect the national security;
b. Standard procedures regarding requests for assistance may be expedited, or under extreme

circumstances, suspended in the immediate aftermath of an event of catastrophic magnitude;

c. Pre-identified Federal response resources deploy and begin necessary operations as required to commence life-safety activities; and

d. Notification and full coordination with States will occur, but disruptions in the coordination process will not delay or impede the rapid deployment of critical resources." (**DHS**, *Catastrophic Incident Annex* July 7, 2004 Draft, pp. 4-5)

Catastrophic Incident Annex (National Response Plan, July 2004), Planning Assumptions:

"1. A catastrophic event will result in large quantities of casualties and/or displaced persons, possibly in the tens of thousands.

2. A catastrophic mass casualty/mass evacuation incident will trigger a Presidential disaster declaration, immediately or otherwise.

3. The Secretary of Homeland Security will immediately designate the event and Incident of National Significance and direct implementation of the NRP-CIA.

4. The nature and scope of such an event may include chemical, biological, radiological, nuclear or high-yield explosive (CBRNE) attacks, disease epidemics, major earthquakes/major hurricanes in densely populated areas, and/or other natural or manmade hazards.

5. Multiple events may occur simultaneously or sequentially in contiguous and/or noncontiguous areas. Some incidents, such as a biological WMD attack, may be dispersed over a large geographic area, and lack a defined incident site.

6. A catastrophic incident may occur with little or no warning. Some incidents, such as rapid disease outbreaks, may be well underway before being detected.

7. The event will cause significant disruption of the area's critical infrastructure to power, transportation, utilities, and communications systems.

8. The response capabilities and resources of the local jurisdiction (to include mutual aid from surrounding jurisdictions and response support from the State) may be insufficient and quickly overwhelmed. Many local emergency personnel who normally respond to incidents will be among those affected and unable to perform their duties.

9. A detailed and credible common operating picture may not be achievable for 24- 38 to 48 hours (or longer) after the incident. As a result, response activities must begin without the benefit of a detailed or complete situation and critical needs assessment.

10. Federal support must be provided in a timely manner to save lives, prevent human suffering, and mitigate severe damage. This may require deploying assets before they are requested via normal NRP protocol.

11. Large-scale evacuations, organized or self-directed, may occur. More people initially will flee and seek shelter for attacks involving CBRN agents than for natural events. The health-related implications of an incident will aggravate attempts to implement a coordinated evacuation management strategy.

12. Large numbers of people may be left temporarily or permanently homeless and may require prolonged temporary housing.

13. A catastrophic incident may produce environmental impacts (e.g., persistent chemical, biological, or radiological contamination) that severely challenge the ability and capacity of governments and communities to achieve a timely recovery.

14. A catastrophic incident will have unique dimensions/characteristics requiring that response plans/strategies be flexible enough to effectively address emerging needs and requirements.

15. A catastrophic incident may have international dimensions. These include potential impacts on cross-border trade, transit, law enforcement coordination and other areas.

16. If the incident is the result of terrorism, the Homeland Security Advisory System (HSAS) level will likely be raised regionally, and perhaps nationally. Elevation of the HSAS level carries additional local, State, and Federal security enhancements that may affect the availability of certain response resources." (**DHS**, *Catastrophic Incident Annex* July 7, 2004 Draft, pp. 3-4)

C**atastrophic Incident Annex (NRF, July 2007 Comment Draft), Planning Assumptions:**

- "A catastrophic incident may result in large numbers of casualties and/or displaced persons, possibly in the tens to hundreds of thousands. During an incident response, priority is given to human life-saving operations.
- The nature and scope of a catastrophic incident may immediately overwhelm State, tribal, and local response capabilities and require immediate Federal support.
- A detailed and credible common operating picture may not be achievable for 24 to 48 hours (or longer) after the incident. As a result, response activities must begin without the benefit of a detailed or complete situation and critical needs assessment.
- A catastrophic incident will trigger a Presidential disaster declaration, immediately or otherwise. The Secretary of Homeland Security or a designee implements the NRF-CIA/CIS.
- The nature and scope of the catastrophic incident may include chemical, biological, radiological, nuclear, or high-yield explosive attacks, disease epidemics, cyber attacks, and major natural or manmade hazards.
- A catastrophic incident has unique dimensions/characteristics requiring that response plans/strategies be flexible enough to effectively address emerging needs and requirements.
- A catastrophic incident may occur with little or no warning. Some incidents, such as rapid disease outbreaks, may be well underway before detection.
- Multiple incidents may occur simultaneously or sequentially in contiguous and/or non-contiguous areas. Some incidents, such as a biological WMD attack, may be dispersed over a large geographic area and lack a defined incident site.

- A catastrophic incident may produce environmental impacts (e.g., persistent chemical, biological, or radiological contamination) that severely challenge the ability and capacity of governments and communities to achieve a timely recovery.
- Federal support must be provided in a timely manner to save lives, prevent human suffering, and mitigate severe damage. This may require mobilizing and deploying resources before they are requested via normal NRF protocols.
- Large-scale evacuations, organized or self-directed, may occur. More people initially are likely to flee and shelter outside of areas involving chemical, biological, radiological, or nuclear agents than for natural events. The health related implications of these incidents may aggravate attempts to implement a coordinated evacuation management strategy.
- Large numbers of people may be left temporarily or permanently homeless and may require prolonged temporary housing.
- A catastrophic incident may have significant international dimensions. These include impacts on the health and welfare of border community populations, cross-border trade, transit, law enforcement coordination, and other areas." (**DHS**, *National Response Framework, Catastrophic Incident Annex*, July 2007 Draft, pp. 4-5)

Catastrophic Incident Annex (National Response Plan, July 2004), Purpose: "The Catastrophic Incident Annex to the National Response Plan (NRP-CIA) establishes the strategy for implementing and coordinating an accelerated, proactive national response to a catastrophic incident." (**DHS**, *Catastrophic Incident Annex*, July 7, 2004 Draft, p. 1)

Catastrophic Incident Annex (National Response Plan, December 2004), Purpose: "The Catastrophic Incident Annex to the National Response Plan (NRP-CIA) establishes the context and overarching strategy for implementing and coordinating an accelerated, proactive national response to a catastrophic incident." (**DHS**, *Catastrophic Incident Annex*, Dec. 2004, p. 1)

Catastrophic Incident Annex (National Response Framework 2007), Purpose and Scope: "Purpose: The Catastrophic Incident Annex to the National Response Framework (NRF-CIA) establishes the context and overarching strategy for implementing and coordinating an accelerated, proactive national response to a catastrophic incident. A more detailed and operationally specific National Response Framework Catastrophic Incident Supplement (NRF-CIS) is published independently of the NRF and annexes.

Scope…. Recognizing that Federal and/or national resources are required to augment overwhelmed State, tribal, and local response efforts, the NRF-CIA establishes protocols to preidentify and rapidly deploy key essential resources (e.g., medical teams, urban search and rescue teams, transportable shelters, medical and equipment caches, etc.) that are expected to be urgently needed/required to save lives and contain incidents. Accordingly, upon designation by the Secretary of Homeland Security of a catastrophic incident, Federal resources, organized into incident-specific "packages," deploy in accordance with the NRF-CIS and in coordination with the affected State and incident command structure.

Where State, tribal, or local authorities are unable to establish or maintain an effective incident command structure due to catastrophic conditions, the Federal Government, at the direction of the Secretary of Homeland Security may establish a unified command structure to save lives,

protect property, secure critical infrastructure/key resources, contain the event, and protect national security. The Federal Government shall transition to its normal role supporting incident command through State, tribal, or local authorities when their command is reestablished." (**DHS**, *National Response Framework, Catastrophic Incident Annex*, July 2007 Draft, p. 1)

Catastrophic Incident Annex (National Response Framework July 2007 Draft), Scope: "The Catastrophic Incident Annex is primarily designed to address no-notice or short-notice incidents of catastrophic magnitude, where the need for Federal assistance is obvious and immediate, where anticipatory planning and resource pre-positioning were precluded, and where the exact nature of needed resources and assets is not known. Appropriately tailored assets and responses identified in the NRF-CIS, as well as other select Federal resources and assets, also may be deployed in support of a projected catastrophic event (e.g., a major hurricane) with advance warning in support of the anticipated requests of State, tribal, and local authorities." (**DHS**, *National Response Framework, Catastrophic Incident Annex*, July 2007 Draft, p. 2)

Catastrophic Incident Planning: "…planning for major catastrophic events sponsored by FEMA is underway [Florida, New Madrid Seismic Zone, California South, California North, Hawaii]. Subject matter experts, planners and operators are deployed at the Federal, Regional, and State levels. Their mission is to identify capability assessments, identify planning seams, and achieve solutions. FEMA is developing and will continue to enhance scenario-driven catastrophic planning that combines planning and exercises that are realistic and reasonable and that simulate the conditions and demands responders would face following a catastrophic disaster." (**FEMA**, *Strategic Plan*, October 10, 2007 Draft, p. 5)

Catastrophic Incident Planning Strategy: "Achieving a robust and sustainable national capability to rapidly and successfully meet the immense challenges posed by an incident of catastrophic magnitude will require a unified strategy supported by aggressive leadership, joint collaboration, innovative thinking, significant funding, and national resolve. To that end, this Strategy for Catastrophic Incident Planning (SCIP) establishes a comprehensive and ambitious set of unified goals and objectives, and will provide a baseline against which to identify, validate, align and prioritize necessary capability-building initiatives." (**FEMA**, *Strategic Plan*, October 10. 2007 Draft, p. 4)

Catastrophic Incident Planning Strategic Goals: "The SCIP shall accomplish the following goals:

- Creation of an ongoing operational framework consisting of collaborative partnerships among all FEMA directorates, other NRF agencies, non-governmental organizations (NGOs and private sector entities at the National, Regional, State, metropolitan, local and tribal levels.
- Development on a continuing basis of comprehensive catastrophic planning solutions for selected natural hazards by working with the other Federal agencies, regions, and other Federal partners and under the auspices of the Post-Katrina Emergency Management Reform Act of 2006. In addition to the current planning efforts already underway, review additional scenarios for catastrophic planning development including all 15 National Planning Scenarios.

- Establishment of clear-cut legal authorities, roles and responsibilities, lines of communication and coordination at all levels of government.
- Implementation of state-of-the-art technology providing information management and document control for the dissemination, exchange, and transfer of plans, lessons learned, best practices, workshop schedules and related products.
- Creation of an integrated, scenario-driven catastrophic planning methodology that combines planning and exercise phases.
- Implementation of standardized plan templates and a planning developmental methodology at the National, Regional, State, metropolitan, local, and tribal levels.
- Development of a Joint Catastrophic Disaster Steering Group (JCDSG) of representatives from key directorates (Disaster, Operations, Disaster Assistance, Mitigation, National Preparedness) that develops and revises goals, policies, doctrines, funding, and long-range plans, and provides integration and coordination with new initiatives within FEMA and with other Federal agencies, as well as NGOs.
- Creation of an annual national conference fro all stakeholders to provide a forum for the reporting of research results and planning efforts in order to support, inform, integrate and enhance catastrophic plans.
- Creation of a five-year plan, developed by the JCDSG (in conjunction with other stakeholders). This plan will address the identified goals and objectives, funding, selected metropolitan areas, scenarios, and specific target dates for local jurisdictions to achieve self-sustaining programs." (**FEMA**, *Strategic Plan*, October 10, 2007 Draft, pp. 6-7)

Catastrophic Incident Planning Vision: "By end of fiscal year 2013, functional planning annexes will prepare the nation to respond to the unique characteristics of all-hazard catastrophic events on a national level and for 21 regional locales around the nation. These will facilitate a coordinated national preparedness and response capability which integrates operations and resources at all levels of government and the private sector." (**FEMA**, *Strategic Plan*, October 10, 2007, p.6)

Catastrophic Task Force (CATF) Exercises: "…in the months before Hurricane Katrina, the HSC [Homeland Security Council] created some confusion at the interagency level by launching the Catastrophic Assessment Task Force (CATF) exercises, which competed with the NEP [National Exercise Program] exercises. The CATF exercises were Cabinet-level exercises aimed at challenging the federal government's ability to respond to a major event. The procedural problem with the CATF exercises was that other departments and agencies, except for the Defense Department with its massive planning staff, simply did not have enough qualified personnel to participate fully in both the NEP and the CATF exercises.

"The substantive problem with the CATF exercises was that they were so complex and catastrophic (and largely implausible) that the lessons learned from them were either obvious without the exercise or too expensive to the point that no President would request the required resources and no Congress would pay for them. For example, a CATF scenario might indicate that the nation needed 20,000 surge hospital beds for third-degree burn victims, the supplies to treat the 20,000 burn victims, and the large numbers of medical personnel to treat the victims. This would require billions of dollars, an enormous increase in the number of college and medical school

students specializing in burn treatment, and other costly changes just for one element of the CATF response.

"The CATF exercises simply demonstrated that the United States could not deal with two nearly simultaneous nuclear detonations followed closely by a Category Five hurricane on the East Coast and an earthquake on the West Coast measuring 8.0 on the Richter scale. This is not a surprise. One senior official referred to the CATF scenarios as the "Book of Revelations" because of their apocalyptic nature.

'The CATF frustrated rather than accelerated the interagency planning effort. Subsequently, the DHS was able to fold the CATF exercises into the NEP schedule and to construct more realistic scenarios based on the NPS so that Cabinet members could constructively explore strategic policy issues that needed to be resolved." (**Mayer and Carafano**, October 24, 2007)

Categories of Hazardous Diseases/Agents: "The Centers for Disease Control and Prevention classifies potential dangers to public health and safety by dividing them into three categories, based on their potential for harm.

Category A Diseases/Agents:

The U.S. public health system and primary healthcare providers must be prepared to address various biological agents, including pathogens that are rarely seen in the United States. High-priority agents include organisms that pose a risk to national security because they can be easily disseminated or transmitted from person to person; result in high mortality rates and have the potential for major public health impact; might cause public panic and social disruption; and require special action for public health preparedness.

Category B Diseases/Agents:

Second highest priority agents include those that are moderately easy to disseminate; result in moderate morbidity rates and low mortality rates; and require specific enhancements of CDC's diagnostic capacity and enhanced disease surveillance.

Category C Diseases/Agents:

Third highest priority agents include emerging pathogens that could be engineered for mass dissemination in the future because of availability; ease of production and dissemination; and potential for high morbidity and mortality rates and major health impact." (**HHS**, *Pandemic and All-Hazards Preparedness Act Progress Report*, November 2007, Appendix 3, p. 1)

CBRA: Coastal Barrier Resources Act of 1982. (**FEMA**, *CBRS History*, 2006)

CBRNE: Chemical, Biological, Radiation, Nuclear and Explosive Weapons. (**HSC**, *NCPIP*, 66)

CBRNE Consequence Management: "CBRNE CM encompasses CM actions taken to address the consequences from all deliberate and inadvertent releases of chemical, biological, radiological, nuclear agents or substances, and high-yield explosives with potential to cause mass casualties and large levels of destruction. An exception is response to accidents or incidents involving US nuclear weapons in DOD or Department of Energy custody. CBRNE CM, is normally managed at the national level (US or HN governments), with DOD providing support as directed. During combat operations, DOD leads the operational response in reaction to an incident involving US forces and allies…. CBRNE CM includes those measures and methods of responding to CBRNE events to alleviate damage, loss of life, hardship or suffering caused by the incident, protect public health and safety, emergency restoration of essential government services and infrastructure, and provide emergency relief to governments, businesses, and individuals affected by the consequences of a CBRNE situation. The method of response will include use of standing contingency plans and procedures to determine what forces and capabilities are required and committed in support of requests for assistance." (**JCS/DoD**, *CBRNE CM* (JP 3-41), 2006, p. vi; see, also, p. I-2)

CBRNE Consequence Management Chain of Command: "**The joint force chain of command and civilian oversight within DOD will be clear.** The joint task force (JTF)-CBRNE CM commander reports directly to the supported combatant commander (CCDR), who in turn reports to the SecDef and the President. Within DOD, the Assistant Secretary of Defense (Homeland Defense) (ASD[HD]) is the principal civilian advisor to the SecDef on domestic CM activities for CBRNE incidents." (**JCS/DoD**, *CBRNE CM* (JP 3-41), 2006, p. I-3) [Bold emphasis in the original.]

CBRNE Consequence Management Command and Control: "The joint force conducting CBRNE CM will usually be in support of a Federal agency. The SecDef always retains control of Federal (Title 10) military forces providing CBRNE CM. The state governors, through the adjutants general, control National Guard forces when those forces are performing active duty in their state role and when performing active duty under Title 32, United States Code (USC). The JFC remains within the normal chain of command for military forces from the President, as Commander in Chief, to the SecDef, to the CCDR. If the JFC is a National Guardsman, the individual can maintain dual Title 10/Title 32 authority over forces, if agreed to by the President and the state governor. National Guard soldiers and airmen may serve either in a Federal status like other reserve soldiers, or in a state status (state active duty or Title 32 status) under the command of the governor. When serving in their home state for disaster relief, they typically will serve in state status. National Guard soldiers and airmen serving in state status are not subject to the Posse Comitatus Act (PCA), (18 USC Section 1385), which generally prohibits Service members in Title 10/Federal status from engaging in civilian law enforcement activities (unless constitutional or statutory exceptions apply). Some state laws, however, also restrict the law enforcement activities that can be performed by National Guard members even when in state status. Statutory exceptions to the PCA include the Insurrection Act and Federal laws that allow the Attorney General to ask the SecDef to authorize the use of active duty forces to assist in law enforcement activities after a CBRN incident. The JFC normally provides support when civil authorities request DOD support, evaluated by DOD authorities and approved by SecDef or designated representative. The evaluation criteria used by DOD authorities includes legality (compliance with laws), lethality (potential use of lethal force by or against DOD forces), risk (safety of DOD forces), cost (who pays, impact on DOD budget), appropriateness (whether the requested mission is in the interest of DOD to conduct), and readiness (impact on DOD's ability to perform its primary mission). Planning an effective, proactive response to mitigate a CBRNE event includes considerations that contribute to saving lives, preventing injuries, reducing human suffering, providing temporary critical life support, and providing shelter to the affected populace." (**JCS/DOD**, *CBRNE Consequence Management* (JP 3-41, 2006, p. II-1)

CBRNE Consequence Management Response Force, DoD (CCMRF): "personnel organized in force packages to perform missions across the CBRNE spectrum. CCMRF capabilities include medical, decontamination, command and control, communications, logistics, transportation and public affairs assets." (FEMA, Statement of Glenn Cannon, 2007, p. 11)

CBRNE Detection Capability Definition: "The preventative Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE) Detection capability provides the ability to detect CBRNE materials at points of manufacture, transportation, and use. It is important to note that the activities and tasks described in this capability will be carried out individually for each specific agent, rather than for all agents at the same time. Therefore, when considering critical tasks and preparedness measures, each task and measure should be applied separately to each CBRNE agent. For example, in considering whether technical support (or "reachback") is available, rad/nuc "reachback" is considerably different from chemical, biological, or explosive "reachback". Preparedness in one or more of the CBRNE areas does not equate to preparedness across the entire CBRNE detection spectrum.

"This capability includes the detection of CBRNE material through area monitoring, but does not include detection by their effects (i.e., signs or symptoms) on humans and animals. Such population level monitoring is addressed, respectively, in the Epidemiological Surveillance and Investigation and Animal Disease Emergency Support capabilities. The CBRNE Detection capability includes the identification and communication of CBRNE threats, but does not include actions taken to prevent an incident or respond to the consequences of a CBRNE incident, which are also addressed in other capabilities.

"The CBRNE Detection capability includes technology, as well as the capacity to recognize potential CBRNE threats through equipment, education, and effective protocols. Training, communication, close coordination with key partners, including intelligence, law enforcement, public safety, public health, and international partners, and public and private sector awareness of CBRNE threats are all recognized as critical enablers for this capability. However, only CBRNE detection-specific tasks within these crosscutting elements have been identified in the discussion of this capability." (**DHS**, *TCL*, 2007, p. 115)

CBRNE Enhanced Response Force Package (CERFP): "The CERFP is composed of four elements staffed by personnel from already established National Guard units. The elements are search and extraction, decontamination, medical, and command and control. The CERFP command and control team directs the overall activities of the CERFP and coordinates with the Joint Task Force - State and the Incident Commander. The CERFP search and extraction element mission is assigned to an Army National Guard Engineering Battalion, the decontamination element mission is assigned to an Army National Guard Chemical Battalion, and the medical element mission is assigned to an Air National Guard Medical Group. The security duties are performed by the state National Guard Quick Response Force. The initial establishment of CERFPs placed at least one in each FEMA Region. There are currently 12 validated CERFPs. An additional five CERFPs have been authorized and funded by Congress, to include full-time manning and equipment. When an incident occurs within a team's response area, they are alerted through their State Headquarters and mobilized on State Active Duty. If the incident is located within their state, they would proceed to the incident when directed by their JFHQ. If the incident is located outside of their state, their State Headquarters would coordinate with the receiving state under the terms agreed to in the Emergency Mutual Aid Compact or EMAC. After arriving at the incident site, the command and control team and element commanders coordinate with the incident commander and JTF Commander to determine how to most effectively employ the CERFP." (**NGB**, *CERFP Fact Sheet*, 2007; see, also **DoD**, *Statement of Verga*, July 19, 2007, p. 5, and **Blum**, July 19, 2007, p. 5)

CBRNE Incidents. "During a CBRNE incident, CBRNE CM [Consequence Management] efforts must make the preservation of life a priority. This is a significant shift in mindset for JFCs [Joint Force Commands], staff personnel, and CBRNE CM planners." (**JCS/DoD**, *CBRNE CM* (JP 3-41), 2006, p. I-4) "Regardless of the nature of the toxic chemical, CBRNE CM operations will focus on life saving and prevention of further injury tasks to include: responding immediately to treat identified casualties; securing and decontaminating the area to prevent spreading of the chemical; decontaminating people possibly exposed; and providing support to a displaced populace. In many instances, chemical warfare individual protective equipment does

not provide protection from toxic materials nor is it certified for use in support of civilian authorities outside of a battlefield environment." (**JCS/DoD**, *CBRNE CM* (JP 3-41), 2006, p. I-6)

CD V-750: Dosimeter Charger. (**USACE**, *ERS Annex B*, 1985, p. B-7)

CD-V-717: Remote Survey Meter, (0-500 r/hr). (**USACE**, *ERS Annex B*, 1985, p. B-7)

CD-V-742: Dosimeter (**USACE**, *ERS Annex B*, 1985, p. B-7)

CDBG: Community Development Block Grant, Depart. of Housing and Urban Development.

CDC: Centers for Disease Control and Prevention, HHS.

CDC: Certain Dangerous Cargo. (**GAO**, *Maritime Security*, December 2007, p. iv)

CDMHA: Center for Disaster Management and Humanitarian Assistance, USF.

CDP: Center for Domestic Preparedness.

CDRARNORTH: Commander, US Army North.

CDRP: Catastrophic Disaster Response Plan. (**DOA/USCOE**, *Anchorage Earthquake CDRP*, January 11, 2005)

CDRUSJFCOM: Commander, US Joint Forces Command.

CDRUSNORTHCOM: Commander U.S. Northern Command (NORTHCOM).

CDRUSPACOM: Commander, US Pacific Command.

CDRUSSOCOM: Commander, US Special Operations Command.

CDRUSSOUTHCOM: Commander, US Southern Command.

CDRUSSTRATCOM: Commander, US Strategic Command.

CDRUSTRANSCOM: Commander, US Transportation Command.

CDS: Civil Defense System (s).

CDUEP: Civil Defense University Extension Program, DCPA. Defunct.

C/E: Controller/Evaluator. (**FEMA**, IS 120.A, *An Introduction to Exercises*, 2 Feb 2008, p. 34)

CEA: California Earthquake Authority.

CEDAP: Commercial Equipment Direct Assistance Program. (**DHS**, *FY07 CEDAP*, 20Dec07

CEEP: Critical Employee Emergency Planning. (GSRCPI, *Critical Employee Emergency Planning (CEEP) Training – DHS*, 2008)

CEM: Certified Emergency Manager (IAEM managed credential).

CEM: Comprehensive Emergency Management.

CEMP: Comprehensive Emergency Management Plan. (**DHS**, *TCL*, 2007, p. 23)

Center for Advancing Microbial Risk Assessment (CAMRA): A Department of Homeland Security funded Center of Excellence "led by Michigan State University and established jointly with the U.S. Environmental Protection Agency, fills critical gaps in risk assessments for decontaminating microbiological threats — such as plague and anthrax — answering the question, 'How Clean is Safe?'" (**DHS**, *Homeland Security Centers of Excellence*, 20March07)

Center for Domestic Preparedness (Anniston, Alabama.): "The Center for Domestic Preparedness (CDP) provides a unique environment and opportunity to offer specialized advanced training to state and local emergency responders in the management and remediation of incidents of domestic terrorism, especially those involving chemical agents and other toxic substances…. The Center was created by a Congressional directive to:
Establish a National, State, and Local Public Training Center for First Responders to domestic terrorist acts at Fort McClellan. The Center will serve as a training facility for all relevant federally supported training efforts that target state and local law enforcement, firefighters, emergency medical personnel, and other key agencies such as public works and state and local emergency management agencies. The focus of the training is to prepare relevant state and local officials to deal with chemical, biological, or nuclear terrorist acts and handle incidents dealing with hazardous materials." (**DOJ**, *ODP Fact Sheet*)

Center for Domestic Preparedness (Anniston, Alabama.): "The CDP operates a Federal training center for the delivery of high-quality, comprehensive preparedness training programs for the nation's emergency responders." (**FEMA/NPD/NIC**, slide 4)

Center for Homeland Defense and Security (SHDS): "The Naval Postgraduate School Center for Homeland Defense & Security (CHDS) has been the nation's premier provider of homeland security graduate and executive level education since 2002. NPS and the U.S. Department of Homeland Security are partnering to pioneer the development and delivery of homeland security education programs for governors, mayors and senior homeland security leaders from across a wide spectrum of disciplines in local, tribal, state and federal government, and the military." (**CDHS**, 2007)

Centers for Public Health Preparedness (CPHP): "The CDC-funded Centers for Public Health Preparedness (CPHP) are a national network of academic institutions working in collaboration with state and local public health departments and other community partners to provide life-long learning opportunities to the public health workforce, in order to handle the next public health crisis." (**ASPH**, *CPHP*, 2008)

Centers for Public Health Preparedness (CPHP): "The CPHPs originated in 1999, when former CDC Director Dr. Jeffrey Koplan instructed the then-Public Health Practice Program Office to develop an agency-wide plan to address the CDC's training and continuing education needs.1 The plan was to establish a cohesive, integrated approach to training that focused on the domestic public health workforce, a group that was found to have little formal training in public health, particularly in bioterrorism. This led to the establishment of CPHPs, whose purpose was to leverage existing expertise and educational materials developed by academic public health institutions and create linkages to public health practice (Council on Linkages between

Academia and Public Health Practice, 2000). In December 2007, 27 CPHPs were located within accredited schools of public health (CDC, 2007)." (**Altevogt**, *Research Priorities in Emergency Preparedness and Response for Public Health Systems: A Letter Report*, January 2008, p. 7)

Center of Gravity Analysis: Joint Publication (JP) 5-0 (Draft 2), *Doctrine for Joint Planning Operations*: "The most important task confronting campaign planners in this process is being able to identify friendly and adversary strategic centers of gravity; that is, the sources of strength, power, and resistance." (**JCS/DOD**, *DJPA*, December 2002, p. IV-12)

Centers of Gravity: "Those characteristics, capabilities, or localities from which a military force derives its freedom of action, physical strength, or will to fight." (**NDP**, *Transforming Defense*, 1997, 89)

Central HAZUS Users Group (CHUG): The CHUG (Central HAZUS Users Group) provides a means of collaboration between HAZUS-MH users within FEMA Region 5. This group looks at software challenges, HAZUS-MH projects, and the overall general use of HAZUS-MH software. The main goal of the CHUG is to maximize the potential of HAZUS-MH within the region. Sharing the successes and challenges between users helps bring the entire region together in planning for natural disasters." (**FEMA**, "HAZUS User Groups Success Story: CHUG, Expanding HAZUS Use in FEMA Region 5," October 22, 2007)

Central Training School (Civil Defense), Stillwater, OK: Opened July 30, 1951 to serve 20 States. (**FCDA**, *Annual Report 1951*, 1952, p. 23). Closed on August 15, 1952 due to reduced Congressional funding. (**FCDA**, *Annual Report for 1952*, p. 169)

Central United States Earthquake Consortium: "The Central U.S. Earthquake Consortium is a partnership of the federal government and the eight states most affected by earthquakes in the central United States. Those states are: Alabama, Arkansas, Illinois, Indiana, Kentucky, Mississippi, Missouri, and Tennessee. Established in 1983 with funding support from the Federal Emergency Management Agency, CUSEC's primary mission is, '... the reduction of deaths, injuries, property damage and economic losses resulting from earthquakes in the Central United States.' CUSEC serves as a 'coordinating hub' for the region, performing the critical role of coordinating the multi-state efforts of the central region. Its coordinating role is largely facilitative and not as the primary implementer of emergency management functions which is the responsibility of each individual state." (**CUSEC**, *CUSEC Mission and Goals*, webpage)

CEPIN: Community Emergency Preparedness Information Network. http://www.cepintdi.org/

CEPP: Chemical Emergency Preparedness Program. (**EPA**, *Technical Guidance for Hazards Analysis: Emergency Planning for Extremely Hazardous Substances*, 1987, p. 1-5)

CERC: Crisis and Emergency Risk Communication. (**DHS**, *TCL*, 2007, p. 309)

CERCLA: Comprehensive Environmental Response, Compensation and Liability Act of 1980.

CERFP: CBRNE Enhanced Response Force Packages, National Guard. (**DoD**, *Statement of Verga*, July 19, 2007)

CERT: Citizen Emergency Response Team.

CERT: Computer Emergency Response Team. (**DSB**, *Protecting the Homeland*, 2001, p. F-3)

Certain Dangerous Cargo (CDC): A US Coast Guard designation. "CDCs are defined in 33 C.F.R. § 160.204, a section of Coast Guard regulations that addresses ports and waterways safety. The list primarily includes nonenergy products that are flammable, toxic, or explosive, such as chlorine and sulfur dioxide." LNG and LPG are also on the USCG's CDC list. (**GAO**, *Maritime Security*, December 2007, p. 43)

Certification (NIMS): "Personnel certification entails authoritatively attesting that individuals meet professional standards for the training, experience, and performance required for key incident management functions." (**FEMA**, *National Emergency Responder Credentialing System* (Fact Sheet), 26 Oct 2005, p. 2)

Certified Business Continuity Professional (**CBCP):** "DRII's CBCP certification is reserved for individuals who have demonstrated their knowledge and experience in the business continuity / disaster recovery industry. The CBCP level is designed for an individual with a minimum of two years of experience as a business continuity/disaster recovery planner." (**ISSA**, 2007)

"To apply for CBCP certification, you must:

- Possess at least two years of significant, practical, enterpise wide* experience in five of the Subject Areas of the Professional Practices for Business Continuity Planners, and focuses on your business continuity / disaster recovery planning responsibilities and accomplishments--not your position responsibilities or organizational accomplishments. - At least two of the five selected subject areas must include: subject area #3: Business Impact Analysis; subject area #4: Developing Business Continuity Strategies; subject area #6: Developing and Implementing Business Continuity Plans; or subject area #8: Maintaining and Exercising Business Continuity Plans.6 This enterprise wide experience must have occurred within a ten-year period from your application date

** Enterprise wide is defined as the development and implementation of a plan document to facilitate the resumption of critical business functions, (including, but not limited to, Human Resources, Facilities, Information Technology, Finance, Security, Engineering, and Sales and Marketing), in accordance with established formal and/or informal service level expectations. This enterprise wide planning process involves the coordination, prioritization, resource allocation, and implementation of critical business function strategies to resume normal operating capabilities.*

- Pass DRII's qualifying examination with a minimum score of 75%." (**DRI**, *Certification CBDP*, 2008)

CET: Certified Environmental, Safety and Health Trainer.

CEU: Continuing Education Unit.

CFC: Chlorofluorocarbons. (**UNDHA**, *Disaster Management Glossar*y, 1992, 21)

CFDA: Catalog of Federal Domestic Assistance.

CFI: Critical Facility Inventory. (**FL DEM**, *CFI-RSFI, SOG*, 2003)

CFO/PA&E: Chief Financial Office/Program Analysis and Evaluation. (**DHS**, *IPG FY 2011*)

CFR: Code of Federal Regulations.

CG: Commanding General. (**Dept. of the Army**, *WMD-CST Operations*, 2007, Glossary-1)

Chain of Command: "A series of command, control, executive, or management positions in hierarchical order of authority." (**DHS**, *NIMS*, 2004, p. 128)

Chain of Command: "The orderly line of authority within the ranks of the incident management organization." (**FEMA**, *NIMS* (FEMA 501/Draft), August 2007, p. 148)

Chain of Command and Unity of Command, Incidence Management: "Chain of command refers to the orderly line of authority within the ranks of the incident management organization. Unity of command means that every individual has a designated supervisor to whom they report at the scene of the incident. These principles clarify reporting relationships and eliminate the confusion caused by multiple, conflicting directives. Incident managers at all levels must be able to control the actions of all personnel under their supervision." (**DHS**, *NIMS*, 2004, p. 11)

Change Agent: "A forward-thinking and acting person who is able to deliberately and tangibly impact the mission and organizational direction or a bureaucracy from its status quo into an integrated, future state capable of contemplating and ultimately thwarting security threats, including natural hazards that might befall the United States of America." (**Forrester**, *The Government's New Breed of Change Agents: Leading the War on Terror*, 2006, p. 28)

Change Agent Practices: "Change agents attribute their success to these six key management practices:

1. Challenge the status quo
2. Frame a clear, compelling vision
3. Focus on new outcomes vs. process
4. Realign and lead within bureaucracy
5. Uncover the right talent
6. Listen intently." (**Forrester**, *The Government's New Breed of Change Agents*, 2006, 5)

CHDS: Center for Homeland Defense & Security, Naval Postgraduate School, Monterey, CA.

Check-In: "The process of first reporting in to an incident." (**Capital Health Region**, Edmonton Canada, *ICS100: Incident Command System Training Student Manual*, Mar 2007, 50)

Checklist Exercise: "A method used to exercise a completed disaster recovery plan. This type of exercise is used to determine if the information such as phone numbers, manuals, equipment, etc. in the plan is accurate and current." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 50)

Chemical Accident: "Accidental release occurring during the production, transportation or handling of hazardous chemical substances." (**UNDHA**, *Disaster Mgmt. Glossary*, 1992, 21)

Chemical Agents: "(1) Chemical agents include any chemical substance which, is intended for use in military operations to kill, seriously injure, or incapacitate through its physiological effects. In contrast, TICs [Toxic Industrial Chemicals] include any chemical substances in solid, liquid, aerosolized, or gaseous form that may be used, or stored for use, for industrial, commercial, medical, military, or domestic purposes that produce toxic impact to personnel, materials, and infrastructure.

"(2) When distinguished by their effects on human physiology, chemical agents fall into five categories: blood (cyanide compounds), blister (vesicants), choking (pulmonary agents), incapacitating, and nerve. Chemical agents may also be categorized by their persistency. Agents are described as persistent when, after release, they may remain in the environment for hours to days and nonpersistent when they remain for 10 to 15 minutes. Persistent agents are primarily contact hazards while nonpersistent agents are primarily inhalation hazards.
(3) The greatest risk with TICs lies in exposure to inhaled chemicals, but emergency responders may receive lethal or incapacitating dosage through ingestion or absorption through the eyes or skin. A variety of industries use and produce chemicals that pose hazards to individuals if exposed to sufficient quantities or concentrations. In many instances, chemical warfare individual protective equipment does not provide protection from TICs (e.g., chlorine gas, sulfuric acid)." (**JCS/DoD**, *CBNHE CM* (JP 3-41), 2006, p. I-5)

Chemical Agents: "Chemical agents are poisonous vapors, aerosols, liquids, and solids that have toxic effects on people, animals, or plants. They can be released by bombs or sprayed from aircraft, boats, and vehicles. They can be used as a liquid to create a hazard to people and the environment. Some chemical agents may be odorless and tasteless. They can have an immediate effect (a few seconds to a few minutes) or a delayed effect (2 to 48 hours). While potentially lethal, chemical agents are difficult to deliver in lethal concentrations. Outdoors, the agents often dissipate rapidly. Chemical agents also are difficult to produce." (**FEMA**, *Chemical Threats*, March 21, 2006)

Chemical Agents: "According to CDC, there are over 80 chemical agents that can kill or seriously injure a person.[6] Of these, 60 or so are toxic substances that could be used as chemical

[6] Cited is: CDC. "Chemical Emergencies: Chemical Agents." U.S. Department of Health and Human Services. http://www.bt.cdc.gov/agent/agentlistchem.asp

weapons by terrorists. Many of these are common commercial and industrial chemicals that can be easily weaponized." (**Trust for America's Health**, *Ready or Not? 2007*, p. 29)

Chemical Attack: "A chemical attack could come without warning. Signs of a chemical release include people having difficulty breathing; experiencing eye irritation; losing coordination; becoming nauseated; or having a burning sensation in the nose, throat, and lungs. Also, the presence of many dead insects or birds may indicate a chemical agent release." (**FEMA**, *Chemical Threats*, March 21, 2006)

Chemical/Biological Incident Response Force, U.S. Marines: "In the event of a chemical or biological incident, the Emergency Services Sector (ESS) can obtain support from the Chemical/Biological Incident Response Force (CBIRF), an element of II Marine Expeditionary Force (II MEF), U.S. Marine Forces Command (MARFORCOM). Located in Indian Head, MD, CBIRF forward-deploys and/or responds by land, sea, or air worldwide to credible threats of chemical, biological, radiation, and nuclear (CBRNE) events on short notice. Once on scene, CBIRF activities include reconnaissance (detecting and identifying threats), rescue and extraction (confined space rescue, trench rescue, vehicle and advanced rope rescue, and collapsed structure stabilization and rescue), medical care in "hot zones," decontamination, explosive ordnance disposal (render Improvised Explosive Devices safe), command and control (critical network communications), and logistics (self-contained, self-sufficient task-organized unit). To receive the Force's assistance at the local level, the senior elected official (e.g., mayor) must contact the governor, who formally requests CBIRF…. CBIRF personnel also have performed hundreds of evaluations of commercial off-the-shelf items that enhance personal protection equipment, detection, and decontamination of agents. CBIRF interacts with all standards-writing organizations, and works on an ongoing basis to improve research, development and acquisition of new equipment." (**EMR-ISAC**, INFOGRAM 42-07, October 25, 2007; see, also, **DoD**, *Statement of Verga*, July 17, 2007, p. 6))

Chemical/Biological Incident Response Force (CBIRF) Background: "In 1995, then Commandant of the Marine Corps, General Krulak provided planning guidance that stated the need for a strategic organization to respond to the growing chemical/biological threat. The Commandant's Warfighting Laboratory developed the concept for the establishment of CBIRF in 1996. As a result of this concept development, CBIRF was formed during the spring of 1996. CBIRF is currently located 26 miles from the District of Columbia." (**CBIRF**, "The Background of CBIRF," 2007)

Chemical/Biological Incident Response Force (CBIRF) Mission: "When direct, forward-deploy and/or respond to a credible threat of a Chemical, Biological, Radiological, Nuclear, or High Yield explosive (CBRNE) incident in order to assist local, state, or federal agencies and Unified Combat Commanders in the conduct of consequence management operations. CBIRF accomplishes this mission be providing capabilities for agent detection and identification; casualty search, rescue, and personnel decontamination; and emergency medical care and stabilization of contaminated personnel." (**CBIRF,** *CBIRF Mission*, 2007)

Chemical, Biological, Radiation, Nuclear, Explosive Weapons (**CBRNE).** (**HSC**, *NCPIP*, 66)

Chemical, Biological, Radiological, Nuclear, and High-yield Explosives Consequence Management: "The consequence management activities for all deliberate and inadvertent releases of chemical, biological, radiological, nuclear, and high-yield explosives that are undertaken when directed or authorized by the President. Also called CBRNE CM." (**DoD**, *DOD Dictionary of Military and Related Terms*, 2007)

Chemical, Biological, Radiological, Nuclear, and High-yield Explosive Hazards: "Those chemical, biological, radiological, nuclear, and high-yield explosive elements that pose or could pose a hazard to individuals. Chemical, biological, radiological, nuclear, and high-yield explosive hazards include those created from accidental releases, toxic industrial materials (especially air and water poisons), biological pathogens, radioactive matter, and high-yield explosives. Also included are any hazards resulting from the deliberate employment of weapons of mass destruction during military operations. Also called CBRNE hazards." (*DOD Dictionary of Military and Related Terms*, 2007)

Chemical, Biological, Radiological, Nuclear, and High-yield Explosives Incident: "An emergency resulting from the deliberate or unintentional release of nuclear, biological, radiological, or toxic or poisonous chemical materials, or the detonation of a high-yield explosive. Also called CBRNE incident." (*DOD Dictionary of Military and Related Terms*, 2007)

Chemical Facility: "Any establishment that possesses or plans to possess, at any relevant point in time, a quantity of a chemical substance determined by the Secretary [DHS] to be potentially dangerous or that meets other risk-related criteria identified by the Department." (**DHS,** *Chemical-Terrorism Vulnerability Information*, November 2007, Glossary, p. 1)

Chemical Facility Anti-Terrorism Standards (CFATS): "Responsibility for chemical security is shared among federal, state, and local governments, as well as the private sector. The Department of Homeland Security has issued Chemical Facility Anti-Terrorism Standards for any facility that manufactures, uses, stores, or distributes certain chemicals above a specified quantity." (**DHS**, "Critical Infrastructure: Chemical Security." November 2, 2007.

Chemical Facility Anti-Terrorism Standards (CFATS) Background: "In 2005 and 2006, the Secretary of Homeland Security identified the need for legislation authorizing DHS to develop and implement a framework to regulate the security of high-risk chemical facilities in the United States. In October 2006, Congress passed and the President signed the Department of Homeland Security Appropriations Act of 2007, which in Section 550 authorizes DHS to require high-risk chemical facilities to complete security vulnerability assessments, develop site security plans, and implement risk-based measures designed to satisfy DHS-defined risk-based performance standards. The Act also authorized DHS to enforce compliance with the security regulations, including conducting audits and inspections of high-risk facilities, imposing civil penalties of up to $25,000 per day, and shutting down facilities that fail to comply with the regulations…. Under the rule, if a facility possesses a chemical of interest at or above the screening threshold quantity, the facility must complete and submit a consequence assessment known as a Top-Screen. A facility must do so within 60 calendar days of the publication of a final Appendix A or within 60

calendar days of coming into possession of the listed chemicals at or above the listed STQs [Screening Threshold Quantities]." (**DHS**, *Fact Sheet: CFATS: Appendix A*, Nov. 2, 2007, p. 1)

"Appendix A [CFATS] lists approximately 300 chemicals of interest and includes common industrial chemicals such as chlorine, propane and anhydrous ammonia as well as specialty chemicals such as arsine and phosphorus trichloride. Facilities that possess chemicals of interest at or above the listed screening threshold quantities are required to complete the Top-Screen within 60 calendar days of the publication of Appendix A." (**DHS**, "DHS Publishes Chemicals of Interest List for Chemical Facility Anti-Terrorism Standards," November 2, 2007)

Chemical Facility Anti-Terrorism Standards (CFATS) Risk-Based Facility Tiering: "The Department has developed a risk-based tiering structure that will allow it to focus resources on the high-risk chemical facilities. To that end, the Department [DHS] will assign facilities to one of four risk-based tiers ranging from high (Tier 1) to low (Tier 4) risk. Assignment of tiers is based on an assessment of the potential consequences of a successful attack on assets associated with chemicals of interest. [DHS] uses information submitted by facilities through the Chemical Security Assessment Tool Top Screen and Security Vulnerability Assessment processes to identify a facility's risk, which is a function of the potential impacts of an attack (consequences), the likelihood that an attack on the facility would be successful (vulnerabilities), and the likelihood that such an attack would occur at the facility (threat). All facilities that were individually requested by the Assistant Secretary or that meet the criteria in Appendix A must complete the CSAT Top Screen…. The highest tier facilities, or Phase 1 facilities, are those specifically requested by the Assistant Security to complete the Top Screen…. Preliminarily tier 1, 2, and 3 facilities must subsequently submit a CSAT Security Vulnerability Assessment. Tier 4 facilities may submit an Alternative Security Program (ASP) for [DHS] to consider… Tier 3 and 4 facilities may choose to submit an Alternative Security Plan for the Site Security Plan for consideration by the Department…." (**DHS**, "Risk for CFATS." November 1, 2007, p. 1)

Chemical Incidents: "Chemical Incidents are characterized by the rapid onset of medical symptoms (minutes to hours) and easily observed signatures (colored residue, dead foliage, pungent odor, dead insects and animals)." (**DOT**, *Emergency Response Guidebook*, 2004, 354)

Chemical Sector Buffer Zone Protection Grant Program: "The Chemical Sector Buffer Zone Protection Grant Program is a targeted effort that provides funds to build security and risk management capabilities at the state and local level for chemical sector critical infrastructure from acts of terror and other hazards. Chemical Sector Buffer Zone funding is specifically focused on enhancing the protection of facilities that, if attacked, could cause Weapons of Mass Destruction (WMD)-like effects." (**DHS**, "DHS Awards $399 Million in Grants to Secure the Nation's Critical Infrastructure" (Press Release), September 25, 2006)

Chemical Security Assessment Tool (CSAT): "The Chemical Security Assessment Tool (CSAT) is the [DHS] system for collecting and analyzing key data from chemical facilities to register for CSAT, identify facilities that present a high level of risk, support the preliminary and final tiering decisions for individual high-risk facilities, assess a facility's security vulnerabilities, and evaluate a facility's security plan to address vulnerabilities and meet risk-

based performance standards. The Chemical Security Assessment Tool comprises four secure, web-based tools:

Facility Registration Questionnaire
Consequence screening questionnaire (Top-Screen);
Security Vulnerability Assessment (SVA) tool
Site Security Plan (SSP) template.

After registering for CSAT, facilities are provided access to the Top Screen, which enables the Department to determine if they are a high risk chemical facility covered by the Chemical Facility Anti-Terrorism Standards Interim Final Rule (CFATS). For facilities that are determined to be high risk, other tools, specifically the SVA and SPP, are made available to satisfy additional CFATS requirements." (**DHS**, "CSAT," November 1, 2007, p. 1)

Chemical Stockpile Emergency Preparedness Program (CSEPP): "The Chemical Stockpile Emergency Preparedness Program (CSEPP) is a unique partnership between FEMA and the U.S. Army, given FEMA's long-standing experience in preparing for and dealing with all types of emergencies and the U.S. Army's role as custodian of the U.S. chemical stockpile. Since 1988, FEMA and the U.S. Army have assisted communities surrounding the eight chemical stockpile sites to enhance their abilities to respond to the unlikely event of a chemical agent emergency." (**FEMA**, *Chemical Stockpile Emergency Preparedness Program (CSEPP)*, May 2, 2006 update.)

Chemical Stockpile Emergency Preparedness Program (CSEPP): The U.S. Army has… stored this country's chemical warfare agents for decades at seven U.S. Army installations around the United States…. In 1985, Congress ordered the destruction of these weapons. Subsequently, in 1988 Congress ordered "maximum protection" of the public near the installations until the chemical weapons were gone. That was the beginning of the Chemical Stockpile Emergency Preparedness Program (CSEPP)." (**Umatilla/Morrow County, OR**, *What is CSEPP?*)

Chemical-Terrorism Vulnerability Information (CVI): "Information used to determine chemical facility readiness to deter, mitigate, or respond to a terrorist attack. CVI includes vulnerability assessments, site security plans, inspection findings, self-audits, sensitive portions of enforcement-related documents, and correspondence between chemical facilities and the Federal government." (**DHS**, *CVI Glossary*, November 2007, p. 1)

Chemical Warfare: "All aspects of military operations involving the employment of lethal and incapacitating munitions/agents and the warning and protective measures associated with such offensive operations. Since riot control agents and herbicides are not considered to be chemical warfare agents, those two items will be referred to separately or under the broader term "chemical," which will be used to include all types of chemical munitions/agents collectively. (**DA**, *WMD-CST Operations*, 2007, Glossary-9)

Chemical Agent: "Together or separately, (a) a toxic chemical and its precursors, except when intended for a purpose not prohibited under the Chemical Weapons Convention; (b) a munition or device specifically designed to cause death or other harm through toxic properties of those

chemicals specified in (a) above, which would be released as a result of the employment of such munition or device; (c) any equipment specifically designed for use directly in connection with the employment of munitions or devices specified in (b) above." (**DA**, *WMD-CST Operations*, Glossary-9)

CHEMPACK: "The CHEMPACK program is an ongoing initiative of the DSNS [Division for the Strategic National Stockpile, CDC], begun in 2003, that provides antidotes (three countermeasures used concomitantly) to volatile nerve agents for pre-positioning by State, local, and/or tribal officials throughout the U.S." (**HHS**, *PHEMCE Implementation Plan*, 2007, p. 18)

CHEMTREC: The Chemical Transportation Emergency Center, 24-hour contact number 1-800-424-9300 in CONUS, 202-483-7616 outside the continental United States. A service, sponsored by the chemical industry, which provides two stages of assistance to responders dealing with potentially hazardous materials. First, on receipt of a call providing the name of a chemical judged by the responder to be a potentially hazardous material, CHEMTREC provides immediate advice on the nature of the chemical product and the steps to be taken in handling it. Second, CHEMTREC promptly contacts the shipper of the material involved for more detailed information and on-scene assistance when feasible. (**DOT** 1993)

CHER-CAP: *Community Hazards Emergency Response-Capability Assurance Process*. (**FEMA**, *Community Hazards Emergency Response-Capability Assurance Process*, 8May2007)

Chief: "The ICS title for individuals responsible for management of functional Sections: Operations, Planning, Logistics, Finance/Administration, and Intelligence/Investigations (if established as a separate Section)." (**FEMA**, *NIMS* (FEMA 501/Draft), August 2007, p. 148)

Children and Disaster: "Disasters can leave children feeling frightened, confused, and insecure. Whether a child has personally experienced trauma, has merely seen the event on television, or has heard it discussed by adults, it is important for parents and teachers to be informed and ready to help if reactions to stress begin to occur. Children may respond to disaster by demonstrating fears, sadness, or behavioral problems. Younger children may return to earlier behavior patterns, such as bedwetting, sleep problems, and separation anxiety. Older children may also display anger, aggression, school problems, or withdrawal. Some children who have only indirect contact with the disaster but witness it on television may develop distress….

For many children, reactions to disasters are brief and represent normal reactions to "abnormal events." A smaller number of children can be at risk for more enduring psychological distress as a function of three major risk factors:

- Direct exposure to the disaster, such as being evacuated, observing injuries or death of others, or experiencing injury along with fearing one's life is in danger.
- Loss/grief: This relates to the death or serious injury of family or friends.
- On-going stress from the secondary effects of disaster, such as temporarily living elsewhere, loss of friends and social networks, loss of personal property, parental unemployment, and costs incurred during recovery to return the family to pre-disaster life and living conditions.

In most cases, depending on the risk factors above, distressing responses are temporary. In the absence of severe threat to life, injury, loss of loved ones, or secondary problems such as loss of home, moves, etc., symptoms usually diminish over time. For those that were directly exposed to the disaster, reminders of the disaster such as high winds, smoke, cloudy skies, sirens, or other reminders of the disaster may cause upsetting feelings to return. Having a prior history of some type of traumatic event or severe stress may contribute to these feelings.

Children's coping with disaster or emergencies is often tied to the way parents cope. They can detect adults' fears and sadness. Parents and adults can make disasters less traumatic for children by taking steps to manage their own feelings and plans for coping. Parents are almost always the best source of support for children in disasters. One way to establish a sense of control and to build confidence in children before a disaster is to engage and involve them in preparing a family disaster plan. After a disaster, children can contribute to a family recovery plan." (**FEMA**, *Helping Children Cope with Disaster*, 2006)

CHIP: Capability and Hazard Identification Program (FEMA CPG 1-35, 1985).

CHIP: Capturing Human Intelligence Project. (**FEMA**, *FEMA's "Good Stewardship Council" Meets to Serve Taxpayers' Interest*, March 27, 2008)

Chlorofluorocarbons (CFC): "A group of chemical compounds used in industry and in the household, of which the excessive and universal use is believed to be one of the causes of ozone depletion, with resulting environmental damage." (**UNDHA**, *DM Glossar*y, 1992, 21)

Choking Agents: "Substances that cause physical injury to the lungs. Exposure is through inhalation. In extreme cases, membranes swell and lungs become filled with liquid (pulmonary edema). Death results from lack of oxygen; hence, the victim is "choked". Phosgene (CG) is a choking agent. Symptoms: irritation to eyes/nose/throat, respiratory distress, nausea and vomiting, burning of exposed skin." (**DOT**, *Emergency Response Guidebook*, 2004. p. 358)

CHOP: Change of Operational Control. (**DA**, *WMD-CST Ops*, Dec 2007, Glossary-1)

Chronic Radiation Dose: "A dose of ionizing radiation received either continuously or intermittently over a prolonged period of time. A chronic radiation dose may be high enough to cause radiation sickness and death but, if received at a low dose rate, a significant portion of the acute cellular damage may be repaired." (*DOD Dictionary of Military and Related Terms*, 2007)

Cities Readiness Initiative (CRI): Announced in May 2004. "The Cities Readiness Initiative (CRI) is a federally funded effort to prepare major US cities and metropolitan areas to effectively respond to a large scale bioterrorist event by dispensing antibiotics to their entire identified population within 48 hours of the decision to do so…[The CRI]: Aids state and local officials in developing plans that support mass dispensing drugs to 100% of the identified population within 48 hours of a decision to do so; provides funding to states, whose CRI jurisdictions cover 500 counties. This means that 56% of the US population lives within a CRI jurisdiction…. The CRI project started in 2004 and has grown each year thereafter:

2004: CRI stared with 21 cities

2005: CDC funded 15 additional cities…
2006: CDC funded an additional 36 cities, for a total of 72 participating cities….

In addition, the United States Postal Service (USPS) is working with select CRI cities to develop Postal Plans, in which mail carriers will deliver antibiotics to the homes in selected zip codes. This option is only available to jurisdictions with an approved USPS Dispensing Plan." (**CDC**, *Key Facts about the Cities Readiness* Initiative July 3, 2007; also, **Kaplowitz, Lowenberg, Wagner**, *Cities Readiness Initiative: Implications for All Homeland Security Partners*. ASTHO, 2005)

Citizen Corps: "The mission of Citizen Corps is to harness the power of every individual through *education, training, and volunteer service*
to make communities safer, stronger, and better prepared to respond to the threats of terrorism, crime, public health issues, and disasters of all kinds." (**Citizen Corps**, *Citizen Corps Councils*)

Citizen Corps: "Citizen Corps, administered by DHS, is a community-level program that brings government and private sector groups together and coordinates the emergency preparedness and response activities of community members. Through its network of community, tribal and State councils, Citizen Corps increases community preparedness and response capabilities through public education, outreach, training and volunteer service." (**DHS,** *National Response Framework* (Comment Draft), September 10, 2007, p. 17)

Citizen Corps Approach: "National network of state/local/tribal Citizen Corps Councils to:

- Tailor activities to the community
- Build on community strengths to develop and implement a local strategy for all to participate
- National Voice – National public awareness and media campaign" (**Citizen Corps**, *Citizen Corps Uniting Communities, Preparing the Nation*, DHS, slide 9)

Citizen Corps Community Benefits:

- Greater sense of security, responsibility, and personal control
- Builds community pride, unity and patriotism
- Promotes risk reduction, mitigation, and preparedness practices
- Prepares us all for helping others in a crisis,"

(**Citizen Corps**, *Citizen Corps Uniting Communities, Preparing the Nation*, DHS, slide 15)

Citizen Corps Community Benefits for Emergency Responders:

- "Year round support through volunteer programs
- Reduces burden on first responder services by promoting mitigation and preparedness measures
- Created well trained, better informed, and better prepared citizens to take care of themselves and others during times of crisis – allowing first responders to address the most critical needs."

(**Citizen Corps**, *Citizen Corps Uniting Communities, Preparing the Nation*, DHS, slide 16)

Citizen Corps Councils: "The Citizen Corps mission is accomplished through a national network of state, local, and tribal Citizen Corps Councils. These Councils build on community strengths to implement the Citizen Corps programs and will carry out a local strategy to have every American participate." (**Citizen Corps (DHS)**, *Citizen Corps Councils*)

Citizen Corps Councils Membership:

- First responder/emergency management (law, fire, EMS/EMT, public works)
- Volunteer community
- Elected officials
- Business leaders
- School systems representatives
- Transportation sector
- Media executives
- Minority and special needs representation
- Leadership from community sub-structure. (**Citizen Corps**, *Citizen Corps Uniting Communities, Preparing the Nation*, DHS, slide presentation, slide10)

Citizen Corps Councils Responsibilities:

- Build on community strengths to develop strategic plans for the whole community, including special needs groups
- Focus on public education, training, and volunteer opportunities for community and family safety
- Ensure citizens are connected to emergency alert systems
- Promote and oversee Citizen Corps Programs
- Provide opportunities for special skills and interests
- Organize special project/community events
- Capture smart practices and report accomplishments.

(**Citizen Corps**, *Citizen Corps Uniting Communities, Preparing the Nation*, DHS, slide 11)

Citizen Corps Fiscal Year 2009 Appropriation Request: "FEMA is requesting $15 million for the Citizen Corps. This funding supports Citizen Corps Councils with efforts to engage citizens in personal preparedness, exercises, ongoing volunteer programs, and surge capacity response, in order to better prepare citizens to be fully aware, trained, and practiced on how to prevent, protect/mitigate, prepare for, and respond to all threats and hazards. This program provides funding by formula basis to all 50 states and 6 territories. Five years after 9/11, there are over 2,000 Citizen Corps Councils reaching 73 percent of the population and operating in all 50 states and six U.S. territories." (**FEMA**, *Statement of R. David Paulison, Administrator, on the Fiscal Year 2009 President's Budget Before the Committee on Appropriations Subcommittee on Homeland Security, U.S. House of Representatives*, March 11, 2008, p. 6)

Citizen Corps Local Strategy and Implementation: "Increased collaboration between government and community leaders." (**Citizen Corps**, *Citizen Corps Uniting Communities, Preparing the Nation*, DHS, slide 14)

Citizen Corps Mission: "To have everyone in America participate in making themselves, our communities, and our nation safer. We all have a role in hometown security: a personal responsibility to be prepared; to get training in first aid and emergency skills; and to volunteer to support local emergency responders, disaster relief, and community safety." (**Citizen Corps**, *Citizen Corps Uniting Communities, Preparing the Nation*, DHS, slide presentation, slide 2)

Citizen Corps National Council: 'Leaders of national organizations promote the Citizen Corps mission, foster collaboration, and support State, tribal, local levels. Subcommittees

- Emergency Management & Public Works
- Emergency Medical and Public Health Services
- Fire Service
- Law Enforcement
- Intergovernmental Organizations
- Volunteer Service
- Private Sector and Trade Associations
- Disabilities Advocacy Organizations."

(**Citizen Corps**, *Citizen Corps Uniting Communities, Preparing the Nation*, DHS, slide 17)

Citizen Corps National Policy Tie-In:

- Homeland Security Presidential Directive-8 (paragraphs 22 and 23)
- National Preparedness Goal (Vision Statement and National Priorities)
- Target Capabilities List
- State and Urban Strategies
- Homeland Security Grant Program
- Homeland Security Exercise and Evaluation Program
- National Response Plan."

(**Citizen Corps**, *Citizen Corps Uniting Communities, Preparing the Nation*, DHS, slide 19)

Citizen Corps Programs:

- Volunteers in Police Service (VIPS): works to enhance the capacity of state and local law enforcement to utilize volunteers
- Neighborhood Watch/USAonWatch: incorporated terrorism awareness education into its existing crime prevention mission
- The Community Emergency Response Team (CERT) program educates and trains citizens in basic disaster response skills
- The Medical Reserve Corps (MRC) Program helps medical, public health, and other volunteers offer their expertise
- Fire Corps promotes the use of citizen advocates to provide support to fire and rescue departments." (**Citizen Corps**, *Citizen Corps Uniting Communities, Preparing the Nation*. DHS, slide presentation, slide 6)

Citizen Disaster Education and Preparedness (1952): At the base of an adequate civil defense is the self-reliant individual, fortified with every possible training and plenty of practice, prepared to do everything he can do to protect himself in an emergency with assurance and

without panic. In addition he is prepared to extned efficient aid to his family, his neighbors, or the people down the street." (**Wadsworth**, *The National Civil Defense Plan*, 1952, p. 4)

"…in public information we are doing fairly well. We have distributed over 57 million pieces of paper; these papers have included six or seven public booklets, air raid alert cards, pamphlets describing household first-aid kits and various other things – all of them very inexpensive. Many millions of them have been bought by the general public from the Superintendent of Documents. This brings revenue to the Government. In fact, the public information part of our program has brought more into the Federal Government than the Federal Government has spent for it." (Ibid., p. 11)

Citizen Disaster Education and Preparedness (1953): "An informed people is a strong people. The Federal Civil Defense Administration will continue to bring Americans the facts about the ever-present threat to their homes and families, and practical instructions on how to meet that threat. Given the facts, no matter how harsh, I am confident tht my fellow citizens – and their elected representatives in local, State and national positions of responsibility – will know how to act promptly and courageiously for the greater security of all." (**FCDA**, *1953 Annual Report*, p. 6)

"The demonstrated usefulness of civil defense in natural disasters has helped convince many skeptics that trained, self-reliant citizens and communites organized for both self-help and mutual assistance, are tood things to have – just in case." (**FCDA**, *1953 Annual Report*, p. 67)

Citizen Disaster Education and Preparedness (1954): To be prepared against natural and man-made disasters, American must know what to expect and what to do. To these ends the Federal Civil Defense Administration devoted a major share of its efforts and funds to the development of an alert, informed, and trained citizenry…. The distinctive feature…of the civil defense effort is that, if civil defense is to work, the preparedness must have worked its way down to individuals and groups of individuals. Survival is still to a large extent a matter of individual behavior during the period of crisis and danger even when warning, directin and a certain amount of defense and protection are provided. The effective execution of the best plans and the efficient use of the most ample resources can be materially reduced if the populace, at large, does not carry out the most adaptive behavior possible during the time of disaster. Civil defense thur trequires a program of information, guidance, education, and training that results in motivation, insight, confidence, and skill on the part of the public in carryiing out its assigned task." (**FCDA**, *1954 Annual Report*, p. 75)

[See, also, "Family-Action Program," and "Public Education."]

Citizen Emergency Response Team (CERT): "Community Emergency Response Team (CERT) training is one way for citizens to prepare for an emergency. CERT training is designed to prepare people to help themselves, their families and their neighbors in the event of a catastrophic disaster. Because emergency services personnel may not be able to help everyone immediately, residents can make a difference by using the training obtained in the CERT course to save lives and protect property." (**DHS,** *National Response Framework* (Comment Draft). DHS, September 10, 2007, p. 18)

Civil Air Defense Warning System (CADW): "…disseminates warning to 200 kep point warning centers throught the United States. These key points, manned by State or local civil defense personnel, alert civil defense headquarters in their areas. Local officials in turn warn the public."

Civil Air Patrol (CAP): "The CAP, the official auxiliary of the United States Air Force, is mandated by Congress to fulfill three missions around aerospace education, youth programs, and emergency services." (Iowa Homeland Security and Emergency Management Div., "Civil Air Patrol Assists During Emergencies," *Secure & Prepared*, Vol. 3, Issue 21, December 4, 2007, 3)

Civil Applications Committee (CAC): "…established in 1975 to provide oversight and coordination of these activities [civil applications of classified remotely sensed imagery]. The CAC is composed of 11 Federal departments and independent agencies. The USGS, through the Secretary of the Interior, is delegated responsibility to chair the CAC." (**USGS**, *NCAP*, 2002)

Civil Applications Domain Working Group: "This working group will continue the efforts of the Civil Application Committee that have been ongoing for more than 30 years, including scientific, geographic and environmental research." (DHS, *Fact Sheet: NAO*, August 15, 2007)

Civil Authorities: "Those elected and appointed officers and employees who constitute the government of the United States, the governments of the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, United States possessions and territories, and political subdivisions thereof." (**JCS/DoD**, *Civil Support*, 2007, p. I-2)

Civil Damage Assessment: "An appraisal of damage to a nation's population, industry, utilities, communications, transportation, food, water, and medical resources to support planning for national recovery. See also damage assessment." (**DOD**, *DOD Dictionary of Military and Related Terms*, 2007)

Civil Defense (CD): "Like many terms, civil defense has several different connotations and communication is often impossible when different meanings are used without some agreement on usage. In its most inclusive meaning, civil defense connotes a function. Thus, civil defense is a description of any and all activities carried out by governmental or quasi-governmental agencies in preparation for and during actual emergencies. This most inclusive meaning is often associated with wartime and potential nuclear attack situations…. According to this meaning, civil defense is "civil government in emergency." The analysis which follows does not use such an inclusive meaning. The referent here is the activities and functions which are performed by the social units called civil defense within the local community. We have found that in the vocabularies of most American communities, civil defense is most commonly used not as a function, but to refer to the particular identity and activities of the "civil defense office." In American society, the local civil defense office is not exclusively concerned with problems relating to potential nuclear attack but also becomes involved in other types of community emergencies, especially disasters. To the other community organizations which become involved in these disaster operations, the civil defense office is seen as only one part of the total emergency picture." (**Anderson**, *Local Civil Defense in Natural Disaster…*, 1969, p. 4)

Civil Defense: "All those activities and measures designed or undertaken to: (a) minimize the effects upon the civilian population caused or which would be caused by an enemy attack on the United States; (b) deal with the immediate emergency conditions that would be created by any such attack; and (c) effectuate emergency repairs to, or the emergency restoration of, vital utilities and facilities destroyed or damaged by any such attack." (**Dept. of Army**, *WMD-CST Operations*, Dec. 2007, Glossary-9)

Civil Defense: "Civil defense operations are the activities and measures undertaken in event of attack…They will be undertaken in a wartime environment by the civil defense operating system…. Many of the civil defense operations needed to save lives and property in event of attack are also needed in peacetime emergencies. Therefore civil defense operational readiness can serve both wartime and peacetime purposes. However, preparedness for peacetime contingencies does not automatically ensure readiness for attack preparedness." (**DCPA,** *DCPA Attack Environment Manual, Chapter 1: Introduction to Nuclear Emergency Operations*, 1973, Panel 1)

Civil Defense (CD): "All those activities and measures designed or undertaken to: a. minimize the effects upon the civilian population caused or which would be caused by an enemy attack on the United States; b. deal with the immediate emergency conditions that would be created by any such attack; and c. effectuate emergency repairs to, or the emergency restoration of, vital utilities and facilities destroyed or damaged by any such attack." (**DOD**, *DOD Dictionary of Military and Related Terms*, 2007)

Civil Defense: "…a systematic, efficient way of dealing with attack on the home front. A strong civil defense can save fifty percent of the lives that might otherwise be lost. It can ease human suffering. It can reduce the destruction of property. It can maintain the flow of food and munitions needed by our Armed Forces. Civil defense can sustain the people and augment the will to survive against any attack by any aggressor. Civil defense is an insurance policy that will ease the effect of attack if and when it comes. Importantly, a strong civil defense, like strong armed forces, will proclaim that we are ready for anything an enemy can hurl against us and that no matter what hits us we can successfully fight back. Such readiness may actually help deter attack by making the results too small to warrant the cost, and thus serve the cause of peace in the world." (**FCDA**, *Annual Report for 1951*, 1952, pp. ix-x)

Civil Defense (CD): "All activities and measures designed or undertaken for the following reasons: (a) to minimize the effects upon the civilian population caused by, or which would be caused by, an attach upon the United States or by a natural disaster; (b) to deal with the immediate emergency conditions which would be created by any such attack or natural disaster; and (c) to effectuate emergency repairs to, or the emergency restoration of, vital utilities and facilities destroyed or damaged by any such attack or natural disaster." (**FEMA**, *Definitions of Terms*, April 4, 1990.)

Civil Defense (CD): "The system of measures, usually run by a governmental agency, to protect the civilian population in wartime, to respond to disasters, and to prevent and mitigate the consequences of major emergencies in peacetime. The term "civil defense" is now used increasingly. (**UNDHA**, *Disaster Management Glossary*, 1992, p.22)

Civil Defense, Role in National Defense: "In the words of the Secretary of Defense, civil defense is 'a partner and coequal partner' with the armed forces, 'a necessary and vital part of national defense." (**Wadsworth**, *The National Civil Defense* Plan, 1952, 3)

Civil Defense, 1951: "All State and Territories had civil defense legislation. States, Territories, and major cities have designated civil defense directors and developed operrating civil defense organizations. Twenty States completed agreements for mutual aid in a civil defense emergency. United States and Canada set up a mutual aid agremment… 1,870,199 volunteers were enlisted in civil defense throughout the Nation" (**FCDA**, *1954 Annual Report*, p. 2)

Civil Defense, 1952: Nearly 2,000 civil defense exercises wre conducted by cities and States. These involved nearly 2,000,000 civil defense workers and 42,000,000 citizens. *Operational Readiness of FCDA.* Under its plan for emergency operations, FCDA activated two operating emergency locations and installed emergency communications facilities. FCDA possessed the physical facilities for operating under attack conditions in close coordination with its regions and the States and with other key security agencies of government." (**FCDA**, *1954 Annual Report*, p. 3)

"During 1952, three 'Alert America' convoys traveled throughout the United States. More than 1,100,000 people in 82 cities attended these traveling exhibits which served as a major means of bringing civil defense information to, and increasing public interest and participation among the 67,000,000 residents in the areas visited." (**FCDA**, *1954 Annual Report*, p. 4)

"Executive Order 10346, April 1952, directs Federal agencies to consult with FCDA on plas for use of their personnel, materials, and facilities in civil defense emergencies. These plans take into consideration the essential military requirements of the Department of Defense from each agency, and the continuity of the agency's essential functions." (**FCDA**, *1954 Annual Report*, p. 21)

Civil Defense, 1953: "*Peacetime Values of Civil Defense.* Communities, cities, and States throughout the Nation learned that an organized, trained civil defense was an important asset whenever and whereever natural disaster struck. Civil defense became a recognized community service – a new dimension of peacetime citizenship." (**FCDA**, *1954 Annual Report*, p. 5)

Civil Defense, 1954: "We staged the first continental alert in history." The motion picture "Operation Ivy" on the US explosion of a hydrogen weapon was released as well as informtion on the newly "discovered" threat of long-distance radioactive fallout. FCDA moves to Battle Creek, MI. FCDA introduces evacuation planning from major cities: "The alternatives are to dig, die, or get out; and certainly we don't want to die. Civil defense's purpose is to see hom many of us can live after an attack." (**FCDA**, *1954 Annual Report*, pp. 7-8

Civil Defense, 1955: "At the close of…[1955] the Administrator summarized the Agency's position and progress as follows:

Some of the important components of the national security policy of the United Statews are: skillful diplomacy, a high degree of military preparedness, and a civil defense program for every segment of our population, from the residents of the Capital City to the citizens of the smallest township.

The civil defense role in national security planning is indispensable. In this age of terrible new weapons, a major deterrent to a potential aggressor will be precisely those programs that this Nation develops to defned its populatin. It seems logical that an ememy's temptation to attack the United States will shrink in proportion to the advance measures the Nation adopts to keep the greater part of its population alive during and after an attack.

The FCDA is working to develop a civil defense program so capable of protecting millions of people in time of danger that it will also help to convince a potential aggressor of the futility of attempting to destroy the Nation." (**FCDA**, *1955 Annual Report*, 1956, p. 1)

"Civil defense has helped to combat natural disasters since 1953, but in 1955 we faced our biggest challenge. Operations were better organized and more effective than at any time in the past. Assignments to other Federal agencies worked more smoothly. Coordination with the work of the Red Cross was excellent. Through these experiences our ability to provide speedy assistance was greatly improved.

The spirit and enterprise of the untrained volunteers who invariably are willing to help their unfortunate neighbors in time of disaster was most impressive. The volunteer spirit, however, is not always enough. There were repeated demonstrations of the need for some civil defense training for everyone. People so trained must supplement the activities of a Federal civil defense agency in emergency rehabilitation.

FCDA training has produced greater civil defense efficiency in combatting disaster and the experience gained should help materially in dealing with conditons resulting from enemy attack….

…the Administrator made on-the-scene inspection of the floods in the east last summer and fall, and those in Nevada and California in December." (**FCDA**, *1955 Annual Report*, 1956, 10)

Civil Defense, 1956: "The Federal Government cannot give the Nation civil defense. As Presidentr Eisenhower has pointed out, should an emergency occur, our Nation's survival may be dependent upon the way each of us responds to his duty. In an area attacked, survival will initially rest mainly with the individual and the community. That is why, in all out planning, we stress a partnership between the Federal Government, States, cities, and towns. During fiscal year 1956, FCDA developed closer cooperation with the States than ever before. Each program, each new decision affecting major policy, was discussed in advance with State civil defense directors." (**FCDA**, *Annual Report 1956*, 1957, p. 2)

Civil Defense, 1957: "The Federal Civil Defense Administration was guided by three major principles during fiscal year 1957:

- Civil defense is part of the inherent responsibility of government at all levels to prepare for emergencies.
- The destructive power of nuclear weapons demands that there be close cooperation among many governmental jurisdictions for effective civil defense operations.
- Close cooperation between officials responsible for the military and the civil defense of the Nation is essential." (**FCDA**, *Annual Report 1957*, page vii)

An operations plan for a hypothetical metropolitan target area was developed by FCDA and distributed to Government officials throughout the country. The plan, entitled *Batleground, USA*

shows how the principles and concepts of national civil defense planning can be applied at the local level." (**FCDA**, *Annual Report 1957*, page 1)

"Both the Department of Defense and the Federal Civil Defense Administration intensified efforts during fiscal year 1957 to improve coordination of their respective roles and operations in natural disasters and in emergencies caused by enemy action. Early in the year the Department of Defense revised its basic directive relating to the responsibilities of the armed services for civil defense and other domestic emergencies to reflect a stronger and more positive role." (**FCDA**, *Annual Report 1957*, pp. 10-11)

Civil Defense Act of 1950 (Public Law 81-875).

Civil Defense Advisory Committee on the Design and Construction of Public Fallout Shelters: "…established in April 1962." (**OCD**, *Annual Report 1962*, p. 36)

Civil Defense Alternatives (President Eisenhower, 1956): "The threat we face affords us only three basic alternatives. One extreme would be to hold our people subject to a rigid discipline, on the premise that a regimented citizenry would be better able to survive a nuclear attack. But this approach, continued, would destroy the America we are determined to preserve. The opposite extreme would be to accept the ultimate annihilation of all person in urban target areas as unavoidable or too costly to prevent, and by this unwarranted decision remove the burdens and cares of a peacetime civil defense program. Of course we reject both extremes. There is another way we must follow. We must continue to avoid Federal preemption of all civil defense programs which are so dependent upon widespread citizen participation. But it is now evident that the exigencies of the present threat require vesting in the Federal Government a larger responsibility in our national plan of civil defense…. The Federal civil defense law was written before the advent of the hydrogen bomb and the recent striking advances in methods of delivering modern weapons. This law must be realistically revised. Plans to meet post-attack situations are, of course, essential, but the Federal Civil Defense Administration needs authority to carry out necessary pre-attack preparations as well. It must be enable to assure adequate participation in the civil defense program. It must be empowered to work out logical plans for possible target areas which overlap state and municipal boundaries…." (Quoted in **Nehnevajsa**, *Civil Defense and Society*, 1964, p. 554)

Civil Defense Appropriations (1952 FCDA): ~$75M. "The 1952 appropriation was 74,950,000 dollars…we asked for 535 million dollars…Out of the roughly 75 million…"

- $56M for supplies and equipment
  - $50M for medical supplies
  - $6M for engineering equipment
- $7.5M for matching fund purpose
  - $2.5M for fire-fighting equipment
  - $2M for communications and attack warning equipment
  - ~$1M for rescue equipment (**Wadsworth**, *The National CD Plan*, 1952, 14)

Civil Defense Appropriations (1953 FCDA): $43 million.

- $8M operations
- $15M Federal contributions to the States (to match funds for supplies and equipment)

- $20M stockpiling of emergency supplies and equipment. (**FCDA**, *1953 Annual Report*, 47)

Civil Defense Appropriations (1954 FCDA): $46, 525,000.
- $8.525M operations
- $10.5M Federal contributions to States (matching funds for supplies and equipment)
- $27.5M Federal emergency supplies and equipent. (**FCDA**, *1954 Annual Report*, p. 143)

- An additional $1,373,829 "made available for natural disasters" from Disaster Relief Fund.

Civil Defense Appropriations (1955 FCDA): $49,325,000.
- $10.025M operations
- $13.3M Federal contributions to States (purchase of supplies, equipment, warning)
- $26M Federal emergency supplies and equipment. (**FCDA**, *1954 Annual Report*, p. 143)

- $12.5M from Disaster Fund to States for Disaster Assistance and Relief. (*1955 AR*, 33)

Civil Defense Appropriations (1956 FCDA): $68,675,000
- $12.125M Operations
- $12.400M Federal contributions to States
- $32.65M Fed. emergency supplies and equip. (**FCDA**, *1955 Annual Report*, 1956, 135)

- $22M from Disaster Fund to States for Disaster Assistance and Relief (Ibid, p. 33)

Civil Defense Appropriations (1959 OCDM): $64M ($58M obligated)
- $22.979M Salaries and Expenses
- $16.318M Federal Contribution to States
- $15.424M Emergency Supplies and Equipment
- $ 3.380M Research and Development (**OCDM**, *Annual Report 1959*, 7-8)

- $ 8.336M Disaster Fund to States for Natural Disasters (Ibid, p. 8)

Civil Defense Appropriations (1960 OCDM): $52.885M
- $29.555M Salaries and Expenses
- $10.000M Federal Contributions to States for Materials and Facilities
- $ 6.950M Emergency Supplies and Equipment
- $ 5.862M Research and Development
- $ 2.400M Construction of Facilities (**OCDM**, *Annual Report 1960*, p. 3)

- $ 4.539M Disaster Fund to States for Natural Disasters (Ibid, p. 3)

Civil Defense Appropriations (1961 OCDM): $61.088M
- $25.184M Salaries and Expenses
- $ 6.477M CD and Defense Mobilization Functions of Federal Agencies
- $13.951M Federal Contributions to States for Materials and Facilities, and P&E Fund
- $ 9.121M Emergency Supplies and Equipment

- $ 5.749M Research and Development
- $ 2.238M Construction of Facilities (**OCDM**, *Annual Report 1961*, p. 1)

- $13.044M Disaster Fund to States for Natural Disasters (Ibid)

Civil Defense Board: Established on November 25, 1946 by Secretary of War Patterson in the War Department to study federal civil defense. Major General Harold R. Bull was named Director. (**Gessert**, *Federal Civil Defense Organization*, 1965, p. 62)

Civil Defense Coordinating Board: Established by President Eisenhower on May 11, 1955 "to give guidance and coordination to the civil defense activities of these departments and agencies" delegated civil defense responsibilities by Executive Order – "The President has approved the delegation of 33 civil defense activities to 7 departments and agencies of the Federal Government." (**FCDA**, *1955 Annual Report*, 1956, pp. 3-4)

"Members of the Board represent each agency that has been assigned delegations, and other agencies with certain responsibilities in civil defense. The Board makes recommendations to the President and keeps him advised of progress. The Administrator of FCDA is Chairman of the Board, and an executive Secretary is stationed in Washington, D.C. Members of the Secretariat serve the Board in Washington and represent the separate FCDA services in dealing with the delegate Federal departments and agencies. The Secretariate coordinates work of specialists at the FCDA National Headquarters and counterparts in other Federal organizations." (**FCDA**, *1955 Annual Report*, 1956, pp. 46-47; see, also, p.p. 57-58)

Civil Defense Education (CDE) Program: "The mission of the Civil Defense Education Program is to establish civil preparedness instruction as a integral part of the existing school program in each State. Instruction materials developed and activities sponsored under the CDE Program are designed to get disaster preparedness and survival information before pupils in school curricula. An equally important facet of the program is to assist school districts in preparing a hazard-safe school environment augmented by a disaster plan that covers hazards common to their districts." (**DCPA** *Foresight, DCPA Annual Report FY73*, 1974, p. 21)

Civil Defense Historical Federal Organization for Civilian Civil Defense (1950-1979):

- Federal Civil Defense Administration (FCDA, Executive Office of President, 1950-1951)
- Federal Civil Defense Administration (FCDA, 1951-1958)
- Office of Defense and Civilian Mobilization (ODCM (EOP) 1958)
- Office of Civil and Defense Mobilization (OCDM, EOP, 1958-1961)
- Office of Civil Defense (OCD, Department of Defense, 1961-1964
- OCD (Department of the Army, DoD, 1964-1972)
- Defense Civil Preparedness Agency (DCPA, DoD (1972-1979)
- Federal Emergency Management Agency (FEMA, 1979-1994[7])

(**National Archives**, *Guide to Federal Records*, Records of FEMA, Record Group 311, p. 2)

Civil Defense Planning Assumptions, 1956:

[7] The Federal Civil Defense Act of 1950 was repealed in 1994, with certain functions transferred to FEMA.

- "It is accepted that a potential enemy has the capability of attacking any target within the United States or its possessions.
- It is accepted that a potential enemy has the capability of:
    - Producing nuclear weapons, biological and chemical warfare agents, as well as conventional incendiary and high explosive weapons.
    - Delivering these weapons by piloted aircraft, submarine launched missiles or mines, and by clandestine menas.
    - Supporting a large scale war effort by technical and industrial skills and organization.
- It is accepted that a potential enemy is engaged in a major effort to develop both guided and ballistic missiles, including the ICBM." (**FCDA**, *1956 Annual Report*, 1957, pp. 6-7)

….

- "It is assumed that bases of military retaliation, other important military installations, and concentrations of population and industry will be targets for nuclear attack." (Ibid, p. 8)

Civil Defense Responsibilities (1952) Federal Government: "The Federal Civil Defense Administration…is responsible for:

- Developing and standardizing the over-all plan.
- Providing financial contributions to the states on a matching funds basis for certain types of equipment and other expenditures.
- Disseminating attack warnings to the States and through them to communities and to the individual citizen.
- Stockpiling and distributing certain emergency supplies and equipement.
- Training key personnel.
- Carrying on a program of public education in civil defense matters.
- Encouraging and facilitating the signing of pacts among the states for mutual aid in event of emergency.
- Determining, after consultation with the military, the critical target areas of the country.
- Exercising very broad powers in the event of an emergncy." (**Wadsworth**, *The National Civl Defense Plan,* 1952, pp. 3-4)

Civil Defense Scientific Advisory Committee: "This Committee, which was created July 1, 1954, under authority of section 102 (b), Public Law 920, 81st Congress, meets at the call or the chairman at places designated by him… The Committee chairman and other officers are appointed by the President, National Academy of Sciences….This Committree assists the Federal Civil Defense Administration in major scientific problems affecting the civil defense program and recommends lines of investigation needed to understand scientific factors involved. It also advises whether conclusions and hypotheses reached are based on all available scientific evidence." (**FCDA**, *1955 Annual Report*, 1956, p. 59-60)

Civil Defense Staff College (1951), Olney, MD: Opened on April 30, 1951. (**FCDA**, *Annual Report 1951*, 1952, p. 21)

Civil Defense Staff College (Jan, 1952): Besides the Civil Defense Staff College at Olney, Maryland….we have opened up in the past several months two other schools over at St. Mary's

College, California, and the other at Stillwater, Oklahoma. We have had great difficulty in operating these schools, largely because we have been precluded by law from paying any part of the travel or sibsistence cost for the students who attend these schools. It was Congress' determination that the local communities and the states should be interested enough to send their representatives to the Federal school and pay their own way, because they would get free tuition. But it has not been easy to stir up interest." (**Wadsworth**, *The National Civil Defense Plan*, 1952, p. 11)

Civil Defense University Extension Program (CDUEP): "The extension divisions of land-grant colleges and universities, because of their experience in local communities and by reason of their facilities have a unique capability for civil preparedness training and education. Under contracts with DCPA, the extension divisions of the colleges and universities conduct conferences for government officials, train instructors, and give professional training courses in local communities." (**DCPA**, *Foresight, DCPA Annual Report FY73*, 1974, p. 21)

Civil Defense Workers: "The number of Civil Defense workers actively enrolled increased by nearly 10% in 1953. States and cities now report more than four and one half million civil defense personnel enrolled and currently assigned to duty." (**FCDA**, *1953 Annual Report*, p. 2; see, also, pp. 98-101)

Civil Disorder: "Any incident intended to disrupt community affairs and requiring police intervention to maintain public safety." (**FEMA**, HICA MYDP (CPG 1-34, 1985, p. A-2)

Civil Disturbance: "Group acts of violence and disorder prejudicial to public law and order." (**DOD**, *DOD Dictionary of Military and Related Terms*, 2007)

Civil Disturbance Readiness Conditions: "Required conditions of preparedness to be attained by military forces in preparation for deployment to an objective area in response to an actual or threatened civil disturbance." (***DOD** Dictionary of Military and Related Terms*, 2007)

Civil Disturbances: "Group acts of violence and disorders prejudicial to public law and order within the 50 States, District of Columbia, Commonwealth of Puerto Rico, U.S. possessions and territories, or any political subdivision thereof. As more specifically defined in DoD Directive 3025.12 (Military Support to Civil Authorities), "civil disturbance" includes all domestic conditions requiring the use of Federal Armed Forces." (**DOD,** *MACDIS,* 1994, p. 17; **Title 32 CFR 185**)

Civil Disturbance Operations. "The President has the authority to deploy troops within the United States to enforce the laws. The Enforcement of the Laws to Restore Public Order, Chapter 15 of Title 10 USC (formerly Insurrection Act) authorizes the President to employ the Armed Forces of the US, including the NG, within the United States to restore order or enforce federal law after a major public emergency (e.g., natural disaster, serious public health emergency, or terrorist attack) when requested by the state governor or when the President determines that the authorities of the state are incapable of maintaining public order. The President normally executes his authority by ordering the dispersal of those obstructing the enforcement of the laws. The President may act unilaterally to suppress an insurrection or domestic violation without the request or authority of the state/governor and to exercise his "major public emergencies" authority to direct the SecDef to provide supplies, services, and

equipment necessary for the immediate preservation of life and property. Such supplies, services, and equipment may be provided: only to the extent that the constituted authorities of the state or possession are unable to provide them; only until such authorities and other departments and agencies of the United States charged with such responsibilities are able to provide them; and only to the extent that their provision, in the judgment of the SecDef, will not interfere with the preparedness of ongoing military operations or functions. Responsibility for the coordination of the federal response for civil disturbances rests with the Attorney General. Any DOD forces employed in civil disturbance operations shall remain under military authority at all times. Forces deployed to assist federal and local authorities during times of civil disturbance follow the use-of-force policy found in CJCS Instruction (CJCSI) 3121.01B, *Standing Rules of Engagement/Standing Rules for the Use of Force for US Forces*." (**JCS/DoD**, *Civil Support*, 2007, pp. III-4-5)

Civil Emergency: "Any occasion or instance for which, in the determination of the President, federal assistance is needed to supplement state and local efforts and capabilities to save lives and to protect property and public health and safety, or to lessen or avert the threat of a catastrophe in any part of the United States." (**DOD**, *DOD Dictionary of Military and Related Terms*, 2007)

Civil Emergency: "Any natural or manmade disaster or emergency that causes or could cause substantial harm to the population or infrastructure. This term can include a "major disaster" or "emergency" as those terms are defined in the Stafford Act, as amended, as well as consequences of an attack or a national security emergency. Under 42 U.S.C. 5121, the terms "major disaster" and "emergency" are defined substantially by action of the President in declaring that extant circumstances and risks justify his implementation of the legal powers provided by those statutes." (**Title 32 CFR 185; DoD,** *MACDIS***,** 1994, p. 17)

Civil Emergency: "An emergency relating to other than the military security of the United States." (**USACE**, *Planning and Operations Guidelines, Annex V: Definitions and Common* Terms, 1985, p. V-3)

Civil Emergency Preparedness: "The nonmilitary actions taken by Federal Agencies, the private sector, and individual citizens to meet essential human needs, to support the military effort, to ensure continuity of Federal authority at national and regional levels, and to ensure survival as a free and independent nation under all emergency conditions, including a national emergency caused by threatened or actual attack on the United States." (**DoD**, *MACDIS*, 1994, p. 18)

Civil-Military Operations: "The activities of a commander that establish, maintain, influence, or exploit relations between military forces, governmental and nongovernmental civilian organizations and authorities, and the civilian populace in a friendly, neutral, or hostile operational area in order to facilitate military operations, to consolidate and achieve operational US objectives. Civil-military operations may include performance by military forces of activities and functions normally the responsibility of the local, regional, or national government. These activities may occur prior to, during, or subsequent to other military actions. They may also occur, if directed, in the absence of other military operations. Civil-military operations may be

performed by designated civil affairs, by other military forces, or by a combination of civil affairs and other forces. Also called CMO." (**DOD**, *DOD Dictionary of Military and Related Terms*, 2007)

Civil Preparedness: "`Civil preparedness' means all those activities and measures designed or undertaken (A) to minimize or control the effects upon the civilian population of major disaster, (B) to minimize the effects upon the civilian population caused or which would be caused by an attack upon the United States, (C) to deal with the immediate emergency conditions which would be created by any such attack, major disaster or emergency, and (D) to effectuate emergency repairs to, or the emergency restoration of, vital utilities and facilities destroyed or damaged by any such attack, major disaster or emergency. Such term shall include, but shall not be limited to, (i) measures to be taken in preparation for anticipated attack, major disaster or emergency, including the establishment of appropriate organizations, operational plans and supporting agreements; the recruitment and training of personnel; the conduct of research; the procurement and stockpiling of necessary materials and supplies; the provision of suitable warning systems; the construction and preparation of shelters, shelter areas and control centers; and, when appropriate, the nonmilitary evacuation of the civilian population; (ii) measures to be taken during attack, major disaster or emergency, including the enforcement of passive defense regulations prescribed by duly established military or civil authorities; the evacuation of personnel to shelter areas; the control of traffic and panic; and the control and use of lighting and civil communication; and (iii) measures to be taken following attack, major disaster or emergency, including activities for fire fighting; rescue, emergency medical, health and sanitation services; monitoring for specific hazards of special weapons; unexploded bomb reconnaissance; essential debris clearance; emergency welfare measures; and immediately essential emergency repair or restoration of damaged vital facilities." (**CT General Assembly**, P.A. 73-544), Chapter 517, *Civil Preparedness. Department of Emergency Management and HS*)

Civil Preparedness: "…civil preparedness…must be useful every day, and not just a standby program, to be used in the event of an enemy attack. The way toward readiness for any eventuality is to prepare every U.S. community as fully as possible to meet the dangers of peacetime disasters. This also lays the solid foundation for emergency operations in event on an enemy attack. In time, 'civil preparedness' is expected to become a household term – replacing 'civil defense' in the American consciousness as a more meaningful and tangible expression of the responsibility of Federal, State, and local government for the safety and protection of the public." (**DCPA**, *Civil Preparedness – A New Dual Mission*, 1972, p. 1)

Civil Preparedness: Civil Preparedness "is not a separate function set apart from the normal responsibilities of government, or a special unit or group of people standing by to save the day in case of a major disaster…the forces responsible for civil preparedness emergency operations are the normal forces of government, together with any trained auxiliaries needed – plus non-governmental personnel or groups, doctors, and hospital and news media staffs… emergency operations require coordinated action by all forces with lifesaving capabilities, under the leadership and direction of key local executives." (**DCPA**, *Standards for Local Civil Preparedness*, 1978, p. 2)

Civil Preparedness Directors/Coordinators: "The term 'civil preparedness Director/Coordinator is used in recognition of the variation in both the official title and duties of the position, is States and

localities throughout the Nation." (**DCPA,** *Standards for Local Civil Preparedness* (CPG 1-5), 1978, p. 1)

Civil Preparedness Directors/Coordinators Responsibilities: "The essence of the Director/Coordinator's job in non-emergency periods is to act on behalf of the chief executive to build readiness for coordinated operations in both peacetime and attack-caused emergencies. This requires working with the operating departments of local government, with non-governmental groups, and with the public. These are primarily staff, not 'command,' functions…. During emergencies, the Director/Coordinator acts as principal advisor or aide to the chief executive on local government emergency operations. His major responsibility is to assure coordination among the operating departments of government (and with higher and adjacent governments), primarily by seeing that the Emergency Operating Center functions effectively. He also assists the chief executive in assuring execution of operations, plans, and procedures required by the emergency." (**DCPA/DOD**, *Standards for Local Civil Preparedness* (CPG 1-5) April 1978, pp. 9-10)

Civil Preparedness Directors/Coordinators, Local Emergency Operations Readiness Duties: "The duties outlined below are typical of those performed by the local civil preparedness Director/Coordinator in non-emergency periods, to develop readiness for operations in emergencies:

1. Develop an Emergency Operating Center (EOC) facility, a protected site from which key local officials control operations
2. Develop EOC staffing and internal procedures to permit key local officials to conduct coordinated operations in emergencies.
3. Conduct tests and exercises to give key local officials practice in directing coordinated operations under simulated emergency conditions.
4. Provide expert knowledge and advice to operating departments on the special conditions and operating requirements that would be imposed by peacetime or attack disasters.
5. Develop local government emergency operations plans, outlining which local forces and supporting groups would do what, in both peacetime and attack disasters, and specifying local organization for major emergencies.
6. Establish system to warn the public of peacetime or attack disasters.
7. Establish system to alert key local officials.
8. Organize radiological monitoring and analysis system, including procurement of instruments and training and exercising of personnel.
9. Coordinate and lead emergency communications planning, secure necessary equipment, and exercise emergency communications
10. Coordinate with doctors, hospitals, and public and private sector medical personnel to develop emergency medical plans and capabilities, as part of local emergency plans.
11. Establish and maintain a shelter system.
12. Establish and exercise an emergency public information system and train personnel to utilize it.
13. Coordinate with welfare offices, and the Red Cross and other voluntary groups, to develop emergency welfare capabilities to care for people needing mass care as a result of peacetime or attack disaster.
14. Coordinate and maintain relationships with industry to develop industrial emergency plans and capabilities in support of local government emergency plans.

15. Assist local operating departments (e.g., fire, police, public works) with radiological defense and other training needs.
16. Coordinate and participate in training programs for the public on disaster preparedness.
17. Assist in the establishment of mutual aid agreements to provide needed services, equipment or other resources in an emergency.
18. Prepare, submit, and justify the annual civil preparedness budget.
19. Secure matching funds and other assistance available through the civil preparedness program, and through other Federal programs (includes preparing annual program papers and other documents required for Federal assistance programs)." (**DCPA**, *Standards for Local Civil Preparedness*, 1978, pp. 1-2)

Civil Preparedness Directors/Coordinators, Professional and Personal Skill Set: "Since the bulk of the Director/Coordinator's responsibilities will involve contacts with the heads of local government departments, as well as officials from other government levels, applicants should show leadership qualities, and an ability to manage and coordinate the civil preparedness program. In addition, applicants should have the ability to meet and deal with the public effectively, and be reliable and trustworthy. According to field studies, personal traits considered important for the civil preparedness Director/Coordinator, by chief executives and other local officials, included enthusiasm for the job, ability to work with others, integrity, friendliness, cooperativeness, ability to coordinate and expedite, administrative ability, and reputation and stature within the community. Probably the most important single personal trait is dedication to the civil preparedness program. In evaluating candidates, interview boards and chief executives should keep in mind the duties of the local Director/Coordinator in emergency periods, They should ask themselves, 'Would I place confidence in the recommendations and advice of this applicant, in making decisions that could affect the preservations of life and property, in an emergency affecting this jurisdiction." (**DCPA/DOD**, *Standards For Local Civil Preparedness* (CPG 1-5), April 1979, p. 11)

Civil Protection: "The phrase 'civil protection' has gradually come into use around the world as a term that describes activities which protect civil populations against incidents and disasters (Mauro, 1996)….Civil protection has gradually and rather haltingly emerged from the preceding philosophy of civil defense." (**Alexander**, 2002, 4)

Civil Resources: "Resources that normally are not controlled by the Government, including workforce, food and water, health resources, industrial production, housing and construction, telecommunications, energy, transportation, minerals, materials, supplies, and other essential resources and services. Such resources cannot be ordered to support needs of the public except by competent civil government authority." (**DoD**, *MACDIS*, 1994, p. 18)

Civil Search and Rescue (Civil SAR): "Search operations, rescue operations, and associated civilian services provided to assist persons and property in potential or actual distress in a non-hostile environment." (National Search and Rescue Committee, *National Search and Rescue Plan of the United States*, 2007, p. 1)

Civil Support: "Civil support is defined as 'DoD support, including the use of Federal military

forces, the Department's career civilian and contractor personnel, and DoD agency and component assets, for domestic emergencies and for designated law enforcement and other activities'."[8] (**Commission on the National Guard and Reserves**, *Transitioning*, 2008, B-1)

Civil Support: "The Secretary of Defense shall provide military support to civil authorities for domestic incidents as directed by the President or when consistent with military readiness and appropriate under the circumstances and the law. The Secretary of Defense shall retain command of military forces providing civil support. The Secretary of Defense and the Secretary [of Homeland Security] shall establish appropriate relationships and mechanisms for cooperation and coordination between their two departments." (**Homeland Security Presidential Directive-5**, 28 February 2003)

Civil Support (CS): "CS is the overarching term for DOD's support to civilian authorities. DOD's role in the CS mission consists of support to US civil authorities (Department of Homeland Security [DHS] or other agency) for domestic emergencies and for designated law enforcement and other activities. HD [Homeland Defense]and CS operations may occur in parallel and require extensive integration and synchronization." (**JCS/DoD**, *Civil Support*, vii)

Civil Support, Requests for Military Assistance: "Federal agencies or state governors request DOD capabilities to support their emergency response efforts by using a formal RFA [Requests for Assistance] process. How DOD handles RFAs depends on various factors, such as: Stafford or non-Stafford Act situation, urgency of the incident, establishment of a JFO, if a DCO or JTF has been appointed, and originator of the request (incident command, state, regional, or national). It is important to note that not all CS is provided via the RFA process. Other processes for obtaining and/or providing support are covered in more detail in Chapter III, "Operations."

(1) Civil authorities may request other CS activities in writing through various means established by the appropriate DOD policy documents. For example, support for military fly-overs may be requested using DD Form 2535 as described in DODD 5410.18, *Public Affairs Community Relations Policy*.

(2) In general…The FCO at the incident site receives RFAs from civil authorities and submits them to the Office of the Executive Secretary of the Department of Defense, who forwards them to the ASD(HD&ASA) and to the JDOMS for validation and order processing, respectively. When a DCO is at the incident site, RFAs are submitted directly to ASD(HD&ASA). Once the SecDef approves the request, an order is issued to combatant commands, Services, and/or agencies to accomplish the mission. The decision process differs significantly for approving Stafford and non-Stafford RFAs (see Figure II-2). Requests are validated at all levels within the chain of command. JDOMS prepares an order and coordinates with necessary force providers, legal counsel, and ASD(HD&ASA) to ensure asset deconfliction and recommendation concurrence. DOD evaluates all requests by US civil authorities for military assistance against six established criteria, including:

(a) Legality. Is the support in compliance with laws, Presidential directives?
(b) Lethality. Is use of lethal force by or against DOD personnel likely or expected?

[8] Cites *Strategy for Homeland Defense and Civil Support,* pp. 5–6.

(c) Risk. Safety of DOD forces. Can the request be met safely, or can concerns be mitigated by equipment or training?
(d) Cost. Who pays, and what is the impact on DOD budget?
(e) Appropriateness. Is the requested mission in the interest of DOD to conduct? Who normally performs and is best suited to fill the request?
(f) Readiness. What is the impact on DOD's ability to perform its primary mission?" (**JCS/DoD**, *Civil Support*, 2007, pp. II-3-4)

Civilian Mobilization Office: Created on March 1, 1950 within the National Security Resources Board. Paul J. Larsen named Chairman. (**Gessert**, *Federal Civil Defense Organization*, 1965, 64)

CJIS: Chairman of the Joint Chiefs of Staff, DOD. (**DA**, *WMD-CST Ops*, 2007, Glossary-1)

CLAS: Culturally and Linguistically Appropriate Services. (**CDC**, *Reaching At Risk Populations*, 2007, p. 22)

Classified National Security Information (also referred to as "classified information"): "Any data, file, paper, record, or computer screen containing information associated with the national defense or foreign relations of the United States and bearing the markings: confidential, secret, or top secret. This information has been determined pursuant to Executive Order 12958 or any predecessor order to require protection against unauthorized disclosure and is marked (confidential, secret, or top secret) to indicate its classified status. It is also referred to as classified information.

• Confidential: Information, the unauthorized disclosure of which reasonably could be expected to cause damage to the national security that the original classification authority is able to identify or describe.

• Secret: Information of which the unauthorized disclosure could reasonably be expected to cause serious damage to the national security that the original classification authority is able to identify or describe.

• Top secret: Information of which the unauthorized disclosure could reasonably be expected to cause exceptionally grave damage to the national security that the original classification authority is able to identify or describe." (**FEMA**, *IIFOG Version 3 Draft*, Feb 2008, p. 34)

CLE: Cabinet-Level Exercise (formerly Catastrophic Assessment Task Force Exercises). (**DoD**, *Statement of Verga*, 2007, p. 13)

Clear Text: "The use of plain language in radio communications transmissions." (**Capital Health Region**, Canada, *ICS100: Incident Command System Training SM*, Mar 2007, 51)

CLF: Congregate Lodging Facility. (**FEMA**, *Capability Assessment and Standards for State and Local Government (Interim Guidance)*, November, 1983, p.21)

Climate Change: "The climate of a place or region is changed if over an extended period (typically decades or longer) there is a statistically significant change in measurements of either the mean state or variability of the climate for that place or region. Changes in climate may be due to natural processes or to persistent anthropogenic changes in atmosphere or in land use. Note that the definition of climate change used in the United Nations Framework Convention on Climate Change is more restricted, as it includes only those changes which are attributable directly or indirectly to human activity." (**UN/ISDR,** *Terminology: Basic Terms of Disaster Risk Reduction*, March 31, 2004)

Coastal Barrier Improvement Act of 1990: The CBIA tripled the size of the system established by the Coastal Barrier Resources Act of 1982. The CBIA also mandated an end to the issuance of new Federal flood insurance within "otherwise protected areas," generally used for activities such as fish and wildlife research and refuges, on buildings constructed after November 16, 1991 unless the building was to be used in a manner related to the reason the area was established as an OPA. (**FEMA**, *CBRS History*, 2006)

Coastal Barrier Resources Act (CoBRA) of 1982: "CoBRA is Federal legislation identifying particular areas that are environmentally sensitive and are subject to rules prohibiting certain Federal expenditures within them." (**FEMA**, *Rebuilding for… Sustainable Future*, 2000, A-2)

Coastal Barrier Resources System (CBRS): "The Coastal Barrier Resources Act (COBRA) of 1982 and later amendments, removed the Federal government from financial involvement associated with building and development in undeveloped portions of designated coastal barriers (including the Great Lakes). These areas were mapped and designated as Coastal Barrier Resources System units or "otherwise" protected areas. They are colloquially called COBRA zones. COBRA banned the sale of NFIP flood insurance for structures built or substantially improved on or after a specified date. For the initial COBRA designation, this date is October 1, 1983. For all subsequent designations, this date is the date the COBRA zone was identified. COBRA zones and their identification dates are shown on Flood Insurance Rate Maps (FIRMs). Communities may permit development in these areas even though no Federal assistance is available, provided that the development meets NFIP requirements." (**FEMA**, *CBRS*, 2007)

Coastal High Hazard Area: "An area of special flood hazard extending from offshore to the inland limit of a primary frontal dune along an open coast and any other area subject to high velocity wave action from storms or seismic sources. The coastal high hazard area is identified as Zone V on Flood Insurance Rate Maps (FIRMs). Special floodplain management requirements

apply in V Zones including the requirement that all buildings be elevated on piles or columns." (**FEMA**, *Coastal High Hazard Area*, 2007)

Coastal Zone: "The coastal zone is defined as the area along the shore where the ocean meets the land as the surface of the land rises above the ocean. This land/water interface includes barrier islands, estuaries, beaches, coastal wetlands, and land areas having direct drainage to the ocean." (**FEMA**, *Rebuilding for a More Sustainable Future*, 2000, p. A-2)

Coastal Zone Management Act (CZMA): "In recognition of the increasing pressures of over-development upon the nation's coastal resources, Congress enacted the CZMA in 1972. The CZMA encourages states to preserve, protect, develop, and, where possible, restore or enhance valuable natural coastal resources such as wetlands, floodplains, estuaries, beaches, dunes, barrier islands, and coral reefs, as well as the fish and wildlife using those habitats. A unique feature of the CZMA is that participation by states is voluntary. To encourage states to participate, the Act makes Federal financial assistance available to any coastal state or territory, including those on the Great Lakes, that is willing to develop and implement a comprehensive coastal management program." (**FEMA**, *Rebuilding for a More Sustainable Future*, 2000, A-2)

COBRA: Coastal Barrier Resources Act (of 1982). (**FEMA/NFIP**, *Call for Issues*, 2004, 24)

COE: Corps of Engineers, United States Army. (**OCD**, *Abbreviations and Definitions*, 1971)

COG: Continuity of Government. (**DHS**, *FCD 1*, Nov. 2007, p. O-1)

COGCON: Continuity of Government Condition. (**DOE**, *DOE Order 100.1D, Subject: Secretarial Succession, Threat Level Notification, and Successor Tracking*, April 20, 2007.

COGCON: Continuity of Government Readiness Conditions. (**White House,** *HSPD-20*)

COI: Community of Interest. (**DHS**, *National Planning and Execution System*, 2007 Draft, I-1)

COIN: Community Outreach Information Network.

COIN: Counterinsurgency. (**Dept. of State**, *Counterinsurgency…*, 2006)

Cold Site: "An alternate facility that already has in place the environmental infrastructure required to recover critical business functions or information systems, but does not have any pre-installed computer hardware, telecommunications equipment, communication lines, etc. These must be provisioned at time of disaster. Related Terms: Alternate Site, Hot Site, Interim Site, Internal Hot Site, Recovery Site, And Warm Site." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 50)

Cold Zone: "Area where the command post and support functions that are necessary to control the incident are located. This is also referred to as the clean zone, green zone or support zone in other documents. (EPA Standard Operating Safety Guidelines, OSHA 29 CFR 1910.120, NFPA 472)." (**DOT**, *Emergency Response Guidebook…Hazardous Materials Incident*, 2004, p. 358)

Collaboration. See, also, Megacommunities.

Collaboration: "At the core, success depends upon robust and adaptive collaboration—between the public and private sector, among different levels of government, among multiple jurisdictions, and among departments and agencies within a single jurisdiction. Collaboration encompasses a wide range of activities (e.g., joint planning, training, operations) aimed at coordinating the capabilities and resources of various entities (agencies, organizations, and individuals from many tiers of public and private sectors) for the common purpose of preventing, protecting against, responding to, and recovering from intentional as well as natural threats to people or property. As such a critical element, collaboration can thus be viewed as the foundation upon which success in all four mission areas [prevent, protect, respond, recover] depends." (**DHS/ODP**, *State and Urban Homeland Security Strategy: Guidance on Aligning Strategies with the NPG*, 2005, p. 4)

"Achieving full integration and interconnectedness between the public and private sector, among different levels of government, among multiple jurisdictions, and among departments and agencies within a single jurisdiction requires robust collaboration." (Ibid, p. 6)

Collaboration: "The recent focus on homeland security has fostered increasing regional collaboration. Since the establishment in 2002 of regional homeland security coordination districts in Washington, all nine regions have begun to participate in regional planning, training, and exercises. Collaboration has also increased among counties, cities and tribal nations. A growing number of tribes are participating in regional homeland security planning and developing emergency management plans consistent with other state and local plans. In general, tribes report that the new regions have provided them with an opportunity for greater participation than they have historically had with neighboring county and city jurisdictions. Additionally, a significant number of local programs are creating new mutual aid agreements and updating existing agreements with adjoining jurisdictions." (**WA State EM Council**, *A Study of Emergency Management at the Local Program Level*, 2004, p. 17)

Collaboration Challenges: There are five core challenges to sustaining collaborative efforts.

- The first is *decision rights*. Collaboration is not one entity barking out orders to other organizations. These entities must share risk, rewards, and responsibilities for collaboration to work.
- The second is *trust.* When trust is present, collaboration will flourish and resources will be shared. In its absence, the actors will start to withdraw and not collaborate.
- The third is that collaboration necessarily involves the *sharing of information* across traditional boundaries and jurisdictions. While not all information needs to be shared, that information shared must be transparent and have high fidelity.
- The fourth is *visible and committed leadership.* Our article argues that Governor Bush was able to build a megacommunity only by surrendering some of his perceived and real authority -- he was willing to sacrifice some of his authority to create a true partnership.
- The fifth is the *rewards system*. Today, our budgetary and human capital systems often dis-incentive transparent, collaborative practices, instead continuing rewards systems that

favor closed competitive behaviors." (Krill and Sulek, *The Megacommunity: A Group Discussion on Cross-Sector Collaboration for Preparedness*. EIIP Virtual Forum Presentation, 27 Feb 2008)

Collaborative, Core Principle of Emergency Management: "Collaborative: emergency managers create and sustain broad and sincere relationships among individuals and organizations to encourage trust, advocate a team atmosphere, build consensus, and facilitate communication." (**EM Roundtable**, 2007, p. 4)

Collaborative Emergency Management: "The public sector alone cannot bear the cost of emergency preparedness. The State's emergency management leader must leverage federal, local, private sector and community resources to improve preparedness and outcomes. Specifically, the State must explore innovative market strategies to promote prevention and mitigation, preparation, response and recovery. And while emergency management currently is largely the domain for first responders, success will require new partnerships with community organizations, research institutions, the insurance and finance industries and others to expand strategies to support preparedness." (**Little Hoover Com**., *Safeguarding Golden State*, 2007, 39)

Collaborative Healthcare Urgency Group (CHUG): Metropolitan Chicago-area organization which works to coordinate evacuation planning for the area's vulnerable and disabled populations in coordination with healthcare organizations, community, state and federal plans. (**CHUG**, 2008)

Collaborative Leadership Practices: "Clearly there are a number of critical skills and capacities collaborative leaders should possess…. The work of the Turning Point Leadership Development National Excellence Collaborative, however, has illustrated six key practices that are unique to the practice of leading a collaborative process. They are:

- Assessing the Environment for Collaboration: Understanding the context for change before you act.
- Creating Clarity − Visioning & Mobilizing: Defining shared values and engaging people in positive action.
- Building Trust & Creating Safety: Creating safe places for developing shared purpose and action.
- Sharing Power and Influence: Developing the synergy of people, organizations, and communities to accomplish goals.
- Developing People − Mentoring and Coaching: Committing to bringing out the best in others and realizing people are your key asset.

Self-Reflection − Personal CQI (Continuous Quality Improvement): Being aware of and understanding your values, attitudes, and behaviors as they relate to your own leadership style and its impact on others." (**Turning Point**, *Collaborative Leadership: Self-Reflection Participant's Guide*, 2004, p. 1)

Collaborative Leadership Premise: "If you bring the appropriate people together in constructive ways with good information, they will create authentic visions and strategies for their organizations and communities." (Chrislip, *Collaborative Leadership and Community Health Governance*, p. 2)

Collection: "Gathering information through approved techniques to address and/or resolve Intelligence Requirements. The sources of information that are used during the Collection step of the Intelligence Cycle include HUMINT, SIGINT, IMINT, OSINT, MASINT." (**FEMA**, *IIFOG Version 3 Draft*, Feb 2008, p. 34)

Color-coded Threat Level System: "…used to communicate with public safety officials and the public at-large through a threat-based, color-coded system so that protective measures can be implemented to reduce the likelihood or impact of an attack. Raising the threat condition has economic, physical, and psychological effects on the nation; so, the Homeland Security Advisory System can place specific geographic regions or industry sectors on a higher alert status than other regions or industries, based on specific threat information." (**DHS,** *Homeland Security Advisory System*, December 31, 2007 Update)

Combating Terrorism: "Actions, including antiterrorism (defensive measures taken to reduce vulnerability to terrorist acts) and counterterrorism (offensive measures taken to prevent, deter, and respond to terrorism), taken to oppose terrorism throughout the entire threat spectrum. Also called CbT." (**DOD**, *Dictionary of Military and Related Terms*, 2007)

Combating Terrorism: "The full range of Federal programs and activities applied against terrorism, domestically and abroad, regardless of the source or motive." (**USG**, *USG Interagency Domestic Terrorism CONPLAN*, 2001, Appendix B: Definitions, p. 1)

Command: "The act of directing, ordering, or controlling by virtue of explicit statutory, regulatory, or delegated authority." (**FEMA**, *NIMS* (FEMA 501/Draft), August 2007, p. 148)

Command and Control: "Command and control of a terrorist threat or incident is a critical function that demands a unified framework for the preparation and execution of plans and orders. Emergency response organizations at all levels of government may manage command and control activities somewhat differently depending on the organization's history, the complexity of the crisis, and their capabilities and resources. Management of Federal, State and local response actions must, therefore, reflect an inherent flexibility in order to effectively address the entire spectrum of capabilities and resources across the United States. The resulting challenge is to integrate the different types of management systems and approaches utilized by all levels of government into a comprehensive and unified response to meet the unique needs and requirements of each incident." (**FBI**, *United States Government Interagency Domestic Terrorism Concept of Operations Plan*, January 2001, p. 15)

Command and Control: "The exercise of authority and direction by a properly designated commander over assigned and attached forces in the accomplishment of the mission. Command and control functions are performed through an arrangement of personnel, equipment, communications, facilities, and procedures employed by a commander in planning, directing, coordinating, and controlling forces and operations in the accomplishment of the mission." (**DoD**, *DOD Dictionary of Military and Related* Terms, 2007; **USCG** *Pub 1*, 2002, p. 60)

Command and Management (1st of Six NIMS Major Components, 2004): "NIMS standard incident command structures are based on three key organizational systems:

1. The ICS.

   The ICS defines the operating characteristics, interactive management components, and structure of incident management and emergency response organizations engaged throughout the life cycle of an incident;

2. Multiagency Coordination Systems.

   These define the operating characteristics, interactive management components, and organizational structure supporting incident management entities engaged at the Federal, State, local, tribal, and regional levels through mutual-aid agreements and other assistance arrangements; and

3. Public Information Systems.

   These refer to processes, procedures, and systems for communicating timely and accurate information to the public during crisis or emergency situations." (**DHS**, *NIMS*, 2004, p. 3; at p. 7 Command and Management is described by reference to ICS, Multiagency Coordination Systems and *the Joint Information System* (JIS) emphasis added.)

Command and Management (1st of 5 NIMS Compliance Metrics, 2005-2006): "Describes the systems used to facilitate domestic incident command and management operations, including the ICS, multi-agency coordination systems, and the Joint Information System (JIS)." (**FEMA**, *NIMSCAST Technical Users Guide Version 1.1*. April 30, 2007, p. 28)

Command: "Command comprises the IC [Incident Commander] and the Command Staff. Command staff positions are established to assign responsibility for key activities not specifically identified in the General Staff functional elements. These positions may include the Public Information Officer (PIO), Safety Officer (SO), and Liaison Officer (LNO), in addition to various others, as required and assigned by the IC." (**DHS**, *NIMS*, 2004, p. 13)

Command Center: "A physical or virtual facility located outside of the affected area used to gather, assess, and disseminate information and to make decisions to effect recovery. (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 50)

Command Channel (Radio Communications): "A radio channel designated by the emergency services organization that is provided for communication between the incident commander and the tactical level management units during an emergency incident. (**Capital Health Region**, Canada, *ICS100: Incident Command System Training SM*, Mar 2007, 51)

Command Function, ICS: "The command function may be conducted in two general ways:

- **Single Command IC.**

When an incident occurs within a single jurisdiction and there is no jurisdictional or functional agency overlay, a single IC should be designated with overall incident management responsibility by the appropriate jurisdictional authority. (In some cases in which incident management crosses jurisdictional and/or functional agency boundaries, a single IC may be designated if all parties agree to such an option,) Jurisdictions should consider predesignating IC's in their preparedness plans. The designated IC will develop the incident objectives on which subsequent incident action planning will be based. The IC will approve the Incident Action Plan (IAP) and all requests pertaining to the ordering and releasing of incident resources.

- **Unified Command** (See "Unified Command")

Command Post Exercise: "An exercise in which the forces are simulated, involving the commander, the staff, and communications within and between headquarters. Also called CPX." (**DoD**, *DOD Dictionary of Military and Related Terms*, 2007)

Command Staff: "Command Staff is responsible for overall management of the incident. This includes Command Staff assignments required to support the command function." (**DHS**, *NIMS*, 2004, p. 13)

Command Staff: Under the Incident Management System, "The Command Staff consists of a Public Information Officer, Safety Officer, Liaison Officer and other positions as required, who report directly to the Incident Commander." (**DHS,** *National Response Framework* (Comment Draft), September 10, 2007, p. 48) [Note: DHS, NIMS, 2004 lists these three positions under "Command."]

Commander's Critical Information Requirement (CCIR): "An information requirement identified by the commander as being critical to facilitating timely decision making. The two key subcomponents are critical friendly force information and priority intelligence requirements." (**DA**, *WMD-CST Operations*, 2007, Glossary-9)

Commander's Intent: "(Army) A clear, concise statement of what the force must do and the conditions the force must establish with respect to the enemy, terrain, and civil considerations that represent the operation's desired end state." (**DA**, *WMD-CST Ops*, 2007, Glossary-9)

Commercial Equipment Direct Assistance Program (CEDAP): "CEDAP helps meet the equipment needs of smaller jurisdictions by providing communications interoperability, information sharing, chemical detection, sensors, personal protective equipment, technology, and training in using the equipment, devices, and technology. Awards are made to law enforcement and emergency responder agencies not currently eligible for funding through the Department's Urban Areas Security Initiative grant program." (**FEMA**, *CEDAP*, December 20, 2007)

Commercial Equipment Direct Assistance Program (CEDAP): "Eligibility for the CEDAP is limited to law enforcement agencies, fire, and other emergency responder organizations with specific financial and capability needs. Equipment and training awards are offered in five categories: personal protective equipment; thermal imaging, night vision, and video surveillance

tools; chemical and biological detection tools; information technology and risk management tools; and interoperable communications equipment. CEDAP equipment awards are integrated with state planning processes for regional response and asset distribution. Each state's administrative agency has the opportunity to review applications submitted by first responder organizations within their state to ensure that equipment requests are consistent with their state homeland security strategy." (**FEMA**, *DHS Announces Fiscal Year 2007 CEDAP Application Period*. April 17, 2007)

Commercial Equipment Direct Assistance Program (CEDAP): "Eligible applicants included law enforcement agencies and other emergency responder agencies who demonstrate the equipment will be used to improve their capability and capacity to respond to a major critical incident or to work with other first responders." (**DHS**, *Fact Sheet: FY 2007 CEDAP*, 20Dec07)

Common Alerting Protocol (CAP): "The Common Alerting Protocol (CAP) is a simple but general format for exchanging all-hazard emergency alerts and public warnings over all kinds of communication and information networks.

- CAP allows a consistent warning message to be transmitted simultaneously over many different warning systems, thus increasing warning effectiveness while simplifying the warning task.

- CAP also can facilitate the detection of emerging patterns in local warnings of various kinds, such as might indicate an undetected natural hazard or a hostile act.

- In addition, CAP offers a template for effective warning messages based on best practices identified in academic research and realworld experience.

CAP implements the National Science and Technology Council's call in November, 2000 for "a standard method ... to collect and relay instantaneously and automatically all types of hazard warnings and reports locally, regionally and nationally for input into a wide variety of dissemination systems."

The Common Alerting Protocol (CAP) specifies an open, non-proprietary digital message format for all types of alerts and notifications. The CAP format is fully compatible with existing formats including the Specific Area Message Encoding (SAME or WR-SAME) used for NOAA Weather Radio and the Emergency Alert System, while offering enhanced capabilities that include:

• Flexible geographic targeting using latitude/longitude "boxes" and other geospatial representations in three dimensions;
• Multilingual and multi-audience messaging;
• Phased and delayed effective times and expirations;
• Enhanced message update and cancellation features;
• Template support for framing complete and effective warning messages;
• Digital encryption and signature capability; and,
• Facility for digital images, audio and video.

The chief benefit of CAP will be reduction of costs and operational complexity by eliminating the need for multiple custom software interfaces to the many warning sources and dissemination systems involved in all-hazard warning. The CAP message format can be converted to and from the "native" formats of all kinds of sensor and alerting technologies, forming a basis for a technology-independent national and international "warning internet." Distributing warning messages in a machine-readable format can also facilitate the automatic triggering of events that must be taken when a disaster threatens (e.g. automated water intake and air ventilation closures, water level adjustments, train stoppages, etc.) The CAP has undergone rigorous technical review within the OASIS standards process and final approval as a standard was received in early 2004." (**Partnership for Public Warn.**, *Protecting America's Communities*, 2004, pp. 16-17)

Common Communication Plan (CCP): "A plan designed to be utilized across multi-agency and multi-jurisdictional incident management operations. It applies standards called for under the ICS. The IC manages communications at an incident, using a CCP and an incident-based communications center established solely for use by the command, tactical, and support resources assigned to the incident. All entities involved in managing the incident will utilize common terminology, prescribed by the NIMS, for communications." (**FEMA**, *NIMS Compliance Metrics Terms of Reference* (For Fiscal Year 2007), October 23, 2006, p. 1)

Common Operating Picture: "Activated in May 2006, the Common Operating Picture (COP) is a display of relevant information that is derived from a Common Operating Database (COD) and shared by several agencies and organizations. The COP/COD system is a situational awareness tool that can be modified for the strategic, operational and tactical levels and is active in the National Operations Center (NOC). As part of an incrementally phased development effort, the DHS COP/COD system has focused on the 2006 hurricane season and has been implemented in selected DHS offices and component and inter-agency operation centers. Subsequently, the COP/COD system will be implemented nationwide for all Homeland Security partners, for all hazards, and for all threats." (**DHS**, *Fact Sheet*: "Protecting the Homeland Post September 11," Sep. 8, 2006.

Common Operating Picture: "The COP is the principal situational awareness tool within the NOC [National Operations Center, DHS] and is the cornerstone of the National Reporting System. This real-time, web-based tool ties together key homeland security partners primarily at the Federal, State, and Joint Field Office (JFO) levels. The COP was the direct result of the Department's internal reviews following Hurricanes Katrina and Rita and the White House Katrina lessons learned report. It was initially available for the 2006 Hurricane season and has the following features:

- Is accessible through the Homeland Security Information Network (HSIN)
- Provides Federal departments and agencies with the capability to share critical information
- Establishes an inter-agency common operating database
- Develops a shared interagency understanding of the situation
- Provides information integrity for reporting requirements
- Facilitates timely decision making

The COP includes functional screens that address the National and International Situation Summaries, executive actions, requests for information, responder status, chronology of events, critical infrastructure, mapping products, media reports, streaming video from the incident site,

the latest incident updates, metrics, and other HSIN information. As part of our incremental approach, we are advancing the COP capabilities from natural disasters to all hazards and all threats. Our "next steps" are intended to further enhance the COP capabilities from exclusively an unclassified, hurricanes/natural disaster centric tool to include a classified, all-hazards capability. We are currently focusing on the "worst case" scenarios for nuclear/radiological incidents and will use national exercises and real world events to validate and continue its overall development." (**DHS**, *Statement of Frank DiFalco, Director of the NOC*, June 20, 2007, p. 4)

Common Operating Picture: "A broad view of the overall situation as reflected by situation reports, aerial photography, and other information or intelligence. (Department of Homeland Security, National Incident Management System (March 2004), 128; Department of Homeland Security, National Response Plan (December 2004), 64.)" (**FEMA**, *FY 2007 NIMS Compliance Metrics Terms of Reference*, October 23, 2006, p. 1)

Common Operating Picture: "Collating and gathering information—such as traffic, weather, actual damage, resource availability—of any type (voice, data, etc.) from agencies/organizations in order to make decisions during an incident…. A common operating picture is established and maintained by the gathering, collating, synthesizing, and disseminating of incident information to all appropriate parties involved in an incident. Achieving a common operating picture allows on-scene and off-scene personnel (e.g., those at the Incident Command Post, an Emergency Operations Center, and within a multi-agency coordination group) to have the same information about the incident, including the availability and location of resources, personnel, and the status of requests for assistance. Additionally, a common operating picture offers an overview of an incident thereby providing incident information which enables the Incident Commander (IC), Unified Command (UC), and supporting agencies and organizations to make effective, consistent, and timely decisions. In order to maintain situational awareness, communications and incident information must be updated continually. Having a common operating picture during an incident helps to ensure consistency for all emergency management/response personnel engaged in an incident." (**FEMA**, *National Incident Management System* (FEMA 501/Draft), August 2007, pp. 23-24)

Common Operating Picture: "Offers an overview of an incident thereby providing incident information enabling the IC/UC and any supporting agencies and organizations to make effective, consistent, and timely decisions." (**FEMA**, *NIMS* (FEMA 501/Draft), August 2007, p. 149)

Common Operating Picture: "Is a broad view of the overall situation as reflected by situation reports, aerial photography and other information and intelligence." (**USCG**, *IM Handbook*, 2006, Glossary 25-4)

Common Operational Picture: "(Army) A single identical display of relevant information within a commander's area of interest tailored to the user's requirements, based on common data and information shared by more than one command." (**DA**, *WMD-CST Ops*, 2007, Glossary-10)

Common Terminology (IM): "Normally used words and phrases—avoids the use of different words/phrases for same concepts, consistency, to allow diverse incident management and support organizations to work together across a wide variety of incident management functions

and hazard scenarios." (**FEMA**, *National Incident Management System* (FEMA 501/Draft), August 2007, p. 149)

Communications: "Communications is the transmission of thoughts, messages, or information." (**DHS**, *TCL*, 2007, p. 38)

Communications: "Modern society runs on nearly instant communication. When disaster strikes and normal communications fail, the government cannot respond to the emergency unless a survivable emergency communication network is in place and ready to function. At a minimum, reliable links among Federal, State, and local governments and key private responders are required along with the ability to quickly access, process, and use emergency information." (**FEMA**, *An Introduction to SCM*, Sep 1992, 4)

Communications and Information Management: "Identify the requirements for a standardized framework for communications, information management, and information-sharing support at all levels of incident management.
• Incident management organizations must ensure that effective, interoperable communications processes, procedures, and systems exist across all agencies and jurisdictions.
• Information management systems help ensure that information flows efficiently through a commonly accepted architecture. Effective information management enhances incident management and response by helping to ensure that decision making is better informed." (**DHS**, *UTL 2.1*, 2005, p. 15)

Communications and Information Management: (NIMS 2005-2006): 4th of five Compliance Assessment Metrics. "Effective communications, information management, and information and intelligence sharing are critical aspects of domestic incident management. Establishing and maintaining a common operating picture and ensuring accessibility and interoperability are principal goals." (**FEMA**, *NIMSCAST Technical Users Guide Version 1.1*. April 30, 2007, p. 28)

Communications Capability Definition, Target Capability List, DHS: "Communications is the fundamental capability within disciplines and jurisdictions that practitioners need to perform the most routine and basic elements of their job functions. Agencies must be operable, meaning they must have sufficient wireless communications to meet their everyday internal and emergency communication requirements before they place value on being interoperable, i.e., able to work with other agencies. Communications interoperability is the ability of public safety agencies (police, fire, EMS) and service agencies (public works, transportation, hospitals, etc.) to talk within and across agencies and jurisdictions via radio and associated communications systems, exchanging voice, data and/or video with one another on demand, in real time, when needed, and when authorized. It is essential that public safety has the intra-agency operability it needs, and that it builds its systems toward interoperability." (**DHS**, *TCL*, Sep. 2007, p. 29)

Communications Interoperability: "Communications interoperability is the ability of multiple entities to intermingle meaningful transmission of thoughts, messages, or information while using similar or dissimilar communications systems." (**DHS**, *TCL*, 2007 p. 39)

Communications Interoperability: "Communications interoperability allows emergency management/response personnel and their affiliated organizations to communicate within and across agencies and jurisdictions via voice, data, or video on demand, in real time, when needed, and when authorized. It is essential that these communications systems be capable of interoperability, as successful emergency management and incident response operations require the continuous flow of critical information among jurisdictions, disciplines, organizations, and agencies." (**FEMA**, *National Incident Management System* (FEMA 501/Draft), Aug. 2007, 24)

Communications Interoperability: "Communications interoperability refers to "the ability of emergency responders to talk across disciplines and jurisdictions via communications systems and to exchange voice and/or data with one another on demand, in real time, when needed, and as authorized." (**NSTAC**, *Report to the President*, 2007, p. 1, citing DHS, SAFECOM Program)

Communities of Interest (COI), Homland Security Planning and Operations. "The following list identifies planning COIs for homeland security operations. It is not all inclusive; additional members will be added as they are identified.

Key Federal Interagency**:**

- Department of Agriculture (USDA)
- Department of Commerce (DOC)
- Department of Defense (DOD)
- Department of Education (DOEd)
- Department of Energy (DOE)
- Department of Health and Human Services (HHS)
- Department of Homeland Security (DHS)
- Federal Emergency Management Agency (FEMA)
- Infrastructure Protection Division (Executive Agent for the NIPP)
- Office of Operations Coordination
- U.S. Coast Guard (USCG)
- Department of Housing and Urban Development (HUD)
- Department of the Interior (DOI)
- Department of Justice (DOJ)
- Federal Bureau of Investigation (FBI)
- Department of Labor (DOL)
- Department of State (DOS)
- Department of Transportation (DOT)
- Department of the Treasury (TREAS)
- Department of Veterans Affairs (VA)
- Environmental Protection Agency (EPA)
- Federal Communications Commission (FCC)
- General Services Administration (GSA)
- National Aeronautics and Space Administration (NASA)
- National Transportation Safety Board (NTSB)
- Nuclear Regulatory Commission (NRC)
- Office of the Director of National Intelligence (ODNI)

- Intelligence Community (IC)
- Office of Personnel Management (OPM)
- Small Business Administration (SBA)
- Social Security Administration (SSA)
- Tennessee Valley Authority (TVA)
- U.S. Agency for International Development (USAID)
- U.S. Postal Service (USPS)

Other**:**

- State, local, and Tribal governments
- Non-Governmental and Volunteer Organizations
- American Red Cross (ARC)
- Corporation for National and Community Service
- National Organization on Disability
- National Voluntary Organizations Active in Disaster (NVOAD)
- Private Sector
- Other" (**FEMA**, *Interim Interagency Planning System for Homeland Security* (Draft 2.3), July 3, 2008 copy, pp. 3-3 – 3-4)

Community: "A political entity, within a defined boundary, having authority to adopt and enforce laws and provides services and leadership to its residents. (**Jones**, *Critical Incident Protocol*, 2000, p. 37)

Community: "A social group of any size whose members reside in a specific locality, share government, and often have a common cultural and historical heritage." (*Webster's Unabridged Dictionary*, 2005)

Community, Functional: "A *functional* community can be defined as the associations that are required by groups of people living together within a specific geographical area." (The Joint Commission, Standing Together, 2005, p. 7, citing: Dwyer D.M. "Strengthening Community in Education -- A handbook for change." *The Progressive Educator,* January 1998.)

Community and Regional Resilience Initiative (CARRI): "CARRI is a groundbreaking program being led by the Department of Energy's Oak Ridge National Laboratory, in conjunction with a variety of other federal, regional, state and local partners. The goal of CARRI is to help develop and then share critical paths that any community or region may take to strengthen its ability to prepare for, respond to, and rapidly recover from significant man-made or natural disasters with minimal downtime to basic community, government and business services. When a community is truly resilient it should be able to avoid the cascading system failures to help minimize any disaster's disruption to everyday life and the local economy. A resilient community is not only prepared to help prevent or minimize the loss or damage to life, property and the environment, but also it has the ability to quickly return citizens to work, reopen businesses, and restore other essential services needed for a full and swift economic recovery." (**ORNL**, *Community & Regional Resilience Initiative* (CARRI). February 6, 2008)

Community Assistance Program: "FEMA created the Community Assistance Program (CAP) to provide outreach and technical support to communities participating in the NFIP. The CAP is

an integral part of the administration of the NFIP at the regional, state, and local level. Under the CAP, both Community Assistance Visits (CAVs) and Community Assistance Calls (CACs) are used to obtain input and share information. A CAV is a visit by FEMA regional staff or the State NFIP Coordinator to a community to assess whether the community's floodplain management program meets NFIP participation requirements." (**FEMA**, *Map Modernization: Guidelines and Specifications for Flood Hazard Mapping Partners, Vol. 1*, 2002, p. 1-12)

Community Assistance Program – State Support Services Element (CAP-SSSE, FEMA): "The Community Assistance Program –State Support Services Element (CAP-SSSE) program derives its authority from the National Flood Insurance Act of 1968, as amended, the Flood Disaster Protection Act of 1973, and from 44 CFR Parts 59 and 60. This program provides funding to States to provide technical assistance to communities in the National Flood Insurance Program (NFIP) and to evaluate community performance in implementing NFIP floodplain management activities. In this way, CAP-SSSE helps to:

- Ensure that the flood loss reduction goals of the NFIP are met,
- Build State and community floodplain management expertise and capability, and
- Leverage State knowledge and expertise in working with their communities.

The National Flood Insurance Act of 1968 prohibits the Director from providing flood insurance in a community unless that community adopts and enforces floodplain management measures that meet or exceed minimum criteria in 44 CFR Part 60.3. These floodplain management measures can take the form of floodplain management ordinances, building codes, or zoning provisions. FEMA Regional Offices and the designated State agency negotiate a CAP-SSSE Agreement (Agreement) that specifies activities and products to be completed by a State in return for CAP-SSSE funds. In addition, since Federal Fiscal Year (FY) 2005, each State is required to develop a Five-Year Floodplain Management Plan (Five-Year Plan) describing the activities to be completed using CAP-SSSE funding as well as how the required performance metrics will be met. Performance standards that address quality of service are to be developed and measured. There is a 25 percent non-federal match for all States receiving CAP-SSSE funds." (**FEMA**, *CAP-SSSE*, 2007)

Community Assistance Visit (CAV): "The Community Assistance Visit (CAV) is a major component of the NFIP's Community Assistance Program (CAP). The CAV is a visit to a community by a FEMA staff member or staff of a State agency on behalf of FEMA that serves the dual purpose of providing technical assistance to the community and assuring that the community is adequately enforcing its floodplain management regulations. Generally, a CAV consists of a tour of the floodplain, an inspection of community permit files, and meetings with local appointed and elected officials. If any administrative problems or potential violations are identified during a CAV the community will be notified and given the opportunity to correct those administrative procedures and remedy the violations to the maximum extent possible within established deadlines. FEMA or the State will work with the community to help them bring their program into compliance with NFIP requirements. In extreme cases where the community does not take action to bring itself into compliance, FEMA may initiate and enforcement action against the community." (**FEMA**, *CAV*, 2007)

Community Awareness and Emergency Response (CAER): "A program developed by the Chemical Manufacturers Association providing guidance for chemical plant managers to assist them in taking the initiative in cooperating with local communities to develop integrated (community/industry) hazardous materials emergency plans." (**FEMA**, *Definitions of Terms*, 1990)

Community Based Disaster Risk Management (CBDRM): "Once a community has assessed the risks it faces and an action plan has been developed, disaster risk reduction measures need to be taken. These measures might include practical disaster mitigation measures, such as building dams or dykes, forming emergency response committees, developing community based early warning systems and practicing response and evacuation, advocating at the local or national government level for policy change in favour of preventive action, or even measures to reinforce the livelihoods of the poorest in the community, hence their resources for self-protection." (ProVention Consortium, *Community Risk Assessment Toolkit*, International Federation of the Red Cross and Red Crescent Societies, May 2006)

Community Based Organizations (CBOs): "A local organization (which may or may not be an affiliate of a national organization) with a primary mission to provide services to specific groups of people. This could include services to people who are developmentally disabled, homeless, low-income elderly, non-English speaking, or others. CBOs are usually nonprofit organizations. Most have a 501 (c) (3) tax-exempt status from the Internal Revenue Service. Some may have the nonprofit status from the Franchise Tax Board. In size, they range from all-volunteer organizations that get by on virtually no budget, to multi-million dollar operations. Examples include Food Banks, Centers for Independent Living, Immigration Assistance Programs, Easter Seals, Neighborhood Clinics, and Family Centers." (**CA OES**, *SEMS Guidelines*, 2006, Glossary, p. 5)

Community Based Planning: "Most state and local emergency management plans were developed without direct involvement from the community. As a result, people tend to have little faith that these plans offer the best courses of action to protect themselves and their families. On the other hand, disaster planning that includes input from the community produces not only higher quality plans, but also far higher levels of community approval and confidence in the plans."[9] (**Carafano**, *Grassroots Disaster Response-Harnessing Capacities of Communities*, 2007)

Community Compliance Program (FEMA): "The National Flood Insurance Act of 1968 prohibits FEMA from providing flood insurance in a community unless that community adopts and enforces floodplain management regulations that meet minimum NFIP criteria. When administrative problems or potential violations are identified in a community, FEMA is committed to working with that community and providing technical assistance to help them bring their floodplain management programs into compliance with NFIP requirements. In those cases where the community does not take action to become compliant, FEMA implements its Community Compliance Program. The Community Compliance Program builds on the basic probation and suspension procedures in Section 59.24 (b) and (c) and provides an orderly sequence of enforcement options of varying severity. If all attempts at obtaining community

[9] Cites: Roz D. Lasker, "Redefining Readiness: Terrorism Planning Through the Eyes of the Public," New York Academy of Medicine, 14Sep04, at *www.healthprivacy.org/usr_doc/RedefiningReadinessStudy.pdf*

compliance are to no avail, communities will become subject to suspension from the NFIP. The availability of two separate sets of enforcement options -- one for communities and one for individuals and structures -- helps FEMA ensure that NFIP enforcement actions are targeted to the responsible party." (**FEMA**, *Community Compliance Program*, 2007)

Community Conditions in a Disaster Environment: "…disasters not only create new tasks but actually task subsystems, and these subsystems must be coordinated with one another if the response is to be effective. This requires the mobilization of resources -- particularly manpower, economic and loyalties. When this mobilization has occurred a new community structure has come into being. However, all this occurs under conditions characterized by the following:

- uncertainty,
- urgency,
- the development of an emergency consensus,
- expansion of the citizenship role,
- convergence, and
- the deemphasis of contractual and impersonal relationships." (**Dynes, Quarantelli, and Kreps,** *A Perspective on Disaster Planning*, 1981 (3rd Ed.), pp. 66-67)

Community Development Block Grant (CDBG), HUD: "HUD [US Department of Housing and Urban Development]…provides disaster recovery assistance through several programs. After the 2005 hurricanes, Congress appropriated $16.7 billion to the Community Development Block Grant (CDBG) program for disaster recovery. The CDBG program generally provides funding to metropolitan cities and urban counties that have been designated as entitlement communities and to states for distribution to other communities. Grant recipients must give maximum feasible priority to activities, including emergency-related activities, that (1) benefit low- and moderate-income families or aid in the prevention or elimination of slums or blight, or (2) meet urgent community development needs. However, HUD can waive regulatory and statutory program requirements to increase the flexibility of the CDBG funds for disaster recovery. These grants afford states and local governments a great deal of discretion to help them recover from presidentially declared disasters." (**GAO**, *Natural Disasters: Public Policy*…, Nov 2007, 16-17)

Community Emergency Response Team(s) (CERT): "CERTs are funded by Congress through Citizen Corps program grants, which are made available to local communities. A key component of Citizen Corps, the CERT program trains citizens to be better prepared to respond to emergency situations in their communities. When emergencies occur, CERT members can give critical support to first responders, provide immediate assistance to victims, and organize volunteers at a disaster site. The CERT program is a 20-hour course, typically delivered over a seven-week period by a local government agency, such as the emergency management agency or fire or police department. Training sessions cover disaster preparedness, disaster fire suppression, basic disaster medical operations, light search and rescue, and team operations. The training also includes a disaster simulation in which participants practice skills that they learned throughout the course." (**The Joint Commission**, *Standing Together*, 2005, p. v)

Community Hazards Emergency Response-Capability Assurance Process (CHER-CAP): "The Community Hazards Emergency Response-Capability Assurance Process (CHER-CAP) is

offered by Regional Offices of the Department of Homeland Security's Federal Emergency Management Agency (FEMA) to assist local communities and tribal l governments in obtaining a greater understanding of community hazard risks, identifying planning deficiencies, updating plans, training first responders, and stimulating and testing the system for strengths and needed improvements. CHER-CAP is offered as an additional tool for state and local governments to use as they develop and enhance preparedness and response capabilities that will address any hazards that communities will face throughout our Nation." (**FEMA**, *Community Hazards Emergency Response-Capability Assurance Process (CHER-CAP) Fact Sheet*, May 8, 2007 update.

Community Mapping: "Community mapping is a tool used to visualize the resources, services, vulnerabilities and risks in a community. These may include health clinics, schools, water sources, shelter as well as identifying risks such as flood areas, health hazards, indicating which locations or populations are vulnerable." (**ProVention Consortium**, *CRA Toolkit: Glossary*, 06)

Community Preparedness: "Preparedness is everyone's job. Not just government agencies but all sectors of society -- service providers, businesses, civic and volunteer groups, industry associations and neighborhood associations, as well as every individual citizen -- should plan ahead for disaster. During the first few hours or days following a disaster, essential services may not be available. People must be ready to act on their own." (**FEMA**, *About FEMA: Community and Family Preparedness Program*, April 5, 2006 update)

Community Preparedness and Participation: "There is a structure and a process for ongoing collaboration between government and nongovernmental organizations at all levels; volunteers and nongovernmental resources are incorporated in plans and exercises; the public is educated, trained, and aware; citizens participate in volunteer programs and provide surge capacity support; nongovernmental resources are managed effectively in disasters; and there is a process to evaluate progress." (**DHS**, *National Preparedness Guidelines*, September 13, 2007, p. 6)

Community Preparedness and Participation, Capability Definition: "The Community Preparedness and Participation capability provides that everyone in America is fully aware, trained, and practiced on how to prevent, protect/mitigate, prepare for, and respond to all threats and hazards. This requires a role for citizens in personal preparedness, exercises, ongoing volunteer programs, and surge capacity response. Specific capabilities for UNIVERSAL preparedness, including knowledge of all-hazards (technological, natural, and terrorist incidents) and related protective measures, skills, and supplies, will be determined through a collaborative process with emergency responders." (**DHS,** *TCL*, 2007, p. 55)

Community Rating System (CRS): "The National Flood Insurance Program's (NFIP) Community Rating System (CRS) is a voluntary incentive program that recognizes and encourages community floodplain management activities that exceed the minimum NFIP requirements. As a result, flood insurance premium rates are discounted to reflect the reduced flood risk resulting from the community actions meeting the three goals of the CRS: (1) reduce flood losses; (2) facilitate accurate insurance rating; and (3) promote the awareness of flood insurance. For CRS participating communities, flood insurance premium rates are discounted in increments of 5%; i.e., a Class 1 community would receive a 45% premium discount, while a Class 9 community would receive a 5% discount (a Class 10 is not participating in the CRS and

receives no discount). The CRS classes for local communities are based on 18 creditable activities, organized under four categories: (i) Public Information, (ii) Mapping and Regulations, (iii) Flood Damage Reduction, and (iv) Flood Preparedness." (**FEMA**, *Community Rating System*. Website: http://www.fema.gov/business/nfip/crs.shtm)

Community Readiness Survey: "The survey, as used in OSA (On-Site Assistance Program), is an assessment ["profile"] of the actual condition of the existing local emergency operational readiness capability…. A thorough understanding of the real situation is desirable before determining the course of action….The most important aspects of the survey are that it is done at the site, and requires direct local participation and involvement. The OSA team should base their recommendations on first-hand information and observations, including information gained in the give-and-take of discussion. The DCPA Standards should serve as a reference point. It should be emphasized that the objective of the survey is to determine the course of future preparedness actions and the manner in which local, State, and Federal resources can contribute most effectively to this course of action, rather than evaluate past actions or present performance. In other words, what can be done to help this civil preparedness director increase his community's emergency operating capability." (**DCPA**, *On-Site Assistance* (MP 63), 1974, p. 21)

Community Relations (Stafford Act Declaration): "Community Relations personnel work closely with disaster victims and community leaders to establish confidence in the emergency management system. They establish an early presence at the disaster site to assess and communicate critical needs. They are highly skilled in explaining the disaster relief process and programs, and set realistic expectations to limit misunderstandings about the disaster assistance process and to ensure that disaster assistance is being delivered as soon as possible. Community relations also employ a culturally diverse staff to ensure they are able to communicate, in different languages, the disaster process and to promote efficient and equitable disaster assistance for all communities and applicants." (**FEMA**, *IS 250*, *Emergency Support Function 15 (ESF15) External Affairs*, 2007, p. 40, Module 4)

Community Risk Assessment: "Community Risk Assessment (CRA) uses participatory action research methods to place communities in the lead role for the assessment, active planning, design, implementation and evaluation of activities aimed at reducing the community's risk to disaster. Whether they are rural, urban or semi-urban neighborhoods, it is crucial that communities exposed to hazards can contribute to the risk assessment and planning process. CRA focuses on identifying the most vulnerable groups in a community, and explores what local capacities can be used to enhance the resilience of the community members. The risks facing a community can include natural hazards, such as hurricanes, floods, earthquakes and droughts, as well as other threats such as environmental health risks, epidemics or conflict." (**ProVention Consortium**, *Community Risk Assessment Toolkit*, International Federation of the Red Cross and Red Crescent Societies, May 2006)

Community Shelter Plans (CSP): "In developing a Community Shelter Plan (CSP) for a given community, people are matched with specific shelters in the best possible combination, considering time and movement constraints. Development of a CSP for a large metropolitan area is a complex task, appropriate for use of computer techniques. A computer-allocation procedure has been developed and field tested in several communities…. At the end of fiscal year 1973, a cumulative

total of 2,737 communities, with a population of approximately 176 million had CSP's completed or underway." (**DCPA**, *Foresight, DCPA Annual Report FY73*, 1974, p. 18)

Community Shelter Planning (CSP): A component of the Nuclear Civil Protection program, Defense Civil Preparedness Agency. Community Shelter Planning was designed to provide fallout shelter, peacetime shelters for disasters, and in some cases blast shelter where that capability already existed, against nuclear attack in a quickly developing crisis. In this context, quickly developing was described as being within hours or a day or more. (See, **DCPA**, *Standards for Local Preparedness Capability*, 1978)

Community Shelter Planning Officers (CSPOS): "DCPA makes funds available for States to obtain the services of planners designated as Community Shelter Planning Officers (CSPOS). The CSPOS give technical assistance to city and county governments in the development of their Community Shelter Plans (CSP's) and for developing plans for dealing with peacetime disasters including natural disasters, environmental hazards and civil disorders, as well as the effects of nuclear attack" (**DCPA**, *Foresight, DCPA Annual Report FY73*, 1974, p. 18)

CoMNET: Consequence Management, News, Equipment and Training (DHS)

Compensation Unit/Claims Unit (ICS): "The unit within the Finance/Administration Section that is responsible for processing financial matters resulting from injuries, fatalities and/or property and environmental damage at the incident." (**Capital Health Region**, Canada, *ICS100: Incident Command System Training SM*, Mar 2007, 51)

Competency: "Observable, measurable skill, knowledge, ability, behavior, and other characteristics that an individual needs to perform work roles or occupational functions successfully." (**DHS**, *DHS Training Glossary*, November 2006, p. 15)

Competitive Training Grants Program (CTGP): The CTGP provides funds to support training initiatives that are national in scope and further the DHS mission of preparing the nation to prevent, protect against, respond to, and recover from incidents of terrorism and catastrophic events. In FY07, the emphasis is on the development and delivery of courses in one of the five following focus areas:

- Public communications
- Executive leadership of homeland security programs
- Intergovernmental coordination and planning
- Managing homeland security risks
- Legal issues in preparation, response, and recovery

The CTGP awards funds to competitively selected applicants to develop and deliver innovative training programs addressing high priority national homeland security training needs." (**DHS**, *DHS Announces $113 Million for National Preparedness Training Initiatives*, 28 Sep 2007)

Competitive Training Grants Program (CTGP): The CTGP is a "coordinated effort to strengthen homeland security preparedness. Through CTGP, funds are provided to support the development of national preparedness training initiatives that further the homeland security

mission. The CTGP supports our overall goals for national preparedness as outlined in the National Preparedness Guidelines and Homeland Security Directives." (**DHS**, *FY07 CTPG*)

Complex Incidents: "Events where the victims have unusual medical needs or require medical care that is not readily available. These medical needs may be very difficult to adequately define or address without specialized expertise, even with only a few casualties." (HHS, *Medical Surge Capacity and Capability Handbook*, August 2004, p. D-3)

Comprehensive (Core Principle of Emergency Management): "Comprehensive: emergency managers consider and take into account all hazards, all phases, all stakeholders and all impacts relevant to disasters." (**EM Roundtable**, 2007, p. 4)

Comprehensive Cooperative Agreement (CCA): Successor (circa 1981-1983 timeframe) to the Personnel and Administrative Expenses program, Defense Civil Preparedness Agency (and previous Federal Civil Defense Programs) which provided funding to State civil defense/emergency management organizations on at a rate not to exceed 50 percent of personnel and administrative expenses on a matching fund basis. States were required to pass the majority of the funding to local civil defense/emergency management offices within each State. CCA's were negotiated annually between FEMA Regional Offices and State CD/EM Offices based upon national program priorities. The Emergency Management Performance Grants (EMPG) replaced the CCA during the Clinton Administration. (Blanchard)

Comprehensive Cooperative Agreement (CCA): "…the contractual management instrument for State and local emergency preparedness projects receiving Federal financial assistance from FEMA." (**FEMA**, *IEMS MYDP*, 1984, p. III-1)

Comprehensive Emergency Management (CEM): An integrated approach to the management of emergency programs and activities for all four emergency phases (mitigation, preparedness, response, and recovery), for all types of emergencies and disasters and for all levels of government and the private sector.

Comprehensive Emergency Management (CEM): "Comprehensive Emergency Management Programs provide a complete approach for dealing with disruptions in both the public and the private sector. While the term is not widely understood, it represents the umbrella which covers emergency management, business continuity, and disaster recovery." (**Davis Logic**, *CEM*, 2005)

Comprehensive Emergency Management (CEM): "Comprehensive Emergency Management means integrating all actors, in all phases of emergency activity, for all types of disasters." (**NGA,** 1978, 111)

Comprehensive Emergency Management (CEM): "CEM refers to a state's responsibility and unique capability to manage all types of disasters by coordinating wide-ranging actions of numerous agencies. The 'comprehensive' aspect of CEM includes all four phases of disaster activity: mitigation, preparedness, response and recovery for all risks -- attack, man-made, and natural -- in a federal-state-local operating partnership." (**NGA** 1978, 203)

Comprehensive Emergency Management (CEM): "CEM fosters a *federal-state-local operating partnership.*" (NGA, *Comprehensive Emergency Management*, 1979, p. 15)

"CEM should be distinguished from *comprehensive emergency preparedness,* a term now generally in use, which emphasizes, in practice if not legislative intent, the preparedness and response phases of emergency management almost exclusively." (NGA, *CEM*, 1979, p. 50)

"In keeping with the concept of a full federal-state-local partnership in the consolidation of all-risk emergency management, state and local governments should adopt consistent nomenclature, using the words *emergency management*." (NGA, *CEM*, 1979, p. 53)

Comprehensive Emergency Management (CEM) Public Commitment Component: "To ensure public support and commitment for emergency preparedness, the emergency management leader must lead a statewide effort to tap the skills, knowledge and abilities of the public to bolster the preparedness of households and businesses, as well as support public and private sector emergency response." (**Little Hoover Com**., *Safeguarding the Golden State*, 2006, 39)

Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), 1980: (Public Law 96-510.) "The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), commonly known as Superfund, was enacted by Congress on December 11, 1980. This law created a tax on the chemical and petroleum industries and provided broad Federal authority to respond directly to releases or threatened releases of hazardous substances that may endanger public health or the environment….CERCLA:

- established prohibitions and requirements concerning closed and abandoned hazardous waste sites;
- provided for liability of persons responsible for releases of hazardous waste at these sites; and
- established a trust fund to provide for cleanup when no responsible party could be identified.

The law authorizes two kinds of response actions:

- Short-term removals, where actions may be taken to address releases or threatened releases requiring prompt response.
- Long-term remedial response actions, that permanently and significantly reduce the dangers associated with releases or threats of releases of hazardous substances that are serious, but not immediately life threatening. These actions can be conducted only at sites listed on EPA's National Priorities List (NPL).

CERCLA also enabled the revision of the National Contingency Plan (NCP). The NCP provided the guidelines and procedures needed to respond to releases and threatened releases of hazardous substances, pollutants, or contaminants. The NCP also established the NPL. CERCLA was amended by the Superfund Amendments and Reauthorization Act (SARA) on October 17, 1986." (**EPA**, *CERCLA* Overview, July 17, 2007 Update)

Comprehensive Maritime Awareness: "Improves maritime security by acquiring, integrating and exchanging relevant maritime activity information on regional threats and focuses limited interdiction and inspection assets on the most probable threats." (**DOD**, *FY 2006 Advanced Concept Technology*…, March 16, 2006)

Comprehensive Resource Management (See "Resource Management")

Computer-Assisted Natural Disaster Operations: "Under a contractual arrangement with the University of Tennessee, a prototype computer system to assist local planners in natural disaster operations was developed and tested during the fiscal year [1973]. The system, using existing computer programs and available data, produces outputs useful in local natural disaster planning. Outputs include numbers of people and resources in an area; estimates of requirements to deal with all types of natural disasters; allocations of populations affected to temporary shelter. Additional capabilities will be developed during fiscal year 1974, including a complete computer package for use in large metropolitan areas." (**DCPA**, *Foresight, Annual Report FY73*, 1974, 11)

COMSEC: Communications Security. (**Dept. of the Army**, *WMD-CST Ops*, 2007, 4-9)

CoMSUPCEN: Consequence Management Support Center. (**DA**, *WMD-CST Ops*, 2007, 4-2)

Concept and Objectives (C&O) Meeting: "The C&O Meeting is the formal beginning of the exercise planning process. It is held to agree upon already-identified type, *scope*, *capabilities*, *objectives*, and *purpose* of the exercise. For less complex exercises and for jurisdictions/organizations with limited resources, the C&O Meeting can be conducted in conjunction with the *Initial Planning Conference (IPC)*; however, when exercise scope dictates, the C&O Meeting is held first. Representatives from the sponsoring agency or organization, the *lead exercise planner*, and senior officials typically attend the C&O Meeting to identify an overall exercise goal, develop rough drafts of exercise capabilities and objectives, and identify *exercise planning team* members." (**FEMA**, *HSEEP Glossary*, 2008)

Concept of Operations: "A verbal or graphic statement that clearly and concisely expresses what the joint force commander intends to accomplish and how it will be done using available resources. The concept is designed to give an overall picture of the operation." (**DoD**, *DOD Dictionary of Military and Related Terms*, 2007)

Concept of Operations: "A verbal or graphic statement, in broad outline, of a commander's assumptions or intent in regard to an operation or series of operations. The concept of operations frequently is embodied in campaign plans and operation plans; in the latter case, particularly when the plans cover a series of connected operations to be carried out simultaneously or in succession. The concept is designed to give an overall picture of the operation. It is included primarily for additional clarity of purpose. Also called commander's concept. (Joint Pub 1-02)" (**JCS**, *JOPES,* 1995, p. GL-3)

Concept of Operations (EOP): "The concept of operations will capture the sequence and scope of the planned response, explaining the overall approach to the emergency situation. The concept of operations should include division of responsibilities, sequence of action (before, during and after the incident), how requests for resources will be met, and who and under what

circumstances will request be made for additional aid from the State (this should included the process for declaring a state of emergency). The concept of operations should mention direction and control, alert and warning, or other activities. This information is usually outlined in the basic plan and fully detailed in the functional and hazard specific annexes and appendices." (**DHS**, *Local and Tribal NIMS Integration: Integrating the National Incident Management System into Local and Tribal Emergency Operations Plans and Standard Operating Procedures* (Version 1.0), November 15, 2005, p. 7 of 33)

Concept of Operations (EOP): "The audience for the Basic Plan needs to picture the sequence and scope of the planned emergency response. The concept of operations section explains the jurisdiction's overall approach to an emergency situation, i.e., what should happen, when, and at whose direction. Topics should include: division of local, State, Federal, and any intermediate interjurisdictional responsibilities; activation of the EOP; "action levels" and their implications…; general sequence of actions before, during, and after the emergency situation; who requests aid and under what conditions (the necessary forms being contained in tabs); and, for States, who appoints a State Coordinating Officer (SCO) and how the SCO and the State response organization will coordinate and work with Federal response personnel in accordance with the FRP… The concept of operations will touch on direction and control, alert and warning, or continuity of operations matters that may be dealt with more fully in annexes." (**FEMA**. *Guide For All-Hazard Emergency Operations Planning* (SLG 101), 1996, 4-3)

Concept Plan (CONPLAN): "The term 'concept plan' or 'CONPLAN' refers to a plan that briefly describes the concept of operations for integrating and synchronizing existing Federal capabilities to accomplish the mission essential tasks, and describes how Federal capabilities will be integrated into and support regional, State, local, and tribal plans." (**White House**, *Annex I "National Planning" to HSPD-8*, December 2007, p. 2)

Condition ALFA: "The USACE posture resulting from a surprise nuclear attack on the CONUS which may destroy the entire or portion of the seat of government and the key personnel of HQUSACE. Planning for this condition is based on employment of an alternate command element and/or predesignated AH to provide continuity of operations. (**USACE**, *Planning and Operations Guidelines, Annex V: Definitions and Common* Terms, 1985, p. V-1)

Condition BRAVO: 'The USACE posture resulting from either actual or suspected nuclear attack on CONUS or allied countries which was preceded by sufficient warning to permit selected USACE personnel to relocate prior to the attack. Continuity planning for this condition is based on the concept of selected personnel moving to and operation from predesignated ERS's." (**USACE**, *Planning and Operations Guidelines, Annex V: Definitions and Common* Terms, 1985, p. V-1)

Conditions (UTL): "Conditions are variables of the environment that affect the performance of a task. Some conditions describe the environment in which a response occurs (e.g., weather or austere conditions). Others describe the scope of the response (e.g., the number of casualties or describe the type of agent). When linked to specific tasks, conditions help frame the differences or similarities between assigned missions." (**DHS**, *UTL 2.1*, 2005, p. 5)

CONELRAD (Control of Electro-Magnetic Radiation): Public Emergency Radio Broadcast System – "the specially organized system which will utilize broadcasting voluntarily in the public interest as soon as the approach of an enemy is detected." "The CONELRAD system became opertive on May 15, 1953. A nationwide test in October demonstrated that it was generally practical." (**FCDA,** *1953 Annual Report*, pp. 1 and 29)

"Every major radio manufacturer in the U.S. is now marking the dials of all new radio sets with the civil defense symbol at 640 and 1240 kilocylces to denote the two Conelrad freqauencies." (**FCDA**, *1954 Annual Report*, p. 94)

"FCDA produced two short subjects [in 1954] …`Bert The Turtle' one-minute spont on Conelrad." (**FCDA**, *1954 Annual Report*, p. 95)

Conflict Hazards: War, acts of terrorism, civil unrest, riots, and revolutions.

Congregate Care Coordination Unit (CCCU): "The Congregate Care Coordination Unit (CCCU) serves as the coordinating unit to support all congregate care activities at the Regional and JFO levels. It provides resources and subject matter experts and coordinates with other ESF-6 partners, other federal agencies (OFAs), and contractors at the NRCC. A CCCU may work in coordination with other Regional and State levels CCCUs. In addition, the CCU manages the National Shelter System (NSS)." (**FEMA**, *Statement of Paulison, Hearing on: "Nuclear Terrorism: Providing Medical Care and Meeting Basic Needs in the Aftermath…"* 26Jun08, 12)

Congregate Care Management: "Manage conventional and nonconventional mass shelter facilities in support of State, tribal, 3 and local government and host States when traditional mass care systems are overwhelmed. Coordinate Federal resources and provide technical support to State, tribal, and local 7 governments for shelter-in-place activities. Nonconventional sheltering may include:

Hotels, motels, and other single-room facilities.
Temporary facilities such as tents, prefab module facilities, trains, and ships.
Specialized shelters and functional and medical support shelters.

Support for other specialized congregate care areas that may include respite centers, rescue areas, and decontamination processing centers. (**DHS**, *National Response Framework Emergency Support Function #6 – Mass Care, Emergency Assistance, Housing, and Human Services Annex* (Comment Draft). September 10, 2007, p. 6)

Congregate Household Pet Shelters: "Any private or public facility that provides refuge to rescued household pets and the household pets of shelterees in response to a declared major disaster or emergency." (**FEMA**, *Eligible Costs Related to Pet Evacuations, Sheltering*, 2007)

Congregate Shelters: "*Congregate Shelters* are facilities used for sheltering large groups of people, but that normally serve other purposes (e.g., schools, stadiums, churches, or church-sponsored facilities)." (**FEMA**, *FEMA Recovery Strategy*, August 3, 2006)

CONOPS/CONOPs: Concept of Operations.

CONPLAN (NRF): Concept Plan. (**DHS**, *NRF Comment Draft*, September 10, 2007, p. 61)

CONPLAN: Contingency Plan. (**Dept. of the Army**, *WMD-CST Ops*, Dec 2007, Glossary-2)

Consequence: "Aligned with accepted terrorism risk management best practices, risk is best described as the product of ***Threat, Vulnerability, and Consequence***. Threat represents the likelihood that an asset is attacked; vulnerability is the likelihood of succumbing to that attack; and consequence quantifies the adverse effects such as loss of life, economic damage, and the psychological impact a successful terrorist attacks will sustain.

Consequence: "The plausible negative outcomes of the current conditions that are creating uncertainty." (**DOA**, *Infrastructure Risk Management. (Army)*, 2004, p. 13)

Consequence: "The result of a terrorist attack or other hazard that reflects the level, duration, and nature of the loss resulting from the incident. For the purposes of the NIPP, consequences are divided into four main categories: public health and safety, economic, psychological, and governance." (**DHS**, NIPP, 2006, p. 103)

Consequence: "The Consequence of a terrorist attack is a product of the *criticality* of the target and the *impact* that an attack would have on that *criticality*.

- Consequence = (Criticality) X (Impact)." (**DHS**, *TCL*, 2007, p. 51)

Consequence: "**CONSEQUENCE** is the direct effect of an event, incident or accident. It is expressed as a health effect (e.g., death, injury, exposure), property loss, environmental effect, evacuation, or quantity spilled." (**DOT**, *Risk Management Definitions*, Office of Hazardous Materials Safety, 2005)

Consequence: "Outcome of an event." (**ISO 22399**, *Societal Security*…, 2007, p. 2)

Consequence: The outcome of an event or situation expressed qualitatively or quantitatively, being a loss, injury, disadvantage or gain. (**Standards Australia/Standards New Zealand**, 1995)

Consequence Analysis: The estimation of the effect of potential hazardous events. (**New South Wales** 1989).

Consequence Assessment Tool Set (CATS): "CATS is a consequence management tool package that integrates hazard prediction, consequence assessment and emergency management tools (including HPAC) with critical population and infrastructure data, all within a commercial Geographical Information System (GIS). CATS uses its constituent tools and data to predict the hazard areas caused by chemical, biological, radiological, nuclear and explosive incidents, as well as earthquakes and hurricanes. CATS helps to estimate collateral damage to military, civil and industrial installations, assesses associated casualties and damage to facilities, resources, and infrastructure and creates mitigation strategies for responders." (**DTRA/DOD**, *CATS*)

Consequence Management: "Comprises those essential services and activities required to manage and mitigate problems resulting from disasters and catastrophes. Such services and

activities may include transportation, communications, public works and engineering, fire fighting, information planning, mass care, resources support, health and medical services, urban search and rescue, hazardous materials, food, and energy." (**DoD**, *MACA*, 1997, p. 15

Consequence Management: "Per the National Strategy for Homeland Security, July 2002, the NRP will consolidate existing federal government emergency response plans into one genuinely all-discipline, all-hazard plan and thereby eliminate the "crisis management" and "consequence management" distinction. Traditionally, consequence management has been predominantly an emergency management function and included measures to protect public health and safety, restore essential government services, and provide emergency relief to governments, businesses, and individuals affected by the consequences of terrorism. The requirements of consequence management and crisis management are combined in the NRP. See also crisis management." (**DHS**, *National Response Plan* (Draft #1), 25Feb2004, p. 73 (Gloss.)

Consequences Management: "Those planning actions and preparations taken to identify, organize, equip, and train emergency response forces and to develop the executable plans implemented in response to an accident; and, the actions taken following an accident to mitigate and recover from the effects of an accident. (**DoD**, *DoD Response to Radiological Accidents* (DoD Directive 3150.8), 1996, p. 9)

Consequences Management: "Consequence management is predominantly an emergency management function and includes measures to protect public health and safety, restore essential government services, and provide emergency relief to governments, businesses, and individuals affected by the consequences of terrorism. In an actual or potential terrorist incident, a consequence management response will be managed by FEMA using structures and resources of the Federal Response Plan (FRP). These efforts will include support missions as described in other Federal operations plans, such as predictive modeling, protective action recommendations, and mass decontamination. The laws of the United States assign primary authority to the State and local governments to respond to the consequences of terrorism; the Federal government provides assistance, as required." (**FBI**, *United States Government Interagency Domestic Terrorism Concept of Operations Plan*, January 2001, p. 7)

Consequence Management ($C^{O}M$): Involves measures to alleviate the damage, loss, hardship, or suffering caused by emergencies. It includes measures to restore essential government services, protect public health and safety, and provide emergency relief to affected governments, businesses, and individuals. (**FEMA**, *Weapons of Mass Destruction-Nuclear Scenario,* 1999*)*

Consequence Management: "Relative to terrorism incident operations, measures to protect public health and safety, restore essential government services, and provide emergency relief to governments, businesses and individuals affected by the consequences of terrorism." (**FEMA** *Disaster Dictionary* 2001, 22; cites Federal Response Plan, "Terrorism Incident Annex.")

Consequence Management: "CM includes those actions required to manage and mitigate problems resulting from disasters and catastrophes**.** It may include COOP/COG measures to restore essential government services, protect public health and safety, and provide emergency

relief to affected governments, businesses, and individuals. Responses occur under the primary jurisdiction of the affected state and local government, and the Federal government provides assistance when required. When situations are beyond the capability of the state, the governor requests federal assistance through the President. The President may also direct the Federal government to provide supplemental assistance to state and local governments to alleviate the suffering and damage resulting from disasters or emergencies. DHS/FEMA has the primary responsibility for coordination of federal CM assistance to state and local governments." (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, pp. IV 8 & 9)

Consequence Management: "Traditionally, consequence management has been predominantly an emergency management function and included measures to protect public health and safety, restore essential government services, and provide emergency relief to governments, businesses, and individuals affected by the consequences of terrorism. The requirements of consequence management and crisis management are combined in the NRP." (**US Army TRADOC**, 2007, p. 147)

Consequence Management: "Consequence management is predominantly an emergency management function and includes measures to protect public health and safety, restore essential government services, and provide emergency relief to governments, businesses, and individuals affected by the consequences of terrorism. In an actual or potential terrorist incident, a consequence management response will be managed by FEMA using structures and resources of the Federal Response Plan (FRP). These efforts will include support missions as described in other Federal operations plans, such as predictive modeling, protective action recommendations, and mass decontamination.

The laws of the United States assign primary authority to the State and local governments to respond to the consequences of terrorism; the Federal government provides assistance, as required." (**USG**, *Interagency Domestic Terrorism CONPLAN*, 2001, p. 10)

Consequence Management Support Center: "A Department of Defense hub for integrated logistics support that serves as a supply support activity for military and commercial equipment, kitting and shipping agent, and logistics operations center for both deployed and home-station units. It supports and sustains the weapons of mass destruction civil support teams through a central organization consisting of a supply support activity, an emergency resupply activity, and a support coordination center." (**DA**, *WMD-CST Operations*, 2007, Glossary-10)

Consequences: "Consequences mean the damages (full or partial), injuries, and losses of life, property, environment, and business that can be quantified by some unit of measure, often in economic or financial terms." (**FEMA**, *Multi Hazard Identification and Risk Assessment*, 1997, p. xxv)

Constitution and Homeland Security: "The Preamble states that two of the purposes of the Constitution are to insure domestic tranquility and provide for the common defense. Furthermore, Congress has the power to declare war, raise and support armies, provide and maintain a Navy, and provide for calling forth the militia to execute the laws of the Union, suppress insurrections and repel invasions. The President is the Commander in Chief of the

Armed Forces. The Constitution provides the fundamental justification for HS through the guarantee of domestic tranquility and provision for the common defense of the nation." (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. A-1)

Constraints/Impediments (NIMS): "Limitations or restrictions in conducting NIMS activities. The following list defines the constraints/impediments:

- **Education:** The knowledge or skill obtained or developed by a learning process.
- **Equipment:** Instrumentality needed for an undertaking or to perform a service including its associated supplies. Equipment can range from small personal items such as search and rescue gear (flashlights, dusk masks, etc.) to large-scale multi-jurisdictional systems (radio repeater systems, computer networks, etc.).
- **Exercise:** Opportunity provided to demonstrate, evaluate, and improve the combined capability and interoperability of elements to perform assigned missions and tasks to standards necessary to achieve successful outcomes." (**FEMA**, *FY 2007 NIMS Compliance Metrics Terms of Reference*, October 23, 2006, p. 1)

Consumable Commodities: "Food, ice, water and other items not requiring installation, such as small plastic tarps and small generators." (**FEMA**, *100% Funding for Direct Federal Assistance and Grant Assistance*, June 9, 2006)

Container Security Initiative (CSI): "…under CSI, U.S. Customs and Border Protection inspectors are placed at the world's top seaports, where they work with their foreign counterparts to screen and label cargo as "higher-risk" or "low-risk" long before it reaches the U.S. This process is aided immeasurably by the new "24-hour rule," which requires electronic transmission of advance cargo manifests from U.S.-bound sea carriers a day in advance of loading. Early reports from industry show that the 24-hour rule is aiding not just security, but productivity. The information is run through our Automated Targeting System, which compares it against law enforcement data, the latest threat intelligence and the ships' history." (**DHS**, *Remarks* [DHS Sec] *Ridge…Port of Portland*, 4May04)

Contamination (Nuclear Weapon): "The deposit of radioactive material on the surfaces of structures, areas, objects, or personnel, following a nuclear (or atomic) explosion. This material generally consists of fallout in which fission products and other weapon debris have become incorporated with particles of dirt, etc. Contamination can also arise from the radioactivity induced in certain substances by the action of neutrons from a nuclear explosion." (**Glasstone**, *The Effects of Nuclear Weapons*, 3rd Ed., 1977, Glossary, p. 631)

Contingency: "A situation requiring military operations in response to natural disasters, terrorists, subversives, or as otherwise directed by appropriate authority to protect US interests." (**DoD**, *DOD Dictionary of Military and Related Terms*, 2007)

Contingency: "A contingency is an incident which would involve DHS resources in response to natural or man made disasters, terrorists or other situations as directed by the President or Secretary of Homeland Security." (**DHS**, *National Planning and Execution System*, 2007, 5-1)

Contingency and Crisis Action Planning: "Ideally all potential national domestic incidents would have a plan ready for execution at a moments notice. This is unlikely so it is necessary to view planning in two contexts. Planning in the Pre-incident phase aims to prepare plans for the most dangerous potential incidents that could affect the nation; this is called contingency planning. Planning that takes place during the Incident Phase is called "crisis action planning" or CAP. Both use the same procedure to develop courses of action. The essential difference is that CAP takes place in a time-constrained and high-visibility environment. These aspects make CAP the most critical capability to develop. An effective CAP process relies on experienced planners, whose primary experience comes from developing contingency plans. Both contingency planning and CAP aim to produce plans that will achieve a specific national objective for a given incident; that is they are "execution" focused." (**DHS**, 2007)

Contingency Plan: "A plan used by an organization or business unit to respond to a specific systems failure or disruption of operations. A contingency plan may use any number of resources including workaround procedures, an alternate work area, a reciprocal agreement, or replacement resources." (**DigitalCare**, *State of OR BC Workshop*, 2006, pp. 50-51)

Contingency Plan: "A document to identify and catalog the elements required to respond to an emergency, to define responsibilities and specific tasks, and to serve as a response guide." (**EPA**, *Technical Guidance for Hazards* Analysis, 1987, p. A-4)

Contingency Plan: "The portion of an IAP [Incident Action Plan] or other plan that identifies possible but unlikely events and the contingency resources needed to mitigate those events." (**USCG**, *IM Handbook*, 2006, Glossary 25-5)

Contingency Planning: "Process of developing advance arrangements and procedures that enable an organization to respond to an event that could occur by chance or unforeseen circumstances." (**DigitalCare**, *State of OR BC Workshop*, 2006, pp. 50-51)

Contingency Planning: "Contingency planning creates plans in anticipation of future incidents based on the most current information utilizing Department resources. A contingency is an incident which would involve DHS resources in response to natural or man made disasters, terrorists or other situations as directed by the President or Secretary of Homeland Security. Contingency planning facilitates the transition to CAP; during CAP any contingency plan will become a Crisis Action Plan. Any plan for conducting national incident management operations will be called a *Department Contingency Plan.* (**DHS**, 2007)

Contingency Planning: "The Joint Operation Planning and Execution System planning activities that occur in noncrisis situations. The Joint Planning and Execution Community uses contingency planning to develop operation plans for a broad range of contingencies based on requirements identified in the Contingency Planning Guidance, Joint Strategic Capabilities Plan, or other planning directive. Contingency planning underpins and facilitates the transition to crisis action planning." (**DOD**, *DOD Dictionary of Military and Related Terms*, 2007)

Contingency Planning: "Contingency planning is the cornerstone of homeland security planning. It supports crisis action planning by anticipating potential crises and developing plans

that facilitate timely selection of courses of action and execution planning during a crisis. Crisis action planning provides the means to transition from normal circumstances to heightened threats, emergency response, and recovery." (**FEMA**, *Interim IPS* (V 2.3), July 2008 copy, 2-8)

Contingency Planning. "Contingency planning creates plans in anticipation of future incidents based on the most current information. A contingency is an incident which would involve national resources to prevent, protect from, respond to, or recover from terrorist attacks or natural disasters.

- Contingency planning facilitates the transition to CAP; during CAP any contingency plan may become a Crisis Action Plan. Contingency plans are prepared by senior Federal agency leaders in response to requirements established by the Secretary [DHS] and/or the President.

- Contingency planning is conducted before an incident. A contingency plan provides guidance for conducting operations for a given threat or scenario. It is conducted under non-emergency conditions, evaluated through training and exercises, and refined over time.

- Contingency plans are not immediately executed after they are approved. They are continually refined over time and provide planners a well-developed starting point that can be rapidly modified with little or no notice to support crisis action planning requirements." (**FEMA**, *Interim IPS* (Draft 2.3), July 3, 2008 copy, p. 2-9)

Contingency Planning: "Asking about all the 'what if's that might occur in the activities of an organization and the dangers faced in the external environment." (**Lerbinger** 1997, 267)

Contingent Business Interruption Coverage: "*Contingent Business Interruption* coverage protects against economic losses caused by your inability to get a supplier's goods, thereby preventing you from producing and then selling you product to the marketplace." (Insure.com. "Hurricane Gustav Losses at Least $4 Billion." September 2, 2008)

Continuity: "An uninterrupted ability to provide services and support, while maintaining organizational viability, before, during, and after an event." (**DHS**, *FCD 1*, Nov 2007, p. P-2)

Continuity Advisory Group (CAG): "The NCC [National Continuity Coordinator] will establish a Continuity Advisory Group (CAG) as a sub-PCC group focused on interagency implementation of continuity programs. It will be comprised of Continuity Coordinators, or their designees, from Category I, II, III, and IV (identified in NSPD-51/HSPD-20 Annex A and in Appendix B of this *Plan*) executive departments and agencies. Key State and local government representatives from the National Capital Region (NCR), and representatives from the legislative and judicial branches may be invited as appropriate. The CAG shall represent the interests of departments and agencies from Categories I-IV before the CPCC. The CAG will assist its member departments and agencies in implementing directives within its scope by performing the following functions: Providing the forum to address issues ultimately requiring commitment of department and agency resources; Facilitating the exchange of information, including lessons

learned, and a sensing of the member community's views; Facilitating the overall coordination and decision process and the initial coordination among departments and agencies of plans and procedures for shared responsibilities; Identifying, prioritizing, and undertaking initiatives to explore options and make recommendations; and Assisting in resolving conflicts as required." (**HSC,** *NCPIP*, August 2007, p. 22)

Continuity Capability: "The ability of an organization to continue performance of Essential Functions, utilizing Continuity of Operations and Continuity of Government programs and integrated, day-to-day operations with a primary goal of ensuring the preservation of our form of government under the Constitution and the continuing performance of National Essential Functions under all conditions. Built from the foundation of continuity planning and continuity program management, the key pillars of continuity capability are Leadership, Staff, Communications, and Facilities." (**HSC**, *National Continuity Policy Implementation Plan*, August, 2007, p. 60; **DHS**, *FCD 1*, Nov 2007, p. P-2))

Continuity Communications Architecture: "An integrated, comprehensive, interoperable information architecture, developed utilizing the OMB-sanctioned Federal Enterprise Architecture Framework, that describes the data, systems, applications, technical standards, and underlying infrastructure required to ensure that Federal executive branch departments and agencies can execute their Primary Mission Essential Functions and Mission Essential Functions in support of National Essential Functions and continuity requirements under all circumstances." (**HSC**, *National Continuity Policy Implementation Plan*, Aug, 2007, p. 60; **DHS**, *FCD* 1, 2007))

Continuity Coordinators: "Representatives of the executive branch departments and agencies at the Assistant Secretary (or equivalent) level." (**HSC**, *National Continuity Policy Implementation Plan*, August, 2007, p. 60; **DHS**, *FCD 1*, Nov 2007, p. P-2)

Continuity Facilities: "As part of their continuity planning, all agencies must identify alternate facilities; alternate uses for existing facilities; and as appropriate, virtual office options including telework. Risk assessments will be conducted on these facilities to provide reliable and comprehensive data to inform risk mitigation decisions that will allow agencies to protect assets, systems, networks, and functions while determining the likely causes and impacts of any disruption. All agency personnel shall be briefed on agency continuity plans that involve using, or relocating personnel to alternate facilities, existing facilities, or virtual offices. Continuity personnel must be provided supplemental training and guidance on relocation procedures." (**DHS**, *FCD 1*, Nov. 2007, p. 8)

Continuity of Government (COG): All measures that may be taken to ensure the continuity of essential functions of governments in the event of emergency conditions, including line-of-succession for key decision-makers.

Continuity of Government (COG): "Continuity of Government means a *coordinated* effort within each branch of Government (e.g., the Federal Government's executive branch) to ensure that NEFs [National Essential Functions] continue to be performed during a catastrophic emergency." (**DHS/FEMA**, *FCD 1*, November 2007, p. 2)

Continuity of Government (COG): "The principle of establishing defined procedures that allow a government to continue its essential operations in case of a nuclear war or other catastrophic event." (**FEMA**, *Department/Agency HQ Devolution of Operations Plan Template*)

Continuity of Government (COG): "Activities that address the continuance of constitutional governance. COG planning aims to preserve and/or reconstitute the institution of government and ensure that a department or agency's constitutional, legislative, and/or administrative responsibilities are maintained. This is accomplished through succession of leadership, the predelegation of emergency authority, and active command and control during response and recovery operations." (**FEMA,** *NIMS* (FEMA 501/Draft), August 2007, p. 149; see as well, *National Response Framework* Resource Center Glossary/Acronyms, September 2007 draft)

Continuity of Government (COG): "The preservation, maintenance, or reconstitution of civil government's ability to carryout the executive, legislative and judicial processes under the threat or occurrence of any emergency condition that could disrupt such process and services." (**Homeland Defense Journal** 2004, 26)

Continuity of Government: The Continuity of Government Program is based upon the principle that the Naation's nomilitary defenses must be developed within the framework of Federal, State, and local governments. It is designed to insure the survival ande effective operation of civil government in case of attack and thereby improve emergency operational capability, prevent unlawful assumption of authority, and reduce the necessity for martial rule…." (**OCDM**, *Annual Report 1960*, p. 7)

Continuity of Government (COG) (Support to the Nation): "Actions taken to assure that essential functions of the government are continued during an enemy attack upon CONUS." (**USACE**, *Planning and Operations Guidelines, Annex V: Definitions and Common* Terms, 1985, p. V-1)

Continuity of Government (COG): "'Continuity of Government,' or 'COG', means a coordinated effort within the Federal Government's executive branch to ensure that National Essential Functions continue to be performed during a Catastrophic Emergency." (**White House**, *HSPD-20*, 9 May 2007)

Continuity of Government, State and Local (1957): "During the latter part of fiscal year 1957, a program for the continuity of State and local government was developed with the advice and assistance of State and local officials and such organizations as the United States Civil Defense Council, National Association of State and Territorial Civil Defense Directors…

The purpose of the program is: (a) to preserve leadership and authority, (b) to preserve State and local government, and (c) to strengthen State and local government for emergency action." (**FCDA**, *1957 Annual Report*, 30)

Continuity of Government Condition (COGCON): There are four levels with level 4 as the lowest threat level and level 1 as the highest. (**DOE**, *DOE Order 100.1D, Subject: Secretarial Succession, Threat Level Notification, and Successor Tracking*, April 20, 2007.

Continuity of Government Readiness Conditions (COGCON): "In order to provide a coordinated response to escalating threat levels or actual emergencies, the Continuity of Government Readiness Conditions (COGCON) system establishes executive branch continuity program readiness levels, focusing on possible threats to the National Capital Region. The President will determine and issue the COGCON Level. Executive departments and agencies shall comply with the requirements and assigned responsibilities under the COGCON program. During COOP activation, executive departments and agencies shall report their readiness status to the Secretary of Homeland Security or the Secretary's designee." (**White House,** *HSPD-20*)

Continuity of Government Readiness Conditions (COGCON) Matrix:

- **COGCON 4:** Continuity Plan fully operational within 12 hours.
- **COGCON 3:** Continuity Plan fully operational within 8 hours.
- **COGCON 2:** Continuity Plan fully operational within 4 hours.
- **COGCON 1:** Continuity Plan fully operational immediately. (**DHS**, *FCD 1*, 2007, N-2)

Continuity of Government Spectrum Strategy. (**DHS**, *Budget-in-Brief FY 2008*, 2007, p. 80)

Continuity of Operations (COOP): "Efforts to ensure a viable capability exists to continue essential functions across a wide range of potential emergencies through plans and procedures that delineate essential functions; specify succession to office and the emergency delegation of authority; provide for the safekeeping of vital records and databases; identify alternate operating facilities; provide for interoperable communications; and validate the capability through tests, training, and exercises." (**FEMA**, *Department/Agency HQ Devolution of Operations Plan Template*)

Continuity of Operations (COOP): "The ability to recover and provide services sufficient to meet the minimal needs of users of the system/agency. This ability to continue essential agency functions across a wide spectrum of emergencies will not necessarily limit COG functions." (**Homeland Defense Journal** 2004, 26)

Continuity of Operations (COOP) (Support to DA, DOD and other Federal agencies): "Actions taken to assure that essential military missions are continued during an enemy attack upon CONUS or the national defense strategy." (**USACE**, *Planning and Operations Guidelines, Annex V: Definitions and Common* Terms, 1985, p. V-1)

Continuity of Operations (COOP): "`Continuity of Operations,' or 'COOP,' means an effort within individual executive departments and agencies to ensure that Primary Mission-Essential Functions continue to be performed during a wide range of emergencies, including localized acts of nature, accidents, and technological or attack-related emergencies." (**White House,** *HSPD-20*, May 9, 2007)

Continuity of Operations (COOP) and Continuity of Government (COG) (Public Sector): "An ongoing process supported by senior management and funded to ensure that the necessary steps are taken to identify the impact of potential losses, maintain viable recovery strategies, recovery plans, and continuity of services." (**NFPA 1600**, 2007, p.7 and 11)

Continuity of Operations Implementation Plan Phases:

- Readiness and Preparedness
- Activation and Relocation (0-12 Hours)
- Continuity Operations
- Reconstitution (**DHS**, *FCD* 1, Nov. 2007, p. N-1)

Continuity of Operations Minimum Issues to Address in COOP Plan:

- Identifying and prioritizing mission-essential functions
- Establishing how, when, and which authorities will be delegated
- Creating orders of succession
- Identifying and training appropriate staff to support essential functions
- Acquiring and equipping an alternate facility for relocation
- Defining availability and redundancy of interoperable communications and IT systems
- Identifying, protecting, and sustaining availability of vital records and databases
- Determining methods to transfer control to/from primary site during/after an emergency
- Creating a viable schedule to update training, exercises, and plans. (**ICF Int**., *Continuity Planning Emphasizes Comprehensive, All-Hazards Approach*, Winter 2005, p. 1)

Continuity of Operations Phases:

a. *Pre-attack*: That phase that includes all planning and testing of existing facilities, plans and Emergency Action Procedures.

b. *Trans-attack period.* From initial attack until civil defense personnel determine that radiation levels permit leaving shelters. Essential functions during this period would include at a minimum all FOA generated Essential War Functions…

c. *Post-attack period*.

(1) Immediate phase. Emphasis on recovery, would include:
(a) Continuing survival activities and military operations.
(b) Mobilizing military and civilian resources.
(c) Restoring essential communications and transportation.
(d) Increasing procurement and production of essential items.

Long-term phase. Activities related to rehabilitation, rejuvenation and restructuring from remaining resources." (**USACE**, *Planning and Operations Guidelines, Annex V: Definitions and Common* Terms, 1985, p. V-1)

Continuity of Operations Plan (COOP): "A COOP provides guidance on the system restoration for emergencies, disasters, mobilization, and for maintaining a state of readiness to provide the necessary level of information processing support commensurate with the mission requirements/priorities identified by the respective functional proponent. The Federal

Government and its supporting agencies traditionally use this term to describe activities otherwise known as Disaster Recovery, Business Continuity, Business Resumption, or Contingency Planning." (**DigitalCare**, *State of OR BC Workshop*, 2006, pp. 50-51)

Continuity of Operations Plan (COOP): "A plan that provides for the continuity of essential functions of an organization in the event an emergency prevents occupancy of its primary facility. The plan provides the organization with an operational framework for continuing its essential functions when normal operations are disrupted or otherwise cannot be conducted from the primary facility." (**FEMA**, *Department/Agency HQ Devolution of Operations Plan Template*)

Continuity of Operations Plan-Essential (COP-E): "COP-E planning assumes a major disaster of national significance like a pandemic cascades into a national and international catastrophe. It assumes planning for degrees of "essential" operational requirements based upon a dramatically worsening situation and the need to sustain not only the business, but also the community and the nation. Thus, the scale and scope of the impacts and possible outcomes demands a dedicated level of effort, investment, and planning beyond typical business continuity planning. COP-E expands initial business continuity plans to create an agile, actionable plan for responding and recovering from a potential catastrophic failure on a national or international scale." (**DHS**, *Pandemic Influenza CIKR Guide*, 2006, p. 29)

Continuity of Operations Plan-Essential (COP-E), Pandemic: "Pandemic preparedness must involve all types and sizes of businesses. Moreover, it demands a shift in business continuity planning from one that anticipates a short-term, near-normal condition, to one that prepares for extreme long-term, catastrophic contingencies. In the event of a pandemic, the private sector must cope to sustain the nation's essential security, as well as its economic and social stability. To do this, the private sector must maintain production of essential goods and services while mitigating the pandemic impact on operations. COP-E planning assumes pandemic-specific impacts and encourages business contingency planners to identify truly essential functions, people, and materials within and across critical sectors. COP-E also proposes alternative methods tailored to each pandemic phase from preparation to recovery…. *Essential functions:* Functions that are absolutely necessary to keep a business operating during an influenza pandemic, and critical to survival and recovery." (**DHS**, *Pandemic Influenza CIKR Guide*, 2006, p. 20; see also pp. 29-)

Continuity of Operations Plans (COOP): "Planning should be instituted (including all levels of government) across the private sector and nongovernmental organizations (NGOs), as appropriate, to ensure the continued performance of core capabilities and/or critical government operations during any potential incident." (**FEMA**, *NIMS Draft*, August 2007, p. 149)

Continuity of Operations (COOP) Plans: "Procedures to ensure the continued performance of core capabilities and/or critical government operations during any potential incident. (**FEMA**, Strategic Plan, 2007, Appendix D: Glossary, p. 51, citing **National Response Framework** (NRF) Resource Center Glossary/Acronyms Draft September 10, 2007)

Continuity Planning: "Continuity planning is simply the good business practice of ensuring the execution of essential functions through all circumstances, and it is a fundamental responsibility of public and private entities responsible to their stakeholders." (**DHS**, *FCD* 1, Nov. 2007, p. 2)

Continuity Planning: "Continuity planning addresses any situation that might disrupt normal operations and possibly prevent access to the organization's primary place of business, ranging from a short-term inconvenience (e.g., a water main break or other maintenance issue) to a long-term interruption (e.g., a major terrorist incident or natural disaster). Disruptions in communications and/or information technology systems also can trigger activation of a continuity plan—physical damage to the primary facility is not required." (**ICF**, *CP Emphasizes Comprehensive, All-Hazards Approach*, Winter 2005)

Continuity Planning: "Specific areas to consider in continuity plans include the following:
(1) Succession: To ensure that the leadership will continue to function effectively under emergency conditions. When practical, there is a designation of at least three successors for each position. Provisions have been made to deal with vacancies and other contingencies such as absence or inability to act.
(2) Pre-delegation of emergency authorities: To ensure that sufficient enabling measures are in effect to continue operations under emergency conditions. Emergency authorities have been enacted that specify the essential duties to be performed by the leadership during the emergency period and that enable the leadership to act if other associated entities are disrupted, and to re-delegate with appropriate limitations.
(3) Emergency action steps: Actions that facilitate the ability of personnel to respond quickly and efficiently to disasters/emergencies. Checklists, action lists, and/or standard operating procedures (SOPs) have been written that identify emergency assignments, responsibilities, and emergency duty locations. Procedures should also exist for alerting, notifying, locating, and recalling key members of the entity. The SOPs and notification procedures should be integrated.
(4) Primary and alternate emergency operations centers: A facility or capability from which direction and control is exercised in an emergency. This type of center or capability is designated to ensure that the capacity exists for the leadership to direct and control operations from a centralized facility or capability in the event of an emergency.
(5) Alternate operating or backup facilities: Provisions also exist for alternate site(s) for departments or agencies having emergency functions or continuing operations.
(6) Vital records: The measures that are taken by the entity to protect the entity's vital records—for example, financial, data, personnel records, and engineering drawings — that the entity should have to continue functioning during emergency conditions and to protect the rights and interests of the entity. Procedures have been put in place to ensure the selection, preservation, and availability of records essential to the effective functioning of the entity under emergency conditions and to maintain the continuity of operations. Protection of records should comply with applicable laws [Health Insurance Portability and Accountability Act (HIPAA) or other privacy laws].
(7) Protection of resources, facilities, and personnel: The measures that are taken to deploy resources and personnel in a manner that will provide redundancy to ensure the entity can continue to function during emergency conditions. Plans and procedures are in place to ensure the protection of personnel, facilities, and resources so the entity can operate effectively. The entity should have the ability to allocate needed resources and restore functions during and after

disasters/emergencies. Plans should address deployment procedures to relocate/replicate resources or facilities, increase protection of facilities, and inform and train personnel in protective measures. Preparedness should be increased based on the threat level." (**NFPA 1600**, 2007, p. 17)

Continuity Policy Coordination Committee (CPCC): "A committee led by HSC established to comprehensively address national level continuity program coordination, integration, oversight, and management. This forum institutionalizes national security policy development, implementation, and oversight for continuity programs. The Committee serves in a continuity oversight and management role with membership at the Assistant Secretary level from the following organizations: the Office of the Vice President; the Homeland and National Security Councils; the White House Military Office; the Office of Management and Budget; the Office of Science and Technology Policy; the Departments of State, Treasury, Defense, Justice, and Homeland Security; the Director of National Intelligence; the Central Intelligence Agency; the Federal Bureau of Investigation; the United States Secret Service; the Federal Emergency Management Agency; and the Joint Chiefs of Staff. Other observers may be invited to attend." (**HSC**, *National Continuity Policy Implementation Plan*, August, 2007, p. 61)

Continuity Program Management Cycle: "An ongoing, cyclical model of planning, training, evaluating, and implementing corrective actions for continuity capabilities." (**HSC**, *NCPIP*, August 2007, p. 61)

Continuity Readiness Posture: A system which establishes readiness levels, such as the executive branch's Continuity of Government Readiness Conditions (COGCON) for the National Capital Region or the DHS Homeland Security Advisory System (HSAS). (**DHS**, *FCD 1*, Nov 2007, pp. 4-5)

Continuous Improvement and Accountability Strategy (Recommendation for CA);

- *The governor and Legislature should fortify internal efforts to improve progress and accountability. The governor and Legislature should:*
    - *Require the department to develop performance measures and benchmarks for preparedness.* Modeled after standards and benchmarks used by the federal Office of Management and Budget, measures should reflect all aspects of preparedness, be understandable to the public and present reliable and valid information on effectiveness. Performance measures and benchmarks should be subject to review and approval by the Emergency Council.
    - *Require the department to prepare & submit an annual emergency preparedness assessment***.** As part of the budget process, the Senate and Assembly budget committees should require the Governor's [OES] and [OHS] to submit annually an assessment of state and local progress toward preparedness goals. Assessments should be based on the benchmarks and standards developed by the department. The report should include strategies to be undertaken in the following budget year to achieve improvement. Annual reports should be reviewed by the Emergency Council.

  - *Require local report cards on preparedness.* Based on the State's performance measures and benchmarks, each local agency should develop and publicly release a report card on preparedness. For those measures requiring confidentially, the State should develop strategies to assess and monitor performance without releasing sensitive information.
- *The Legislature should direct the California Emergency Council to promote improvement and accountability. The council should be charged with the following responsibilities:*
  - *Advise policy-makers and administrators on preparedness goals and progress in meeting them.* The council should advise the department on the formulation of preparedness goals and benchmarks and a strategic plan… The council also should provide ongoing advice to the Legislature on legislative proposals, the governor's budget and other proposals to bolster preparedness. The council should be authorized to issue reports on preparedness as needed.
  - *Evaluate after action reports.* The council should assess after action reports issued by state and local agencies, report its findings to policy-makers and the public and recommend changes in policies and practice s based on lessons learned following emergency events. The council also should recommend strategies to improve the value of after action reports.
- *Authorize the Joint Legislative Budget Committee to review and approve contingent emergency rules…* the [OES] should promulgate contingent emergency management rules and regulations to support catastrophic response, emergency response and recovery. To provide a reasonable check of the governor's unilateral authority, any order established in advance of an emergency that would suspend existing rules or regulations or represent new rules or regulations, as authorized by Government Code Section 8567, should be submitted to the Joint Committee, rather than the Emergency Council, for review and approval." (**Little Hoover Com.**, *Safeguarding…State…,* 2007, 61-62)

Continuous Improvement Plan/Program/Process (CIP). A Continuous Improvement Plan is a set of activities designed to bring gradual, but continual improvement to a process through constant review.

Contributions in Kind: **"**Non-cash assistance in materials or services offered or provided in case of disaster." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 22)

Control and Authority: "Coordination is not possible without some system of overall control and distribution of authority. There must be people who have responsibilities, who are in charge, and whose authority is legitimated… spheres of organized activity are relatively independent during normal periods. This lack of overall control will simply not suffice in disasters. A general tendency in disaster situations is for new authority patterns, to emerge. An individual's authority may be legitimated by his technical competence, his preparation, or his degree of information about the on-going situation. Likewise, organizations which are loci of communication, have a disaster technology, or are especially prepared in some way often exert considerable control and coordination. The authority of these individuals and organizations is accepted for these same reasons…. the traditional or pre-disaster community contains coordination gaps which must be filled in disaster situations. In order to fill these coordination gaps, there must be an associated system of authority and control." (**Dynes**, et al, *A Perspective on Disaster Planning*, 1981, p. 12)

Control Center: "The control center would be the place from which operations are directed, and would be the source of information and of instructions to the operating personnel." (**OCDP**, *Hopley Report*, 1948, p. 224)

Control Staff Instructions (COSIN): "The COSIN, typically only used in larger, more complex exercises (e.g., *TOPOFF*) contains guidance that *controllers* may need concerning procedures and responsibilities for exercise control, simulation, and support. The COSIN is designed to help exercise controllers understand their roles and responsibilities in exercise execution in order to conduct an effective exercise. For most exercises, however, the COSIN can be combined with an *EvalPlan* to produce a *Controller and Evaluator Handbook*." (**FEMA**, *HSEEP Glossary*, 2008)

Control Zones: "Designated areas at dangerous goods incidents, based on safety and the degree of hazard. Many terms are used to describe control zones; however, in this guidebook, these zones are defined as the hot/exclusion/restricted zone, warm/contamination reduction/limited access zone, and cold/support/clean zone. (EPA Standard Operating Safety Guidelines, OSHA 29 CFR 1910.120, NFPA 472)." (**DOT**, *Emergency Response Guidebook*, 2004, p. 360)

Controller: "Individuals who manage an exercise and influence player actions by injecting preplanned events to stimulate play and to keep the exercise from going off track." (**DHS**, *Cyber Storm Exercise Report*, 2006, p. 3, footnote 3)

Controller and Evaluator (C/E) Debrief: "The C/E debriefing provides each *controller* and *evaluator* with an opportunity to provide an overview of the functional area they observed, and to discuss both strengths and areas for improvement. The *lead evaluator* should assign one or more members of the *evaluation team* to take detailed notes of the C/E debriefing discussion." (**FEMA**, *HSEEP Glossary*, 2008)

Controller and Evaluator (C/E) Handbook: "The Controller and Evaluator (C/E) Handbook supplements the ExPlan for operations-based exercises, containing more detailed information about the exercise scenario and describing exercise controllers' and evaluators' roles and responsibilities. Because the C/E Handbook contains information on the scenario and exercise administration, it is distributed only to those individuals specifically designated as controllers or evaluators." (**FEMA**, *About HSEEP*, 2008)

Controllers: "In an *operations-based exercise*, *controllers* plan and manage exercise play, set up and operate the exercise incident site, and possibly take the roles of individuals and agencies not actually participating in the exercise (i.e., in the *Simulation Cell* [*SimCell*]). Controllers direct the pace of exercise play and routinely include members from the *exercise planning team*, provide key data to players, and may prompt or initiate certain player actions and injects to the players as described in the *Master Scenario Event List (MSEL)* to ensure exercise continuity. The individual *controllers* issue exercise materials to *players* as required, monitor the exercise timeline, and monitor the safety of all exercise *participants*. Controllers are the only participants who should provide information or direction to players. All controllers should be accountable to one senior controller. (Note: If conducting an exercise requires more controllers or evaluators

than are available, a controller may serve as an *evaluator*; however, this typically is discouraged.)" (**FEMA,** *HSEEP Glossary*, 2008)

CONUS: Continental United States. (**DA**, *WMD-CST Operations*, Dec 2007, Glossary-2)

CO-OP: Cooperative Training Outreach Program. (DHS, *U.S. Department of Homeland Security Launches Program to Decentralize First Responder Training*, October 19, 2005)

COOP: Continuity of Operations. (**DA**, *WMD-CST Operations*, Dec 2007, Glossary-2)

COOP Event: "Any event that causes an Agency or Department to relocate operations to an alternate site to assure continuance of its essential functions." (**FEMA**, *Federal Preparedness Circular (FPC 65) – Subject: Federal Executive Branch Continuity of Operations (COOP)*, June 15, 2004)

Cooperating Agency (ICS/NIMS): "An agency supplying assistance other than direct operational or support functions or resources to the incident management effort." (**DHS**, NIMS, 2004, p. 128)

Cooperating Federal Agency: "Each Support Annex of the NRP identifies a coordinating Federal agency and cooperating agencies. When the procedures within a Support Annex are needed to support elements of an incident, the coordinating Federal agency will notify cooperating agencies of the circumstances. Cooperating agencies are responsible for conducting using their own authorities, subject-matter experts, capabilities, or resources and participating in planning for short-term and long-term incident management and recovery operations and the development of supporting operational plans, standard operating procedures, checklists, or other job aids, in concert with existing first-responder standards." (**FEMA**, *Mission Assignment SOPs Operating Draft*, 2007, p. 55)

Cooperating Technical Partners (CTP) Program, FEMA NFIP: "With over 20,000 communities in the National Flood Insurance Program (NFIP), there is a significant challenge keeping flood hazard maps current. The Cooperating Technical Partners (CTP) Program is an innovative approach to creating partnerships between FEMA and participating NFIP communities, regional agencies, and State agencies that have the interest and capability to become more active participants in the FEMA flood hazard mapping program." (**FEMA**, *CTP Program*, November 29, 2007)

Cooperative Training Outreach Program (CO-OP): "CO-OP is a program designed to decentralize the delivery of identified ODP courses and facilitate access to them in a cost effective manner, augmenting the capacity of States, territories, and tribal entities (participating entity/entities) to deliver SLGCP/ODP (SLGCP) courses. The program provides ready access to all the tools, including course curricula and supporting materials, that participating entities need to offer courses to their response communities without the attendant costs of course development and approval processes. (**DHS**, *Cooperative Training Outreach Program (CO-OP) Responses to Frequently Asked Questions*, October 24, 2005)

Cooperative Training Outreach Program (CO-OP): "The Cooperative Training Outreach Program (CO-OP) was launched in October 2005 to expand first responder preparedness training across the country by permitting the states to identify and approve institutions within their states, territories, or tribal entities that can adopt and deliver DHS standardized training courses." (**DHS**, *Cooperative Training Outreach Program*, April 3, 2007)

Coordinate: "To advance systematically an analysis and exchange of information among principals who have or may have a need to know certain information to carry out specific incident management responsibilities." (**USG**, *USG Interagency Domestic Terrorism CONPLAN*, 2001, Appendix B. Definitions, p. 1; see also, **DHS**, *NIMS*, 2004, p. 128)

Coordinate (Incidence Management): "To advance systematically an analysis and exchange of information among principals who have or may have a need to know certain information to carry out specific incident management responsibilities." (**FEMA**, *NIMS Draft*, 2007, p. 149)

Coordinated (**Core Principle of Emergency Management): "**Coordinated: emergency managers synchronize the activities of all relevant stakeholders to achieve a common purpose." (**EM Roundtable**, 2007, p. 4)

Coordinating Agencies: "Coordinating agencies described in the NRP annexes support the DHS incident management mission by providing the leadership, expertise and authorities to implement critical and specific aspects of the response." (**FEMA**, *Mission Assignment SOPs Operating Draft*, 2007, p. 48)

Coordinating Agency: "An agency that supports the incident management mission by providing the leadership, expertise, and authorities to implement critical and specific aspects of the response. Responsible for orchestrating a coordinated response, provides staff for operations functions, notifies and tasks cooperating agencies, manages tasks with cooperating agencies, works with private-sector organizations, communicates ongoing activities to organizational elements, plans for short- and long-term incident management and maintains trained personnel to execute their appropriate support responsibilities." (**JCS/DoD**, *Civil Support*, 2007, p. Gl-7)

Coordinating Office for Terrorism Preparedness and Emergency Response (COTPER): "The mission of the Coordinating Office for Terrorism Preparedness and Emergency Response (COTPER) is to protect health and enhance the potential for full, satisfying and productive living across the lifespan of all people in all communities related to community preparedness and response. To carry out its mission, COTPER (1) fosters collaborations, partnerships, integration, and resource leveraging to increase the Centers for Disease Control and Prevention's (CDC) health impact and achieve population health goals; (2) provides strategic direction to support CDC's terrorism preparedness and emergency response efforts; (3) manages CDC-wide preparedness and emergency response programs; (4) maintains concerted emergency response operations—including the Strategic National Stockpile and the Director's Emergency Operations Center; (5) communicates terrorism preparedness and emergency response activities to internal and external stakeholders." (**CDC**, *COTPER*, 2005)

Coordination: "The process of systematically analyzing a situation, developing relevant information, and informing appropriate command authority of viable alternatives for selection of

the most effective combination of available resources to meet specific objectives. The coordination process (which can be either intra-or inter-agency) does not involve dispatch actions. However, personnel responsible for coordination may perform command or dispatch functions within the limits established by specific agency delegations, procedures, legal authority, etc." (**CA OES**, *SEMS Guidelines*, 2006, Glossary, p. 5)

Coordination: "The federal government, through FEMA, requires all states to have a comprehensive emergency operations plan to serve as a guide for all types of hazards that may occur in their area, including emergency evacuation events. This comprehensive plan would be built upon the emergency plans developed by the counties and cities within that state. Thus, the information should be fully coordinated among all agencies.

Typically, this has involved a hierarchical structure to the development of emergency management plans at all levels. The local level, usually individual cities or counties, will lead the development of plans for emergency planning, response, and recovery operations within their immediate jurisdictions. Emergency management agencies at the next higher level, county and/or state, typically serve to coordinate all local-level emergency management activities, as well as assist with additional law enforcement and transportation system management." (**FHWA/DOT**, *Evacuation Transportation Management Task Five: Operational Concept*, 2006, 18)

Coordination: "Coordination and networking, not command and control are the essence of emergency management." (**Harrald**, *Statement Before the Senate Homeland Security and Government Affairs Committee, Hearing on 'National Emergency Management: Where Does FEMA Belong?'* June 8, 2005, p. 2)

Coordinator of Civil Defense Planning: Position created in the National Security Resources Board by President Truman on March 3, 1949, thereby transferring civil defense responsibility for the Office of Civil Defense Planning in the National Military Establishment. William A. Gill named Coordinator. (**Gessert**, *Federal Civil Defense Organization*, 1965, p. 63)

COP: Common Operating Picture. (**DHS**, *Target Capabilities List*, 2007, p. 34)

COP: Common Operational Picture. (**DHS/IGO,** *Progress in Developing the National Asset Database*, June 2006, Abbreviations)

COP-E: Continuity of Operations Plan-Essential. (**DHS**, *Pandemic Influenza CIKR Guide*, 2006, p, 19)

Coping Capacity: "The means by which people or organizations use available resources and abilities to face adverse consequences that could lead to a disaster. In general, this involves managing resources, both in normal times as well as during crises or adverse conditions. The strengthening of coping capacities *usually builds resilience to withstand the effects of natural and human-induced hazards*. (**UN/ISDR**, *Terminology: Basic Terms of Disaster Risk Reduction*, March 31, 2004)

CORE: Cadre of on-Call Response Employee (FEMA).

Corporate Crisis Response Officers Association (CCROA). "Every local business should appoint an employee to a new position in every facility called the **Crisis Response Officer** (CRO), to act as liaison from the facility to the local public responder/law/medical sectors – and function as a partner to help plan and train their employees for community crisis. The CRO will also identify corporate resources and employees that can be assets to the community during threat or crisis. Because there is a shared interest in community recovery, this can result not only in a more robust response, but a quicker recovery, with businesses and community organizations working together to prepare, respond and recover.

"The CRO serves three primary functions: 1) act as the key liaison between the corporation and the surrounding jurisdiction leadership for planning, response and continuity; 2) establish a direct link to responder sector leaders to facilitate training, preparedness and response planning; and 3) serve as the task officer to help employees and their families prepare, respond and recover from crisis. In addition to the individual role, an organization of CROs should be created to develop practical public policy initiatives that overcome barriers to participation with respect to liability and cost. The core of this policy effort would be model state and federal legislation to provide an affirmative defense to tort liability for conforming corporations which have incidents occur generally in or around their facilities. As long as corporations exercise enumerated care in following practical standards (employee education, training, communication, dispensaries, commissaries, etc.), commercial planning and continuity is reinforced by the protection through this affirmative defense. The rationale is two-fold: 1) encouraging collaboration between municipalities and their local employers and businesses to establish a new standard of participation protected in part by new laws at the local and state level; and 2) by removing barriers to private sector involvement in preparedness and crisis that could augment and magnify the local community capability (and make it more adaptive and responsive) by magnitudes far greater than possible through a public-sector tax-funded system." (CCROA, *About CCROA: A New Corporate Position in Local Preparedness and Response*, 2007)

Corporate Security Review (CSR) Program: "The CSR program has gathered excellent pipeline system data since its conception in 2003. The CSR program is an on-site security review process with pipeline companies that is used to help establish working relationships with key security representatives. CSRs give TSA an understanding of the pipeline operator's security plan and its implementation. The CSR process uses a standard protocol to capture data on pipeline systems, which can be evaluated both quantitatively and qualitatively to further prioritize critical pipeline systems. During the CSR process, potentially critical assets are examined and catalogued based on their importance to the pipeline systems. Assets are identified and a link between the asset and the critical pipeline system will be documented." (**DHS**, *Transportation Sector-Specific Plan, Pipeline Modal Annex, Section 4, Risk-Based Approach to Pipeline Security*, May 21 2007, p. 16)

Corporation for National and Community Service: "The mission of the Corporation for National and Community Service is to improve lives, strengthen communities, and foster civic engagement through service and volunteering. As we pursue our goals, we are guided by the following principles:

- Put the needs of local communities first.

- Strengthen the public-private partnerships that underpin all of our programs.
- Use our programs to build stronger, more efficient, and more sustainable community networks capable of mobilizing volunteers to address local needs, including disaster preparedness and response.
- Measure and continually improve our programs' benefits to service beneficiaries, participants, community organizations, and our national culture of service.
- Build collaborations wherever possible across our programs and with other Federal programs.
- Help rural and economically distressed communities obtain access to public and private resources.
- Support diverse organizations, including faith-based and other community organizations, minority colleges, and disability organizations.
- Use service-learning principles to put volunteer and service activities into an appropriate context that stimulates life-long civic engagement.
- Support continued civic engagement, leadership, and public service careers for our programs' participants and community volunteers.
- Exhibit excellence in management and customer service."

(**Corporation for National and Community Service**. *Our Mission and Guiding Principles*, 2007)

Corporation for National and Community Service: "Provides teams of trained National Service Participants (including AmeriCorps members, Learn and Serve America volunteers, and Retired and Senior Volunteer Program volunteers) to carry out a wide range of response and recovery support activities emphasizing disadvantaged communities and special needs residents, including:

- Canvassing, needs assessment, and information distribution.
- Shelter and feeding support; and distribution of water, food, ice, and other emergency goods.
- Debris clearance, temporary roof repair, and elimination of identified health/safety hazards.
- Unaffiliated volunteer support and warehousing assistance.
- Registration and call center support.
- Case management assistance." (**DHS**, *National Response Framework Emergency Support Function #6 – Mass Care, Emergency Assistance, Housing, and Human Services Annex* (Comment Draft), September 10, 2007, p. 15)

Corrective Action: "Corrective actions are the concrete, actionable steps outlined in Improvement Plan (IPs) that are intended to resolve preparedness gaps and shortcomings experienced in exercises or real-world events." (**FEMA,** *HSEEP Glossary*, 2008)

Corrective Action Program (CAP): "The CAP system is a web-based application that allows Federal, State, territorial, tribal and local emergency response and homeland security officials to track and analyze improvements in their COOP plans." (**DHS**, *Fed. Cont. Direct. 1*, 2007, P-3)

Corrective Action Program (CAP): "All local, tribal, State, and Federal entities should institute a corrective action program to evaluate exercise participation and response, capture lessons learned, and make improvements in their response capabilities. An active corrective action program will provide a method and define roles and responsibilities for identification,

prioritization, assignment, monitoring, and reporting of corrective actions arising from exercises and real-world events. The Homeland Security Exercise and Evaluation Program (HSEEP) Toolkit is a Web-based system that enables implementation of the corrective action program process. In this way, the continuous cycle of preparedness yields enhancements to national preparedness." (**DHS**, *National Response Framework*, Jan 2008, 32)

Corrective Action Program (CAP): "Corrective Action Program (CAP) System - a web-based application that enables users to prioritize, track, and analyze improvement plans developed from exercises and real-world events. Features of the CAP System include Improvement Plan creation and maintenance, corrective action assignment and tracking, and reporting and analysis. The CAP System functionality is based on the process described in HSEEP Volume III: Exercise Evaluation and Improvement Planning. The CAP System supports the process by which exercise and real-world events can inform and improve exercise programs and other preparedness components." (**FEMA**, *HSEEP Toolkit: Overview*, 2008)

Corrective Action Program (CAP): "There are eight components in the Corrective Action Program…
(1) Develop a problem statement that states the problem and identifies its impact
(2) Review the past history of corrective action issues from previous evaluations and identify possible solutions to the problem
(3) Select a corrective action strategy and prioritize the actions to be taken, as well as an associated schedule for completion
(4) Provide authority and resources to the individual assigned to implementation so that the designated change can be accomplished
(5) Identify the resources required to implement the strategy
(6) Check on the progress of completing the corrective action
(7) Forward problems that need to be resolved by higher authorities to the level of authority that can resolve the problem
(8) Test the solution through exercising once the problem is solved." (**NFPA 1600**, 2007, 18-19)

Corrective Action Program (CAP) System: "The Corrective Action Program (CAP) System is a web-based application that allows Federal, State, and local emergency response and homeland security officials to track and analyze Improvement Plans. The Department of Homeland Security is developing this system as part of a larger effort to systematically translate Homeland Security Exercise and Evaluation Program (HSEEP) outputs—including findings, areas for improvement, recommendations, lessons learned, and best practices—into meaningful inputs for homeland security plans, programs, and budgets." (**HSC**, *NCPIP*, August 2007, p. 61)

[Note: The CAP System was made available to the DHS stakeholder community in Nov. 2006,]

Corrective Actions: "Implementing procedures that are based on lessons learned from actual incidents or from training and exercises." (**FEMA**, *NIMS Draft*, August 2007, p. 149)

COSIN: Control Staff Instructions. (**FEMA**, *HSEEP Glossary*, 2008)

Cost-Benefit Analysis: "A process used to select countermeasures, by balancing the costs of implementing each option against the benefits derived from it. In general, the cost of managing risks needs to be equal to the benefits gained from putting the countermeasures in place. The benefit of this technique is the attempt to ensure public investment is directed toward those activities producing the greatest benefits for the best value for money. The limitations of the technique include the lack of data collection and methods that are required to capture indirect and intangible costs and benefits, legal and social responsibility requirements may override simple financial cost benefit analysis, and the possibility that its application may disadvantage certain measures or people." (**UNDAP**, *Techniques Used in Disaster Risk Assessment*, 2008)

Cost-Efficiency: "FEMA continually strives to improve performance while reducing operating costs. Initiatives include re-engineering our processes, streamlining Agency operations, reducing regulations, leveraging state-of-the-art technology, and enhancing our ability to measure success and redirect efforts to maximize effectiveness." (**FEMA**, *Strategic Plan FY 1998…*, 1997, 33)

Cost-Share Adjustments: "For work performed by State and local jurisdictions under the PA program, an upward adjustment to the 75/25 percent Federal/non-Federal ratio of sharing total eligible costs for repair, restoration, reconstruction, or replacement of facilities. Cost-share adjustments cannot exceed 90/10 percent for the Federal/non-Federal cost-share ratio. The cost-share for the Individual and Family Grant program or the Hazard Mitigation program may not be adjusted." (**FEMA**, *Mission Assignment SOPs Operating Draft*, 2007, p. 48)

Cost Unit: "The unit within the Finance/Administration Section responsible for tracking costs, analyzing cost-related data, making cost estimates and recommending cost-saving measures." (**Capital Health Region**, Canada, *ICS100: Incident Command Sys. Training SM*, Mar 2007, 51)

COTPER: Coordinating Office for Terrorism Preparedness and Emergency Response, CDC.

COTS: Commercial, Off-The Shelf. (**DA**, *WMD-CST Operations*, Dec 2007, Glossary-2)

Counter Measures: "All measures taken to counter and reduce disaster risk. They most commonly refer to engineering (structural) measures but can also include non-structural measures and tools designed and employed to avoid or limit the adverse impact of natural hazards and related environmental and technological disasters." (**UN/ISDR**, *Terminology: Basic Terms of Disaster Risk Reduction*, March 31, 2004)

Counterintelligence: "`Counterintelligence' is defined by Executive Order 12333, United States Intelligence Activities, Dec 81, (As Amended), as 'information gathered and activities conducted to protect against espionage, and activities conducted to protect against espionage, other intelligence activities, sabotage or assassinations conducted for or on behalf of foreign powers, organizations, or persons, or international terrorist activities, but not including personnel, physical, document or communications security programs.'." (**Chertoff**, Foreign Intelligence Threat to DHS Memorandum, August 4, 2008)

Counterterrorism (CT): "Counterterrorism - is responsive or reactive to terrorist threats or attacks. It entails using "active measures... which incorporate the direct intervention of terrorists

groups or the targeting… of terrorist personnel."[10] (**DHS**, *The ODP Guidelines*…, 2003, Glossary, p. 1)

Counterterrorism (CT): "Operations that include the offensive measures taken to prevent, deter, preempt, and respond to terrorism." (**DoD**, *DOD Dictionary of Military and Related Terms*, 2007)

Counterterrorism (CT): "…usually describes proactive measures, including targeting terrorist personnel and supporters" (as opposed to Antiterrorism). (**Sauter & Carafano** 2005, 261)

Counterterrorism (CT): "The full range of activities directed against terrorism, including preventive, deterrent, response and crisis management efforts." (**USG**, *USG Interagency Domestic Terrorism CONPLAN*, 2001, Appendix B: Definitions)

Counterterrorism Security Group (CSG): "The CSG is an interagency body convened on a regular basis to develop terrorism prevention policy and to coordinate threat response and law enforcement investigations associated with terrorism. This staff-level group evaluates various policy issues of interagency import regarding counterterrorism and makes recommendations to Cabinet and agency deputies and principals for decision. As appropriate, the chair of the National Security Council and Cabinet principals will present such policy issues to the President for decision. The CSG has *no role regarding operational management* during an actual incident." (**DHS**, *NRF Comment Draft*, September 2007, pp. 51-52)

Counterterrorism (CT) Support: "Acting through the FBI, the Attorney General, in cooperation with the heads of other Federal departments, agencies, and military criminal investigative organizations, coordinates domestic intelligence collection and the activities of the law enforcement community to detect, prevent, preempt, and disrupt terrorist attacks, and to identify the perpetrators and bring them to justice in the event of a terrorist incident. DOD may be requested to support the FBI or other LEAs during the CrM portion of a response. If there is a credible threat, DOD may also be requested to support LEAs in a pre-positioning of forces. Under this type of support, specific RUF must be established and approved. In the absence of preexisting RUF, such as are contained in DODD 5210.56, *Use of Deadly Force and the Carrying of Firearms by DOD Personnel Engaged in Law Enforcement and Security Duties*, requests for RUF [rules for the use of force] for CS missions will be sent through the supported combatant commander to DOD for development and approval. Supplemental RUF may be required depending on the situation. *For more information on CT see JP 3-07.2,* Joint Tactics, Techniques, and Procedures for Antiterrorism." (**JCS/DoD**, *Homeland Security*, 2005, p. IV-6)

County Civil Defense Directors, Number (1961): "On June 30, 1961, the number of counties having a civil defense director (full- or part-time), a plan published and State approved, an active training program, a staff appointed and on record with the State, and significant civil defense planning and organizational activity totaled 738 or 24 percent. Counties having a full-or part-time civil defense director and a plan published and State approved totaled 950 or 30 percent.

---

[10] Citation: For example, see Plaster, Sherry and Stan Carter. (1993). *Planning for Prevention: Sarasota, Florida's Approach to Crime Prevention Through Environmental Design.* Tallahassee: Florida Criminal Justice Executive Institute.

Therefore, 1,688 counties or 54 prcent have a full- or part-time director and a published State plan as a minum. About 1,414 or 46 percent of the counties had little or no civil defense activity." (**OCDM**, *Annual Report 1961*, p. 6)

Course of Action (COA) Analysis (DHS): "COA Analysis, also known as 'WARGAMING,' identifies which COA accomplishes the mission with minimum risk and best positions capabilities/resources to prevent, respond, to, and/or recover from national domestic incidents. The war game is a disciplined process, with rules and steps designed to attempt to visualize the flow of an operation. It relies heavily on doctrinal foundation, judgment, and experience." (**DHS**, 2007)

Course of Action (COA) Comparison (DHS): "COA Comparison displays the information obtained during COA Analysis into a matrix format. Each COA is rated based on weighted criteria in order to present a quantified basis for leadership decision making. This phase ends at the completion of the COA Decision Brief provided to senior leadership." (**DHS**, 2007)

Course of Action (COA) Statement (DHS): "The COA statement clearly articulates how the organization will accomplish the mission and explain the sequence of response to include:

- Mission
- End State
- Who, how, where, and why (purpose)
- Address risk and where it may occur for the organization." (**DHS**, *Interagency Planning Workshop*, November 29, 2007, slide 36)

Crate & Ship: "A strategy for providing alternate processing capability in a disaster, via contractual arrangements with an equipment supplier, to ship replacement hardware within a

specified time period. SIMILAR TERMS: Guaranteed Replacement, Drop Ship, Quick Ship.**"** (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 51)

CRCL: Office of Civil Rights and Liberties, DHS.

CREATE: Center for Risk and Economic Analysis of Terrorism Events, USC.

CRED: Centre for Research on the Epidemiology of Disasters.

Credentialing: "The credentialing process is an objective evaluation and documentation of a person's current license or degree; training or experience; competence or certification; and the ability to meet nationally accepted minimum standards, to provide particular services and/or functions or perform particular procedures during an incident." **FEMA**, *National Incident Management System* (FEMA 501/Draft), August 2007, p. 39)

Credentialing: "Providing documentation that can authenticate and verify the certification and identity of designated incident managers and emergency responders. This system helps ensure that personnel representing various jurisdictional levels and functional disciplines possess a minimum common level of training, currency, experience, physical and medical fitness, and capability for the incident management or emergency responder position they are tasked to fill." (**FEMA**, *National Incident Management System* (FEMA 501/Draft), August 2007, p.149)

Credentialing First Responders: "…credentialing first responders is the right of the local community and that FEMA and the Department in no way wishes this effort to encroach upon that right, but instead assist them in their efforts both now and into the future to develop nationwide credentialing standards. FEMA will not be issuing credentials to state and local personnel; that will remain a state and local responsibility as it always has been." (**FEMA**, *Statement of Marko Bourne* Director…, 15Nov07, p, 1)

"Lessons learned from past disasters have indicated that it is often difficult for local officials to know who is qualified to do what, and who may be an immediate asset to the situation among the multitude of volunteers or entities that arrive. Additionally, examples of people posing as firefighters, police officers, doctors or rescue specialists are well documented in every major disaster, and further underscore the need for further measures to provide the Incident Commander with greater assurance that those who respond, whether asked or not, can be verified, validated and utilized." (pp. 1-2)

Credentialing System, National: "A national credentialing system must:
• Function within existing federal, state, tribal and local identification and qualification protocols, where feasible;
• Not place undue burden on federal, state, tribal or local governments;
• Support (primarily) interstate augmentation of state and local resources;
• Conform to ICS protocols; and
• Use current credentialing emergency responder systems, where possible." (**FEMA**, *National Emergency Responder Credentialing System,* October 26, 2005, p. 2)

CREST: Community Response Emergency Simulation Training, DOD.

CREW: Cascadia Region Earthquake Workgroup.

CRI: Cities Readiness Initiative (CDC).

Crime Scene: "An area or areas that contain physical evidence that may have forensic, investigative, demonstrative or other probative value. Crime Scenes include "Remains Collection Areas"/"Body Collection Points" where the decedents are gathered for processing and safeguarding." (**FEMA**, *IIFOG Version 3 Draft*, Feb 2008, p. 34)

Crisis: "…a decisive or critical moment or turning point when things can take a dramatic turn, normally for the worse…" (**Allinson** 1993, 93; based upon *Webster's New International Dictionary, Unabridged*, 2nd ed.)

Crisis: "…negative incidents that can cause the demise of an organization." (**Chong**, John K. S., "Six Steps to Better Crisis Management," *Journal of Business Strategy* 25, no. 2 (2004): 43; quoted in Light, *Predicting Organizational Crisis Readiness*, 2008, 8)

Crisis: "A critical event, which, if not handled in an appropriate manner, may dramatically impact an organization's profitability, reputation, or ability to operate. Or, an occurrence and/or perception that threatens the operations, staff, shareholder value, stakeholders, brand, reputation, trust and/or strategic/business goals of an organization." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 51)

Crisis: "An incident or situation involving a threat to a nation, its territories, citizens, military forces, possessions, or vital interests that develops rapidly and creates a condition of such diplomatic, economic, political, or military importance that commitment of military forces and resources is contemplated to achieve national objectives." (**DoD**, *DOD Dictionary of Military and Related Terms*, 2007)

Crisis: "Definition of a Crisis:

- Normal operational procedures are severely impacted
- Traumatic events or situations occur
- The lives and the well-being of employees are directly impacted." (**DOJ**, *CMP*, 2002, p. 3)

Crisis: Short period of extreme danger, acute emergency. (**D&E** Reference Center 1998)

Crisis: "Crises involve events and processes that carry severe threat, uncertainty, an unknown outcome, and urgency…Most crises have trigger points so critical as to leave historical marks on nations, groups, and individual lives. Crises are historical points of reference, distinguishing between the past and the present….Crises come in a variety of forms, such as terrorism (New York World Trade Center and Oklahoma bombings), natural disasters (Hurricanes Hugo and Andrew in Florida, the Holland and Bangladesh flood disasters), nuclear plant accidents (Three-Mile Island and Chernobyl), riots (Los Angeles riot and the Paris riot of 1968, or periodic prison

riots), business crises, and organizational crises facing life-or-death situations in a time of rapid environmental change….Crises consist of a 'short chain of events that destroy or drastically weaken' a condition of equilibrium and the effectiveness of a system or regime within a period of days, weeks, or hours rather than years….Surprises characterize the dynamics of crisis situations…Some crises are processes of events leading to a level of criticality or degree of intensity generally out of control. Crises often have past origins, and diagnosing their original sources can help to understand and manage a particular crisis or lead it to alternative state of condition" (**Farazmand** 2001, 3-4)

Crisis: "A crisis is an incident or situation involving a threat to the United States, its territories, citizens, military forces, possessions or vital interests. It typically develops rapidly and creates a condition of such diplomatic, economic, political, or military importance that the President or Secretary of Homeland Security considers commitment of Federal resources to achieve national objectives. A crisis may occur with little or no warning or cause additional emergencies or cascading effects that create new problems or amplify the existing disaster(s)." (**FEMA**, *Interim IPS* (Draft 2.3), July 3, 2008 copy, p. 2-9)

Crisis: "…a situation that threatens high-priority goals of the decision-making unit, restricts the amount of time available for response before the decision is transformed and surprises the members of the decision-making unit by its occurrence." (**Hermann**, C. F., *International Crises: Insights from Behavioral Research* (New York: Free Press, 1972), as quoted in Uriel Rosenthal and Alexander Kouzmin, "Crises and Crisis Management: Toward Comprehensive Government Decision Marking," Journal of Public Administration Research and Theory 7, no. 2 (1997): 279; cited in Light, *Predicting Organizational Crisis Readiness*, 2008, p. 9)

Crisis: "Any incident(s), human-caused or natural, that require(s) urgent attention and action to protect life, property, or environment." (**ISO 22399**, *Societal Security*…, 2007, p. 2)

Crisis: "Any emotionally charged situation that, once it becomes public, invites negative stakeholder reaction and thereby has the potential to threaten the financial wellbeing, reputation or survival of the firm or some portion thereof." (**James**, Erica Hayes and Lynn Perry Wooten, "Leadership as (Un)usual: How to Display Competence in Times of Crisis," *Organizational Dynamics* 34, no. 2 (2005): 142; quoted in Light, *Predicting Organizational Crisis Readiness*, 2008, p. 9)

Crisis: "An incident or event that cannot be adequately handled within the normal scope of business operations. (**Jones**, *Critical Incident Protocol*, 2000, p. 37)

Crisis: "…an event and/or a situation which endangers the established system, the health, life, and property of its members….the term 'crisis' is treated as being separated from…other concepts based on the intensity and scope of influence. The terms *disaster, hazard, accident*, etc., refer to only one event and/or situation, while *crisis* includes the concepts of natural disasters, man-made/technological disasters, and social disasters." (**Kim and Lee** 2001, 502)

Crisis: "A crisis is an incident, event, circumstance, or series of incidents, events, or circumstances that has, or has the potential to, significantly and negatively impact financial

results, image, reputation, or relationships with customers, investors, regulators, employees, or the general public." (**NFPA**, *Implementing NFPA 1600*, 2007, p. 6)

Crisis: "…events that threaten the survival and goals of an organization." (**Nathan**, Maria L. "How Past Becomes Prologue: A Sensemaking Interpretation of the Hindsight-Foresight Relationship Given the Circumstances of Crisis," *Futures* 36 (2004): 184; quoted in Light, *Predicting Organizational Crisis Readiness*, 2008, pp. 8-9)

Crisis: "Crises act as *focusing events*, demanding public attention to a policy failure or problem…A great war, a major depression, or an epidemic may set into motion a number of important changes in public policies." (**Nice and Grosse** 2001, 55)

Crisis: "A crisis, according to the *Oxford English Dictionary,* is figuratively a "vitally important or decisive stage in the progress of anything; a turning-point." The definition continues by specifying that a crisis is "a state of affairs in which a decisive change for better or worse is imminent; now applied esp. to times of difficulty, insecurity, and suspense in politics or commerce." (***Oxford English Dictionary,*** 2nd ed., s.v. "crisis."; quoted in Light, *Predicting Organizational Crisis Readiness*, 2008, p. 8)

Crisis: "A low-probability, high-impact event that threatens the viability of the organization and is characterized by ambiguity of cause, effect, and means of resolution, as well as by a belief that decisions must be made swiftly." (**Pearson**, Christine M. and Judith A. Clair, "Reframing Crisis Management," Academy of Management Review 23 (1998): 60; quoted in Light, *Predicting Organizational Crisis Readiness*, 2008, p. 9)

Crisis: "…a hard and complicated situation…or a turning point—a decisive crucial time/event, or a time of great danger or trouble with the possibilities of both good and bad outcomes" (**Porfiriev** 1995, 291-292).

Crisis: "A collective crisis can be conceptualized as having three interrelated features: (1) a threat of some kind, involving something that the group values; (2) when the occasion occurs it is relatively unexpected, being abrupt, at least in social time; and (3) the need to collectively react for otherwise the effects are seen as likely to be even more negative if nothing is done sooner or later..." (**Quarantelli** 1998, 257).

Crisis: "…a serious threat to the basic structure or the fundamental values and norms of a social system, which—under time pressure and highly uncertain circumstances—necessitates making critical decisions." (**Rosenthal**, Uriel, Paul 't Hart, and Michael T. Charles, "The World of Crises and Crisis Management," in *Coping with Crises: The Management of Disasters, Riots and Terrorism*, ed. Uriel Rosenthal, Michael T. Charles, and Paul 't Hart (Springfield, Ill.: Charles C. Thomas, 1 10; quoted in Light, *Predicting Organizational Crisis Readiness*, 2008, p. 9)

Crisis: "…crises are 'events that threaten [the corporation's] most important goals of survival and profitability'." (**Shrivastava**, Paul and Ian I. Mitroff, "Strategic Management of Corporate Crises," *Columbia World Journal of Business* 22, no. 1 (1987); quoted in Light, *Predicting Organizational Crisis Readiness*, 2008, p. 8)

Crisis: "…a situation that, left unaddressed, will jeopardize the organization's ability to do business." (**Ziaukas** 2001, 246; citing other sources)

Crisis (Smoldering): "A smoldering crisis is a problem that starts out small and someone within the organization should recognize the potential for trouble and fix it before it becomes a public issue." (**Institute for Crisis Management**, *Annual ICM Crisis Report*, March 2008, p. 5)

Crisis Action Planning (CAP): "Crisis Action Planning will create one of two products…OPORD [or] Campaign Plan, and they are really related to one another." (**Army Transportation School**, *Crisis Action Planning* (Strategic Deployment Planning Course). Slide 4) CAP ensures:

- A logical approach to a crisis
- Rapid, effective exchange of information
- Timely preparation of COAs [Courses of Action]
- Timely relay of decisions. (Slide 5)

Crisis Action Planning (CAP): "One of the two types of joint operation planning. The Joint Operation Planning and Execution System process involving the time-sensitive development of joint operation plans and operation orders for the deployment, employment, and sustainment of assigned and allocated forces and resources in response to an imminent crisis. Crisis action planning is based on the actual circumstances that exist at the time planning occurs. Also called CAP." (**DoD**, *DOD Dictionary of Military and Related Terms*, 2007)

Crisis Action Planning: "Deliberative planning during nonincident periods should quickly transition to crisis action planning when an incident occurs. Crisis action planning is the process for rapidly adapting existing deliberative plans and procedures during an incident based on the actual circumstances of an event. Crisis action planning should also include the provision of decision tools for senior leaders to guide their decisionmaking." (**DHS**, *NRF*, 2008, 49)

Crisis Action Planning (CAP): "CAP occurs in response to a credible threat or in response to an incident. CAP occurs in a time-compressed environment with the objective of developing an imminently executable plan. Planners operating in a CAP environment normally attempt to modify an existing contingency plan related to the incident threat or scenario. If a plan is unavailable, planners will develop a plan using CAP. Because crisis planning is a continuation and derivative of deliberate planning, the processes used for both should be as similar as possible. Emergency situations—where human tragedy, disrupted communications, contradictory information, demands for immediate action, and other factors place tremendous strain on staffs and leaders—is not the time to be shaking out and learning new methods and systems. To the maximum extent possible, deliberate planning should be the template for crisis action planning." (**FEMA**, *Interim IPS* (Draft 2.3), July 3, 2008 copy, p. 2-9)

Crisis Action Planning (CAP): "When time is not a critical factor planners use a process called peacetime or deliberate planning. When the time available for planning is short and the near-term result is expected to be an actual deployment and/or employment of military forces, the planner uses crisis action planning (CAP) procedures…. Regardless of which process is used, the basic procedures are the same for both adaptive, deliberate and crisis action planning:

- receive and analyze the task to be accomplished
- review the enemy situation and begin to collect necessary intelligence
- develop and compare courses of action
- select a course of action (COA)
- develop and get approval for the selected COA
- prepare a plan
- then document the plan." (**JFSC**, *Joint Transition Course: Planning Primer*, 2005, 1-7)

Crisis Action Planning: "Crisis action planning is a third key principle in our approach to incident management. This planning process takes existing contingency plans and procedures and rapidly adapts them to address the requirements of the current crisis or event of concern in a compressed timeframe." (**White House**, *National Strategy for Homeland Security*, Oct 2007, 47)

Crisis Action Process (CAP): "Purpose: The Crisis Action Process (CAP) was developed to facilitate SECDHS' ability to execute his responsibilities as the principal federal official for domestic incident management." (**DHS**, *DHS Ops Coordination: IM&P: CAP*, Jan 2008, 21)

Crisis Action Process (CAP): "The Crisis Action Process (CAP) is a standard process by which DHS leadership manages a domestic incident response by following a general sequence of events while simultaneously engaging in a continuous cycle of actions. Over the past 6 months, in an effort to bolster preparations for real-world events, a number of refinements have been made to our processes. Two refinements of note are the formalization of the Senior Leadership Group (SLG), which the Director of OPS chairs, and the establishment of the Crisis Action Team (CAT) to manage incidents.

"The SLG is comprised of the various DHS Assistant Secretaries that report to the Secretary and other select leaders within DHS. The SLG can be convened by the Secretary at any time and its primary purpose is to facilitate the Secretary's ability to receive input and recommendations from his most experienced leaders during times of crisis. When convened during times of crisis, the Secretary can also issue initial guidance to the SLG members regarding actions he deems appropriate.

"The CAT is the main focus of the Crisis Action Process. The CAT is a multi-agency coordination entity comprised of over 60 personnel, many from the interagency IMPT, and is designed to facilitate the Secretary's ability to coordinate interagency operations for threats and incidents in accordance with the responsibilities identified in HSPD-5. The CAT provides the Secretary and the Federal government with an immediate incident management capability and ensures seamless integration of threat monitoring and strategic cross-directorate operational response activities. By incorporating guidance from the Secretary and SLG into its incident management activities, the CAT is able to translate executive level guidance into operational action.

"The CAT's incident management activities include, but are not limited to, developing course of action recommendations, conducting national level planning, facilitating access to critical resources, prioritizing incidents and resources, serving as a central point for information

collection and evaluation, and coordinating the flow of information and resources for complex and/or multiple incidents." (**DHS**, *Statement of Frank DiFalco, Director of NOC*, 20Jun07, 6)

Crisis Action Process (CAP): "During deliberate planning and the Crisis Action Process, the JOPES [Joint Operations Planning and Execution System] model integrates all elements of deliberate or crisis action civil-military planning. In addition, the planning process for military operations other than war…places considerable emphasis on mission analysis and the commander's estimate. Commanders must plan for the right mix of available forces to quickly make the transition to combat operations, evacuations, peacekeeping or peace enforcement." (**Joint Forces Staff College**, *Pre-Planning and Post-Conflict CMOC/CIMIC Challenges*, 2003)

Crisis Action Team (CAT): "Conducts national/strategic-level Crisis Action Management." (**DHS**, *Operations Coordination: Incident Management and Planning: CAP*, Jan 2008, slide 20)

Crisis Action Teams (CAT): "These multi-agency teams, whose membership overlaps in part with the new planning teams, are to provide interagency incident management capabilities and to, among other things, recommend courses of action, help prioritize incidents and resources, and serve as a central point for information collection, evaluation, and coordination, especially for complex or multiple incidents." (**GAO**, *Homeland Security: Guidance from Ops*…, 2007, 17)

Crisis and Emergency Risk Communication (CERC): "Crisis and emergency risk communication is the attempt by science- or public health professionals to provide information that allows an individual, stakeholders, or an entire community to make the best possible decisions during a crisis emergency about their well being, and communicate those decisions, within nearly impossible time constraints, and ultimately, to accept the imperfect nature of choices as the situation evolves." (**CDC**, *CERC Course*, 2002, Course Purpose Statement.)

"Crisis and emergency risk communication encompasses the urgency of disaster communication with the need to communicate risks and benefits to stakeholders and the public. Crisis and emergency risk communication differs from crisis communication in that the communicator is not perceived as a participant in the crisis or disaster, except as an agent to resolve the crisis or emergency. Crisis and emergency risk communication is the effort by experts to provide information to allow an individual, stakeholder, or an entire community to make the best possible decisions about their well-being within nearly impossible time constraints and help people ultimately to accept the imperfect nature of choices during the crisis. This is the communication that goes on in emergency rooms, not doctors' offices. Crisis and emergency risk communication also differs from risk communication in that a decision must be made within a narrow time constraint, the decision may be irreversible, the outcome of the decision may be uncertain, and the decision may need to be made with imperfect or incomplete information. Crisis and emergency risk communication represents an expert opinion provided in the hope that it benefits its receivers and advances a behavior or an action that allows for rapid and efficient recovery from the event." (**CDC**, *CERC Course*, 2002, p. 10)

"Crises, emergencies, and disasters happen. One of the reasons disaster response is difficult to coordinate is that *disasters are different from routine daily emergencies.* The difference is more than just one of magnitude. Disasters generally cannot be adequately managed merely by

mobilizing more personnel and material. During crisis situations, decision-makers are often unable to collect and process information in a timely manner and, thus, rely on established routines for situations that are, by definition, novel. Communication during a crisis cannot be managed solely by mobilizing more people and material—the communication itself must change because crises are inherently low-probability but high-impact events in which established frames of reference for understanding may breakdown. In major disasters, the incident is so shattering that both the sense of what is occurring and the means to rebuild that sense collapse simultaneously. Crisis and emergency risk communication is a vital component to help people cope and begin to rebuild a sense of order and understanding in their lives. Crisis and emergency risk communication can work to counter some of the harmful human behaviors that are known to arise during a crisis. These potentially harmful individual, group, or community behaviors include:

- Demands for unneeded treatment
- Disorganized group behavior (stealing/looting)
- Bribery and fraud
- Reliance on special relationships
- Increased alcohol and tobacco use
- Increased multiple unexplained physical symptoms (MUPS)
- Unreasonable trade and travel restrictions.

"Add bad communication practices to a crisis situation and the odds of a negative public response increase." (**CDC**, *CERC*, 2002, p. 11)

Crisis Communication: "Crisis communication can be defined in two ways and, therefore, can cause some confusion for a practitioner looking for expert training and counsel. Today, the term is most often used to describe an organization facing a crisis and the need to communicate about that crisis to stakeholders and the public. Typically, a crisis is an event that occurs unexpectedly, may not be in the organization's control, and may cause harm to the organization's good reputation or viability. An example of an organization facing a crisis is the occurrence of a mass shooting of employees by a disgruntled employee. In most instances, the organization is facing some legal or moral culpability for the crisis (unlike a disaster in which a tornado wipes out the production plant), and stakeholders and the public are judging the organization's response to the crisis.

"A simple definition of crisis communication separates the judgment or reputation factors in the communication and deals primarily with factual communication by an involved organization to its stakeholders and the public. Crisis communication could simply be the effort by community leaders to inform the public that, by law, they must evacuate in advance of a hurricane. In this definition, the organization is not being overtly judged as a possible participant in the creation of the disaster, and the information is empirically sound, so the individual can judge its veracity without the help of an expert.

'The underlying thread in crisis communication is that the communicating organization is experiencing an unexpected crisis and must respond. Crisis also implies lack of control by the involved organization in the timing of the crisis event." (**CDC**, *CERC*, 2002, p. 5)

Crisis Communication: "Effective communication is a "resource multiplier" during a crisis, disaster, or emergency. Many of the expected harmful individual and community behaviors can be mitigated with effective crisis and emergency risk communication. Each crisis will carry its own psychological baggage. The practitioner must anticipate what mental stresses the population will be experiencing and apply appropriate risk communication strategies to attempt to manage these stresses in the population. Risk communication is a fully legitimate tool of response and recovery just like any other resource applied to the disaster. It is not an attempt at mass mental therapy. It is a reasoned and mature communication approach to the selection of message, messenger, and method of delivery." (**CDC**, *CERC*, 2002, p. 13)

Crisis Communication Audiences: "Although it is impossible to anticipate every aspect of crisis communications to be deployed during an event, some audiences that should be addressed in plans and preparedness efforts include:

- Members of the organization's response team.
- Managers responsible for continuing operations and interfacing with employees.
- Line employees whose understanding of the broader issues may be less complete than the management team.
- Family members of employees, especially family members of employees directly impacted by the event or the organization's response.
- National media, including financial media, whose interest in the organization is principally focused on management of the current event.
- Local media, both print and broadcast, that cover the organization regularly on a broad variety of topics.
- Investors, especially institutional investors, who desire transparency in the short- and long-term ramifications of an incident.
- Local and state/provincial governments that are interested in the long-term viability of the tax base and other benefits the organization brings to their constituents.
- Regulatory agencies responsible for ensuring continued compliance even when operating in recovery mode.
- Neighbors who may be adversely affected by the event, the organization's response, or the authorities' efforts to minimize overall community impact." (**IIA**, *BCM*, 2008, 18)

Crisis Communication Lifecycle: "Understanding the pattern of a crisis can help communicators anticipate problems and respond effectively. For communicators, it's vital to know that every emergency, disaster, or crisis evolves in phases and that the communication must evolve in tandem. By dividing the crisis into the following phases, the communicator can anticipate the information needs of the media, stakeholders, and the general public. Each phase has its unique informational requirements." (**CDC**, *CERC*, 2002, p. 7)

[Figure 1 includes "Precrisis, Initial, Maintenance, Resolution, Evaluation."]

Crisis/Emergency Communication Practices, Unadvisable: "Some of the bad communication practices that contribute to a poor public response that can be overcome with planning, coordination, research, and training include:

■ Mixed messages from multiple experts
■ Information released so late that events make the issue moot
■ Messages that are over-reassuring
■ Recommendations to the public without a reality check
■ Leaving myths, rumors, and doomsayers unchallenged or corrected
■ Spokespersons who engage in improper behavior, exhibit a lack of affect, or use inappropriate humor
■ Public power struggles and confusion." (**CDC**, *CERC*, 2002, pp. 11-12)

Crisis Communication STARCC Principle:

Simple—Frightened people do not want to hear big words.
Timely—Frightened people want information now.
Accurate—Frightened people will not get nuances, so give it straight.
Relevant—Answer their questions and give action steps.
Credible—Empathy and openness are your keys to credibility.
Consistent—The slightest change in the message is upsetting. (**DHS**, *Pandemic Influenza CIKR Guide*, 2006, p. 78)

Crisis Management: In the literature that exists so far, the term "crisis management" has been widely employed. But this terminology is ambiguous. "Crisis management" can be taken to refer either to managing a crisis after it has arisen—that is, intervening in a crisis situation—or managing in such a way that a crisis does not arise in the first place. The blanket term "crisis management" is thus a conceptual blanket that covers a multitude of sins. It is best to avoid the usage of such a label, since the inclusion of the word "management" in such a label implies that the process so labeled is envisioned as a *solution* to the problem of crises in general. This, however, is not really the case. At best, so-called crisis management addresses only crises that have already arisen and usually only when such crises have become either imminent or already actualized disasters. (**Allinson**, 1993, 92)

Since "crisis management" is used in the literature to refer for the most part to either how one responds to an existent crisis or how one might anticipate crises and therefore be able to respond to them, crisis management most often connotes crisis intervention management whether after the onset of the disaster or in anticipation of a disaster. In either of these two modes, it is nevertheless a "band-aid" approach since it either comes into effect after the wound or primarily addresses itself to having a band-aid ready to cover the wound immediately so that the wound does not bleed overly much. (**Allinson** 1993, 93)

Crisis Management: Coordination of actions during acute emergency. (**D&E Ref Center** 1998)

Crisis Management: "Crisis management is predominately a law enforcement function that manages the resources necessary to prevent or resolve a terrorist incident, including one involving WMD." (**CRS**, *Terrorism and the Military's Role in Domestic Crisis Management: Background and Issues for Congress*, April 19, 2001, p. i)

Crisis Management: "The overall coordination of an organization's response to a crisis, in an effective, timely manner, with the goal of avoiding or minimizing damage to the organization's profitability, reputation, or ability to operate." (**DigitalCare**, *State of OR BC Wkshop*, 2006, 51)

Crisis Management: "Per the National Strategy for Homeland Security, July 2002, the NRP will consolidate existing federal government emergency response plans into one genuinely all-discipline, all-hazard plan and thereby eliminate the "crisis management" and "consequence management" distinction. Traditionally, crisis management was predominantly a law enforcement function and included measures to identify, acquire, and plan the use of resources needed to anticipate, prevent, and/or resolve a threat or act of terrorism. The requirements of consequence management and crisis management are combined in the NRP. See also consequence management." (**DHS**, *National Response Plan* (Draft #1). Washington, DC: DHS, February 25, 2004, pp. 73-74 (Glossary)

Crisis Management: "Measures to identify, acquire, and plan the use of resources needed to anticipate, prevent, and/or resolve a threat or an act of terrorism. It is predominantly a law enforcement response, normally executed under federal law. Also called CrM." (**DoD**, *DOD Dictionary of Military and Related Terms*, 2007)

Crisis Management: "Key to crisis management is an accurate and timely diagnosis of the criticality of the problems and the dynamics of events that ensue. This requires knowledge, skills, courageous leadership full of risk-taking ability; and vigilance. Successful crisis management also requires motivation, a sense of urgency, commitment, and creative thinking with a long-term strategic vision. In managing crises, established organizational norms, culture, rules and procedures become major obstacles: administrators and bureaucrats tend to protect themselves by playing a bureaucratic game and hiding behind organizational and legal shelters. A sense of urgency gives way to inertia and organizational sheltering and self-protection by managers and staff alike….Successful crisis management requires: (1) sensing the urgency of the matter; (2) thinking creatively and strategically to solving the crisis; (3) taking bold actions and acting courageously and sincerely; (4) breaking away from the self-protective organizational culture by taking risks and actions that may produce optimum solutions in which there would be no significant losers; and (5) maintaining a continuous presence in the rapidly changing situation with unfolding dramatic events. (**Farazmand** 2001, 4)

Crisis Management: "Crisis management is predominantly a law enforcement function and includes measures to identify, acquire, and plan the use of resources needed to anticipate, prevent, and/or resolve a threat or act of terrorism. In a terrorist incident, a crisis management response may include traditional law enforcement missions, such as intelligence, surveillance, tactical operations, negotiations, forensics, and investigations, as well as technical support missions, such as agent identification, search, render safe procedures, transfer and disposal, and limited decontamination. In addition to the traditional law enforcement missions, crisis management also includes assurance of public health and safety.

"The laws of the United States assign primary authority to the Federal government to prevent and respond to acts of terrorism or potential acts of terrorism. Based on the situation, a Federal crisis management response may be supported by technical operations, and by consequence

management activities, which should operate concurrently. (**FBI**, *United States Government Interagency Domestic Terrorism Concept of Operations Plan*, January 2001, p. 7)

Crisis Management (C^RM): Involves measures to resolve the hostile situation, investigate, and prepare a criminal case for prosecution under federal law. (**FEMA**, *WMD IG*, 1998)

Crisis Management: "Measures to identify, acquire, and plan the use of resources needed to anticipate, prevent, and/or resolve a threat or act of terrorism." (**FEMA** *Disaster Dictionary*, 2001, 26; citing FEMA FRP, "Terrorism Incident Annex")

Crisis Management: "The fundamental strategic objective of any organization is to ensure its long term survivability and economic success. Crisis management is a strategic function that links functions such as risk management, safety management, environmental management, security, contingency planning, business recovery, and emergency response…. Organizations that have technocratic, reactive, compliance, or preventive (safety and security management) crisis management programs are focused almost exclusively on their internal processes and activities and will see no need to cooperate and coordinate with external organizations. Businesses with communications oriented crisis management programs are focused on their customers and stakeholders, not on threats and vulnerabilities. The strategic integration of these functions is, therefore, a necessary condition for proactive public sector participation in natural disaster reduction. Similarly, an understanding by public sector managers of the private sector requirements for both short term profitability and long term survival will lead to an appreciation of the complexity of private sector crisis management and the effective use of the skills, knowledge, and experience gained by their private sector crisis managers." (Harrald, *Linking Corporate Crisis Management To Natural Disaster Reduction*, pp. 1, 5)

Crisis Management (CM): "Crisis management (CM) focuses on managing external — and in some companies, internal — communications and senior management activities during a disaster. (**IIA**, *Business Continuity Management*, July, 2008, p. 2)

"*Crisis Management* is easily one of the most misunderstood words in the entire BCM field. In some organizations, it is the extremely tactical planning we…[describe] as *emergency response*. Some organizations use it to cover events related to physical security problems. Some organizations define it as being the executive-level plan to address major events at the entity level, but in reality, their plans only address crisis communications issues. For the purposes of this GTAG, we will use the term to describe entity-level planning designed to address the immediate and high-level impacts to an organization." (**IIA**, *BCM*, July, 2008, p. 20)

Crisis Management (CrM): "Crisis management is predominantly a law enforcement response and involves measures to identify, acquire, plan, and employ the use of resources needed to anticipate, prevent, and/or resolve a threat or act of terrorism." (**JCS/DoD**, *CBRNE CM*, 2006, v)

Crisis Management: "The HSPD-5 and the NRP adopt the concept of incident management as including both consequence management (CM) and crisis management (CrM), while DOD continues to categorize CS [Civil Support] operations using these two terms. The application of CrM and CM is unique and separate in the context of planning and conducting military

operations…. CrM is predominantly a law enforcement response, normally executed under federal law. DHS is responsible for preventing terrorist attacks, reducing the vulnerability of the United States to terrorism, minimizing the damage, and assisting in the recovery, from terrorist attacks…. Historically, much of DOD's CS mission set has involved CM operations. This is due to legal restrictions which generally preclude DOD from participating in CrM law enforcement investigations and operations." (**JCS/DoD**, *Civil Support*, 2007, p. I-9)

Crisis Management: "CrM refers to measures to identify, acquire, and plan the use of resources needed to anticipate, prevent, and/or resolve a threat or an act of terrorism. PDD-39, *US Policy on Counterterrorism,* designates DOJ, specifically the FBI, as the LFA for CrM. The Federal government exercises primary authority to prevent, preempt, and terminate threats or acts of terrorism and to apprehend and prosecute the perpetrators, and state and local governments provide assistance as required. CrM is predominantly a law enforcement response and in such cases involves measures to identify, acquire, and plan the use of resources needed to anticipate, prevent, and/or resolve a threat or act of terrorism under federal law." (**JCD/DoD**, *Homeland Security* (JP 3-26), 2005, p. IV-8)

Crisis Management: "When interviewed by *CIO Insight,* Mitroff provided "best practice" advice on crisis management: he stressed that organizations (1) should not ignore low-probability, high-consequence events when developing their crisis management plans; (2) should understand the limitations of risk analysis—namely the fact that it doesn't usually include failures in multiple systems simultaneously; and (3) should dedicate one individual to crisis management. This individual does not need to be a "chief crisis officer," but does need to make crisis management (and avoidance) a full-time responsibility." (Cited: Pearson, Christine M. and Ian I. **Mitroff**, "From Crisis Prone to Crisis Prepared: A Framework for Crisis Management," *Academy of Management Executive* 7 (1993), by Light in *Predicting Organizational Crisis Readiness*, 2008, pp.19-20)

Crisis Management: "Crisis management is a program similar in structure to emergency management and business continuity. It includes a process to identify potential causes of crises and includes activities to prepare the organization for response to, and recovery from, a crisis. Crisis management is a strategic and overarching program designed to protect the organization itself." (**NFPA**, *Implementing NFPA 1600*, 2007, p. 6)

Crisis Management: "While there are numerous views of what crisis management is, one of the most accepted models was developed by Pearson and Mitroff, who are leading scholars in the area of organizational crises. These authors maintain that crisis management should proceed through five logical steps: (1) signal detection, (2) preparation/prevention, (3) containment-damage limitation, (4) recovery, and (5) learning." (Cited: **Pearson**, Christine M. and Ian I. **Mitroff**, "From Crisis Prone to Crisis Prepared: A Framework for Crisis Management," *Academy of Management Executive* 7 (1993), by Light in *Predicting Organizational Crisis Readiness*, 2008, p. 19)

Crisis Management: "Traditionally, crisis management was predominantly a law enforcement function and included measures to identify, acquire, and plan the use of resources needed to anticipate, prevent, and/or resolve a threat or act of terrorism. The requirements of consequence

management and crisis management are combined in the NRP." (**US Army TRADOC**, 2007, p. 147)

Crisis Management: "Crisis management is predominantly a law enforcement function and includes measures to identify, acquire, and plan the use of resources needed to anticipate, prevent, and/or resolve a threat or act of terrorism. In a terrorist incident, a crisis management response may include traditional law enforcement missions, such as intelligence, surveillance, tactical operations, negotiations, forensics, and investigations, as well as technical support missions, such as agent identification, search, render safe procedures, transfer and disposal, and limited decontamination. In addition to the traditional law enforcement missions, crisis management also includes assurance of public health and safety.

The laws of the United States assign primary authority to the Federal government to prevent and respond to acts of terrorism or potential acts of terrorism. Based on the situation, a Federal crisis management response may be supported by technical operations, and by consequence management activities, which should operate concurrently." (**USG,** *Interagency Domestic Terrorism CONPLAN*, 2001. pp. 9-10)

Crisis Management -- versus Disaster Risk Reduction Management Approaches:
Crisis Management:

1. Primary focus on hazards and disaster events
2. Single, event-based scenarios
3. Basic responsibility to respond to an event.
4. Often fixed, location-specific conditions
5. Responsibility in single authority or agency
6. Command and control, directed operations
7. Established hierarchical relationships
8. Often focused on hardware and equipment
9. Dependent on specialized expertise
10. Urgent, immediate and short time frames in outlook, planning, attention, returns
11. Rapidly changing, dynamic information usage, often conflicting or sensitive
12. Primary, authorized or singular information sources, need for definitive facts
13. Directed, 'need to know' basis of information dissemination, availability
14. Operational, or public information based on use of communications
15. In-out or vertical flows of information
16. Relates to matters of public security, safety

Disaster Risk Reduction Strategies:

1. Primary focus on vulnerability and risk issues
2. Dynamic, multiple risk issues and development scenarios
3. Fundamental need to assess, monitor and update exposure to changing conditions
4. Extended, changing, shared or regional, local variations
5. Involves multiple authorities, interests, actors
6. Situation-specific functions, free association
7. Shifting, fluid and tangential relationships
8. Dependent on related practices, abilities, and knowledge base
9. Specialized expertise, squared with public views, priorities

10. Comparative, moderate and long time frames in outlook, planning, values, returns
11. Accumulated, historical, layered, updated, or comparative use of information
12. Open or public information, multiple, diverse or changing sources, differing perspectives, points of view.
13. Multiple use, shared exchange, inter-sectoral use of information
14. Matrix, nodal communication
15. Dispersed, lateral flows of information
16. Matters of public interest, investment and safety."
(**UN ISDR**, *Living With Risk*, Chapter 1, 2002, p. 13)[11]

Crisis Management, State of Literature (2007): "Since the start of the 1980s, the field of crisis management has been characterized by two main trends: planning in crisis management and the analysis of organizational contingencies during a crisis. The literature on crisis management planning consists of a number of normative pronouncements aimed at increasing the efficiency of crisis interventions. Their authors highlight the need for emergency planning (Lagadec, 1991, 1996; Counts & Prowant, 1994; Perry & Nigg, 1985; Denis, 1993, 2002; Bugge, 1993; Sylves & Pavalak; Quarantelli, 1996), defining actions in relation to the various phases of the evolution of a crisis starting with the detection of warning signs up to post-crisis activities (Drabek & Hoetmer, 1991), stressing the development of a culture of security, both within organizations and in the population at large (Lagadec, 1991; Tazieff, 1988; Denis, 1993, 2002; Toft & Reynolds, 1994; Pauchant, 1997), and the training and sensitization of leaders to their roles in times of crisis (Perry & Nigg, 1985; Lagadec, 1991, 1996, 1997; Kuban, 1995; Petak, 1985; Pauchant & Mitroff, 1995). (**Lalonde**, *Crisis Management and Organizational Development*, 2007, p. 508)

Crisis Management Center (CMC): "Location where the Crisis Management Team meets. Primary and alternate location must be preplanned. May be at the facility where the incident is occurring or a distant location, as the main office, headquarters of the business function, or alternate site. (**Jones**, *Critical Incident Protocol*, 2000, p. 37)

Crisis Management Plan (CMP): "This Crisis Management Plan (CMP) is a detailed guide outlining the policies and procedures to be followed…in case there is an emergency situation that impacts normal workplace operations. The CMP provides guidance to Personnel Staff, the Crisis Management Team (CMT) and the Evacuation Team. This plan incorporates emergency procedures found in the Department of Justice Occupant Emergency Plan developed for National Place Building. Both the Crisis Management Team and the Evacuation Team for JMD Personnel Staff will work with the Command Center Team (CCT) for the National Place Building when necessary, as outlined in this plan. The Crisis Management Plan Goals are to:

- Provide guidance to managers regarding appropriate procedures and resources
- Protect the safety and well-being of all employees
- Provide for the care of employees and their families through personnel services and EAP

[11] Cites: Terry Jeggle, "The Evolution of Disaster Reduction as an International Strategy: Policy Implications For the Future." Chapter 20, pages 316-341 in *Managing Crises: Threats, Dilemmas, Opportunities*, (Edited by U. Rosenthal, R. Boin, L. Comfort, 2001)

- Minimize post-traumatic stress reaction among employees
- Ensure that accurate and appropriate information about the incident is conveyed to appropriate audiences both inside and outside the PS.
- Plan the orderly return of the workplace to a normal mode of operation
- Outline preventative measures which should be taken in advance." (**USDOJ**, *CMP*, 2002, p. 1)

Crisis Management Planning: "Crisis management planning addresses how the corporate entity will inform the general public, its employees, and various stakeholders of the crisis and the steps being taken to get the business up and running again. CM consists of methods used to respond to both the reality and perception of crises, which are documented in a CM plan. CM also involves establishing metrics to define what scenarios constitute a crisis and should consequently trigger the necessary response mechanisms. It consists of the communication that occurs within the response phase of emergency management scenarios." (**IIA**, *Business Continuity Management*, July, 2008, p. 3)

Crisis Readiness: "…the term *crisis readiness*…suggests a desirable, proactive orientation toward crises. In addition, because it is broader than many of the other related terms in use, such as *emergency* or *disaster preparedness, emergency response,* and *disaster recovery*, the term *crisis readiness* encapsulates these other terms. It is thus defined here as *an organization's ability to effectively respond to and recover from external events (such as terrorist attacks and natural disasters), as well as internal events (such as major accidents and financial/funding crises).* In this regard, crisis readiness is the desired end state of organizational preparedness, crisis management, business continuity planning, and other organizational activities and processes." (Light, *Predicting Organizational Crisis Readiness*, 2008, p. 17)

Crisis Readiness: "In the late 1980s, Anne Reilly proposed a "crisis readiness" construct, defining it as "the readiness to cope with the uncertainty and change engendered by a crisis." She further suggested that crisis readiness has six core components, which are related to (1) the organization's ability to respond quickly to a crisis, (2) managers' awareness of the organization's crisis management repertoire, (3) managers' access to the organization's crisis management repertoire, (4) the adequacy of the firm's strategic crisis planning, (5) the organization's media management ability in a crisis, and (6) the perceived likelihood of crisis striking the organization."[12] (**Light**, *Predicting Organizational Crisis Readiness*, 2008, 17-18)

Crisis Readiness Management Characteristics: "Frequently mentioned management characteristics

- Developing and implementing crisis management/disaster management plans
- Incorporating crisis readiness into the strategic management process, the strategic plan, and the overall business planning process
- Engaging in a crisis management planning process and regularly updating the plan
- Engaging in risk and vulnerability assessment
- Increasing staff crisis readiness through regular crisis drills

[12] Anne H. Reilly, "Are Organizations Ready for Crisis? A Managerial Scorecard," *Columbia Journal of World Business* 22 (1987): 81.

- Ensuring that the organization has sufficient general workforce training programs in place
- Rewarding error detection and reporting
- Implementing robust project management systems
- Providing redundant, off-site locations to ensure continuity of operations" (**Light**, *Predicting Organizational Crisis Readiness*, 2008, p. 33)

Crisis Relocation: "It is DCPA's judgment, based on extensive research and developmental work, that crisis relocation could be highly effective – given the requisite planning and development of supporting systems and capabilities, and given about a week for moving and protecting the bulk of our population at risk. For example, while no one can issue a guarantee that the response of the population would be predominately cooperative and constructive, experience in peacetime disasters and wartime situations requiring evacuation is that most people will comply with official instructions, provided these are understandable and appear to make sense in terms of improving chances for survival. Also, planning includes provision for temporary lodging and feeding for evacuees, and for developing fallout protection in host areas. It is important to note that relocation has great lifesaving potential even if it works not perfectly but quite well.

It is significant that on September 1-3, 1939 the British moved some 1.5 million women and children from London and a few other large cities in what was a crisis evacuation, for Britain did not declare war until September 3. (Also of interest are the facts that some 2 million additional persons spontaneously evacuated at their own initiative, and that this was unsuspected at the time by the British government.) It is also worthy of note that in Hurricane Carla, in 1961, between half and three-quarters of a million people were evacuated from Gulf Coast cities without a single fatality or a major reported accident.[13]" (**Chipman**, *CD for the 1980's*, July 13, 1979, 17)

Crisis Relocation Planning: Introduced by the DCPA circa 1973 in consonance with its movement away from "hardware oriented" civil defense programs of the 1950's and 1960's, toward a dual-use (peacetime and wartime) "civil preparedness" program for the 1970's which was to be more "people-oriented". Crisis relocation planning is noted in the FY 1973 DCPA Annual Report under the "major task" of "development of guidance for local governments based on risk analysis, to include crisis relocation planning guidance for areas at high-risk to the direct effects of nuclear weapons and low-risk reception areas." (**DCPA**, *Foresight*, 1974, pp. 2 & 6)

"Crisis Relocation Planning: During fiscal year 1973 worked on the development of handbooks for use in guiding State and local governments in preparing contingency plans for population relocation, should a period of international crisis make this advisable. Such contingency plans may also be needed when certain types of natural disasters threaten, such as hurricanes or floods, which might require people to evacuate low-lying areas….DCPA expects to make use of the guide during fiscal year 1974." (**DCPA**, *Foresight*, 1974, p. 10)

[13] Cited is: Senate Committee on Banking, Housing, and Urban Affairs, Hearings, Civil Defense, 95th Congress, 2d Session (January 1979) at 51-52.

"During fiscal year 1973, an in-house task force developed procedures for conducting contingency planning for population relocation during periods of increased threat for communities considered at high-risk to direct weapons effects if the event of a nuclear attack. Results of this work and DCPA research efforts are expected to be applied by DCPA and the CSPOS [Community Shelter Planning Officers] on a pilot-project basis during fiscal year 1974." (**DCPA**, *Foresight*, 1974, p. 18)

Crisis Response Organizations. "During the crisis assessment phase, special teams are assembled at all levels where the problem and its resolution are being developed. These teams vary in size and composition, as well as in name. They may be called crisis action teams, crisis response cells, battle staffs, emergency response teams, operations action groups, or operation planning groups. Specially constituted crisis action organizations generally include representatives from all command staff divisions and may include representatives from a wide range of involved organizations." (**JFSC**, *JFSC Pub 1 (JSO Guide 2000*), p. 5-13)

Crisis Response Planning: "Effective crisis response plans include the following ten elements:

1. **A representative set of planning scenarios.** It's essential to create a set of crisis scenarios that serve to guide planning. This need not be an exhaustive list of everything that could happen, but it should represent a broad range of potential emergency situations that the organization could plausibly face…
2. **A flexible set of response modules.** Leaders should be able to pull combinations of pre-set response "modules" off the shelf. Modularizing the elements of a crisis response plan provides the organization with flexibility to deal with unexpected scenarios or combinations of scenarios…
3. **A plan that matches response modules to scenarios.** This is the core plan that links each of the planning scenarios to the response modules that will be immediately activated. For example, a "shooter on site" event triggers an immediate facility lockdown plus a police response plus preset communication protocols to convene the crisis-response team and warn staff.
4. **A designated chain of command.** One finding of research on crisis response is that decentralized organizations, which are so good at helping promote innovation in normal times, prove to be woefully inadequate in times of crisis. Crisis demands a rapid centralized response and this, in turn, requires a very clear line of command and the ability to shift into what the military term "war fighting mode" rapidly. Otherwise the organization responds incoherently. This means creating a centralized parallel organization, in which the leader has a designated deputy and they, too, have a backup who would take command if the others were unavailable or disabled. It also means having a core crisis response team of perhaps five or six people who function as the leader's staff in the parallel crisis-management organization.
5. **Preset activation protocols.** Preset signals for activating and coordinating the various response modules in the event of a crisis situation. There have to be clear triggers to move the organization from "normal" to "war-fighting" mode as well as to activate specific response modules….
6. **A command post and backup.** This should be a location that can be rapidly converted to be used by the crisis response team. Requirements include the ability to rapidly connect

many lines of communication, to have access to external media (TV coverage), to provide access to crisis management plans, etc. In addition, there should be a backup command post located off-site in the event that evacuation is necessary….

7. **Clear communication channels.** Easily activated channels for reaching people on site and outside. For example, use of internal speakers and TV monitors to make announcements. A shooter on site, for example, triggers facility lockdown and police response but also rapid announcement that everyone should stay where they are, lock doors, hide, etc. To the extent possible there should be redundancy in these channels including backups that are not linked to the telephone system or the Web. Messages should be composed in advance. There also should be mechanisms for rapidly locating key staff (e.g. "check in" Web pages, phone-in lines).
8. **Backup resources.** Critical resource stocks to be tapped if necessary. Examples include backup power generation/gas supplies, modest reserves of food and water, and medical supplies. Agreements should also be negotiated with external agencies to provide specific resources in time of crisis, for example augmented private security.
9. **Regular simulation exercises.** The best plans are worthless if they exist only on paper. There needs to be regular, at least biannual, exercises conducted by the crisis response team, and regular testing of channels, inventorying of resources, and the like. These tests should be done regularly, but not scheduled in order to test speed of response.
10. **Disciplined post-crisis review.** Each crisis provides an opportunity for organizational learning to occur and plans to be revised. But this learning only occurs if the mechanisms are in place to make it happen. A post-crisis review should be conducted by the crisis response team after each significant event. The guiding questions should be: What went well and what went poorly? What are the key lessons learned? What changes do we need to make to our organization, procedures, and support resources?" (Watkins, "Your Crisis Response Plan: The Ten Effective Elements," 30 Sep 2002)

Critical Activity: "Any function or process that is essential for the organization to deliver its products and/or services." (**ISO 22399**, *Societal Security.…*, 2007, p. 2)

Critical Asset: "Any facility, equipment, service or resource considered essential to DoD operations in peace, crisis and war and warranting measures and precautions to ensure its continued efficient operation, protection from disruption, degradation or destruction, and timely restoration. Critical Assets may be DoD assets or other government or private assets, (e.g., Industrial or Infrastructure Critical Assets), domestic or foreign, whose disruption or loss would render DoD Critical Assets ineffective or otherwise seriously disrupt DoD operations. Critical Assets include both traditional "physical" facilities or equipment, non-physical assets (such as software systems) or "assets" that are distributed in nature (such as command and control networks, wide area networks or similar computer-based networks)." (**DoD**, *CAAP*, 1998)

Critical Asset and Portfolio Risk Analysis (CAPRA): A quantitative model which "Resembles the traditional security risk model where risk is the product of consequence, vulnerability, and threat, though with clear meanings assigned to each parameter.

Critical Asset Assurance Program (CAAP) Policy (Directive No. 5160.54, January 20, 1998)**:**
4. POLICY. It is DoD policy to:

4.1. Identify and ensure the availability, integrity, survivability and adequacy of those assets, (domestic and foreign) whose capabilities are deemed critical to DoD Force Readiness and operations in peace, crisis, and war by providing for their protection from all hazards; mitigating the effect of their loss or disruption; and/or planning for timely restoral or recovery. The level of assurance appropriate for each asset is a risk management decision of the owning or controlling DoD Component, made in coordination with those dependent on the asset, and based on its criticality, the threat, and resources available.
4.2. Recognize that critical DoD equipment, facilities, and services are dependent upon non-DoD assets – the international and national infrastructures, other facilities and services of the private sector, and those of other Government Departments and Agencies; and that non-DoD assets essential to the functioning of DoD Critical Assets are also Critical Assets of concern to the Department of Defense. Critical Assets include information systems and computer-based systems and networks that can be distributive in nature.
4.3. Recognize that in peacetime responsibility for protecting non-DoD Critical Assets and designing their security rests primarily with the civil sector owners and with local, State, and Federal law enforcement authorities and that responsibility for protecting non-U.S. Critical Assets rests with the appropriate national authority. However, the Department of Defense must participate with the civil sector, emergency preparedness and law enforcement authorities in planning for Critical Asset assurance during an emergency, and must be prepared, in concert with the appropriate authorities and within defense priorities, to assist in their protection during emergencies, including natural disaster, physical or technical attack, and technological or other emergency that seriously degrades or threatens DoD operations. (See DoD Directives 3025.1, 3025.12, and 3025.15, references (f) through (h).)
4.4. Provide an integrated asset and infrastructure vulnerability assessment and assurance program for the protection and assurance of DoD and non-DoD Critical Assets worldwide through the CAAP. The CAAP must provide a comprehensive and integrated decision support environment to represent the relationship between Critical Assets and force readiness and operations in peace, crisis or war that can be used to assess the dependencies, vulnerabilities and effects of the disruption or loss of Critical Assets or supporting infrastructures on their plans and operations. The CAAP must also provide the capability for Critical Asset assurance analysis, planning, prioritization, resource programming and response necessary to mitigate the disruption or loss of Critical Assets. It must also ensure that the collection, retention, and dissemination of CAAP information are in compliance with applicable U.S. law, statutes, directives, and policies as delineated by the established intelligence oversight program. See DoD Directive 5240.1 and DoD 5240.l-R (references (i) and (j)).” (**DoD**, *CAAP*, January 20, 1998)

Critical Business Functions (CBF): “Business functions or information that could not be interrupted or unavailable for one month or less without significantly jeopardizing the mission of the agency, and…health, welfare or safety…” (**DigitalCare**, *State of OR BC Wkshop*, 2006, 51)

Critical Business Functions (CBF): “Critical business functions are functions a business must perform in order to stay in business…. Non-profits and governments need business continuity to assure that they can perform their mandated functions.” (**Glenn**, *What Is BC Planning?*, 2002)

Critical Facilities Self Protection (1952): “We call our part of the job ‘Facilities Self-Protection’….Our program includes thi protective system…to minimize the effects of enemy

action; and, second, necessry countermeasures that will restore the facilities to normal operations in a minimum of time. We have available to us a key facilities list, which will be given to state and local civil defense directors, so that they will know the facilities which must be given top priority in rehabilitation or even in emergency hook up to power, water, or otherwise in the event of attack." (**Wadsworth**, *The National Civil Defense Plan*, 1952, p. 9)

Critical Functions: "Business activities or information that could not be interrupted or unavailable for several business days without significantly jeopardizing operation of the organization." (**DigitalCare**, *State of OR Business Continuity Workshop*, 2006, p. 51)

Critical Functions: "Processes and activities which, if interrupted, will cause a business or organization to sustain a severe economic loss, or jeopardize the continued existence of the organization. Public service organizations may define *critical functions* to include those whose loss would cause adverse effects to their clients. For example, a welfare office's existence may not be threatened by the temporary loss of its facilities, but the well-being of the public it serves may be severely impacted." (**Risky Thinking**, *A Glossary of Risk Related Terms*, 2007)

Critical Incident: "A critical incident is any event or situation that threatens people and/or their homes, businesses, or community. While we often think of floods, tornadoes, hurricanes, or armed assailants as posing critical incidents, the true definition of a critical incident includes any situation requiring swift, decisive action involving multiple components in response to and occurring outside of the normal course of routine business activities. (**Jones**, *Critical Incident Protocol: A Public and Private Partnership*, 2000, p. 4)

Critical Incident Plan: "Action plan developed to mitigate, respond to, and recover from a critical incident. Includes steps to guide the response and recovery efforts. Identifies persons, equipment, and resources for activation in a disaster and outlines how they will be coordinated. (**Jones**, *Critical Incident Protocol: A Public and Private Partnership*, 2000, p. 37)

Critical Incident Stress Management: "Critical Incident Stress Management (CISM) provides an organized approach to the management of stress responses for personnel having been exposed to a traumatic event in the line of duty. The use of CISM may decrease post-traumatic stress disorder, acute stress disorder, workman's compensation claims, fatalities, injuries, and suicide. The use of CISM does not prevent an employee from seeking individual consultation through the Employee Assistance Program or a trained Peer Supporter." (**NIFC**, *Interagency Standards for Fire and Aviation Operations 2007* (Appendix Q, CISM), p. Q-1)

Critical Incident Stress Management Team: "Team is responsible for the prevention and mitigation of disabling stress among emergency responders in accordance with the standards of the International Critical Incident Stress Foundation (ICISF). Team composition, management, membership and governance varies, but can include psychologists, psychiatrists, social workers, and licensed professional counselors." (**FEMA**, *Typed Resource Definitions: Incident Management Resources* (FEMA 508-2), 2005, p. 9)

Critical Information Requirement (CIR): "CIRs comprise information requirements that need to be collected and processed in order to meet operational requirements and are critical in

facilitating timely information management and the decision-making process that affects successful operations." (DHS, *JFO Activation and Operations: Interagency Integrated SOP Version 8.3*, April 2006, p. 46)

Critical Infrastructure: "Essential underlying systems and facilities upon which our standard of life relies. (**Capital Health Region**, Canada, *Incident Cmd. Sys. Training SM*, Mar 2007, 51)

Critical Infrastructure: "Assets, systems, and networks, whether physical or virtual, so vital to the United States that the incapacity or destruction of such assets, systems, or networks would have a debilitating impact on security, national economic security, public health or safety, or any combination of those matters." (**DHS**, *National Infrastructure Protection Plan*, 2006, p. 103)

Critical Infrastructure: "Critical infrastructures include those assets, systems, networks and functions – physical or virtual – so vital to the United States that their incapacitation or destruction would have a debilitating impact on security, national economic security, public health or safety or any combination of those matters. Key resources are publicly or privately controlled resources essential to minimal operation of the economy and the government." (**DHS,** *National Response Framework* (Comment Draft), September 10, 2007, p. 15)

Critical Infrastructure: "Systems whose incapacity or destruction would have a debilitating impact on the economic security of an organization, community, nation, etc." (**DigitalCare**, *State of OR Business Continuity Workshop*, 2006, p. 51)

Critical Infrastructure: "Systems and assets, whether physical of virtual, so vital to the United States that the incapacity or destruction of such systems and assets would be a debilitating impact on security, national economic security, national public health or safety, or any combination of those matters." (**Patriot Act**, Sec. 1016(e))

Critical Infrastructure: "Critical infrastructure includes systems, facilities, and assets so vital that if destroyed or incapacitated would disrupt the security, economy, health, safety, or welfare of the public. Critical infrastructure may cross political boundaries and may be built (such as structures, energy, water, transportation, and communications systems); natural (such as surface or groundwater resources); or virtual (such as cyber, electronic data, and information systems)."

"Criticality is often in the eyes of the beholder and is dependent upon a given situation. The large and diverse number of critical assets within a region, constrained state and local resources, and our need to gain better understanding of infrastructure interdependencies require the development of criteria for and a risk-based approach to identifying critical assets." (**The Infrastructure Security Partnership**, *Regional Disaster Resilience*, 2006, pp. 3-4)

Critical Infrastructure:

Information Technology
Telecommunications
Chemicals
Transportation Systems
Emergency Services

Postal and Shipping
Agriculture and Food
Public Health
Water and Waste Water
Energy
Banking and Finance
National Monuments and Icons
Defense Industrial Base (**White House**, *HSPD 7*, 2003)

Critical Infrastructure and Key Resources (CI/KR): "An interdependent network of vital physical and information facilities, networks, and assets, including in the telecommunications, energy, financial services, water, and transportation sectors, that private business and the Government rely upon (including for the defense and national security of the United States). Critical infrastructures are those systems and assets so vital to the Nation that their incapacity or destruction would have a debilitating impact on national security (including national economic security) and/or national public health or safety." (**DHS**, Fed. Cont. Direct. 1, Nov 2007, P-1)

Critical Infrastructure and Key Resources (CI/KR): "Critical infrastructure includes those assets, systems, networks and functions—physical or virtual—so vital to the United States that their incapacitation or destruction would have a debilitating impact on security, national economic security, public health or safety or any combination of those matters. Key resources are publicly or privately controlled resources essential to minimal operation of the economy and the government." (**DHS**, *Private Sector and Nongovernmental Organizations Response Partner Guide* (Draft), Sep.10, 2007, p. 2)

Critical Infrastructure and Key Resources (CI/KR) Sectors:
Agriculture and Food
Banking and Finance
Chemical
Commercial Facilities
Commercial Nuclear Reactors, Materials and Waste
Communications
Dams
Defense Industrial Base
Drinking Water and Water Treatment Systems
Emergency Services
Energy
Government Facilities
Information Technology
National Monuments and Icons
Postal and Shipping
Public Health and Healthcare
Transportation Systems (**DHS,** *National Infrastructure Protection Plan Sector Overview*, 2007)

Critical Infrastructure and Key Resources (CI/KR) Tiers: "DHS has established a set of consequence thresholds to identify sites that are considered CIKR *Tier 1* assets, and thus eligible

for higher funding levels. To be considered CIKR *Tier 1*, the asset or system must be documented to have the potential, if successfully destroyed or disrupted through terrorist attack, to cause major national or regional impacts. These include combinations of the following characteristics:
• Nationally significant loss of life
• Severe cascading economic impacts
• Mass evacuations with relocation for an extended period of time
• Impact to a city, region, or sector of the economy due to contamination, destruction, or disruption of vital services to the public
• Severe national security impacts
DHS worked with the SSAs to establish sector-by-sector criteria for CIKR *Tier 2* assets that would identify those CIKR sites having inherently greater consequence potential than other assets within their sectors. DHS worked with States to identify assets that met these criteria. Sites nominated by the States through this process were subsequently validated by the Federal SSAs. CIKR sites that may otherwise meet the criteria identified above, but are not being addressed through the FY 2008 BZPP, include:
• Sites that have been sufficiently addressed through prior grants
• Sites eligible for funding through other HSGP and/or grant program funding that more directly address risks associated with the specific site
• Sites, particularly those associated with systems, whose risks DHS has determined may be more appropriately addressed in future program years." (**DHS**, *Fiscal Year 2008 Buffer Zone Protection Program Guidance and Application Kit*, February 2008, p. 6)

Critical Infrastructure Government Coordinating Councils: "The Critical Infrastructure Government Coordinating Councils will serve as government coordination mechanisms and will be comprised of representatives from DHS, sector-specific agencies, appropriate supporting Federal departments and agencies, and state and local government representatives, as appropriate. These councils will work with and support their counterpart Critical Infrastructure Sector Coordinating Council to plan, implement, and execute sector-wide security, planning, and information sharing." (**DHS**, *ODP Information Bulletin*, No. 172, June 01, 2005)

Critical Infrastructure Information: "The term 'critical infrastructure information' means information not customarily in the public domain and related to the security of critical infrastructure or protected systems—

(A) actual, potential, or threatened interference with, attack on, compromise of, or incapacitation of critical infrastructure or protected systems by either physical or computer-based attack or other similar conduct (including the misuse of or unauthorized access to all types of communications and data transmission systems) that violates Federal, State, or local law, harms interstate commerce of the United States, or threatens public health or safety;
(B) the ability of any critical infrastructure or protected system to resist such interference, compromise, or incapacitation, including any planned or past assessment, projection, or estimate of the vulnerability of critical infrastructure or a protected system, including security testing, risk evaluation thereto, risk management planning, or risk audit; or
(C) any planned or past operational problem or solution regarding critical infrastructure or protected systems, including repair, recovery, reconstruction, insurance, or continuity, to the

extent it is related to such interference, compromise, or incapacitation." (**Critical Infrastructure Information Act of 2002**)

Critical Infrastructure Partnership Advisory Council (CIPAC): See Department of Homeland Security, CIPAC.

Critical Infrastructure Program – Mission Assurance Assessments (CIP-MAA): "National Guard CIP-MAA teams execute the pre-planning needed to educate the civilian agencies on basic force protection and emergency response. Additionally, these teams are building relationships with first responders, owners of critical infrastructure and National Guard planners in the States and Territories. CIP-MAA teams deploy traditional National Guard forces in a timely fashion to assist in protection of the Nation's critical infrastructure, including vital elements of the Defense Industrial Base." (**Blum**, July 19, 2007, pp. 5-6)

Critical Infrastructure Protection (CIP): "Actions taken to prevent, remediate, or mitigate the risks resulting from vulnerabilities of critical infrastructure assets. Depending on the risk, these actions could include changes in tactics, techniques, or procedures; adding redundancy; selection of another asset; isolation or hardening; guarding, etc." (**DoD**, *DCIP*, 2005, p. 11)

Critical Infrastructure Protection (CIP): "Critical Infrastructure Protection (CIP) focuses on using available resources to protect truly indispensable infrastructures from degradation or destruction prior to any catastrophe. Simply stated, CIP is all about preventing the loss of crucial services by protecting the critical assets that provide those services." (**FEMA**, *Infogram 3-08: Protection, Resilience or Both?* January 24, 2008)

Critical Infrastructure Protection (CIP): "CIP activities consist of the identification, prioritization, assessment, and security enhancement of infrastructure network assets essential to mobilize, deploy, and sustain DOD military operations. **DCI generally consists of physical (installations, power projection platforms, etc.), and nonphysical (electronic information) assets.** The increasing interconnectivity and interdependence among commercial and defense infrastructures demand that DOD also take steps to understand the vulnerabilities of, and threats to, the critical infrastructures on which it depends for mission assurance. The DCIP is a fully integrated program that provides a comprehensive process for understanding and protecting selected infrastructure assets that are critical to national security during peace, crisis, and war. It involves identifying, prioritizing, assessing, protecting, monitoring, and assuring the reliability and availability of mission-critical infrastructures essential to the execution of the NMS. The program also addresses the operational decision support necessary for combatant commanders to achieve their mission objectives despite the degradation or absence of these infrastructures." (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. III-6)

Critical Infrastructure Protection – Decision Support System (CIP-DSS): See Department of Homeland Security, CIP, DSS.

Critical Infrastructure Protection Program: "The term 'critical infrastructure protection program' means any component or bureau of a covered Federal agency that has been designated

by the President or any agency head to receive critical infrastructure information." (**Critical Infrastructure Information Act of 2002**)

Critical Infrastructure Resilience (CIR): "Extend National Goal [required by HSPD-8] from CIP: Protection against intentional acts, to CIR: Resilience to all-hazards." (**DHS**, *Critical Infrastructure Task Force Presentation to HSAC,* January 10, 2006, slide 12)

Critical Infrastructure Resilience (CIR): "Critical Infrastructure Resilience (CIR) addresses and resolves the protection gaps" in critical infrastructures. Recognizing that scarce resources limit protective (CIP) measures, CIR actions provide redundancy for that which cannot be protected. CIR strategies ensure that unprotected infrastructures can restore essential operations and services shortly after an all-hazards attack. CIR is a cost-effective alternative to CIP, particularly when critical infrastructures cannot be adequately protected because of insufficient resources. At its core, CIR refers to the ability of an organization to expeditiously recover and reconstitute fundamental services with minimum disruption to personnel, processes, procedures, information, and facilities. In other words, CIR facilitates a quicker recovery from man-made and natural disasters, and an earlier return to normal operations" (**FEMA**, *Infogram 3-08: Protection, Resilience or Both?* January 24, 2008)

Critical Infrastructure Sector Coordinating Councils: "The Critical Infrastructure Sector Coordinating Councils will act as private sector coordination mechanisms and will be comprised of private sector infrastructure owners and operators, and supporting associations, as appropriate. These councils will bring together sector-specific infrastructure protection activities and issues and will provide a primary point of entry for government to partner with the sector." (**DHS**, *ODP Info. Bulletin*, No.172, 1 June 2005)

Critical Infrastructure Task Force (CITR) Charter: "Review current and provide recommendations on *advancing national critical infrastructure policy&* planning to ensure the reliable delivery of critical infrastructure services while *simultaneously reducing the consequences* of the exploitation, destruction, or disruption of critical infrastructure products, services, and/or operations." (**DHS**, *Critical Infrastructure Task Force Presentation,* 10Jan06)

Critical Infrastructure Tiers: "DHS divides high-risk facilities into 4 risk-based tiers. As risk increases from Tier 4 to Tier 1, stricter security measures are required." (DHS, *Success Stories: DHS Sets Regulations for Chemical Facility Security*. DC: DHS, September 14, 2007 mod.)

Critical infrastructure Warning Information Network (CWIN): "Arrowhead Global Solutions, Inc. has announced the successful roll out of the US Critical infrastructure Warning Information Network (CWIN) to all 50 states and the District of Columbia. The implementation of CWIN's network connectivity to the states by the Department of Homeland Security provides a survivable line of communications for use particularly when the public networks are unavailable. Operational since 2003, CWIN is the survivable link in the Homeland Security Information Network (HSIN), connecting DHS with the vital sectors that restore the Nation's infrastructure during emergencies; the states' homeland security advisors; and appropriate federal agencies. CWIN has no logical dependency on the Internet or the public switched network, and remains viable under emergency conditions to provide key decision-makers with the ability to

direct and manage incident response activities." (Continuity Central, *US Critical infrastructure Warning Information Network Complete*, April 15, 2005)

Critical Infrastructures: "Systems and assets, whether physical or virtual, so vital to the United States that the incapacity or destruction of such systems and assets would have a debilitating impact on security, national economic security, national public health or safety, or any combination of those matters." (**USCG**, *IM Handbook*, 2006, Glossary 25-6)

Critical Records: "Records or documents that, if damaged or destroyed, would cause considerable inconvenience and/or require replacement or recreation at considerable expense." (**DigitalCare**, *State of OR Business Continuity Workshop*, 2006, p. 52)

Critical Resource Logistics and Distribution Capability Definition: "Critical Resource Logistics and Distribution is the capability to identify, inventory, dispatch, mobilize, transport, recover, and demobilize and to accurately track and record available human and material critical resources throughout all incident management phases. Critical resources are those necessary to preserve life, property, safety, and security." (**DHS**, *TCL*, 2007, p. 223)

Critical Success Factors (CSF): "Recognizing the variability of capability requirements, the USCG has developed Critical Success Factors (CSF) for spill response that drive a "Best Possible Response"—that is, a set of general goals to achieve when conducting a comprehensive and effective response. Six particular CSF are to be considered when developing ACPs [Area Contingency Plan], including (1) no public or responder injuries, illness or deaths; (2) sensitive areas protected; (3) resource damage minimized; (4) infrastructure damage minimized; (5) economic impact minimized; and (6) highly coordinated law enforcement and emergency management operations." (**GAO**, *Maritime Security*, December 2007, p. 67)

Critical Target Areas, 1953: "It is assumed that large concentrations of industry and people will be major enemy targets for attack with nuclear weapons. The atomic bomb and chemical warfare are weapons of mass destruction most efficiently used on large targets, such as our standard metropolitan areas, with their high concentrations of population and industry. Biological warfare can be efficiently used against both urban and rural areas and populations.

Based on Census Bureau and Department of Labor statistics, there has been drawn up a list of 193 potential atomic target areas in the continental United States, the Territories and possessions, including State and Territorial capitals which do not qualify as standard metropolitan areas.

Of the 193 areas, the 70 which contain the highest concentrations of both industry and population are designated 'critical target areas,' since they are assumed to be the most likely targets…. Nearly half the population of the United States lives within these 70 areas, although they comprise less than 3 percent of the total area of the Nation." (**FCDA**, *1953 Annual Report*, 10)

Critical Task: "A task that must be performed during a major event to prevent occurrence, reduce loss of life or serious injuries, or mitigate significant property damage. Critical tasks are essential to the success of a homeland security mission and require coordination among a combination of federal, state, local, and tribal entities." (**DA**, *WMD-CST Ops*, 2007, Gloss-10)

Critical Task: "A task performed by an individual which is essential for mission accomplishment. It is identified through the application of a task selection model. It is addressed in the training curriculum for the position/occupation. (DHS, *Training Glossary, Version 1.2.* December 2007, p. 22)

Critical Task: "Critical tasks are defined as those prevention, protection, response, and recovery tasks that require coordination among an appropriate combination of Federal, State, local, tribal, private sector, and non-governmental entities during a major event in order to minimize the impact on lives, property, and the economy." (**DHS**, *UTL 2.1*, 2005, p. B-1)

Critical Tasks: "Critical tasks are tasks that are essential to achieving the desired outcome and to the success of a homeland security mission. The critical tasks are derived from the tasks found in the Universal Task List." (**DHS**, *TCL*, 2007, p. 6)

Criticality: "Criticality (i.e., how quickly a specific capability is needed to prevent an incident, save lives, prevent suffering, or reduce major damage) is an important consideration in determining where a capability is needed." (**DHS**, *TCL*, 2007, p. 12)

Criticality: "*Criticality* is broadly defined as the particular aspects or features of an asset that would make someone want to protect the asset against an attack. Generally, *criticality* is defined using a set of 'Critical Asset Factors'. These factors define the specific features of an asset that could make it important to protect that asset from attack. Examples of typical critical asset factors include:

- Loss of Life
- Economic losses
- Disruption of Government Services
- Degradation of Critical Infrastructures and Key assets." (**DHS**, *TCL*, 2007, p. 51)

CrM: Crisis Management. (**JCS/DoD**, *Civil Support*, 2007, p. I-9)

Crop Failure: "Abnormal reduction in crop yield such that it is insufficient to meet the nutritional or economic needs of the community." (**UNDHA**, *DM Glossary*, 1992, p. 22)

Crop Moisture Ratio: "The ratio of precipitation to the potential evapotranspiration. An index for assessment of agricultural drought." (**UNDHA**, *Disaster Management Glossary*, 1992, 23)

Cry Wolf "Syndrome": A "common assumption is that warnings not followed by the anticipated hazard will cause people to ignore future warnings. If false warnings are a regular occurrence, the public may begin to pay less attention to future warnings. However, there is no solid research that shows relatively rare false warnings have such an effect. The objective is to educate the public about uncertainty so that they can comprehend that false warnings arise from inherent uncertainty rather than from poor professional practice. One implication of this lesson is that warning systems should be designed to only alert and warn those at risk. A warning system that continually warns many people not at risk may lose credibility and the public will pay less attention." (**PPW**, *Protecting America's Communities,* 2004, 8)

CTF: Cooperating Technical Partners, FEMA.

CTGP: Competitive Training Grants Program, DHS.

CTOS: Counter Terrorism Operations Support, DOE Nevada Test Site. (**FEMA**, *TEI/TO* Course Catalog, 2008, 5)

C-TPAT: Customs-Trade Partnership Against Terrorism.

Cultural Competence: "A set of values, behaviors, attitudes, and practices that enables an organization or individual to work effectively across cultures; the ability to honor and respect the beliefs, language, interpersonal styles, and behaviors of individuals and families receiving services as well as of staff who are providing such services."] (**HHS**, 2003, p. 60)

Culture: "*Culture* refers to the characteristic attitudes and practices within an organization or society: "it defines the tacit rules that influence actions in a wide variety of situations." Because it is "rooted in a set of values, beliefs, rituals, symbols, and assumptions," it drives many unexamined actions. And because it strongly influences behavior, culture "can affect performance and capability," and it is thus a strategic concern of those who manage human resources….To transform the military he [DOD Sec. Donald Rumsfeld] "encourag[ed] a culture of creativity and intelligent risk taking" and asked for "a more entrepreneurial approach to developing military capabilities." " (**Commission on the National Guard and Reserves**, *Transforming,* 2008, p. 323)

Culture of Continuity: "Pursuant to NSPD-51/HSPD-20 [May 4, 2007], and in accordance with the National Continuity Policy Implementation Plan, the President directs the executive branch to reorient itself and to utilize an integrated, overlapping national continuity concept to ensure the preservation of our Government and the continuing performance of essential functions. Continuity responsibility and planning should not be a separate and compartmentalized function performed by independent cells of a few planners in each agency. It must be fully integrated into all aspects of an organization's daily operations thus creating a 'culture of continuity'." (**DHS/FEMA**, *Federal Continuity Directive 1*, November 2007, p. 3)

Culture of Preparedness: "The National Response Framework…reflects our pledge to provide clear, concise information and a sound structure within which we can develop tailored planning for every one of the myriad types of challenges that we are likely to face as we enter into this new, very transformative century… beyond the doctrine and the principles and the plans is the issue of culture. We need a culture of preparedness -- and that means engaging communities, businesses, schools and individuals, because despite our best efforts to put plans in place, and despite all the training that professionals undertake, unless we engage civic leaders to help us prepare the public, our emergency response efforts will always be strained and lives will be put at risk. And that's why we made community preparedness a priority in the National Preparedness Guidelines that we released in September.

“We recognize it's a national effort to get community preparedness underway that will not be achieved overnight. But it will require instead continuous education and community involvement at all levels. And so we're taking a comprehensive approach by engaging community leaders, NGOs, and our partners in the private and public sectors so we can focus on preparedness and, as important, resiliency.

“One of the ways we're building a culture of preparedness is our Citizen Corps program. In the nearly six years since its creation, Citizen Corps has seen tremendous growth and support from local communities. In fact, there are nearly 2,300 Citizen Corps Councils in all of our states and territories, and a new council is registered every two days. What these councils do is bring community and government leaders together to participate in emergency planning, training, exercise, and response surge development. The councils foster education and participation with the general public.

“Our Ready campaign, which is undertaken with the private sector and the Ad Council, complements this grassroot effort through national preparedness messaging. The Ready -- by the way, it was a great set of ads -- which I saw previewed and then I saw a couple of them on TV -- in which they went out and they actually talked to families. And they said, do you have a plan for an emergency? And what they did is they talked to like every member of the family separately -- you know, there was the father, the mother, the kids -- and everybody said, oh yes, we have a plan. And then everybody's recitation of the plan was different. And it was great, actually. It was a great self-test, and we tried it at home, and we didn't do that well either. So we have actually now got our kids focused on these issues. And it requires constantly reminding people about it because, you know, you do get distracted with your day-to-day.

“But I'll tell you, as someone who lived through 9/11 with my family, and lived through the anthrax attack, and lived through the sniper attack, having a plan and knowing that your kids know what they're supposed to do, for parents is the number one most important concern.

Now, we have a website, www.ready.gov, which has useful information, and it gets quite a lot of hits. And this past September we sponsored our fourth annual National Preparedness Month. More than 14 -- more than 1,700 organizations partnered with us through our Ready campaign in that National Preparedness Month, and hosted various events educating people on preparedness and response.

“In addition to reaching out through the Ad Council and these other media campaigns, private sector partners, such as the Council on Competitiveness and the Infrastructure Security Partnership, have worked with us, recognizing that we have to focus on resiliency as well as preparedness -- that means the community's ability to rebound and restore critical government and business functions after a disaster occurs. To that end we've provided funding to organizations like the Southeast Region Research Initiative to study and increase resiliency in our cities and other communities.

Our goal here is to make sure that if, despite the best preventive and preparedness efforts, a disaster strikes, we can get back up and running and recover, as quickly as possible. And some of these efforts are now underway in Mississippi, Tennessee and South Carolina, working to increase community resiliency through SERRI-directed research.

Finally, as we talk about various institutions, I'd be remiss if I didn't mention schools. Schools, in many way, are the network that binds communities most closely together. It gets parents most engaged, and, of course, as we all know, when children become part of the process of educating their parents, that's really a phenomenal engine for information and, frankly, driving good behavior. You know, when we've got kids involved in things like the fire safety campaign or recycling, they're like little relentless engines of propaganda. They never drop it -- they just nag again and again and again about the recycling and stuff. Don't take this as a comment on my family.

"But, actually, it's a great lesson. It brings parents around to understanding what they need to do. We need to harness some of that great energy by educating a generation of children to readiness and preparedness -- not to frighten them, but to make sure that part of civic preparation is understanding how you play your role when there is a flood, or an emergency, or some kind of a medical situation, that requires community-based response.

"And so we've worked closely with the Department of Education to ensure that schools across the country are engaged with our local Citizen Corps Councils and have the information and guidance, first to make sure they've got good plans, and second to make sure they've got their children engaged and their parents engaged in what they would need to do if, God forbid, we faced some kind of a catastrophe that affected a community and a school structure.

"Finally, I want to highlight what is the key foundation element in everything that we're talking about in terms of preparedness -- and that is individual responsibility. We need your leadership at the local level to echo the message that we are sending at the national and state level, which is getting people prepared by getting together a kit of the necessary things that they need, making a plan, and staying informed. You all know that these three principles are the key to responding to any disaster of whatever kind.

"Sometimes people think it's complicated. Sometimes people think it's just not going to happen. What we have to do is demystify this. We have to make it clear that this is no different than the kind of preparations a responsible person does before they take, for example, their family on a long vacation trip in the automobile. You know, you check the car, you check the tires, you make sure the automobile is running properly, maybe you take it in for an oil change. This is basic stuff that all of us do and learn to do in order to protect our families with respect to everyday challenges. And now, as you look at the possibility of hurricanes and ice storms and earthquakes, you'll recognize how important it is to build this same mindset, and to make it accessible to people if we're going to survive ice storms and fires and other kinds of catastrophes, and even, God forbid, some kind of medical emergency or a terrorist attack.

"Not only do we have to demystify it, but we have to make this part of the morality of public life, part of civic responsibility, because my view is that when able-bodied people take the steps they need to take care of themselves for 48 or 72 hours, what they are doing is they are freeing the first responders to help those who cannot help themselves. On the other hand, if you simply throw your hands up and you don't bother, and you figure someone is going to come and take care of you, then what you're likely doing is distracting a responder who could otherwise be helping someone who can't help themselves. And I think -- so it is really a matter of public morality and civic engagement." (**DHS**, *Remarks by Secretary Michael Chertoff to the National Congress for Secure Communities*, December 17, 2007)

Culture of Preparedness: "Though created as the federal agency that leads and manages emergency management on behalf of the Nation, there are many organizations engaged in all phases of [EM]…at the federal, state, and local levels. FEMA, in its leadership role, must set the standard for emergency management across the Nation and help build strong relationships among its partners. As a first step, we will foster a culture of preparedness by building combined and comprehensive national capabilities that better protect us all from the extraordinary natural and man-made threats that face our Nation." (**FEMA**, *Strategic Plan*, 2007, 5)

Culture of Preparedness, Strategic Plan Objective 1.1: Build a culture of preparedness across the Nation for all hazards:

"FEMA will strengthen national preparedness by engaging and supporting other federal agencies, states, territories, tribal nations, local governments, and private sector and nongovernmental organizations in building national capabilities to address all-hazard events. Through grants that provide financial assistance, the provision of technical expertise, or through enhanced partnerships and cooperative agreements with the public and private sector, FEMA will work closely with its partners to build a nationwide culture of preparedness that builds and sustains national capabilities. This effort will include public education and outreach that strives to instill broad awareness of the importance of personal and community responsibility for the Nation's overall preparedness." (**FEMA**, *Strategic Plan*, 2007, p. 12)

Culture of Preparedness: "Those who have had the most exposure to disasters tend to be the most prepared, but they are in the minority. We can create a broader culture of preparedness with relatively simple, low-cost measures like involving the public in the planning process, empowering them with information, and providing tools. In higher risk areas, we can involve the public more directly by assigning specific roles for disaster response and offering opportunities to interact with first responders and care providers during drills and emergencies." (**PricewaterhouseCoopers**, 2007, p. 4)

Culture of Preparedness: "Foresman [George W. Foresman, DHS Under Secretary, Preparedness Directorate] told the symposium audience that, previously, the nation has viewed preparedness in the context of the last crisis event. In the new culture of preparedness, 'we need to look forward, not back.'…. The culture of preparedness, he said, includes continuing a national dialog to make sure the public knows its responsibility: to begin individually." (**USNORTHCOM**, "DHS Official Promotes New 'Culture of Preparedness'." October 4, 2006)

Culture of Preparedness: "CREATING A CULTURE OF PREPAREDNESS: The second element of our continuing transformation for homeland security perhaps will be the most profound and enduring—the creation of a Culture of Preparedness. A new preparedness culture must emphasize that the entire Nation—Federal, State, and local governments; the private sector; communities; and individual citizens—shares common goals and responsibilities for homeland security. In other words, our homeland security is built upon a foundation of partnerships. And these partnerships must include shared understanding of at least four concepts:

- The certainty of future catastrophes;

- The importance of initiative;
- The roles of citizens and other homeland security stakeholders in preparedness; and
- The roles of each level of government and the private sector in creating a prepared Nation." (**White House**. *The Federal Response to Hurricane Katrina – Lessons Learned*, Chapter 6 "Transforming National Preparedness," February **2006**.)

Culture of Preparedness: "This Culture rests on four principles.

- The first principle of our Culture of Preparedness is a shared acknowledgement that creating a prepared Nation will be an enduring challenge….

- The second principle is the importance of individual and collective initiative to counter fundamental biases toward reactive responses and approaches….

- The third principle is that individual citizens, communities, the private sector, and non-profit organizations each perform a central role in homeland security….

- The fourth principle of our Culture of Preparedness is the responsibility of each level of government in fostering a prepared Nation." (**White House**, *National Strategy for Homeland Security*, Homeland Security Council, October **2007**, pp. 41-42)

Culture of Preparedness: "In order for citizens to play an optimum role in responding to a mass casualty event, it is important to develop a "culture of preparedness". Spreading basic knowledge such as who to inform when an incident occurs can speed up responses and result in lives being saved. Similarly, increasing basic search and rescue and first aid skills can avoid the onset of complications for those injured in a mass casualty incident. In addition to knowledge, attitudes need to be changed. The passive expectation that responding to emergencies is someone else's responsibility (typically someone in authority) can be changed to an active willingness to get involved in the activities necessary to a planned response. While efforts to inculcate such a culture can be sponsored (i.e. funded and conceived) at national level, programming is likely to be most effective if delivered by local government authorities and based in a planning process. Such activities may include:

• preparedness training to teach communities how to survive without outside help for a given period (48 or 72 hours)
• Basic search and rescue and first aid training for community members and for emergency services staff (publications such as *Capacity Building for Search & Rescue in Local Communities (Jeannet 1999)* and *International harmonization of First Aid: First recommendations on life-saving techniques* (IFRC 2004) provide useful advice on this)
• presentations at public gatherings such as clubs, religious centres (e.g. those connected with churches, mosques and temples), and community service organizations
• Advertising or public information through the press and electronic media, or using posters, leaflets and public displays in markets and shopping areas. The education system has an important role to play in preparedness. Schools can incorporate some elements of the community's emergency preparedness plans in curricula for children and teen-agers, in order to increase the awareness of what to do during a mass casualty

incident." (**World Health Organization**, *Mass Casualty Management Systems*, April 2007, p. 23)

Current Meter (water): "Instrument for measuring the velocity of water." (**UNDHA**, *DM Glossary*, 1992, 23)

CUSEC: Central United States Earthquake Consortium.

Customer Service: "The stated ideologies of service companies that have consistently performed extremely well have a strong focus on flowing value to the customer. The customer service theme from these companies resonates with lean thinking philosophy:

- Service to the customer above all else. We exist to provide value to our customers--to make their lives better via lower prices and greater selection; all else is secondary
- People are number one–they are your only appreciating asset, treat them well, expect a lot, and the rest will follow
- Partner with employees, include them in the process
- Encourage individual initiative
- Expect hard work and productivity, yet keep it fun
- Work with passion, commitment, and enthusiasm
- Continuous self-improvement; there's always something more to be improved
- Excellence in reputation
- Run lean by continuously identifying and eliminating waste
- Never settle for less than what is possible." (**Buckentine**, "Lean for Service Businesses," *MA Insider* [Manufacturers Alliance E-Newsletter], May 2007)

Customer Service: "Customer service is a key element of FEMA's strategic plan. FEMA's customer service initiatives include benchmarking performance, setting standards, and surveying internal (FEMA employees) and external (the public and emergency management partners) customers. It also focuses on building skills and instituting programs that provide high-quality service that exceeds the expectations of FEMA's customers. The customer service program supplies valuable information that assists to identify barriers to performance and measure progress towards achieving the Agency's strategic goals. The customer service strategy seeks to:

1. Refine data collection, databases and performance measures for the Agency's strategic plan and establish baselines against which future performance can be measured.
2. Create a highly productive, customer-driven workforce that provides services that meet or exceed customer expectations
3. Institutionalize better and more cost-effective service-delivery systems." (**FEMA**, *Strategic Plan FY 1988 – FY 1992*, 1997, p. 30)

Customer Service: "In Oklahoma, I'm lucky to have a boss, Governor Brad Henry, who realizes emergency management is a customer service business. More importantly, he understands that the customers we serve are at the local level, not in Washington. Following disaster events, he expects me to brief him on what assistance is being provided to the victims immediately and what assistance we're working to provide in the future. The Governor does not expect me to provide anything which is not available under the law, but he does expect me to

extract the full potential of the law to the victim's advantage. And, he expects the same level of customer service to be provided by the federal government, in the support of our state. Unfortunately, our recent dealings with FEMA, in response to disasters our state has experienced over the last 18 months, has done little to ensure customer service is a concern, or that we are even considered a customer. Since December 2005, Oklahoma has experienced wildfires, ice storms, tornadoes and floods which have resulted in six major disaster declarations, one emergency declaration, and 26 fire management assistance grants.

One might say that this level of activity is proof that the "new" FEMA is working diligently to make sure assistance is being provided as quickly as possibly, but I would offer that each request has been viewed from a federal perspective of, "what is the minimum we have to provide, as opposed to, what is the need." Never before have I entered into so many discussions regarding the interpretation of the law or the standard of assessment. I've even had a FEMA attorney question the authority my Lieutenant Governor has to make a request for the state, in the Governor's absence. Through this all, the Governor has asked me some very simple questions, like: "Is FEMA this unresponsive because they're under DHS?; Why does it take two weeks to make a decision on my request?; Why does the FEMA Region support our request and FEMA Headquarters doesn't?; or even, Why won't they return my phone calls?". Regretfully, I have but one answer to each of his questions, "I don't know, sir. But, I do know this is not the way it's supposed to be." (**Ashwood**, *Testimony... on* "*FEMA Preparedness in 2007…*," 2007, 3)

"In conclusion, I'd like to summarize the current philosophical differences between my state and FEMA with a brief illustration. In my operations center a sign, defining what is expected of each employee, has hung on the wall for many years. It simply says, "If it's legal, moral and ethical . . . Just do it!" And while I realize much of this creed is subjective, by nature, it does stress the reason we are all employed . . . to provide a service to our citizens during their time of need. With this in mind, I wonder what a similar sign would say, if it were currently hanging on the wall in FEMA headquarters. Perhaps it would say something like, "If it's legally concise and limits our agency's exposure and potential liability, we should consider doing it, contingent of course on General Counsel's final opinion, in coordination with the Office of Management and Budget, and subject to the final vote of the tribunal convened to effectively disperse responsibility throughout the federal government." Whether this philosophy is a product of FEMA, DHS, the White House, Congress, or a combination of any or all of the above, I simply don't know. I only know it is does not meet my expectations, as either a state customer or private citizen." (**Ashwood**, *Testimony... on* "*FEMA Preparedness in 2007…*," 2007, 4)

CVI: Chemical-terrorism Vulnerability Information. (**DHS**, *CVI Glossary*, Nov. 2007, p. 1)

CWG: Continuity Working Group(s). (**DHS**, *FCD 1*, Nov. 2007, p. 11)

CWG: COOP Working Group. (**FEMA**, *Region III Annual Report FY 2007*, 2008, 30)

CWIN: Critical Infrastructure Warning & Information Network. (**Continuity Central**, *US CWIN Complete*, April 15, 2005.

CX: Phosgene Oxime. (**Dept. of the Army**, *WMD-CST Operations*, Dec 2007, Glossary-2)

Cyber Cop Portal: "Coordination with law enforcement helps capture and convict those responsible for cyber attacks. The Cyber Cop Portal is an information sharing and collaboration tool accessed by over 5,300 investigators worldwide who are involved in electronic crimes cases." (**DHS,** *National Cyber Security Division*, September 23, 2006 modification)

Cyber-Risk Management Programs, DHS: "Through Cyber Risk Management, the National Cyber Security Division seeks to assess risk, prioritize resources, and execute protective measures critical to securing our cyber infrastructure." (**DHS,** *NCSD*, 23Sep2006 modification)

Cyber Security: "The prevention of damage to, unauthorized use of, or exploitation of, and, if needed, the restoration of electronic information and communications systems and the information contained therein to ensure confidentiality, integrity, and availability. Includes protection and restoration, when needed, of information networks and wireline, wireless, satellite, public safety answering points, and 911 communications systems and control systems." (**DHS,** *NIPP*, 2006, 103)

Cyber Security Preparedness and the National Cyber Alert System, DHS: "Cyber threats are constantly changing. Both technical and non-technical computer users can stay prepared for these threats by receiving current information by signing up for the National Cyber Alert System." (DHS, National Cyber Security Division, September 23, 2006 modification)

Cyber Storm: A National Cyber Exercise (NCE): "**…**the first government-led, full-scale cyber security exercise of its kind [February 6-10, 2006]…. Cyber Storm was designed to test communications, policies and procedures in response to various cyber attacks and to identify where further planning and process improvements are needed. Activities included:

- Exercising interagency coordination through the activation of the National Cyber Response Coordination Group (NCRCG) and the Interagency Incident Management Group (IIMG)
- Exercising inter-governmental and intra-governmental coordination and incident response
- Identifying policies and issues that either hinder or support cyber security requirements
- Identifying public and private information sharing mechanisms to address communications challenges
- Identifying the interdependence of cyber and physical infrastructures
- Raising awareness of the economic and national security impacts associated with a significant cyber incident
- Highlighting available tools and technologies for cyber incident response and recovery." (**DHS**, *Cyber Storm Exercise Fact Sheet*, September 13, 2006)

Cyber Storm II: Held March 10-14, 2008, largest cyber security exercise ever organized. Cyber Storm II included "18 federal departments and agencies, nine states (Calif., Colo., Del.,

Ill., Mich., N.C., Pa., Texas and Va.), five countries (United States, Australia, Canada, New Zealand and the United Kingdom), and more than 40 private sector companies. They include ABB, Inc., Air Products, Cisco, Dow Chemical Company Inc., Harris Corporation, Juniper Networks, McAfee, Microsoft, NeuStar, PPG Industries, and Wachovia.
Cyber Storm II objectives include:

- Examining the capabilities of participating organizations to prepare for, protect against, and respond to the potential effects of cyber attacks
- Exercising strategic decision making and interagency coordination of incident response in accordance with national level policy and procedures
- Validating information sharing relationships and communications paths for the collection and dissemination of cyber incident situational awareness, response and recovery information
- Examining means and processes through which to share sensitive information across boundaries and sectors without compromising proprietary or national security interests."

(**DHS**, *DHS Holds Cyber Storm II Exercise to Further Cyber Security Preparedness and Response Capabilities*, March 10, 2008)

Cyber Storm II:

- Affects 4 infrastructure sectors including chemical, information technology (IT), communications and transportation (rail/pipe) and used 10 information sharing and analysis centers;
- Exercises the processes, procedures, tools and organizational response to a multi-sector coordinated attack through, and on, the global cyber infrastructure;
- Allows players to exercise and evaluate their cyber response capabilities to a multi-day coordinated attack and to gauge the cascading effects of cyber disasters on other critical infrastructures, shaping response priorities; and
- Exercises government and private sector concepts and processes developed since Cyber Storm I, requiring great interaction and coordination at the strategic, operational, and tactical levels. (DHS, *Cyber Storm: Securing Cyber Space*, March 7, 2008)

Cyber-Terrorism: "(FBI): A criminal act perpetrated by the use of computers and telecommunications capabilities, resulting in violence, destruction and/or disruption of services to create fear by causing confusion and uncertainty within a given population, with the goal of influencing a government or population to conform to a particular political, social, or ideological agenda." (**US Army TRADOC**, 2007, p. 148)

Cybergeddon: Cyber mushroom cloud.

Cyclone: "An atmospheric closed circulation rotating counter-clockwise in the Northern Hemisphere and clockwise in the Southern Hemisphere." (**NHC**, *Glossary of NHC Terms*, 2007)

Cyclone: "A large-scale closed circulation system in the atmosphere with low barometric pressure and strong winds that rotate counter clockwise in the northern hemisphere and clockwise in the southern hemisphere. The system is referred to as a cyclone in the Indian Ocean and South Pacific, hurricane in the western Atlantic and eastern Pacific and typhoon in the western Pacific." (**UNDHA**, *Disaster Management Glossary*, 1992, 23)

CZMA: Coastal Zone Management Act.

D/A: Department and/or Agency

DA: Department of the Army. (**Department of the Army** Website, References (Glossary).)

DA: Diphenylchloroarsine. (**Dept. of Army**, *WMD-CST-Operations*, Dec 2007, Glossary-2)

DAC: Disaster Application Center.

DAD: Disaster Assistance Directorate, FEMA (**DHS**, *FEMA OMA*, 2008, 5)

DAE: Disaster Assistance Employee, FEMA.

Daily NOC Elements Conference Call: "…in order to enhance integration and coordination, we established the Daily NOC Elements Conference Call. This conference call provides the NOC Element Directors, Operation Centers (Senior Duty Officers), and staff members a daily forum to highlight operational matters, address process issues, and conduct coordination as appropriate." (**DHS**, *Statement of Frank DiFalco, Director of the NOC, OOC*, June 20, 2007, 7)

DAIP: Disaster Assistance Improvement Plan. (**FEMA**, S*tatement of Harvey E. Johnson, Jr., Acting Deputy Administrator and Chief Operating Officer, "Moving Beyond the First Five Years: Ensuring FEMA's Ability to Respond and Recover in the Wake of a National Catastrophe,"* April 9, 2008, p. 4)

Dam (also barrage; barrier; weir): "Barrier constructed across a valley for impounding water or creating a reservoir." (**UNDHA**, *Disaster Management Glossary*, 1992, 23)

Dam Failure: "Downstream flooding due to the partial or complete collapse of any impoundment. Dam failure is associated with intense rainfall and prolonged flood conditions. However, dam breaks may also occur during dry periods as a result of progressive erosion of an embankment caused by seepage leaks. Dam failure may also be caused by earthquake." (**FEMA**, *Hazard Identification…* (CPG 1-34), 1985, p. A-3)

Damage Assessment: The process utilized to determine the magnitude of damage and the unmet needs of individuals, businesses, the public sector, and the community caused by a disaster or emergency event.

Damage Assessment: "The process of assessing damage, following a disaster, to computer hardware, vital records, office facilities, etc. and determining what can be salvaged or restored and what must be replaced." (**DigitalCare**, *State of OR Business Cont. Workshop*, 2006, p. 52)

Damage Assessment: "The process used to appraise or determine the number of injuries and deaths, damage to public and private property, and the status of key facilities and services such as hospitals and other health care facilities, fire and police stations, communications networks,

water and sanitation systems, utilities, and transportation networks resulting from a man-made or natural disaster." (**FEMA**, *Guide For All-Hazard Emer. Ops Planning* (SLG 101), 1996, GLO-1)

Damage Assessment: "An appraisal or determination of the effects of the disaster on human, physical, economic, and natural resources." (**NFPA 1600**, 2007, p. 7)

Damage Classification: "Evaluation and recording of damage to structures, facilities, or objects according to three (or more) categories:

1. "Severe Damage" - which precludes further use of the structure, facility, or abject for its intended purpose.
2. "Moderate Damage" - or the degree of damage to principal members, which precludes effective use of the structure, facility, or object for its intended purpose, unless major repairs are made short of complete reconstruction.
3. "Light Damage" - such as broken windows, slight damage to roofing and siding, interior partitions blown down, and cracked walls; the damage is not severe enough to preclude use of the installation for the purpose for which it was intended." (**UNDHA**, *DM Glossary*, 1992, 24)

Damping: "Limitation of movement or dissipation of energy." (**UNDHA**, *DM Gloss.*, 1992, 24)

DAST: Disaster Area Survey Team. (**Japan National Committee for IDNDR**, *Multi-language Glossary on Natural Disasters,* March 1993)

Data Backups: "The back up of system, application, program and/or production files to media that can be stored both on and/or offsite. Data backups can be used to restore corrupted or lost data or to recover entire systems and databases in the event of a disaster. Data backups should be considered confidential and should be kept secure from physical damage and theft." (**DigitalCare**, *State of OR Business Continuity Workshop*, 2006, p. 52)

Data Center Recovery: "The component of Disaster Recovery which deals with the restoration, at an alternate location, of data center services and computer processing capabilities. SIMILAR TERMS: Mainframe Recovery, Technology Recovery." (**DigitalCare**, *State of OR Business Continuity Workshop*, 2006, p. 52)

Data Collection Platform (DCP): "Automatic measuring facility with a radio transmitter to provide contact and transmission of data via satellite." (**UNDHA**, *DM Glossary*, 1992, 24)

Data Mining: "Data mining is the process of knowledge discovery and predictive modeling and analytics, traditionally involving the identification of patterns and relationships from databases…. In government, data mining is increasingly used to help detect terrorist threats through the collection and analysis of both public and private sector data." (**DHS/OIG**, *ADVISE Report*, June 2007, p. 6)

DCIP: Defense Critical Infrastructure Program. (**DOD**, *DCIP Geospatial Data Strategy*, 2006)

DCIP: Defense Critical Infrastructure Protection. (**DSB**, *Report of DSB TF on CHIP*, 2007, 2)

DCE: Defense Coordinating Element (DCO Staff). (**JCS/DOD**, *CBRNE CM*, 2006, II-19)

DCO: Defense Coordinating Officer. (**Dept of the Army**, *WMD-CST Ops*, 2007, Glossary-2)

DCP: Data Collection Platform. "Automatic measuring facility with a radio transmitter to provide contact and transmission of data via satellite." (**UNDHA**, *DM Glossary*, 1992, 24)

DCPA: Defense Civil Preparedness Agency.

DCT: Data Collection Toolkit. (**OIG/DHS**, *IT Information Management Letter, FY 2005*, p. 58)

DDS: Design and Development System. (**FEMA**, *HSEEP*, 2008 slide presentation)

Deaf and Hard-of-Hearing Notification System (DHNS): "Provides emergency information to the hearing impaired community; Uses American Sign Language videos; Information is sent over Internet and other communication devices." (**FEMA**, *IPAWS*, September 11, 2007)

DEARE: Delayed Effects of Acute Radiation Exposure. (**HHS**, *PHEMCE IP*, 2007, p. 17)

DEAS: Digital Emergency Alert System. (**DHS**, *NCRC, First Annual Report*, 2005, p. F-11)

Debrief: "A debriefing is a forum for planners, *facilitators*, *controllers*, and *evaluators* to review and provide feedback after the exercise is held. It should be a facilitated discussion that allows each person an opportunity to provide an overview of the functional area they observed and document both strengths and areas for improvement. Debriefs should be facilitated by the *exercise planning team* leader or the *exercise program manager*; results should be captured for inclusion in the *AAR/IP*. (Note: Other sessions, such as a separate debrief for hospitals during an *operations-based* exercise, may be held as necessary.) A debriefing is different from a *hot wash*, in that a hot wash is intended for players to provide feedback." (**FEMA**, *HSEEP Glossary*, 2008)

Debris Clearance and Removal: "Clearance, pick up, hauling, processing and disposal of all manner of debris generated by the declared event on public property. This includes woody debris, sand and gravel, and components of buildings or other structures. This may also include debris on private property, when FEMA has approved such removal." (**FEMA**, *100% Funding for Direct Federal Assistance and Grant Assistance*, June 9, 2006)

Debris Flow: "A high-density mud flow with abundant coarse-grained materials such as rocks, tree trunks, etc." (**UNDHA**, *Disaster Management Glossary*, 1992, 25)

DEC: Disaster Emergency Communications. (**FEMA**, *JTF Commanders' Briefing*, Jan 2008)

Decedents: "A deceased person, including portions of remains from that person." (**FEMA**, *IIFOG Version 3 Draft*, Feb 2008, p. 34)

Decision Information Distribution System (DIDS): "DIDS is a low-frequency radio network which has been designed to improve and expand nationwide warning. A…prototype facility is located at Edgewood Arsenal, MD…. DIDs could form the basis for automatic indoor home warning. Special low-frequency home warning receivers are under development, along with devices which could be incorporated in regular television or entertainment radios. The low-frequency transmission of DIDS could turn on these units to alert the public and provide warning information." (**DCPA**, *Civil Preparedness – A New Dual Mission*, 1972, p. 8)

Declaration: The formal action by the President to make a State eligible for major disaster or emergency assistance under the Robert T. Stafford Relief and Emergency Assistance Act, Public Law 93-288, as amended. (**FEMA**, *Disaster Basics* (IS-292), 2007 update, p. A-2 (Glossary)

Declaration of Disaster: "Official issuance of a state of emergency upon the occurrence of a large-scale calamity, in order to activate measures aimed at the reduction of the disaster's impact." (**UNDHA**, *Disaster Management Glossary*, 1992, 25)

Declaration Process: "The request for a declaration [disaster or emergency] must come from the Governor or Acting Governor. Before sending a formal request letter to the President, the Governor will request that FEMA conduct a joint Preliminary Damage Assessment (PDA) with the State to verify damage and estimate the amount of supplemental assistance that will be needed. If the Governor believes that Federal assistance is necessary after this assessment is complete, the Governor sends a request letter to the President, directed through the Regional Administrator (RA) of the appropriate FEMA region. The RA reviews the request and forwards it with a recommendation to the Director of FEMA who, in turn, makes a recommendation to the President. In the aftermath of a significant event causing extensive damage and loss of life, the declaration process may be expedited. The President makes the decision whether to declare a major disaster or emergency. After the initial declaration, the person designated by the Governor as the Governor's Authorized Representative (GAR) may request additional areas to be eligible for assistance or for additional types of assistance as deemed necessary." (**FEMA**, *Public Assistance Guide* (FEMA 322), June 2007)

Deconfliction: "…the avoidance of duplication or interference." (**FEMA**, *IIFOG, Ver 3*, 08, 12)

Decontamination: "The removal of dangerous goods from personnel and equipment to the extent necessary to prevent potential adverse health effects. Always avoid direct or indirect contact with dangerous goods; however, if contact occurs, personnel should be decontaminated as soon as possible. Since the methods used to decontaminate personnel and equipment differ from one chemical to another, contact the chemical manufacturer, through the agencies listed on the inside back cover, to determine the appropriate procedure. Contaminated clothing and equipment should be removed after use and stored in a controlled area (warm/contamination reduction/limited access zone) until cleanup procedures can be initiated. In some cases, protective clothing and equipment cannot be decontaminated and must be disposed of in a proper manner." (**DOT**, *Emergency Response Guidebook…Hazardous Materials Incident*, 2004, 360)

DEFCON: Defense Readiness Condition. (**OCD**, *Abbreviations and Definitions*, 1971, p. 1)

Defense Against Weapons of Mass Destruction Act of 1996: Public Law 104-201, Title XIV**,** also known as the Nunn- Lugar-Domenici Domestic Preparedness Act.

Defense Against Weapons of Mass Destruction Act of 1996: "The Defense Against Weapons of Mass Destruction Act of 1996, or Nunn-Lugar-Domenici amendment to the National Defense Authorization Act for FY97, stipulated the training of first responders to deal with WMD terrorist incidents. (James Martin Center for Nonproliferation Studies." *Nunn-Lugar-Domenici Domestic Preparedness and WMD Civil Support Teams.* October 2001)

Defense Against Weapons of Mass Destruction Act: "The Defense Against Weapons of Mass Destruction (WMD) Act, 50 U.S.C. 2301*et seq*, is intended to enhance the capability of the Federal government to prevent and respond to terrorist incidents involving WMD. Congress has directed that DOD provide certain expert advice to Federal, State, and local agencies with regard to WMD, to include domestic terrorism rapid response teams, training in emergency response to the use or threat of use of WMD and a program of testing and improving the response of civil agencies to biological and chemical emergencies." (**DHS**, *National Response Plan* (Draft #1), Feb. 25, 2004, p. 70.)

Defense Civil Preparedness Agency (DCPA): "In further recognition of the broader responsibility of the Federal Government in disaster preparedness assistance at the State and local government level, Secretary of Defense Melvin Laird, on May 5, 1972, abolished the Office of Civil Defense, which operated under the Secretary of the Army, and established a new, separated Defense Agency within the Department of Defense – the Defense Civil Preparedness Agency." (**DCPA**, *Civil Preparedness – A New Dual Mission*, 1972, p. 1)

Defense Coordination Element (DCE): "On-scene staff element composed of administrative staff and liaison personnel (including Emergency Preparedness Liaison Officers). Normally, the DCE will co-locate with the ERT Operations Section in the JFO." (**FEMA**, *Mission Assignment SOPs Operating Draft*, 2007, p. 48)

Defense Coordinating Element (DCE): "The Defense Coordinating Element is that structure within the DFO which supports and executes missions under the authority of the Defense Coordinating Officer." (**USACE**, *Response Planning Guide*, 1995, p. B-2)

Defense Coordinating Officer (DCO): "DOD has appointed 10 DCOs and assigned one to each FEMA region. If requested and approved, the DCO serves as DOD's single point of contact at the JFO. With few exceptions, requests for Defense Support of Civil Authorities originating at the JFO are coordinated with and processed through the DCO. The DCO may have a Defense Coordinating Element consisting of a staff and military liaison officers to facilitate coordination and support to activated ESFs. Specific responsibilities of the DCO (subject to modification based on the situation) include processing requirements for military support, forwarding mission assignments to the appropriate military organizations through DOD-designated channels and assigning military liaisons, as appropriate, to activated ESFs." (**DHS**, *National Response Framework* (Comment Draft), September 10, 2007, p. 66; see, also, **DHS**, *NRF*, 2008, 68))

Defense Coordination Officer (DCO): "A military official specifically designated to orchestrate DoD support activity. As the designated DoD on-scene member of the ERT, the DCO is the single POC in the field for coordinating and tasking the use of all DoD resources in support of Federal relief efforts, excluding National Guard forces operating under State control." (**FEMA**, *Mission Assignment SOPs Operating Draft*, 2007, p. 48)

Defense Coordinating Officer (DCO): "The **DCO** is appointed by DOD and serves as DOD's single point of contact at the JFO, with the exception of US Special Operations Command and USACE assets. Generally, requests for CS originating at the JFO will be coordinated with and processed through the DCO. The DCO may have a DCE consisting of a staff and military LNOs [Liaison Officers] in order to facilitate coordination and support to activated ESFs. Specific responsibilities of the DCO (subject to modification based on the situation) include processing requirements for military support, forwarding RFAs to the appropriate military organizations through DOD designated channels, and assigning military liaisons, as appropriate, to activated ESFs. Requests for CS originating at the JFO will be coordinated and processed through the DCO with the exception of requests for USACE support, NG forces operating under state active duty or Title 32 USC (i.e., not in federal service), or, in some circumstances, DOD forces in support of the FBI." (**JCS/DoD**, *Civil Support*, 2007, pp. D-21-22)

Defense Coordinating Officer (DCO) Relationship to Joint Task Force (JTF) as part of the Unified Coordination Group (UCG): "The DCO and JTF Commander, although both DOD representatives, have very distinct roles and responsibilities. If requested and approved, the DCO serves as DOD's single point of contact at the JFO for requesting assistance from DOD . With few exceptions, requests for Defense Support to Civil Authorities (DSCA) originating at the JFO are coordinated with and processed through the DCO. Based on the complexity and type of incident, and the anticipated level of DOD resource involvement, DOD may also elect to designate a JTF Commander to command Federal (Title 10) military activities in support of the incident objectives. If a JTF is established, consistent with operational requirements, its command and control element will be co-located with the senior on-scene leadership at the JFO to ensure coordination and unity of effort. The co-location of the JTF command and control element does not replace the requirement for a DCO/Defense Coordinating Element as part of the JFO Unified Coordination Staff. The DCO remains the DOD single point of contact in the JFO for requesting assistance from DOD." (**DHS**, *NRF FAQs*, Jan 2008, 7)

Defense Critical Asset: "An asset of such extraordinary importance to DoD operations in peace, crisis, and war that its incapacitation or destruction would have a very serious, debilitating effect on the ability of the Department of Defense to fulfill its missions." (**DoD**, *DCIP*, 2005, 11)

Defense Critical Infrastructure: "DoD and non-DoD networked assets essential to project, support, and sustain military forces and operations worldwide." (**DoD**, *DCIP*, 2005, 2)

Defense Critical Infrastructure Program (DCIP): "…the mission of the DCIP is to identify, prioritize, and coordinate protection of critical assets that affect the warfighting capability of the U.S. armed forces and, ultimately, our national defense and economic security; to establish adaptive plans and procedures to mitigate risk and restore capability in the event of an asset's

loss or degradation; to support Defense critical infrastructure crisis and consequence management; and to protect critical infrastructure information." (**DoD**, *DCIP*, 2004)

Defense Critical Infrastructure Program (DCIP): "A DoD risk management program that seeks to ensure the availability of networked assets critical to DoD missions. Activities include the identification, assessment, and security enhancement of assets essential for executing the National Military Strategy." (**DoD**, *DCIP* (DODD 3020.40), August 19, 2005, p. 2)

Defense Emergency Response Fund: Established by Public Law 101-165 (1989). That law provides that, "The Fund shall be available for providing reimbursement to currently applicable appropriations of the Department of Defense for supplies and services provided in anticipation of requests from other Federal departments and agencies and from State and local governments for assistance on a reimbursable basis to respond to natural or manmade disasters. The Fund may be used upon a determination by the Secretary of Defense that immediate action is necessary before a formal request for assistance on a reimbursable basis is received." The Fund is applicable to military support to civil authorities (MSCA) under DoD Directive 3025.1 and to foreign disaster assistance under DoD Directive 5100.46. (**32 CFR 185**)

Defense Production Act of 1950 (DPA): "The Defense Production Act of 1950 (DPA) as amended by P.L. 102-558, 106 Stat. 4201, 50 U.S.C. App. 2062, is the primary authority to ensure the timely availability of resources for national defense and civil emergency preparedness and response. Among other things, the DPA authorizes the President to demand that companies accept and give priority to government contracts "which he deems necessary or appropriate to promote the national defense." The DPA defines "national defense" to include activities authorized by the emergency preparedness sections of the Stafford Act. Consequently, DPA authorities are available for activities and measures undertaken in preparation for, during, or following a natural disaster or accidental or man-caused event. The Department of Commerce has redelegated DPA authority under Executive Order 12919, National Defense Industrial Resource Preparedness, June 7, 1994, as amended, to the Secretary of Homeland Security to place, and upon application, to authorize State and local governments to place, priority rated contracts in support of Federal, State, and local emergency preparedness activities." (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, pp. 68-69)

Defense Support of Civil Authorities (DSCA): "Defense support of civil authorities, often referred to as civil support, is DoD support, including Federal military forces, the Department's career civilian and contractor personnel, and DoD agency and component assets, for domestic emergencies and for designated law enforcement and other activities. The Department of Defense provides defense support of civil authorities when directed to do so by the President or Secretary of Defense." (**DOD**, *Strategy for Homeland Defense/Civil Support*, June 2005, pp. 5-6)

Defense Support of Civil Authorities (DSCA) -- Immediate Response: "Imminently serious conditions resulting from any civil emergency may require immediate action to save lives, prevent human suffering or mitigate property damage. When such conditions exist, and time does not permit approval from higher headquarters, local military commanders and responsible officials from DOD components and agencies are authorized to take necessary action to respond to requests from civil authorities. This response must be consistent with the Posse Comitatus Act

18 U.S.C. § 1385), which generally prohibits Federal military personnel (and units of the National Guard under Federal authority) from acting in a law enforcement capacity (e.g., search, seizures, arrests) within the United States, except where expressly authorized by the Constitution or Congress." (**DHS**, *Overview: ESF…Support Annexes…In Support of the NF*, Sep 2007, p. 6)

Deforestation: "The clearing or destruction of a previously forested area." (**UNDHA**, *Disaster Management Glossary*, 1992, 25)

Delegation of Authority: "A delegation of authority identifies who is authorized to act on behalf of the agency head or other officials for specified purposes and ensures that designated individuals have the legal authorities to carry out their duties. To the extent possible, these authorities should be identified by title or position, and not by the individual office holder's name." (**DHS**, *FCD 1*, Nov. 2007, p. E-3)

Delegation of Authority: "Identification, by position, of the authorities for making policy determinations and decisions at headquarters, field levels, and all other organizational locations. Generally, pre-determined delegations of authority will take effect when normal channels of direction are disrupted and terminate when these channels have resumed." (**HSC,** *NCPIP*, 2007, p. 61)

Deliberate Planning: Contingency Planning "(the creation of plans in anticipation of future incidents based on the most current information utilizing Department resources, also known as deliberate planning." (**DHS**, *National Planning and Execution System*, 2007 Draft, p. 4-4)

DEMHS: Department of Emergency Management and Homeland Security, Connecticut.

Demobilization Unit: "The unit within the Planning Section responsible for ensuring the orderly, safe and efficient demobilization of incident resources." (**Capital Health Region**, Canada, *Incident Cmd. Sys. Training SM*, Mar 2007, 52)

Department of Defense "Active, Layered Defense" for the Homeland, Civil Support: "The Department of Defense's approach to homeland defense and civil support is guided by the concept of an "active, layered defense." The strategy focuses on four strata: the forward regions, the approaches, the global commons, and the homeland. DOD's objective in the *forward regions*—foreign lands, airspace, and waters—consists of deterring and preventing attacks. Its objective for the *approaches*—the means of access from the forward regions to the homeland, including Canadian and Mexican territory and those waters and airspace contiguous to the homeland—consists of detecting, deterring, and defeating threats en route to the United States. For the *global commons*—international waters and airspace, space beyond Earth's atmosphere, and cyberspace—DOD's objective is to continue to be able to operate effectively within it. Finally, in the *homeland* DOD focuses on deterring and defeating direct attacks on the United States, supporting civilian law enforcement and counterterrorism activities, and supporting civil authorities by providing critical chemical, biological, radiological, nuclear, and high-yield explosives (CBRNE) consequence management capabilities."[14] (**Commission on the National Guard and Reserves**, *Transitioning*, 2008, p. B-5 (390 of 448))

[14] Cites: *Strategy for Homeland Defense and Civil Support,* pp. 10–13.

Department of Defense (DOD) Process for Requests for Assistance, Domestic Emergencies: "JDOMS [Joint Director pf Military Support], located within the Joint Staff Operations Directorate (J-3), produces military orders as they pertain to domestic emergencies, forwards them to the SecDef for approval, and then to the appropriate military commander for execution. A six-step process is initiated when a request for assistance (RFA) is received from a lead or other primary agency:

(a) Lead or other primary agency initiates the RFA.
(b) RFA is sent to the DOD Executive Secretary for assessment/processing.
(c) RFA is processed and sent to ASD(HD) and JDOMS.
(d) JDOMS processes the order.
(e) SecDef approves the order.
(f) JDOMS issues the order to appropriate combatant commanders, Services, and agencies." (**JCS/DOD**, *CBRNE Consequence Management* (JP 3-41), 2006, p. II-9)

Department of Defense Strategy for Homeland Defense: "According to DOD's *Strategy for Homeland Defense and Civil Support,* the Department has five objectives in the homeland and its approaches. In order of priority, they are

- Achieve Maximum Awareness of Threats.
- Deter, Intercept, and Defeat Threats at a Safe Distance.
- Achieve Mission Assurance.
- Support Consequence Management for CBRNE Mass Casualty Attacks.
- Improve National and International Capabilities for Homeland Defense and Homeland Security.

"The first three objectives represent more traditional military missions that fall under the homeland defense umbrella, in which DOD acts as the lead agency.38 In fulfilling the final objective, DOD plans to improve interagency planning and interoperability, as well as its ability to function alongside federal, state, and local partners to improve its capacity to provide defense support to civil authorities. This objective also involves strengthening security cooperation with other countries. While the objective emphasizes the importance of cooperation with civil authorities, much of what constitutes civil support appears to fall outside of it." (**Commission on the National Guard and Reserves**, *Transitioning*, 2008, p. B-5 (390 of 448)

Department of Energy (DOE). "DOE serves as a support agency to the FBI for technical operations and a support agency to DHS/FEMA for CM [Consequence Management]. DOE provides scientific and technical personnel and equipment in support of the LFA during all aspects of WMD incidents. DOE assistance can support both CrM [Crisis Management] and CM activities with capabilities such as threat assessments, domestic emergency support team (DEST) deployment, LFA advisory requirements, technical advice, forecasted modeling predictions, and assistance in the direct support of operations. Deployable DOE scientific technical assistance and support includes capabilities such as search operations; access operations; diagnostic and device assessment; radiological assessment and monitoring; identification of material; development of federal protective action recommendations; provision of information on the radiological response; render safe operations; hazards assessment; containment, relocation and storage of special nuclear material evidence; post-incident cleanup; and on-site management and

radiological assessment to the public, the White House, and members of Congress and foreign governments. All DOE support to a federal response will be coordinated through a senior DOE official." (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. II-20)

Department of Health and Human Services (DHHS): "DHHS assistance supports threat assessment, DEST deployment, epidemiological investigation, LFA advisory requirements, and technical advice. Technical assistance to the FBI may include identification of agents, sample collection and analysis, on-site safety and protection activities, and medical management planning. DHHS serves as a support agency to the FBI for technical operations, and a support agency to DHS/FEMA for CM. DHHS provides technical personnel and supporting equipment to the LFA during all aspects of an incident. DHHS can also provide regulatory follow-up when an incident involves a product regulated by the Food and Drug Administration. Operational support to DHS/FEMA may include mass immunization, mass prophylaxis, mass fatality management, pharmaceutical support operations (Strategic National Stockpile), contingency medical records, patient tracking, and patient evacuation and definitive medical care provided through the National Disaster Medical System." (**JCS/DoD**, *Homeland Security*, 2005, p. II-21)

Department of Homeland Security Goals, Missions, Principles, Priorities, Vision, etc.

[Note: Scroll down below for descriptions of DHS organization parts and components]

Department of Homeland Security: "Legislation to create the largest reorganization of the federal government in 50 years was signed into law on November 25, 2002. Three months later, on March 1, 2003, the majority of the 22 agencies and 180,000 employees were officially merged to form the U.S. Department of Homeland Security." (**DHS**, Fact Sheet: Leadership and Management Strategies for Homeland Security Merger, February 11, 2004)

Department of Homeland Security (June 2002): "The Homeland Security Act of 2002, Pub. L. No. 107-296, 116 Stat. 2135 (2002) (codified predominantly at 6 U.S.C. §§ 101-557), as amended with respect to the organization and mission of the Federal Emergency Management Agency in the Department of Homeland Security Appropriations Act of 2007, Pub. L. No. 109-295, 120 Stat. 1355 (2006), established a Department of Homeland Security as an executive department of the United States. The Homeland Security Act consolidated component agencies…into the Department. The Secretary of Homeland Security is the head of the Department and has direction, authority, and control over it. All functions of all officers, employees, and organizational units of the Department are vested in the Secretary." (**DHS**, *National Response Framework List of Authorities and References*. (Draft), Sep.10, 2007, p. 1)

Department of Homeland Security, First Principles of Homeland Security -- See Principles.

Department of Homeland Security, Foundational Operating Concept – Unified Effort: "Unified Effort is the combination and integration of Federal, State, local, and tribal governments and organizations; the private sector; and international partners' operations and investments to plan, prepare, coordinate, execute, and assess those actions necessary to prevent,

protect, respond, and recover from threats to the citizens, infrastructure and homeland of the United States.

"The concept of *Unified Effort* defines the way DHS operates both internally and within the broader homeland security environment; it binds the operations of its components as well as the approach DHS takes in working with its partners from across the community. *Unified Effort* allows DHS to expand its strengths, compensate for its weaknesses, and provide depth in delivering capabilities to meet homeland security challenges.

"*Unified Effort* is an operational concept applied to all DHS missions. The unique roles and missions of the DHS components, as well as the State, local and tribal governments, and the private sector, require coordination and cooperation in planning and executing for the range of homeland operations. *Unified Effort* ensures a precision of roles and a clear understanding of who does what in each situation." (**DHS**, Chapter 2, *Capstone Doctrine Pub 1 Draft*, 2008, 2)

Department of Homeland Security, Goals:

1. Continue to Protect our Nation from Dangerous People
2. Continue to Protect our Nation from Dangerous Goods
3. Protect Critical Infrastructure
4. Build a Nimble, Effective Emergency Response System and a Culture of Preparedness
5. Strengthen and Unify DHS Operations and Management. (**DHS**, *Performance Budget Overview, Fiscal Year 2008 Congressional Budget Justification*, March 2007, p. i) [Under Goal 5: "…we will integrate hiring, retention, training and development and performance programs by the end of 2008." (Cited in **DHS**, *Establishing a DHS University System*, Sep 28, 2007, p. 6)

Department of Homeland Security, Guiding Principles: See DHS Principles, below:

Department of Homeland Security, Imperatives (2005):

"In the weeks and months to come, the Department will launch specific policy initiatives in a number of key areas. Here, then, are six of the key imperatives that will drive the near-term agenda for DHS.

1. We must increase preparedness with particular focus on catastrophic events;
2. Strengthen border security and interior enforcement and reform immigration processes;
3. Harden transportation security without sacrificing mobility;
4. Enhance information sharing with our partners, particularly with state, local and tribal governments and with the private sector;
5. Improve DHS stewardship, particularly with stronger financial, human resource, procurement, and information technology management; and
6. Realign the DHS organization to maximize mission performance."

(**DHS**, *Secretary Michael Chertoff U.S. Department of Homeland Security Second Stage Review Remarks*, 13 July 2005)

Department of Homeland Security, Incident Planning:

- Contingency Planning
- Crisis Action Planning (**DHS**, *National Planning and Execution System*, 2007, p. 5-1)

Department of Homeland Security, Interoperability Continuum: The "… Interoperability Continuum is designed to help the emergency response community and local, tribal, state, and Federal policy makers address critical elements for success as they plan and implement interoperability solutions. These elements include governance, standard operating procedures, technology, training and exercises, and usage of interoperable communications. The Interoperability Continuum was developed in accordance with the SAFECOM program's locally driven philosophy and its practical experience in working with local governments across the Nation. SAFECOM is a communications program of the Department of Homeland Security's Office for Interoperability and Compatibility. The Continuum was established to depict the core facets of interoperability according to the stated needs and challenges of the emergency response community and will aid emergency responders and policy makers in their short- and long-term interoperability efforts. (**DHS/Safecom**, *Interoperability Continuum.…*, Aug 2006, p. 2)

Department of Homeland Security, Mission (Primary) (2002): "The primary mission of the Department is to:

> (A) prevent terrorist attacks within the United States;
> (B) reduce the vulnerability of the United States to terrorism; and
> (C) minimize the damage, and assist in the recovery, from terrorist attacks that do occur within the United States." (*Homeland Security Act of 2002*, November 25, 2002).

Department of Homeland Security, Mission (Critical Six Missions) (2003): "I…wish to state my promise that I will do everything in my power to use the office of the secretary to keep the Department focused on all six of its critical missions outlined in the *National Strategy for Homeland Security*. They include:

- Intelligence and Warning,
- Border and Transportation Security,
- Domestic Counterterrorism,
- Protecting Critical Infrastructure and Key Assets,
- Defending Against Catastrophic Threats, and
- Emergency Preparedness and Response.

"While each of these missions is unique, each is essential to our primary mission of protecting the security of the United States. Some, such as Emergency Preparedness and Response, have long played key roles in helping society overcome hardship and emergencies; while others are byproducts of the harsh reality that terrorism can strike on our soil….the future employees of the Department of Homeland Security will be doing the same job in the new Department that they are doing today. The difference is that the new structure of the Department will refocus, consolidate and reorganize the functions of each of the 22 agencies involved in protecting the homeland. (DHS, *The Nomination of The Honorable Tom Ridge to be Secretary of the Department of Homeland Security*, January 19, 2003)

Department of Homeland Security, Mission (2004): "We will lead the unified national effort to secure America. We will prevent and deter terrorist attacks and protect against and respond to

threats and hazards to the nation. We will ensure safe and secure borders, welcome lawful immigrants and visitors, and promote the free-flow of commerce." (**DHS**, *Strategic Plan*, 2004)I

Department of Homeland Security, Mission (Preparedness) (2005): "Bringing greater planning discipline to each of these risk scenarios is another dimension of our preparedness mission, and simple common sense counsels that we begin by concentrating on events with the greatest potential consequences." (DHS, *Secretary Michael Chertoff U.S. Department of Homeland Security Second Stage Review Remarks*, July 13, 2005)

Department of Homeland Security, Missions (Primary) (2007): "The primary missions of the Department are to:

- Prevent terrorist attacks within the United States;
- Reduce the vulnerability of the United States to terrorism;
- Minimize the damage, and assist in the recovery, from terrorist attacks that do occur within the United States;
- Carry out all functions of entities transferred to the Department, including by acting as a focal point regarding natural and manmade crises and emergency planning;
- Ensure that the functions of the agencies and subdivisions within the Department that are not related directly to securing the homeland are not diminished or neglected except by specific explicit Act of Congress;
- Ensure that the overall economic security of the United States is not diminished by efforts, activities, and programs aimed at securing the homeland;
- Ensure that the civil rights and civil liberties of persons are not diminished by efforts, activities, and programs aimed at securing the homeland; and
- Monitor connections between illegal drug trafficking and terrorism, coordinate efforts to sever such connections, and otherwise contribute to the efforts to interdict illegal drug trafficking." (**DHS**, *National Response Framework List of Authorities and References* (Draft), Sep. 2007, p.1)

Department of Homeland Security, Operational Security Domains (Four): *"Operating in Multiple Domains*

"The Department's prevention, protection, response and recovery missions are carried out across a range of security domains, to include the air, land, maritime, and cyber domains. Security domains are those areas of flow of goods, people, and technologies, where a breach in security with malicious intent threatens the overall homeland security of the country. Achieving homeland security means exercising dominion over each of the homeland security domains so as to have information about the threats and vulnerabilities within the domains and be able to prevent, protect, respond and recover from security incidents in that domain. For example, achieving security in the cyber domain is not merely related to building fire-walls to prevent cyber attacks, but also includes increasing domain awareness, building a cyber response and recovery system, and developing partnerships among a range of legitimate participants in activities (including commerce) in cyber space, particularly the private sector, to reduce the consequences of an attack to the cyber network. DHS strives to lead the unified effort to prevent, protect, respond, and recover from threats to the citizens, infrastructure and homeland of the United States across four major domains.

- ***The land domain***. The homeland security land domain entails the entire geographic area of the United States and its territories. Protecting the land domain entails both border protection, to prevent illicit entry of people and goods into the U.S., as well as protection of the country's infrastructure. This involves both a "borders out" and a "borders in" approach to security operations.
- ***The maritime domain***. The maritime domain is all areas and things of, on, under, relating to, adjacent to, or bordering on a sea, ocean, or other navigable waterway, including all maritime related activities, infrastructure, people, cargo, and vessels and other conveyances.[15]
- ***The air domain***. The air domain consists of both the skies above the United States, and the skies that allow entry into U.S. airspace. As the National Strategy for Aviation Security notes, "the differences between ground-based and airborne aviation security measures implemented in different jurisdictions throughout the world, the volume of domestic and international air traffic, the speed with which events unfold, and the complexity of aviation assets make the Air Domain uniquely susceptible to attack or exploitation by terrorist groups, hostile nation-states, and criminals."
- ***The cyber domain***. The cyber domain is composed of hundreds of thousands of interconnected computers, servers, routers, switches, and fiber optic cables that allow the Nation's critical infrastructures to work. Thus, the healthy functioning of cyberspace is essential to the economy and the Nation's well-being.[16] (DHS, Capstone Doctrine Pub 1 Draft, Chapter 2, 2008, p. 2-6)

Department of Homeland Security, Planning Communities of Interest (COI): "DHS has four major planning communities of interest (COI):

- Key Department Components,
- Intra-Departmental,
- Interagency, and
- Other." (**DHS**, *National Planning and Execution System*, 2007 Draft, p. 2-1)

[Note: At p. 2-4 "Other" is elaborated upon as: "State, local, and tribal governments; Non-Governmental and Volunteer Organizations; Private Sector; Other."]

Department of Homeland Security, Primary Responsibilities: As "described in this Act, the Department's primary responsibilities shall include:

(A) information analysis and infrastructure protection;
(B) chemical, biological, radiological, nuclear, and related countermeasures;
(C) border and transportation security;
(D) emergency preparedness and response; and

[15] Definition from "The National Strategy for Maritime Security."
[16] Definition of cyber space from "The National Strategy to Secure Cyberspace"

(E) coordination (including the provision of training and equipment) with other executive agencies, with State and local government personnel, agencies, and authorities, with the private sector, and with other entities." (**Homeland Security Act**, 2002, Title 1,Sec. 101, p. 5)

Department of Homeland Security, Principles: "Our review [2SR] was conducted with several core principles in mind.

First, as I've said before, DHS must base its work on **priorities that are driven by risk**. Our goal is to maximize our security, but not security "at any price." Our security strategy must promote Americans' freedom, privacy, prosperity, mobility.

Second, our Department must **drive improvement** with a **sense of urgency**. Our enemy constantly changes and adapts, so we as a Department must be nimble and decisive.

Third, DHS must **be an effective steward of public resources**. Our stewardship will demand many attributes -- the willingness to set priorities; disciplined execution of those priorities; sound financial management; and a commitment to measure performance and share results.

Perhaps most of all, **DHS must foster innovation.**

Finally, our work must be guided by the understanding that effective security is built upon a **network of systems** that span all levels of government and the private sector. DHS does not own or control all these systems. But we must set a clear national strategy, and design an architecture in which separate roles and responsibilities for security are fully integrated among public and private stakeholders. We must draw on the strength of our considerable network of assets, functioning as seamlessly as possible with state and local leadership, law enforcement, emergency management personnel, firefighters, the private sector, our international partners, and most certainly, the general public. **Building effective partnerships** must be core to every mission of DHS.

So, with these principles in mind, we went to work. From across the Department and elsewhere in the federal government, we pulled subject matter experts and talented individuals away from their day jobs to focus on how well we tackle **our tough fundamental challenges: prevention, protection, and all-hazards response and recovery.**" (DHS, *Secretary Michael Chertoff U.S. Department of Homeland Security Second Stage Review Remarks*, July 13, 2005) {Thus}

- **Priorities that are driven by risk**
- **Drive improvement with a sense of urgency**
- **Be an effective steward of public resources**
- **DHS must foster innovation**
- **Building effective partnerships must be core to every mission of DHS.**

Department of Homeland Security, Principles – All Hazards, Integrated Organization: "I would like to thank the Committee for its thoughtful look at how we as a nation, and especially the federal government, responded to Katrina…. I…agree with the fundamental principles underlying the Committee's conclusions and recommendations. The first and most

important such principle is that DHS must operate as an all hazards, integrated organization. I said this when I announced our Second Stage Review one month prior to Katrina, and my experiences since then have made me even more steadfast in the belief that this is the best approach." (**DHS**, *Statement of Michael Chertoff… Building An Integrated Preparedness And Emergency Management System: The Case For Keeping FEMA Within The Department Of Homeland Security*, June 8, 2006, p. 2)

Department of Homeland Security, Principles: First Principles of Homeland Security:
"First Principles are axioms that underpin how DHS and its employees should think about, approach, and reconcile the multitude of activities and actions that constitute their effort to secure the Homeland; they transcend any specific task or operations. These principles enable *Unified Effort* to provide a construct for organizing, planning, and conducting operations. They have been developed through a study of past homeland security operations, as well as analysis of critical components of success for DHS and its components in accomplishing their mission. The First Principles of DHS Capstone Doctrine are:

- Risk Management
- Preparedness
- Engaged Partnerships
- Bias Toward Action
- Leadership
- Operational Security
- Unity of Effort
- Economy of Effort
- Information
- Support in Depth

(**DHS,** "First Principles of Homeland Security," Ch. 4, *Capstone Doctrine Pub 1 Draft*, 2008, 1)

Department of Homeland Security, Principles: Guiding Principles of Homeland Security:
"The philosophy that informs and shapes decision making and provides normative criteria that governs the actions of policy makers and employees in performing their work.

- *Protect Civil Rights and Civil Liberties*. We will defend America while protecting the freedoms that define America. Our strategies and actions will be consistent with the individual rights and liberties enshrined by our Constitution and the Rule of Law. While we seek to improve the way we collect and share information about terrorists, we will nevertheless be vigilant in respecting the confidentiality and protecting the privacy of our citizens. We are committed to securing our nation while protecting civil rights and civil liberties.
- *Integrate Our Actions*. We will blend 22 previously disparate agencies, each with its employees, mission and culture, into a single, unified Department whose mission is to secure the homeland. The Department of Homeland Security will be a cohesive, capable and service-oriented organization whose cross-cutting functions will be optimized so that we may protect our nation against threats and effectively respond to disasters.
- *Build Coalitions and Partnerships*. Building new bridges to one another are as important as building new barriers against terrorism. We will collaborate and coordinate across traditional boundaries, both horizontally (between agencies) and vertically (among different levels of

government). We will engage partners and stakeholders from federal, state, local, tribal and international governments, as well as the private sector and academia. We will work together to identify needs, provide service, share information and promote best practices. We will foster inter-connected systems, rooted in the precepts of federalism that reinforce rather than duplicate individual efforts. Homeland security is a national effort, not solely a federal one.

- *Develop Human Capital*. Our most valuable asset is not new equipment or technology, but rather our dedicated and patriotic employees. Their contributions will be recognized and valued by this Department. We will hire, train and place the very best people in jobs to which they are best suited. We are committed to personal and professional growth and will create new opportunities to train and to learn. We will create a model human resources management system that supports equally the mission of the Department and the people charged with achieving it.
- *Innovate*. We will introduce and apply new concepts and creative approaches that will help us meet the challenges of the present and anticipate the needs of the future. We will support innovation and agility within the public and private sector, both by providing resources and removing red tape so that new solutions reach the Department and the marketplace as soon as possible. We will harness our nation's best minds in science, medicine and technology to develop applications for homeland security. Above all, we will look for ways to constantly improve—we will recognize complacency as an enemy.

Be Accountable. We will seek measurable progress as we identify vulnerabilities, detect evolving threats to the American homeland and prioritize our homeland security resources. We will assess our work, evaluate the results and incorporate lessons learned to enhance our performance. We will reward excellence and fix what we find to be broken. We will communicate our progress to the American people, operating as transparently as possible and routinely measuring the success of our progress. (**DHS**, *Securing Our Homeland: U.S. Department of Homeland Security Strategic Plan 2004*. February 24, 2004, p. 5)

Department of Homeland Security, Principles: Learning and Development Guiding Principles:

"Principle 1: Align with Homeland Security and National Strategies
Programs must be aligned with the Department of Homeland Security Strategic Plan and National Strategy. All curricula must continuously adapt to the changing nature of the security environment and the strategies that arise to address emerging threats and hazards.
Principle 2: Encompass Interdisciplinary and Global Perspectives
Learning programs must be interdisciplinary in nature and acknowledge the global scope of the endeavor. Programs must be grounded in a systemic understanding of the strategy, operations and tactics needed to achieve objectives associated with prevention, protection, detection, disruption, response, economic stabilization and recovery.
Principle 3: Employ Best Practices
Courses and programs should be based on best practices in education and training, grounded in learning theory, research-based, built on experiential learning principles and proven before deployment.
Principle 4: Emphasize Integration
Courses and programs should be integrated vertically and horizontally using the DHS lexicon to bridge communication across different sectors, disciplines and cultures. Similarly, educational

institutions and other program delivery entities must coordinate, communicate and collaborate if there is to be a comprehensive system of programs that meets national needs.

Principle 5: Responsive to Multiple Stakeholder Needs

Programs must prepare leadership across public and private sectors to formulate and execute strategies in harmony with Federal homeland security strategic objectives. Programs must be developed and delivered in a spirit of inclusiveness among the Federal, state, local, public and private sectors. Programs must be designed to promote essential information sharing, and unity of effort. Courses must be integrated into ongoing career development and professional training programs.

Principle 6: Make Programs Modular

Programs must be based on a building-block approach that can be adapted to different audiences. All programs must be designed to acknowledge target audiences' needs to balance breadth of knowledge objectives against the depth of knowledge needed for operational expertise.

Principle 7: Promote Innovation

Studies must be designed to expand horizons, perceptions and combat biases that inhibit creative, critical thinking. Programs must incorporate innovative approaches to problem solving, be designed to achieve resilient and adaptive patterns of thinking, and be dynamic and evolutionary in nature, in terms of both content and delivery. (**DHS**, *Establishing a Department of Homeland Security University: Learning and Development Strategy*, September 28, 2007, p. 3)

Department of Homeland Security, Priorities (Secretary's Five Highest):

"The Department continues to be disciplined in its use of resources, and has structured its budget request to target the Secretary's five highest priorities.

- Protect Our Nation From Dangerous People
- Protect Our Nation From Dangerous Goods
- Protect Critical Infrastructure
- Build a Nimble Effective Emergency Response System and Culture of Preparedness
- Strengthen and Unify DHS Operations and Management." (**DHS**, *Budget-in-Brief, Fiscal Year 2008*, pp. 9-13)

Department of Homeland Security, Purpose: "We were established shortly after the September 11th attacks to mobilize our nation to prevent, protect against, and respond to acts of terrorism and other threats to our security." (**DHS/Chertoff**, Rice University, June 5, 2008, p. 1)

Department of Homeland Security, Risk-Based Planning: "…the Department's recently released *National Preparedness Goals* -- and additional, risk-based planning -- will form our standard in allocating future DHS grants to our state and local partners so that we build the right capabilities in the right places at the right level. Federal money should be distributed using the risk-based approach that we will apply to all preparedness activities." (DHS, *Secretary Michael Chertoff U.S. Department of Homeland Security Second Stage Review Remarks*, July 13, 2005)

Department of Homeland Security, Secretary's Five Highest Priorities: --See DHS Priorities

Department of Homeland Security, Strategic Goals:

- "**Awareness** -- Identify and understand threats, assess vulnerabilities, determine potential impacts and disseminate timely information to our homeland security partners and the American public.
- **Prevention** — Detect, deter and mitigate threats to our homeland.
- **Protection** — Safeguard our people and their freedoms, critical infrastructure, property and the economy of our Nation from acts of terrorism, natural disasters, or other emergencies.
- **Response** — Lead, manage and coordinate the national response to acts of terrorism, natural disasters, or other emergencies.
- **Recovery** — Lead national, state, local and private sector efforts to restore services and rebuild communities after acts of terrorism, natural disasters, or other emergencies.
- **Service** — Serve the public effectively by facilitating lawful trade, travel and immigration.
- **Organizational Excellence** — Value our most important resource, our people. Create a culture that promotes a common identity, innovation, mutual respect, accountability and teamwork to achieve efficiencies, effectiveness, and operational synergies." (**DHS**, *Strategic Plan*, 2004)

Department of Homeland Security, Strategic Plan: "In January 2003, the Department of Homeland Security became the Nation's 15th and newest Cabinet department, consolidating 22 previously disparate agencies under one unified organization. One year ago, no single federal department had homeland security as its primary objective. Now it is our mission. We are integrating our resources to meet a common goal. Our most important job is to protect the American people and our way of life from terrorism. We have a single, clear line of authority to get the job done. While we can never eliminate the potential for attack, particularly in a society that's as open, as diverse, and as large as ours, we will significantly reduce the Nation's vulnerability to terrorism and terrorist attack over time. Through partnerships with state, local and tribal governments and the private sector, we are working to ensure the highest level of protection and preparedness for the country and the citizens we serve.

This plan outlines our approach to implement the National Strategy to secure the United States from terrorist threats and attacks, and prepare our country by building up capacity to respond if either occurs. It provides the frame of reference in which we will set priorities and focus our operations. We, in the Department of Homeland Security, are working to protect our fellow citizens and our very way of life by securing our borders, our airports, our waterways and our critical infrastructure. We are increasing our nation's ability to respond to emergencies. We are protecting the rights of American citizens and enhancing public services. We understand our mission. The task before us is difficult, but not impossible. We undertake the challenges before us with the understanding that Americans do not live in fear. We live in freedom, and we will never let that freedom go." (**DHS**, *Securing Our Homeland: Strategic Plan 2004*, 24Feb2004, 2)

Department of Homeland Security, Vision: "Preserving our freedoms, protecting America ... we secure our homeland." (**DHS**, *Strategic Plan*, March 8, 2007 update)

Department of Homeland Security Component Parts, Programs and Organizations

Scroll Up For Entries on Goals, Missions, Principles, Priorities, Vision, etc.

Department of Homeland Security, Air and Marine Operations Center: 24/7 operations center for the Office of Air and Marine Operations within DHS' Customs and Border Protection, "the largest law enforcement air force in the world." (**DHS**, *Fact Sheet: Securing America's Borders CBP 2006 FY Review*)

Department of Homeland Security, Analysis, Dissemination, Visualization, Insight, and Semantic Enhancement (ADVISE) System: The "(ADVISE) system enables intelligence analysts to search rapidly and integrate information to identify and understand potential threats to homeland security." (**DHS/OIG**, *ADVISE Report*, June 2007. Preface)

Department of Homeland Security, BioWatch: "DHS, through the Science and Technology (S&T) Directorate, provides management oversight to the BioWatch program (BioWatch), an early warning system designed to detect the release of biological agents in the air through a comprehensive protocol of monitoring and laboratory analysis." (**DHS/OIG**, *DHS' Management of BioWatch*, 2007, p. 1)

"BioWatch was rolled out in just under 80 days from late January 2003 to mid-April 2003." (**DHS/OIG**, *DHS' Management of BioWatch*, 2007, p. 4)

Department of Homeland Security, BioWatch Exercise and Evaluation Program (BWEEP): "Under…BWEEP, all jurisdictions undergo a yearly assessment of operational proficiency." (**DHS/OIG**, *DHS' Management of BioWatch*, 2007, p. 12)

Department of Homeland Security, BioWatch Goals: "The goals of BioWatch are to:

- Provide early warning of a biological attack by expeditiously identifying the bio-agent, thereby minimizing casualties in an affected area;
- Assist in establishing forensic evidence on the source, nature, and extent of biological attack to aid law enforcement agents in identifying the perpetrators; and
- Determining a preliminary spatial distribution of biological contamination, including what populations may have been exposed." (**DHS/OIG**, *DHS' Management of BioWatch*, 2007, p. 2)

Department of Homeland Security, Buffer Zone Plans (BZPs) and Vulnerability Reduction Purchasing Plans (VRPPS): *Development of the BZP and VRPP***.** "The IP Protective Security Coordination Division (PSCD) provides a range of support to BZPP grantees and sub-grantees. PSCD can provide a federally guided vulnerability assessment team to assist in the development of the BZP. BZP workshops, which train law enforcement and other homeland security

prevention personnel on the BZP process, are also available to support grantee and sub-grantee jurisdictions. While conducting a BZP assessment with DHS assistance, a Site Assistance Visit (SAV) will also be conducted, when possible. The purpose of conducting a SAV in coordination with the BZP assessment is to provide the CIKR owner and operator with a facility report. This coordinated process reduces the need to revisit a site for a more detailed assessment, thus reducing the impact on owner/operators and on State and local homeland security personnel. Additionally, conducting these assessments simultaneously will provide a more thorough BZP and SAV report for State, local, and private sector partners to support prevention and protection efforts of CIKR.

• Jurisdictions are required to notify and include their PSAs in the BZP assessment. The PSA will coordinate federal resources to ensure the appropriate level of support and/or resources are available during the BZP workshop and/or assessment.

• Site vulnerability and jurisdiction capability assessments are critical elements of the BZPP process. Jurisdictions are expected to evaluate their relevant prevention and protection capabilities in accordance with the Target Capabilities List (TCL), and conduct, or leverage, existing vulnerability assessments of the specific CIKR site, including the zone outside the perimeter of the potential target. The assessment process must include coordination with security management, where possible, and consideration of security and safety measures already in place at the facility.

• The responsible jurisdictions are required to share these assessments with DHS, upon request, so that DHS may better prioritize preventive and protective programs, as they may be relevant to emerging and specific threats.

• Upon completion of these assessments, the responsible jurisdictions must complete the BZP template in coordination with the State for each identified CIKR site. Additionally, the development of the BZP must be coordinated with the following entities, as applicable and when possible:

o Urban Area Working Groups (UAWGs)
o Area Maritime Security Committees (AMSCs)
o Regional Transit Security Working Groups (RTSWGs)
o Protective Security Advisors (PSAs)
o Sector Specific Agencies (SSAs) (information on the SSAs located at http://www.dhs.gov/xlibrary/assets/NIPP_SectorOverview.pdf

"The BZP template serves as a useful tool that can be integrated to support CIKR protection program planning efforts across all sectors. The BZP will assist in identifying preventive and protective measures necessary to protect the CIKR site, mitigate vulnerabilities, or close capability gaps. This includes a description of required planning, equipment, training, and exercises necessary to address identified vulnerabilities and/or capability gaps.

• Upon completion of the BZP, the jurisdictions must complete a VRPP. The VRPP identifies a spending plan, including the planning activities and equipment necessary to implement the BZP. If multiple sites are identified in a single VRPP, the responsible jurisdictions should ensure that any requested equipment is available to support the implementation of preventive and protective measures for all identified sites in the VRPP, as appropriate and applicable. For more information on assessments or the assessment process, please contact ipassessment@dhs.gov.

Department of Homeland Security, Buffer Zone Protection Program (BZPP): A Department of Homeland Security program which provides "funding to protect and secure areas surrounding critical infrastructure and key resource sites such as chemical facilities, dams, and nuclear plants across the country. The Buffer Zone Protection Program (BZPP) provides targeted funding through states to local jurisdictions to purchase equipment that will extend the zone of protection beyond the gates of these critical facilities." (**DHS**, *Department of Homeland Security Announces $91.3 Million in Buffer Zone Protection Program Grants*, March 2, 2005.)

Department of Homeland Security, Buffer Zone Protection Program (BZPP): The BZPP assists responsible jurisdictions in building effective prevention and protection capabilities that will make it more difficult for terrorists to conduct site surveillance or launch attacks within the immediate vicinity of selected CI/KR assets. These capabilities are enumerated in Buffer Zone Plans (BZPs) that:
• Identify significant assets at the site(s) that may be targeted by terrorists for attack.
• Identify specific threats and vulnerabilities associated with the site(s) and its significant assets.
• Develop an appropriate buffer zone extending outward from the facility in which preventive and protective measures can be employed to make it more difficult for terrorists to conduct site surveillance or launch attacks.
• Identify all applicable law enforcement jurisdictions and other Federal, State, and local agencies having a role in the prevention of, protection against, and response to terrorist threats or attacks specific to the CI/KR site(s) and appropriate points of contact within these organizations.
• Evaluate the capabilities of the responsible jurisdictions with respect to terrorism prevention and response.
• Identify specific planning, equipment, training, and/or exercise requirements to better enable responsible jurisdictions to mitigate threats and vulnerabilities of the site(s) and its buffer zone.
(**DHS**, *Fiscal Year 2007 Infrastructure Protection Program: Buffer Zone Protection Program – Program Guidance and Application Kit*, January 2007, pp. 2-3)

Department of Homeland Security, Buffer Zone Protection Program (BZPP): "The Buffer Zone Protection Program (BZPP) is one of five grant programs that constitute the Department of Homeland Security (DHS) Fiscal Year 2008 focus on infrastructure protection activities. The BZPP is one tool among a comprehensive set of measures authorized by Congress and implemented by the Administration to help strengthen the nation's critical infrastructure against risks associated with potential terrorist attacks. The vast bulk of America's critical infrastructure is owned and/or operated by State, local and private sector partners. The funds provided by the BZPP are provided to increase the preparedness capabilities of jurisdictions responsible for the safety and security of communities surrounding high-priority critical infrastructure and key resource (CIKR) assets through allowable planning and equipment acquisition. The purpose of this package is to provide: (1) an overview of the BZPP; and (2) the formal grant guidance and application materials needed to apply for funding under the program. Also included is an explanation of DHS management requirements for implementation of a successful application." (DHS, *Fiscal Year 2008 Buffer Zone Protection Program Guidance and Application Kit*, February 2008, page 1).

Department of Homeland Security, Buffer Zone Protection Program (BZPP): "Described as a surgical approach to protecting CI/KR, the goal of the BZPP is to provide funding for the purchase of equipment that will:

• Devalue a target by making it less attractive or too costly to attack;
• Deter an event from happening;
• Detect an aggressor planning or committing an attack, or the presence of a hazardous device or weapon; and
• Defend against attack by delaying or preventing an aggressor's movement toward the asset, or the use of weapons and explosives." (**DHS/OIG**, *Review of the BZPP*, July 2007, p. 3)

Department of Homeland Security, Center for Academic and Interagency Programs:
"The Center for Academic and Interagency Programs will employ partnerships and current best practices to provide DHS employees with the highest quality training, education and professional development opportunities available in the homeland security community. The Center will establish and maintain partnerships and linkages with interagency counterparts, institutions of higher learning and professional associations.

"As the academic discipline of homeland security emerges and grows, it will eventually develop enough depth to positively impact DHS operations and initiatives. The Center for Academic and Interagency Programs provides a foundation for the DHS University System, supporting the pillars by sustaining a cycle of continuous academic improvement. Effective implementation will require:

• **Communication:** The Department will first focus on increasing awareness of the many programs already available to employees within DHS components and throughout academia and the interagency community. This requires continuous and timely communication and information sharing between organizations. The Department will share relevant information on training, education and professional development opportunities through the DHS OCHCO learning and development website and interagency consortiums and councils.
• **Coordination:** Coordination via partnerships and linkages will include managing learning opportunity quotas between agencies and determining appropriate mixes of employee populations to maximize the learning benefit and methods to leverage opportunities at academic institutions. All parties involved must carefully consider the benefits of the partnership in order to optimize the value to DHS and to our partners.
• **Collaboration:** Melding the talents and expertise of workforce managers, course developers and content managers from different agencies will facilitate interagency communication and cooperation. The collective work of cross-cultural learning and development professionals will help build and sustain cooperative interagency and intergovernmental working relationships. By working together, the multi-faceted academic discipline of homeland security will emerge and grow.
• **Programs:** The Katrina Lessons Learned Interagency Working Group on Professional Development, the DHS Training Leaders Council and the National Security Education Consortium have all identified the value of reaching outside the Department to build capacity and capabilities to support mission operations. DHS is involved in several such program initiatives and is developing new programs that when expanded will more effectively meet

current and future DHS and interagency professional development needs. Some examples include:
• The Science and Technology Directorate's Centers of Excellence and Homeland Security Scholars and Fellows Programs
• National Security Education Consortium pilot for a National Security Professionals Program
• The DHS Office of Grant Programs (FEMA/GP) funded Center for Homeland Defense and Security Executive Development Program
• The Center for Academic and Interagency Programs Center will augment existing programs by establishing new fellowship, scholarship and internship opportunities at the baccalaureate and graduate levels to align with mission-critical occupational requirements and functional areas (e.g., maritime security, intelligence, human resources management)

"Partnerships, communication, coordination and collaboration with our academic and governmental counterparts will support the pillars of the DHS University System and develop unlimited potential for employee learning and development, while effectively enhancing the Department's and Nation's capacity to manage homeland and national security missions. (**DHS**, *Establishing a DHS University System*, Sep 2007, pp. 16-17)

Department of Homeland Security, Critical Infrastructure Partnership Advisory Council: "CIPAC is a partnership between government and private sector CI/KF [critical infrastructure and key resources] owners and operators that facilitates effective coordination of Federal CI/KR protection programs…DHS published a Federal Register Notice on March 24, 2006, announcing the establishment of CIPAC as a Federal Advisory Committee Act (FACA) exempt body pursuant to section 871 of the Homeland Security Act…" **(DHS**, *NIPP***,** 2006, p. 27)

Department of Homeland Security, Critical Infrastructure Protection – Decision Support System (CIP-DSS): "The CIP-DSS provides a unique, scientifically-informed approach for prioritizing critical infrastructure protection strategies and resource allocations. Using modeling, simulation, and analyses to assess vulnerabilities, consequences, and risks, the system develops and evaluates protection, mitigation, response, and recovery strategies and technologies; and provides real-time support during crises and emergencies to leadership within the Department and the rest of the government. This measure demonstrates the availability of actionable information to help protect U.S. critical infrastructure from acts of terrorism, natural disasters, and other emergencies." (**DHS**, *Performance Budget Overview, FY 2008,* March 2007, 29)

Department of Homeland Security, Customs and Border Protection (CBP): "…the Nation's frontline border agency… responsible for protecting the Nation's borders in order to prevent terrorists and terrorist weapons from entering the United States, while facilitating the flow of legitimate trade and travel. CBP provides shipping security at the Nation's ports and border security to prevent illegal entry of goods or individuals into this country." (**DHS**, The Homeland Security Challenge, *Capstone Doctrine Pub 1 Draft*, 2008, 8)

Department of Homeland Security, Director of Operations Coordination: "The DHS Director of Operations Coordination is the Secretary's principal advisor for the overall departmental level of integration of incident management operations and oversees the National Operations Center. Run by the Director, the National Operations Center is intended to provide a

one-stop information source for incident information sharing with the White House and other Federal departments and agencies at the headquarters level." (**DHS**, *NRF*, 2008, 55)

Department of Homeland Security, Directorate for Management: "The Directorate for Management is responsible for budget, appropriations, expenditure of funds, accounting and finance; procurement; human resources and personnel; information technology systems; facilities, property, equipment, and other material resources; and identification and tracking of performance measurements relating to the responsibilities of the Department." Within this Directorate are:

- Chief Administrative Services Officer
- Chief Financial Officer
- Chief Human Capital Officer
- Chief Information Officer
- Chief Procurement Officer
- Chief Security Officer (**DHS**, *Directorate for Management*, March 2, 2007)

Department of Homeland Security, Directorate for National Protection and Programs. See DHS NPP Directorate, below.

Department of Homeland Security, Directorate for Science and Technology. See DHS S&T Directorate below.

Department of Homeland Security, DHScovery: "DHScovery is owned by the Office of the Chief Information Officer (OCIO) in partnership with the Office of the Chief Human Capital Officer (OCHCO). DHScovery will create an e-training environment that supports development of the Department of Homeland Security (DHS) workforce through simplified one-stop access to high quality e-training products and services…. Many of the current DHS components maintain and operate their own training systems. DHScovery's goal is to consolidate all training programs at DHS into a single operation. DHScovery is intended to accomplish several objectives including:

- Providing easy access to mandatory and professional development training,
- Facilitating sharing of courses through a common DHS course catalog…" (**DHS**, *Privacy Impact Assessment for the DHS Headquarters DHScovery*, January 19, 2006, p. 2)

Department of Homeland Security, Enterprise Data Management Office (EDMO): "…responsible for the data architecture of DHS, and is engaged in helping DHS lay the foundation and building blocks for an information sharing environment." (**Metatopia**, "Geospatial Data and the National Information Exchange Model, November 5-7, 2007)

Department of Homeland Security, Federal Emergency Management Agency: "The primary mission of the Federal Emergency Management Agency is to reduce the loss of life and property and protect the Nation from all hazards, including natural disasters, acts of terrorism, and other man-made disasters, by leading and supporting the Nation in a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation." (**FEMA**, *About FEMA, What We Do, FEMA Mission*, October 16, 2007)

Department of Homeland Security, Federal Law Enforcement Training Center (FLETC): The FLETC "provides career-long training to law enforcement professionals to help them fulfill their responsibilities safely and proficiently." (**DHS**, *Department Subcomponents and Agencies*)

Department of Homeland Security, Functional Areas: "The DHS Enterprise Architecture, developed and baselined originally by the DHS Chief Information Officer with the input of DHS Components, organizes the Department's mission space around "Functional Areas." The Functional Areas designate groupings of activities, assets, programs, projects and other resources around groups of similar functions. Each of the Functional Area groupings are designed to encompass the mission spaces of multiple Components, thereby helping to illuminate areas where cross-component coordination and integration could be beneficial to the Department's missions. They also help provide a DHS-wide view of what the Department does and what resources it will need to accomplish its missions." (**DHS**, *IPG FY 2011-2015 Draft*, 2008, 10)

1. Screening
2. Securing
3. Law Enforcement
4. Domain Awareness
5. Incident Management
6. Benefits Administration

Department of Homeland Security, Homeland Infrastructure Threat and Risk Analysis Center (HITRAC). "DHS has established the …HITRAC to develop products to help inform infrastructure owners and operators of any threats they may potentially face, as well as to better inform their security planning and investment decisions. HITRAC is currently working in partnership with industry to develop an updated threat assessment for the chemical sector detailing plausible terrorist threats on a sector basis. This effort includes available intelligence as well as operational tactics, techniques, and procedures derived from study of overseas terrorist operations." **(DHS/Stephan**, June 15, 2005, p. 3)

"The Department's Homeland Infrastructure Threat and Risk Analysis Center (HITRAC) conducts all-source intelligence research and analysis to assess the potential threat to critical infrastructure and key resources across the Nation, as well as develop lessons learned products derived from attacks on commercial venues abroad. HITRAC's goal is to provide owners and operators of CIKR with strategically relevant and actionable information on threats they face, primarily from terrorists. HITRAC conducts outreach to both private sector and public sector partners through classified and unclassified threat briefings to members of private sector coordinating councils; government coordinating councils; State and local officials; and individual companies." (**DHS**, *Statement for…Record, Robert B. **Stephan**, Assistant Secretary, Infrastructure Protection…[NPPD, DHS] before... Committee on…[HLS],* July 9, 2008, p.5)

Department of Homeland Security, Homeland Security Academy:
"*Objective*: The Homeland Security Academy cultivates creative homeland security strategic analysis and decision-making skills through a high quality, fully accredited graduate degree program in homeland security studies.

"*Overview*: The DHS Homeland Security Academy graduate program initially will support an existing DHS program funded by the Office of Grant Programs (FEMA/GP) and offered at the Center for Homeland Defense and Security located at the Naval Postgraduate School in Monterey, California.

"The Homeland Security Academy will employ DHS and other government training facilities to disseminate graduate-level homeland security curricula for select DHS, interagency, state and local students. A new group of students will start every six months with a desired FY09 goal of three classes in session at any given time. Each class will attend the program for 18 months and will participate in a blended learning environment comprised of two-weeks of in-residence instruction per quarter and online learning. The Academy will matriculate 200 students annually when combined with the three-class program for state and local participants administered by the Office of Grant Programs (FEMA/GP) at the Monterey, California facility.

"To establish deeper interagency and military understanding and cooperation and to maximize master's level education opportunities in National Security Studies, the Department will expand its relationships with National Defense University, the Foreign Service Institute and other senior service schools. These collaborative relationships provide the essential link between National Security and Homeland Security missions so critical to protecting national interests. These programs include:
• Industrial College of the Armed Forces
• National War College
• Joint Forces Staff College
• US Army War College
• Naval War College." (**DHS**, *Establishing a DHS University System*, Sep 2007, p. 15)

Department of Homeland Security, Homeland Security Advisory Council (HSAC): "The HSAC provides advice and recommendations to the Secretary of Homeland Security on relevant issues. The Council members, appointed by the DHS Secretary, include experts from State and local governments, public safety, security and first-responder communities, academia, and the private sector." **(DHS**, *NIPP,* 2006, p. 27)

Department of Homeland Security, Homeland Security Education Program: "H.R. 4331, DHS Appropriations Act 2007, Section 623 amending the Homeland Security Act to establish a graduate level Homeland Security Education Program." "The Secretary, acting through the Administrator, shall establish a graduate-level Homeland Security Education Program in the National Capital Region to provide educational opportunities to senior Federal officials and selected state and local officials with homeland security and emergency management responsibilities." (DHS, *Establishing a Department of Homeland Security University: Learning and Development Strategy*, September 28, 2007, p. 5)

Department of Homeland Security, Homeland Security Institute (HSI: First announced on April 23, 2004 and operational in June 2004, the HSI was DHS's first federally funded research and development center or "think tank."

Department of Homeland Security, Homeland Security Preparedness: "Homeland security preparedness is a comprehensive national program encompassing all homeland security systems involved in the planning of organizational, operational, and technical measures designed to achieve full and sustainable performance to prevent, disrupt, or deter threats or acts of terrorism; reduce vulnerabilities; mitigate the effects of acts of terrorism; respond to threats and acts of terrorism; and perform effective remediation and recovery efforts from terrorist attacks throughout the entire threat spectrum, including terrorist use of chemical, biological, radiological, nuclear, and explosive weapons of mass destruction (CBRNE WMD)." (**DHS/ ODP**, *HSEEP*, Vol. II, 2003, p. ix)

Department of Homeland Security, Homeland Security Preparedness Technical Assistance Program (HSPTAP): "The Homeland Security Preparedness Technical Assistance Program (HSPTAP) is a capabilities-based program that is structured to build and sustain State and local capacity in preparedness activities. Under this vision, the technical assistance (TA) services developed and delivered to State and local homeland security personnel address the full spectrum of mission areas, national priorities, and target capabilities outlined in the National Preparedness Goal (the Goal). As capability gaps are identified, the HSPTAP develops services to address those needs and build priority capabilities in the most critical areas. The HSPTAP is designed to be an agile program that addresses present day areas of greatest State and local need; is committed to transferring and institutionalizing knowledge at the State and local level; provides a dynamic menu of services that is responsive to national priorities; is performance based; and effectively leverages limited resources. HSPTAP provides direct assistance to State, regional, local, and Tribal jurisdictions to improve their ability to prevent, protect against, respond to, and recover from major events, including threats or acts of terrorism" Program Guidance and Application Kit (**DHS**, *Programs*, March 4, 2008)

Department of Homeland Security, Homeland Security Science and Technology Advisory Committee (HSSTAC): "The Department of Homeland Security through the Science and Technology division is harnessing the nation's scientific knowledge to protect America and our way of life from terrorists and their weapons of mass destruction. The Homeland Security Science and Technology Advisory Committee (HSSTAC) is assisting the division in its efforts.
Overview and Mission:

> The Homeland Security Act of 2002 directed the Secretary of Homeland Security to establish a Homeland Security Science and Technology Advisory Committee (HSSTAC). The Committee's mission is to serve as a source of independent, scientific and technical planning advice for the Under Secretary for Science and Technology.

Duties:

> Focus the responsibilities of the Science and Technology division to organize the nation's scientific and technological resources to prevent or mitigate the effects of catastrophic terrorism against the United States, including sponsorship and coordination of research and development for this purpose…." (**DHS**, *Fact Sheet: HSSTAC*, February 26, 2004)

Department of Homeland Security, Immigration and Customs Enforcement (ICE):
"Created in March 2003, ICE… is the largest investigative branch of …DHS. The agency was created after 9/11, by combining the law enforcement arms of the former Immigration and Naturalization Service (INS) and the former U.S. Customs Service, to more effectively enforce

our immigration and customs laws and to protect the United States against terrorist attacks. ICE does this by targeting illegal immigrants: the people, money and materials that support terrorism and other criminal activities. ICE is a key component of the DHS 'layered defense' approach to protecting the nation." (**ICE**, *About Us*, 31 Oct 2007)

Department of Homeland Security, Infrastructure Protection Program (IPP): "The DHS Infrastructure Protection Program (IPP) is designed to strengthen the Nation's ability to protect critical infrastructure facilities and systems. IPP is comprised of five separate grant programs: the Transit Security Grant Program (TSGP), the Port Security Grant Program (PSGP), the Intercity Bus Security Grant Program (IBSGP), the Trucking Security Program (TSP), and the Buffer Zone Protection Program (BZPP). Funding under these grant programs will total roughly $445 million for State, local and private industry infrastructure protection initiatives. Together, these grants fund a range of preparedness activities, including strengthening infrastructure against explosive attacks, preparedness, planning, equipment purchase, training, exercises, and security management and administration costs. IPP programs support objectives outlined in the interim National Preparedness Goal and related national preparedness doctrine, such as the National Incident Management System, the National Response Plan, and the National Infrastructure Protection Plan." (**DHS**, *Infrastructure Protection Program*, May 10, 2007)

"The risk methodology for the IPP programs is consistent across the modes and is linked to the risk methodology used to determine eligibility for the core DHS State and local grant programs. The risk formula for the IPP program is based on a 100 point scale comprised of *threat* (20 points) and *vulnerability/consequence* (80 points). The threat component of the formula is drawn from comprehensive analysis by the Intelligence Community of known threats from all data sources at its disposal." (**DHS,** *Overview: FY 2007 IPP Final Awards*, 2007, p 3)

Department of Homeland Security, Interagency Coordinating Council on Emergency Preparedness and Individuals with Disabilities: Created by Presidential Executive Order: *Individuals with Disabilities in Emergency Preparedness*, July 22, 2004. "Section 1. Policy. To ensure that the Federal Government appropriately supports safety and security for individuals with disabilities in situations involving disasters, including earthquakes, tornadoes, fires, floods, hurricanes, and acts of terrorism, it shall be the policy of the United States that executive departments and agencies of the Federal Government (agencies):
(a) consider, in their emergency preparedness planning, the unique needs of agency employees with disabilities and individuals with disabilities whom the agency serves;
(b) encourage, including through the provision of technical assistance, as appropriate, consideration of the unique needs of employees and individuals with disabilities served by State, local, and tribal governments and private organizations and individuals in emergency preparedness planning; and
(c) facilitate cooperation among Federal, State, local, and tribal governments and private organizations and individuals in the implementation of emergency preparedness plans as they relate to individuals with disabilities." (**White House**. *Executive Order: Individuals with Disabilities in Emergency Preparedness*, July 22, 2004)

Department of Homeland Security, Interoperable Communications Technical Assistance Program (ICTAP): Through the ICTAP "ODP will provide to any site or state, on a first-come,

first-served basis, no-cost technical assistance in developing and exercising a Tactical Interoperable Communications Plan. ICTAP has assigned a site manager and a site technical lead to each UASI grantee and to states without a designated urban area. These individuals (and support staff) are available on a first-come, first-served basis to meet with a site's governance, operations, and technical working groups to facilitate TICP development and documentation and to support table top exercises." (**DHS/ODP**, *ODP TICP FAQs*, May 16, 2005, p. 1)

Department of Homeland Security, Law Enforcement Terrorism Prevention Program (LETPP) "…focuses upon the prevention of terrorist attacks and provides law enforcement and public safety communities with funds to support the following activities: intelligence gathering and information sharing through enhancing/establishing fusion centers; hardening high-value targets; planning strategically; continuing to build interoperable communications; and collaborating with non-law enforcement partners, other government agencies and the private sector." (**DHS**, *State Contacts & Grant Award Information,* July 18, 2007 Update)

Department of Homeland Security, Metropolitan Medical Response System (MMRS): "The MMRS program began by awarding contracts to municipalities, requiring the submission of disaster response plans as the contract deliverable. The program's scope now includes planning as well as exercising, training, and equipment purchasing. Currently, MMRS awards are provided annually to 124 of the nation's most populous cities to develop plans and conduct related activities for mass casualty incidents by coordinating efforts among first responders, healthcare providers, public health officials, emergency managers, volunteer organizations, and other local entities.[83] In FY2007, each MMRS jurisdiction received $258,145 to establish or sustain local mass casualty preparedness capabilities. Each fiscal year, MMRS guidance explicitly requires grantees to update or revise their plans as needed to address new benchmarks." (**CRS**, *Pandemic Influenza: An Analysis of State Preparedness and Response Plans*, September 24, 2007, p. 27)

Department of Homeland Security, Metropolitan Medical Response System (MMRS): The MMRS "grant program funds support MMRS jurisdictions to further enhance and sustain an integrated, systematic mass casualty incident preparedness program that enables a first response during the first crucial hours of an incident." (**DHS**, *State Contacts & Grant Award Information*, July 18, 2007 Update)

Department of Homeland Security, National Applications Office (NAO): "The U.S. Department of Homeland Security's (DHS) National Applications Office (NAO) is the executive agent to facilitate the use of intelligence community technological assets for civil, homeland security and law enforcement purposes within the United States. The office will begin initial operation by fall 2007 and will build on the long-standing work of the Civil Applications Committee, which was created in 1974 to facilitate the use of the capabilities of the intelligence community for civil, non-defense uses in the United States.

"While civil users are well supported for purposes such as monitoring volcanic activity, environmental and geological changes, hurricanes, and floods through the current Civil Applications Committee, homeland security and law enforcement will also benefit from access to Intelligence Community capabilities. As a principal interface between the Intelligence

Community and the Civil Applications, Homeland Security and Law Enforcement Domains, the National Applications Office will provide more robust access to needed remote sensing information to appropriate customers by:

- Enabling a wide spectrum of civil applications, homeland security, and law enforcement users greater access to the collection, analysis, and production skills and capabilities of the intelligence community;
- Enhancing intelligence and information sharing and dissemination to federal, state, and local government and law enforcement users;
- Educating customers about the capabilities and products of the intelligence community;
- Advocating future collection technology needs of the civil applications, homeland security and law enforcement customers in the intelligence community and Department of Defense forums; and
- Providing a forum for discussion of proper use oversight and management of new uses of classified information on behalf of domains, in addition to already established uses." (**DHS**, *Fact Sheet: National Applications Office*, August 15, 2007)

Department of Homeland Security, National Biosurveillance Integration Center (NBIC):
"…the Office of Health Affairs, within DHS, is leading the National Biosurveillance Integration Center, or NBIC, partnership…. NBIC brings together biological information from various Federal partners and open sources to develop an integrated picture of biological risks. The President has called for a "timely response to mitigate the consequences of a biological weapons attack." Our mission was initially established through Homeland Security Presidential Directives (HSPDs) 9 and 10. It was also recently codified in title XI of P.L. 110-53, *Implementing Recommendations of the 9/11 Commission Act of 2007.*

"NBIC seeks to provide information to allow early recognition of biological events of national concern, both natural and man-made, to make a timely response possible. No other place in government serves to integrate this information from across the spectrum of public and private, domestic and international, open or protected sources. The three…component parts of NBIC are:

- A robust information management system capable of handling large quantities of structured and unstructured information;
- A corps of highly-trained subject matter experts and analysts; and
- A clear establishment of a culture of cooperation, trust and mutual support across the Federal government and other partners….

"To provide additional value to our partners, DHS has the advantage of its access to threat information, which, when integrated with surveillance of health data and disease outbreak trends may provide early warning of a biological attack. To accomplish this, fused information products and other patterns and trends developed from biosurveillance sources are provided to our agency partner, the DHS Office of Intelligence and Analysis, for incorporation with intelligence analysis products. When appropriate, the product can be forwarded to the wider Intelligence Community and pertinent threat analysis information added for return to the Center for further interagency dissemination. This final process of actionable information preparation fuses biosurveillance patterns and trends with threat information. The completed products can then be provided to the National Operations Center (NOC) for inclusion in the Common Operating Picture (COP). This distribution closes the loop by providing biosurveillance situational awareness back to NBIC partner agencies and other organizations.

"By integrating and fusing this large amount of available information we can then begin to develop a base-line against which we can recognize anomalies and changes of significance. NBIC seeks to identify patterns and trends, which in combination with threat analysis provide the situational awareness our partners need to execute their mission." (**DHS**, *Testimony of Dr. Kimothy Smith…National Biosurveillance Integration Center*, October 4, 2007)

Department of Homeland Security, National Biosurveillance Integration System Operational Display System (NODS): "…an IT system that provides our Center [NBIC] the visibility into over 300-plus unclassified sources of biosurveillance information from across multiple sources. This information is aggregated with various reports that we receive from the departments of Defense, State, Health and Human Services, Agriculture, and Transportation and other sources. Our relationship and integration of such valuable sources, such as ARGUS is firmly established within NODS." (**DHS**, *Testimony of Dr. Kimothy Smith…NBIC...,* 4Oct2007)

Department of Homeland Security, National Biosurveillance Watch Desk: Operates 24/7 within the National Operations Center (NOC), which first stood up in December 2005. (**DHS**, *Testimony of Dr. Kimothy Smith…NBIC*…, October 4, 2007)

Department of Homeland Security, National Cyber Security Center:

Department of Homeland Security, National Cyber Security Division (NCSD):
"*Mission* The National Cyber Security Division (NCSD) works collaboratively with public, private, and international entities to secure cyberspace and America's cyber assets.
Strategic Objectives To protect the cyber infrastructure, NCSD has identified two overarching objectives:

- To build and maintain an effective national cyberspace response system
- To implement a cyber-risk management program for protection of critical infrastructure.

Organization and Functions NCSD works to achieve its strategic objectives through the following programs:
National Cyberspace Response System The National Cyber Security Division seeks to protect the critical cyber infrastructure 24 hours a day, 7 days a week. The National Cyberspace Response System coordinates the cyber leadership, processes, and protocols that will determine when and what action(s) need to be taken as cyber incidents arise. Examples of current cyber preparedness and response programs include:

- *Cyber Security Preparedness and the National Cyber Alert System* - Cyber threats are constantly changing. Both technical and non-technical computer users can stay prepared for these threats by receiving current information by signing up for the National Cyber Alert System.
- *US-CERT Operations* - US-CERT is responsible for analyzing and reducing cyber threats and vulnerabilities, disseminating cyber threat warning information, and coordinating incident response activities.
- *National Cyber Response Coordination Group* - Made up of 13 Federal agencies, this is the principal Federal agency mechanism for cyber incident response. In the event of a nationally significant cyber-related incident, the NCRCG will help to coordinate the

Federal response, including US-CERT, law enforcement, and the intelligence community.

- *Cyber Cop Portal* – Coordination with law enforcement helps capture and convict those responsible for cyber attacks. The Cyber Cop Portal is an information sharing and collaboration tool accessed by over 5,300 investigators worldwide who are involved in electronic crimes cases.

Cyber-Risk Management Programs - Through Cyber Risk Management, the National Cyber Security Division seeks to assess risk, prioritize resources, and execute protective measures critical to securing our cyber infrastructure. Examples of current cyber risk management programs include:

- *Cyber Exercises: Cyber Storm* - Cyber Storm is a nationwide cyber security exercise that took place in early February 2006, to assess preparedness capabilities in response to a cyber incident of national significance. Cyber Storm was the Department of Homeland Security's first cyber exercise testing response across the private sector as well as international, Federal, and state governments.
- *National Outreach Awareness Month* - Every October the National Cyber Security Division coordinates with multiple states, universities and the private sector to produce National Cyber Security Awareness month.
- *Software Assurance Program* - This program seeks to reduce software vulnerabilities, minimize exploitation, and address ways to improve the routine development and deployment of trustworthy software products. Together, these activities will enable more secure and reliable software that supports mission requirements across enterprises and the critical infrastructure." (**DHS**, *National Cyber Security Division*, 23Sep06 modification)

Department of Homeland Security, National Domestic Incident Response Planning Components: "The Department has four Components with <u>*major*</u> National domestic incident response planning requirements. These Components include:

- Directorate of Policy
- Federal Emergency Management Agency
  - National Preparedness Division (Executive Agent for the NIMS)
  - Disaster Operations Division (Executive Agent for the NRP and ESFLG)
  - National Security Coordination (Executive Agent for COOP)
- National Protection and Programs Directorate
  - Infrastructure Protection Division (Executive Agent for the NIPP)
- Office of Operations Coordination
  - National Operations Center (NOC) Planning Element (called the Incident Management Planning Team [IMPT]). (**DHS**, 2007)

Department of Homeland Security, National Infrastructure Advisory Council (NIAC): "The NIAC provides the President, through the Secretary of Homeland Security, with advice on the security of physical and cyber systems across all CI/KR sectors. The Council is comprised of up to 30 members appointed by the President. Members are selected from the private sector, academia, and State and local governments. The Council was established (and amended) under Executive Orders 13231, 13286, and 13385." (**DHS,** *NIPP*, 2006, 28.)

Department of Homeland Security, National Infrastructure Coordinating Center (NICC*).* "Part of the NOC [DHS Operations Center], the NICC monitors the nation's critical infrastructure and key resources on an ongoing basis. During an incident, the NICC provides a coordinating forum to share information across infrastructure and key resources sectors through appropriate information-sharing entities such as the Information Sharing and Analysis Centers and the Sector Coordinating Councils." (**DHS**, *NRF Comment Draft,* 2007, 54; see, also, **DHS,** *NRF*, 2008, 56))

Department of Homeland Security, National Operations Center (NOC): "The NOC links key headquarters components together. It is comprised of five sub-elements:

- **The NOC – Interagency Watch (NOC-Watch, DHS HQ).** The NOC Interagency Watch is a standing 24/7 interagency organization fusing law enforcement, national intelligence, emergency response, and private sector reporting. The NOC-Watch facilitates homeland security information-sharing and operational coordination with other Federal, State, local, tribal, and nongovernmental emergency operations centers.

- **National Response Coordination Center (NOC-NRCC), FEMA.** The NOC-NRCC monitors potential or developing incidents and supports the efforts of regional and field components, including coordinating the preparedness of national-level emergency response teams and resources; in coordination with Regional Response Coordination Centers (RRCCs), initiating mission assignments or reimbursable agreements to activate other Federal departments and agencies; and activating and deploying national-level specialized teams. In addition, the NOC-NRCC resolves Federal resource support conflicts and other implementation issues forwarded by the JFO. Those issues that cannot be resolved by the NOC-NRCC are referred to the IAC. During an incident, the NOC-NRCC operates on a 24/7 basis or as required in coordination with other elements of the NOC.

- **Intelligence and Analysis (NOC-I&A).** I&A is responsible for interagency intelligence collection requirements, analysis, production, and product dissemination for DHS. I&A coordinates or disseminates homeland security threat warnings, advisory bulletins, and other information pertinent to national incident.

- **National Infrastructure Coordination Center (NOC-NICC).** The NOC-NICC monitors the Nation's critical infrastructure and key resources (CI/KR) on an ongoing basis. During an incident, the NOC-NICC provides a coordinating forum to share information across infrastructure and key resources sectors through appropriate information-sharing entities such as the Information Sharing & Analysis Centers and the Sector Coordinating Councils.

- **NOC-Planning Element:** The NOC-Planning Element conducts national domestic incident management planning and coordination. This includes coordinating response, recovery, and mitigation operational planning and interagency coordination with the NOC-NRCC; coordinating and sustaining Federal preparedness, prevention, and protection activities related to an Incident of National Significance or at the Secretary's

> direction; and coordinating preparedness, prevention, and protection operations and resource allocation planning with the appropriate Federal departments and agencies, the NOC-NRCC, the RRCCs, and the JFO. Also called the Incident Management Planning Team (IMPT)." (**DHS**, *National Planning and Execution System*, 2007 Draft, pp. 3-5/6)

"The DHS National Operations Center (NOC) is responsible for facilitating homeland security coordination across the Federal mission areas of prevention, protection, response and recovery. The NOC serves as the national fusion center, collecting and synthesizing all-source information to determine if there is a terrorist nexus. The NOC also shares all-threats and all-hazards information across the spectrum of homeland security partners. Federal departments and agencies should report information regarding actual or potential incidents requiring a coordinated Federal response to the NOC." (**DHS**, *NRF Comment Draft*, 2007, p, 32)

"The NOC is the primary national hub for domestic incident management operational coordination, and situational awareness. The NOC is a standing 24/7 interagency organization fusing law enforcement, national intelligence, emergency response, and private sector reporting." (**FEMA**, *Mission Assignment SOPs Draft*, 2007, p. 56)

"National Operations Center is the principal operations center for the Department [DHS] and shall (1) provide situational awareness and a common operating picture for the entire Federal Government, and for State, local, and tribal governments as appropriate, in the event of a natural disaster, act of terrorism, or other man-made disaster; and (2) ensure that critical terrorism and disaster-related information reaches government decision-makers." (**Post-Katrina EM Reform Act of 2006**, p. 1409)

Department of Homeland Security, National Protection and Programs Directorate (NPPD):
"The goal of the National Protection and Programs Directorate is to advance the Department's risk-reduction mission. Reducing risk requires an integrated approach that encompasses both physical and virtual threats and their associated human elements…. The components of the National Protection and Programs Directorate include:
Office of Cybersecurity and Communications (CS&C: CS&C has the mission of assuring the security, resiliency, and reliability of the nation's cyber and communications infrastructure.
Office of Infrastructure Protection (OIP): OIP leads the coordinated national effort to reduce risk to our critical infrastructures and key resources (CI/KR) posed by acts of terrorism. In doing so, the Department increases the nation's level of preparedness and the ability to respond and quickly recover in the event of an attack, natural disaster, or other emergency.
Office of Intergovernmental Programs (IGP): IGP has the mission of promoting an integrated national approach to homeland security by ensuring, coordinating, and advancing federal interaction with state, local, tribal, and territorial governments.
Office of Risk Management and Analysis (RMA): RMA serves as the Department's Executive Agent for national risk management and analysis.
US-VISIT uses innovative biometrics-based technological solutions--digital fingerprints and photographs--to provide decision-makers with accurate information when and where they need.. (**DHS**, *National Protection and Programs Directorate*, January 25, 2008)

Department of Homeland Security, Nonprofit Security Grant Program (NSGP):

"Grants are being awarded to nonprofit organizations according to criteria that include:

- Prior identified and substantiated threats or attacks by a terrorist organization, corroborated by intelligence or law enforcement reporting, toward the nonprofit or closely-related organization, either within or outside the United States;
- Symbolic value of a site as a highly recognized national or historical institution that renders it a possible terrorist target;
- Organization's role in responding to or recovering from terrorist attacks; and
- Organization's credible threat or vulnerability, as well as the potential consequences of an attack, as determined by a previously conducted risk assessment.

NSGP grants seek to integrate nonprofit preparedness activities with broader state and local preparedness efforts. The program is also designed to promote coordination and collaboration in emergency preparedness activities among public and private community representatives, state and local government agencies, and Citizen Corps Councils." (**DHS**, *DHS Announces $24 Million in Homeland Security Nonprofit Grants*, 28Sep07)

Department of Homeland Security, Office of Business Continuity and Emergency Preparedness (BCEP): "ICF International…today announced it has won a new task order valued at $5.6 million with…DHS, Office of Business Continuity and Emergency Preparedness (BCEP). The task order was issued under a Blanket Purchase Agreement awarded to ICF in June 2006 to supply professional and program management support services to DHS headquarters. It has been funded for the first year at $1.4 million, with two option years.
Under the task order, ICF will support BCEP activities to ensure the DHS headquarters is able to continue operations during any emergency situation. This is ICF's first task order for new work with BCEP, the office responsible for setting continuity of operations policy for all DHS offices and divisions. ICF is partnering on this work with Lockstep Consulting, LLC, a national security/emergency preparedness consultant."

Centredaily.com. "ICF International Awarded Task Order by Department of Homeland Security Valued at $5.6 Million: Firm to Support Business Continuity and Emergency Preparedness Office." 19 Feb 2008

Department of Homeland Security, Office of Chief of Staff: "The Chief of Staff is responsible for the coordination of all Department agencies, directorates, and offices. This office is tasked to streamline, coordinate, and deliver initiatives and policies that will ensure our safety, response capacity, and our freedoms." (**DHS**, *DHS FY 2009 Cong. Budget Justification*, 2008, 3144)

Department of Homeland Security, Office of Civil Rights and Civil Liberties: (**DHS**, *Office of CR&CL*, December 7, 2007)

Department of Homeland Security, Office of Emergency Communications (OEC, DHS): "OEC Mission Statement: The OEC supports and promotes the ability of emergency responders and government officials to continue to communicate in the event of natural disasters, acts of terrorism, or other man-made disasters, and works to ensure, accelerate, and attain interoperable and operable emergency communications nationwide." (**OEC** October 18, 2007 slide pres.)

Department of Homeland Security, Office of Counternarcotics Enforcement:
"…responsible for developing policies that will unify the Department's counternarcotics activities, and coordinates efforts to monitor and combat connections between illegal drug trafficking and terrorism." (**DHS**, *Director…OCE*, 07)

Department of Homeland Security, Office of Cybersecurity and Communications (CS&C):
"…has the mission of assuring the security, resiliency, and reliability of the nation's cyber and communications infrastructure in collaboration with the public and private sectors, including international partners. Specifically, CS&C is focused on preparing for and responding to catastrophic incidents that could degrade or overwhelm the networks, systems, and assets that operate our nation's information technology (IT) and communications infrastructure. Programs include the following:

- National Communications System
- National Cyber Security Division
- Office of Emergency Communications." (**DHS**, *Office of CS&C*, October 2, 2007)

Department of Homeland Security, Office of Emergency Communications (OEC):
"The Office of Emergency Communications (OEC) supports the Secretary of Homeland Security in developing, implementing, and coordinating interoperable and operable communications for the emergency response community at all levels of government. The mission of the Office of Emergency Communications is to support and promote the ability of emergency responders and government officials to continue to communicate in the event of natural disasters, acts of terrorism, or other man-made disasters, and work to ensure, accelerate, and attain interoperable and operable emergency communications nationwide. On October 4, 2006, President George W. Bush signed the Department of Homeland Security Fiscal Year 2007 Appropriations Act, which established the OEC. The legislation assigned the OEC to the Department of Homeland Security's Office of Cybersecurity and Communications within the National Protection and Programs Directorate…. OEC became operational on April 1, 2007." (**DHS**, *OEC*, 2007)

Department of Homeland Security, Office of General Counsel (OGC): "The Office of the General Counsel (OGC) integrates approximately 1700 lawyers from throughout the Department into an effective, client-oriented, full-service legal team. The Office of the General Counsel comprises a headquarters office with subsidiary divisions and the legal programs for eight Department components." (**DHS**, *OGC*, 07)

Department of Homeland Security, Office of Health Affairs (OHA): Formally established April 1, 2007. "The Office of Health Affairs serves as the principal medical advisor for the Secretary and FEMA Administrator by providing timely incident-specific management guidance for the medical consequences of disasters. Additionally, the OHA leads the Department's biodefense activities in coordination with other Departments and agencies across the Federal government; leads and sustains a comprehensive, integrated and collaborative framework that protects the health security of the Nation…" (**DHS**, *OHA FY09 Cong. Justification*, 08, OHA-3)

"OHA plays a crucial role in the Department's mission to secure the homeland. In leading the Department's biodefense activities, OHA is responsible for operating the biological monitoring and early detection systems that are deployed in the nation's major cities, and for managing the

National Biosurveillance Integration System. Together, these programs play a vital role in ensuring that relevant human, plant, animal and environmental health information is consolidated, analyzed and shared with interagency partners and better coordinate the nation's biodefense activities." (**DHS**, *Budget-in-Brief FY 2008*, p. 84)

Department of Homeland Security, Office of Health Affairs Biodefense Countermeasures Program: "The Biodefense Countermeasures program procures medical countermeasures to strengthen the Nation's preparedness against chemical, biological, radiological, and nuclear (CBRN) attacks, including promoting the removal of barriers to development and production processes that the Government undergoes to pre-purchase critically needed vaccines or medications for biodefense." (**DHS**, *OHA Biodefense Countermeasures Fiscal Year 2009 Congressional Justification*, 2008, BIO-2)

Department of Homeland Security, Office of Infrastructure Protection (OIP): "The Office of Infrastructure Protection (OIP) leads the coordinated national effort to reduce risk to our critical infrastructures and key resources (CI/KR) posed by acts of terrorism. In doing so, the Department increases the nation's level of preparedness and the ability to respond and quickly recover in the event of an attack, natural disaster, or other emergency. The Office of Infrastructure Protection facilitates the identification, prioritization, coordination, and protection of CI/KR in support of federal, state, local, territorial, and tribal governments, as well as the private sector and international entities. By ensuring the sharing of information with our security partners, the Office of Infrastructure Protection communicates threats, vulnerabilities, incidents, potential protective measures, and best practices that enhance protection, response, mitigation, and restoration activities across the nation and the international community. The Office of Infrastructure Protection uses the National Infrastructure Protection Plan, and mechanisms for enhancing CI/KR-related protective and response capabilities under the National Response Plan, to provide operational support to government and private entities in response to significant threats and incidents. Through the Office of Infrastructure Protection's vulnerability assessment process, the organization communicates standards to the infrastructure owners/operators and key stakeholders and ensures the maintenance of a CI/KR sector governance and information-sharing framework." (**DHS**, *Office of Infrastructure Protection*, December 6, 2007 Update.

Department of Homeland Security, Office of Inspector General: "The DHS Office of Inspector General (OIG) was established by the *Homeland Security Act 2002* (P.L. 107-296), by amendment to the *Inspector General Act of 1978*. The Inspector General (IG) has a dual reporting responsibility, to the Secretary of Homeland Security and to the Congress. The OIG serves as an independent and objective inspection, audit, and investigative body to promote economy, efficiency, and effectiveness in DHS programs and operations, and to prevent and detect fraud, waste, and abuse in such programs and operations." (**DHS**, *DHS FY09 Cong. Budget Justification*, 2008, 3437)

Department of Homeland Security, Office of Intelligence and Analysis (I&A): "The mission of my Office is clear – it is to identify and assess transnational and domestic threats to Homeland security. We provide anticipatory, proactive, and actionable intelligence to support the Department; State, local, tribal, and private sector customers; and the Intelligence Community. The most critical and overarching threat to the Homeland remains terrorism – transnational and

domestic – and much of the IC's resources are devoted to this issue. I believe, however, that my Office adds unique value by viewing terrorism through the prism of threats to the Homeland. This holistic perspective allows us to make connections – if and where they exist – between terrorism and other illicit transnational criminal activities. Moreover, these other illicit activities often constitute serious threats to the Homeland, and we must address these as well to support our Departmental mission and to help secure the Nation." (**DHS**, *Statement, Charles Allen*, 08)

Department of Homeland Security, Office of Intergovernmental Programs (IGP): The IGP "mission is to promote an integrated national approach to homeland security by ensuring, coordinating, and advancing federal interaction with state, local, tribal, and territorial governments…The purpose of the office's operations is multi-faceted: to facilitate communication between the Department's expert resources and the expert resources of the nation's autonomous governments; to act as an advocate for state, local, tribal, and territorial governments within the Department; and to coordinate and maintain constant awareness of the various bilateral communications occurring regularly throughout the Department….The Office of Intergovernmental Programs' overarching goal is to facilitate timely and meaningful consultation by the Department and its agencies with our state, local, tribal, and territorial partners." (**DHS**, *Office of Intergovernmental Programs*, September 26, 2007)

Department of Homeland Security, Office of Legislative Affairs: "The Office of Legislative Affairs serves as the Secretary's principal liaison with Capital Hill and other governmental entities by fostering relationships with Members of Congress and staff to precipitate legislative support for the Departmental programs, policies and initiatives that promote a more secure nation." (**DHS**, *DHS FY09 CBJ*, 2008, 3145)

Department of Homeland Security, Office of Operations Coordination (OPS): "The mission of the Office of Operations Coordination is to integrate DHS and interagency operations and planning to prevent, protect, respond to and recover from terrorist threats attacks or threats from other man-made/natural disasters. OPS disseminates threat information, maintains and disseminates domestic situational awareness, performs incident management and operational coordination among all DHS components, Federal, state, local, tribal, private sector and international partners' to facilitate a coordinated and efficient effort to secure the Homeland against all threats and hazards." (**DHS**, *DHS FY2009 Cong. Budget Justification*, 2008, 3406)

"The Office of Operations Coordination is responsible for monitoring the security of the United States on a daily basis and coordinating activities within the Department and with governors, Homeland Security Advisors, law enforcement partners, and critical infrastructure operators in all 50 States and more than 50 major urban areas nationwide. Leadership: The Office of Operations Coordination is headed by Director for Operations Coordination, Roger T. Rufe, Jr. (USCG Ret).

"*Mission:* The Office of Operations Coordination works to deter, detect, and prevent terrorist acts by coordinating the work of Federal, state, territorial, tribal, local, and private sector partners and by collecting and fusing information from a variety of sources.

"*Goals*: The Office is responsible for:

- conducting joint operations across all organizational elements.
- coordinating activities related to incident management.
- employing all Department resources to translate intelligence and policy into action.
- overseeing the National Operations Center (NOC) which collects and fuses information from more than 35 Federal, State, territorial, tribal, local, and private sector agencies.

"*Organization*: Information is shared and fused on a daily basis by the two halves of the Office that are referred to as the "Intelligence Side" and the "Law Enforcement Side." Each half is identical and functions in tandem with the other but requires a different level of clearance to access information. The Intelligence Side focuses on pieces of highly classified intelligence and how the information contributes to the current threat picture for any given area. The Law Enforcement Side is dedicated to tracking the different enforcement activities across the country that may have a terrorist nexus. The two pieces fused together create a real-time snap shot of the nation's threat environment at any moment." (**DHS**, *Office of Operations Coordination*, 2007)

Department of Homeland Security, Office of Operations Coordination (OPS) DHS Mission: "The mission of OPS…is to integrate DHS and interagency planning and operations coordination in order to prevent, deter, protect, and respond to terrorists threats/attacks or threats from other man-made or natural disasters." (**DHS**, *Statement of Frank DiFalco, Director of NOC*, June 20, 2007, p. 1)

Department of Homeland Security, Office of Operations Coordination, DHS Mission Blueprint Analysis: "OPS conducted a Mission Blueprint Analysis in September 2006. In this Blueprint Analysis, we took a hard look at our policies, processes, procedures, organization and technologies in order to help define the way forward for OPS in order to meet and exceed the Department's capabilities required to fulfill HSPD-5, the Homeland Security Act, and highlighted in the White House Katrina lessons learned review. The Blueprint analysis was conducted by an outside team that performed a top-down strategic review of the organization, its mission capabilities and perceived future requirements. In addition, the team also employed a bottom-up assessment of existing capabilities and supporting activities. Over 100 individuals within OPS, DHS, and throughout the government were interviewed during the course of the study. This effort provided analysis and recommendations for ensuring OPS more effectively meets its current and emerging integrated mission requirements within DHS and across the larger homeland security community." (**DHS**, *Statement of Frank DiFalco, Director of the NOC*, June 20, 2007, 7)

Department of Homeland Security, Office of Operations Coordination (OPS) DHS Mission Blueprint Analysis: "DHS has completed a study of its operational capabilities and gaps to guide its future mission and initiatives. Called the Operations Mission Blueprint, DHS operations staff said the results are still under review; therefore, that they could not provide us with a copy. Part of this study includes a plan to consolidate DHS operations centers in headquarters and its components in a facility located at the St. Elizabeth's West Campus in Washington, D.C.[13] The plan cites a number of organizational benefits to collocating facilities, including enhancing collaboration by bringing together a large number of DHS executives and line employees currently dispersed across the region." (**GAO**, *Homeland Security: Guidance from Ops. Directorate*, 20Jun07, 17)

Department of Homeland Security, Office of Policy: "The Office of Policy's responsibilities include the coordination of Department wide policies, programs, and planning to ensure consistency and integration of missions throughout the Department. This Office strengthens the Department's ability to maintain policy and operational readiness needed to protect the Homeland by providing a centralized coordination point for developing and communicating policies across the multiple internal and external components of the Homeland Security network." (**DHS**, *DHS FY2009 Congressional Budget Justification*, 2008, 3145)

Component parts:

- Office of Policy Development
- Office of Strategic Plans
- Office of International Relations
- Office of Immigration Statistics
- Private Sector Office
- Homeland Security Advisory Council (**DHS**, *Office of Policy: Organization*, 2008)

Department of Homeland Security, Office of Policy Development (Office of Policy):
"The Office of Policy Development ensures the coordinated development of all policy matters before for the Department. The Office of Policy Development:

- Supports the Secretary in the identification, development, and implementation of the Department's policy objectives.
- Regularly interacts with Department entities such as Legislative Affairs, Public Affairs, the Chief Privacy and Civil Liberties Officers, the General Counsel, and the Department's agencies to ensure effective and coordinated development of Department policy.
- Serves as principal representative for the Department in promoting the policies before the White House and other cabinet agencies.
- Works with foreign governments and institutions, stakeholders in the affected private sector industries, think tanks, and media to identify potential concerns and solutions."

There are 13 units within Policy Development.

- Biothreats
- Border Security
- Cargo Maritime & Trade
- Committee on Foreign Investment in the United States
- Counterterrorism Strategy and Policy
- Cyber Security
- Emergency Preparedness and Response
    - Emergency Preparedness & Response is responsible for developing and coordinating Department-wide policies and plans for preparedness, response and recovery missions, as well as the federal emergency management mission within the Department's overall incident management function. Issue areas include the Terrorism Risk Insurance Act, school preparedness and interoperable emergency communications.
- Immigration, Refugee & Asylum
- Law Enforcement Intelligence

- Rad/Nuke/Chem and S&T Policy
- REAL ID Program Office
- Regulatory Policy
- Transportation Infrastructure
- Visa Waiver Program. (**DHS**, *Office of Policy Development*, February 8, 2008)

Department of Homeland Security, Office of Public Affairs: "The Office of Public Affairs is responsible for managing external and internal communications. The Office of Public Affairs respond to national media inquiries, maintain and update the Department's web site, write speeches for principals and coordinate speaking events for Department officials. The Office of Public Affairs also develops and manages various public education programs including the Ready Campaign to increase citizen preparedness. The Office fosters strategic communication throughout the Department and with external stakeholders. It manages the Department's organizational identity program, which includes usage of the DHS seal and related guidelines. It oversees the Department's employee communication activities, which include an all employee newsletter, town hall meetings between management and employees, and an intranet site. Finally, its incident communications program guides overall Federal incident communication activity and coordinates with state, local, and international partners to ensure accurate and timely information to the public during a crisis." (**DHS**, *DHS FY 2009 Cong. BJ*, 2008, 3145)

Department of Homeland Security, Office of Strategic Plans (Office of Policy):
"*Mission* -- The Office of Strategic Plans articulates the long-term view to the Department and translates the Secretary's strategic priorities into capstone planning products that drive integration, component priorities, and the tough resource allocation decisions.
The Office of Strategic Plans

- Develops a Department-wide planning structure and implementation strategies for use by Homeland Security leadership.
- Ensures the Secretary's strategic priorities are reflected in the Department's budget documents and throughout Strategic Plans of the Department and its component agencies.

Responsibilities
Strategic Planning Division

- Is the primary coordinator of Department-wide planning, including the formation of priorities, goals, objectives and performance measures to reflect legislatively mandated missions and Secretarial priorities.
- Works closely with the Office of Budget for Department to ensure coordination of budget and planning and provides the foundation and direction for Department-wide strategic planning and budget priorities. It provides the Department with a central office to develop and communicate planning efforts across multiple components of the homeland security network.
- Bridges multiple headquarters' components and operating agencies will improve communication and coordination among Department of Homeland Security entities, eliminate duplication of effort, and translate Department policies into achievable goals and objectives. It will also create a single point of contact for internal and external stakeholders that will allow for streamlined performance management across the Department.

- Strategic Planning also reviews Department component strategic plans, ensuring coordination amongst components and alignment with the Department's Strategic Plan.

Counterterrorism (CT) Plans Division

- Protects and defends the homeland by developing and coordinating counterterrorism policies and planning for the Department's missions that support the war on terrorism (WOT).
- Is primary departmental coordinator for interagency plans and policies that support the U.S. Government war on terrorism.
- Provides other U.S. departments and agencies with a single, central element within the Department to ensure consistent coordination of interagency counterterrorism and WOT plans affecting multiple Homeland Security components enabling those plans to be translated into timely action.
- Serves as primary liaison element within the Department's Office of Policy to the National Counterterrorism Center (NCTC) Directorate of Strategic Operational Planning (SOP) and will manage the deployment of Homeland Security personnel to the NCTC SOP and serve as primary office for deployed department personnel to reach back for policy and planning guidance from the Department.
- Serves as lead policy element on planning issues related to the National Strategy for Combating Terrorism, National Presidential Decision Directives, and Homeland Security Decision Directives related to the WOT.
- Coordinates interagency security plans for the prevention of terrorism and protection of the homeland.

Implementation Plans Division

- Serves as the cross-cutting medium to long-term operational planning office for Homeland Security agencies to ensure effective integration and execution of Department strategic goals, priorities, and policies. This Division will strengthen Homeland Security by developing and coordinating the implementation planning efforts of Department of Homeland Security agencies to improve operational effectiveness.
- Serves as primary coordinator and guide for Department-wide development of medium-to long-term operational planning in alignment with the strategic goals and policy priorities set forth by the Department. It will coordinate policy development and implementation planning to ensure thoughtful, optimal, execution of Homeland Security's mission. It will advocate and support Department of Homeland Security agencies with guidance and direction for policy implementation planning. A central departmental planning office will improve communication, resource allocation, and build requirements based planning into the Department as a tool to bridge multiple agency headquarters' centric focus and develop integration of operations.
- Serves as liaison with policy developers both at the Department and agency levels to coordinate planning to achieve medium to long-term goals. It will have the expertise and direct participation of agency liaisons to effectively communicate and engage agency leadership to improve implementation planning of agency operations. It will serve to validate implementation plans to ensure sufficient integrated planning, allocation of Department resources, mission critical, and operational security issues have been addressed.

- Provides critical feedback to the Undersecretary for Policy regarding the tempo and operational efficiencies of planning to achieve Departmental goals." (**DHS**, *Office of Strategic Plans*, February 8, 2008 modification)

Department of Homeland Security, Office of the Executive Secretary: "The Office of the Executive Secretary's mission is to support the Office of the Secretary in the Homeland Security mission of leading a unified national effort to secure America. By providing the Secretary with accurate and timely dissemination of information and written communications throughout DHS and with our homeland security partners, the Executive Secretary supports DHS's strategic goals of awareness, prevention, protection, response, recovery, service and organizational excellence. The Executive Secretary supports the Office of the Secretary by developing, implementing, and managing business processes for written communications, briefing book materials for the Secretary and Deputy Secretary, Authorization Questions for the Record, White House/ interagency actions, and others as identified by the Chief of Staff. Most importantly, the Executive Secretary facilitates communications among all the DHS components, thereby encouraging a unified national effort to secure America." (**DHS**, *DHS FY 2009 CBJ*, 2008, 3145)

Department of Homeland Security, Office of the Federal Coordinator for Gulf Coast Rebuilding. "The Office of the Federal Coordinator for Gulf Coast Rebuilding was created by President George W. Bush to help devise a long-term plan for rebuilding the region devastated by Hurricanes Katrina and Rita." (**DHS**, *Office of the Federal Coordinator*, January 23, 2008)

Department of Homeland Security, Office of the Secretary and Executive Management (OSEM) Mission Statement: "The Department of Homeland Security (DHS) Office of the Secretary and Executive Management (OSEM) supports the Department and all of its components by providing leadership, direction, and management to the Department. OSEM establishes and implements policy and provides various support functions and oversight to all entities within the Department. The Department continues to work toward integration and consolidation of its resources and operations to create a seamless organization that shares services, information, and best practices across previously stove-piped organizations." (**DHS**, *DHS FY09 Congressional Budget Justification*, 2008. 3144)

Department of Homeland Security, Office of US-VISIT: "US-VISIT (United States Visitor and Immigrant Status Indicator Technology) was established in order to accurately record the entry and exit of travelers to the United States by collecting biographic information and biometrics—digital fingerprints and photographs." (**DHS**, *Office of US-VISIT*, September 28, 2007)

Department of Homeland Security, Organization/Structure (2003): "The Department will be structured into four Directorates, each responsible for implementing the applicable components of the six critical missions. They are:

- Border and Transportation Security,
- Information Analysis and Critical Infrastructure Protection,
- Emergency Response and Preparedness, and
- Science and Technology.

"The United States Coast Guard and Secret Service will retain their independence and will play key roles in supporting all of the critical missions. (**DHS**, *The Nomination of The Honorable Tom Ridge to be Secretary of the Department of Homeland Security*, January 19, 2003)

Department of Homeland Security, Protective Security Advisor (PSA) Coordination. "DHS has deployed PSAs in major metropolitan areas throughout the country to assist State and local efforts to identify and protect CIKR and to ensure national risk assessments are better informed through State and local input. PSAs implement DHS's mission to protect CIKR by fostering improved coordination at the State and local level through their support for national CIKR protection-related programs. Responsible jurisdictions must coordinate with and include their PSAs in the assessment of CIKR identified for BZPP funding to ensure all necessary resources are made available for the development of the BZP" (DHS, *Fiscal Year 2008 Buffer Zone Protection Program Guidance and Application Kit*, February 2008, p. 10)

Department of Homeland Security, Public Safety Interoperable Communications Grant Program (PSIC): "…assists public safety agencies in the acquisition of, deployment of, or training for the use of interoperable communications systems that can utilize reallocated public safety spectrum in the 700 MHz band for radio communication." (**DHS**, *State Contacts & Grant Award*, July 18, 2007 Update)

Department of Homeland Security, Science & Technology(S&T) Directorate: "The Directorate for Science and Technology is the primary research and development arm of DHS. *Mission and Objectives* -- The S&T Directorate, in partnership with the private sector, national laboratories, universities, and other government agencies (domestic and foreign), helps push the innovation envelope and drive development and the use of high technology in support of homeland security. The Directorate is focusing on enabling its customers—the DHS components—and their customers, including Border Patrol agents, Coast Guardsmen, airport baggage screeners, Federal Air Marshals, and state, local, and Federal emergency responders, as well as the many others teamed and committed to the vital mission of securing the Nation.
To reach its goals, the S&T Directorate is:

- Creating a customer-focused, output-oriented, full-service science and technology management organization that is consistent with its enabling legislation
- Incorporating lessons learned since the start-up of DHS to sharpen its focus on executing mission-oriented programs
- Providing leadership and resources to develop the intellectual basis that is essential to future mission success." (**DHS**, *Directorate for Science and Technology*, May 22, 2007)

Department of Homeland Security, Science & Technology(S&T) Directorate, Office of University Programs: S&T "is harnessing the nation's scientific knowledge to protect America and our way of life from terrorists and their weapons of mass destruction. The Office of University Programs is furthering this mission by engaging the academic community to create learning and research environments in areas critical to Homeland Security. Through a national network of Homeland Security Centers of Excellence, the Department encourages colleges and universities to lead or participate in centers of multi-disciplinary research where important areas of inquiry can be analyzed and debated and academic and policy results can be shared. To create an enduring capability for homeland security and fulfill its stewardship mission, S&T also

develops and supports the next generation of scientists through the DHS Scholars and Fellows Program, which provides financial assistance and career development for deserving students whose intellectual pursuits align with the DHS mission." (**DHS**, *Fact Sheet: HS Centers of Excellence: Partnering with the Nation's Universities*, January 10, 2005)

Department of Homeland Security, Secret Service: "The Secret Service represents…[a] unique critical mission that aligns with the core competencies of the new Department and will remain independent. Through its two distinct missions, protection and criminal investigation, the Secret Service is responsible for the protection of the President, the Vice President and their families; heads of state; the security for designated National Special Security Events; and the investigation and enforcement of laws relating to counterfeiting, fraud and financial crimes. The Secret Service is, and has been for decades, in the business of assessing vulnerabilities and designing ways to reduce them in advance of an attack. This expertise will greatly benefit the Department as we strive to create an overall culture of anticipation, vulnerability assessment, and threat reduction. Building on these institutional ideals will be of the utmost importance as it pertains to nearly all of the missions in the Department, but none more so than protecting our critical infrastructure." (**DHS**, *The Nomination of The Honorable Tom Ridge to be Secretary of the Department of Homeland Security*, January 19, 2003)

Department of Homeland Security, Situational Awareness Teams (DSATs): "DSATs are made up of DHS personnel who provide key situational awareness reporting to incident managers by providing data directly from the scene of the incident. This data can include information from streaming video which can be posted on HSIN, satellite communications, and other tools that provide incident managers vital information in near real-time. This capability supports Federal, State, and Local domestic incident managers and allows our collective emergency response to be coordinated with key homeland security partners such as the Principal Federal Official (PFO)." (**DHS**, *Statement of Frank DiFalco, Director of the NOC*, 20Jun07, 4)

Department of Homeland Security, Software Assurance Program: "Grounded in the National Strategy to Secure Cyberspace, The Department of Homeland Security's Software Assurance Program spearheads the development of practical guidance and tools and promotes research and development investment in cyber security. Significant new research on secure software engineering is underway, examining a range of development issues from new methods that avoid basic programming errors, to enterprise systems that remain secure when portions of the system software are compromised. Through these efforts, Homeland Security seeks to reduce software vulnerabilities, minimize exploitation, and address ways to improve the routine development and deployment of trustworthy software products. Together, these activities will enable more secure and reliable software that supports mission requirements across enterprises and the critical infrastructure." (**DHS**, *Software Assurance*, US-CERT, February 18, 2008)

Department of Homeland Security, Transportation Security Administration (TSA):

"TSA includes the Federal Air Marshal Service (FAMS) and airport aviation screeners at airports across the country. The skills and competencies developed by FAMS and the screeners became the nucleus of operations called upon by the Aviation and Transportation Security Act passed on November 19th 2001. The operations include all modes of transportation – not just aviation – and

provide a layered security system involving examination of people, cargo, and worker credentials; investigations of suspect activity on maritime, land, and airports; sharing intelligence and conducting analysis of transportation security gaps; as well as enforcing industry regulation. Through this work, TSA inspectors are the most visible enforcement presence to aviation travelers in the Nation's airports." (**DHS**, "United States Homeland Security…." Ch. 3, *Capstone Doctrine Pub 1 Draft*, Feb 2008, 8)

Department of Homeland Security, United States Citizen and Immigration Services (USCIS): "On March 1, 2003, service and benefit functions of the U.S. Immigration and Naturalization Service (INS) transitioned into the Department of Homeland Security (DHS) as the U.S. Citizenship and Immigration Services (USCIS). USCIS is responsible for the administration of immigration and naturalization adjudication functions and establishing immigration services policies and priorities. These functions include:

- adjudication of immigrant visa petitions;
- adjudication of naturalization petitions;
- adjudication of asylum and refugee applications;
- adjudications performed at the service centers, and
- all other adjudications performed by the INS.
- Fifteen thousand…federal employees and contractors working in approximately 250 [HQ] and field offices around the world comprise the USCIS." (**DHS**, *About USCIS*)

Department of Homeland Security, United States Coast Guard: "The Coast Guard's fundamental responsibilities -- preparedness, protection, response and recovery -- cut across all facets of the Department's mission. Every day since the September 11th terrorist attacks, the Coast Guard pushes our maritime borders farther from shore. All ships bound for the U.S., regardless of registry, face a multi-layered, interagency security screening process in addition to traditional safety, environmental and operational standards enforcement, plus random boardings…. The Coast Guard has also created highly trained and specially equipped Maritime Safety and Security Teams to add an extra layer of security and additional quick-response capabilities in key U.S. ports. But let me make one thing clear. The new Department will not lose focus of the Coast Guard's other critical missions. From search and rescue, anti-drug and illegal migrant patrols to fisheries enforcement and aids to navigation, I will work personally to ensure that the Department continues to support the entirety of the Coast Guard mission. (**DHS**, *The Nomination of The Honorable Tom Ridge to be Secretary of the Department of Homeland Security*, January 19, 2003)

"The US Coast Guard (USCG) is a Military Service within the DHS dedicated to protecting the safety and security of the United States. As such, it operates globally; on the high seas and in US territorial waters, and has certain federal law enforcement authorities ashore. It is a federal LEA and an Armed Force of the United States whose Service secretary is the Secretary of DHS. It is the lead agency for maritime drug interdiction and the co-lead agency for air drug interdiction operations, along with US Customs and Border Protection. The USCG defends the United States' seaward frontier against illegal drugs and illegal immigrants. The USCG is also the lead agency for maritime search and rescue. The USCG is the lead agency for coordinating all maritime security planning and operations in the ports and inland waterways, including all efforts to prevent attacks and to mitigate the consequences of an attack should one occur. The USCG's

counterterrorism teams are ready to intercept terrorists before they ever reach the homeland. In time of war, the USCG could be transferred to the Department of the Navy for operations. In its maritime law enforcement role, USCG has jurisdiction in both US waters and on the high seas. In this capacity, the USCG may make inquiries, examinations, inspections, searches, seizures, and arrests upon the high seas and waters over which the US has jurisdiction, for prevention, detection, and suppression of violations of laws of the US. It is unique among the Services in that it has statutory law enforcement authority." (**JCS/DoD**, *Civil Support*, 2007, pp. II-16-17)

Department of Homeland Security, University System Governance and Implementation: "The Executive Steering Committee will provide guidance and recommendations, through the Office of the Chief Human Capital Officer (OCHCO), to develop and facilitate a cohesive DHS community of learning. Specifically, the Executive Steering Committee will:
• Determine policies that govern employee training and outline the guiding principles for agency training and education
• Assign responsibility for and delegate training approval authority to the lowest possible level
• Establish priorities for training and educating employees and providing funds and staff according to these priorities
• Provide guidance and resource support to the DHS Training Leaders Council (TLC)
• Annually review and approve the Learning and Development Strategy
Champion: Secretary of the Department of Homeland Security
Meetings: The Executive Steering Committee will meet at least two times annually or as otherwise required to address training, education and/or development needs of DHS employees. Meeting objectives will include:
• Review progress of the DHS Training Leaders Council's Strategic Plan for Learning and Development and the DHS Learning and Development Strategy
• Discuss learning and development priorities and resource allocation." (**DHS**, *Establishing a DHS University System*, 2007, p. 7)

Department of Homeland Security, Urban Areas Security Initiative Nonprofit Security Grant Program (UASI-NSGP): "The…Urban Areas Security Initiative (UASI) Nonprofit Security Grant Program provides funding support for target hardening activities to nonprofit organizations that are at high risk of international terrorist attack. While this funding is provided specifically to high-risk nonprofit organizations, the program seeks to integrate nonprofit preparedness activities with broader state and local preparedness efforts. It is also designed to promote coordination and collaboration in emergency preparedness activities among public and private community representatives, State and local government agencies, and Citizen Corps Councils." (**DHS**, *Fiscal Year 2007 Homeland Security Grant Program Urban Areas Security Initiative: Nonprofit Security Grant Program--Program Guidance and Application Kit*, April 2007, p. 1)

Department of Homeland Security, USCG Deployable Operations Group (DOG): "Over the past year, we have strengthened the Coast Guard's capabilities by creating a Deployable Operations Group (DOG) consisting of six Coast Guard elements: the National Strike Force, Port Security Units, Maritime Safety and Security Teams, Tactical Law Enforcement Teams, Naval Coastal Warfare Personnel, and Maritime Security Response Teams.

Each of these elements has unique capabilities, including search and rescue, hazmat, biological and chemical response, counterterrorism, law enforcement, and port security expertise. By bringing them under a single command and training them for rapid deployment in any environment, we are strengthening our ability to respond effectively to any disaster. Moreover, by coordinating this group with other DHS assets, such as FEMA Search and Rescue teams, ICE officers, and CBP agents, we can create an efficient, tailored, DHS-wide response to any incident." (DHS, *Testimony of Secretary Michael Chertoff before the House Committee on Homeland Security*. (Remarks as Prepared), September 5, 2007)

Department of Homeland Security, U.S. Customs and Border Protection (CBP): "U.S. Customs and Border Protection (CBP) is the unified border agency within the Department of Homeland Security (DHS). CBP combined the inspectional workforces and broad border authorities of U.S. Customs, U.S. Immigration, Animal and Plant Health Inspection Service and the entire U.S. Border Patrol…. For the first time in our nation's history, one agency has the lone responsibility of protecting our borders. As the single, unified border agency, CBP's mission is vitally important to the protection of America and the American people. CBP's priority mission is preventing terrorists and terrorist weapons from entering the United States, while also facilitating the flow of legitimate trade and travel…" (**DHS**, *About CBP Spotlight, Protecting Our Borders Against Terrorism*)

Department of Homeland Security, United States Computer Emergency Readiness Team (US-CERT): "The United States Computer Emergency Readiness Team (US-CERT) is a partnership between the Department of Homeland Security and the public and private sectors. Established in 2003 to protect the nation's Internet infrastructure, US-CERT coordinates defense against and responses to cyber attacks across the nation." (**DHS**, *Welcome to US-CERT*, November 2007)

Department of Homeland Security, University System: "The DHS University System is comprised of four centers or pillars that, together, support a comprehensive and networked approach to developing Department employees at all levels. The pillars include:
• Leadership Institute — prepares and grows leaders throughout the Department at every level by establishing programs and methods that deliver essential leadership training at career milestones.
• Preparedness Center — establishes a culture of preparedness throughout the Department by offering programs that build awareness of the Department's protection and response capabilities in a multi-threat/all-hazards environment by establishing a network of DHS recognized interagency and national preparedness training programs.
• Homeland Security Academy — cultivates homeland security strategic analysis and decisionmaking skills through a high-quality, fully-accredited graduate degree program in Homeland Security Studies.
• Center for Academic and Interagency Programs — establishes and maintains partnerships and linkages with interagency and academic community counterparts to optimize current best practices and provide DHS employees with the highest quality training, education and professional development opportunities available in the integrated homeland security learning community." (**DHS**, *Establishing a Department of Homeland Security University: Learning and Development Strategy*, September 28, 2007, p. 4)

Department of Justice (DOJ)/FBI: "As the lead for crisis management and counterterrorism, the Attorney General is responsible for ensuring the development and implementation of policies directed at preventing terrorist attacks domestically, and will undertake the criminal prosecution of acts of terrorism. DOJ has charged the FBI with execution of its LFA responsibilities for the management of a federal response to threats or acts of terrorism that take place within US territory or those occurring in international waters that do not involve flag vessels of foreign countries. As LFA, the FBI will implement a federal CrM response, and will designate a federal on-scene commander to ensure appropriate coordination with federal, state and local authorities until such time as the Attorney General finds it necessary to transfer the overall LFA role to DHS/FEMA." (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. II-20)

Department Operations Center (DOC): "A school site or single-discipline operations center. May be found at any level above the field response level." (Orange County (CA) Emergency Management Organization Schools Committee. *SEMA Emergency Operations Center (EOC) Course for Schools*)

Department Operations Centers (DOCs): "Department Operations Centers (DOCs) normally focus on internal agency incident management and response and are linked to and, in most cases, are physically represented in a higher level EOC. ICPs [Incident Command Posts] should also be linked to DOCs and EOCs to ensure efficient incident management." (**DHS**, *NIMS,* 2004, 27)

Depression (low, low pressure area): "Region where the barometric pressure is lower relative to that in the surrounding regions at the same level." (**UNDHA**, *Disaster Mgmt Glossary*, 1992, 25)

Deputy (NIMS): "A fully qualified individual who, in the absence of a superior, can be delegated the authority to manage a functional operation or perform a specific task. In some cases, a deputy can act as relief for a superior and, therefore, must be fully qualified in the position. Deputies can be assigned to the Incident Commander, General Staff, and Branch Directors." (**DHS**, *NIMS*, 2004, p. 128)

Depth (total) of Run-Off: "Run-off volume from a drainage basin, divided by its area." (**UNDHA**, *DM Glossary*, 1992, 25)

Deputy (ICS): "A fully qualified individual, who in the absence of an immediate supervisor, could be delegated the authority to manage a functional operation or perform a specific task. Deputies can be assigned to the Incident Commander, General Staff and Branch Directors. (**Capital Health Region**, Canada, *Incident Cmd. Sys. Training SM*, Mar 2007, 52)

DERG: Devolution Emergency Response Group. (**FEMA**, *Department/Agency HQ Devolution of Operations Plan Template*)

Desertification: "The processes by which an already arid area becomes even more barren, less capable of retaining vegetation, and progressing towards becoming a desert." (**UNDHA**, *DM Glossary*, 1992, 26)

Design and Development (HSEEP Exercises): "Building on the exercise *foundation*, the design and development process should consist of identifying *capabilities*, *tasks*, and *objectives*, designing the *scenario*, creating documentation, coordinating logistics, planning exercise conduct, and selecting an evaluation and improvement methodology." (**FEMA**, *HSEEP Glossary*, 2008)

Design and Development System (DDS): "The Design and Development System (DDS) is a project management tool and comprehensive tutorial for the design, development, conduct, and evaluation of exercises. The DDS provides users with templates and guidance for developing master task lists, timelines, planning teams, and exercise documentation (e.g. Master Exercise Scenario Lists [MSELs] and Exercise Evaluation Guides [EEGs]). Note: the DDS was formerly called the HSEEP Toolkit." (**FEMA**, *HSEEP FAQs*, 2008)

Design and Development System (DDS) Objectives:

- ■ Encourage the development of self-sustaining exercise programs
- ■ Reduce dependency on direct support
- ■ Provide consistent exercise guidance, templates and exercise documentation

(**DHS**, *Homeland Security Exercise and Evaluation Program, Toolkit Overview*. May 15, 2007)

Design Earthquake: "Earthquake parameters selected for designing an earthquake resistant structure according to code requirements." (**UNDHA**, *Disaster Mgmt. Glossary*, 1992, 26)

Design Flood: "Flood hydrograph or peak discharge adopted for the design of a hydraulic structure according to code requirements." (**UNDHA**, *Disaster Mgmt. Glossary*, 1992, 26)

Design Flood Elevation (DFE): "…the specified level to which a structure will be protected from floods when it is built or retrofitted." (**FEMA**, *Reducing Damage…Flooding*, 2005, viii)

Design Storm: "Rainfall amount and time distribution adopted over a given drainage area, used in determining the design flood." (**UNDHA**, *Disaster Mgmt. Glossary*, 1992, 26)

Designated Area: "Any emergency or major disaster-affected portion of a State which has been determined in the President's declaration letter to be eligible for Federal assistance. Also referred to as the affected area." (**FEMA**, *Mission Assignment SOPs Draft*, 2007, p. 49)

Designated Floodway: "…refers to the channel of the stream and that portion of the adjoining floodplain reasonably required to provide for the passage of a design flood; in California, it is also the floodway between existing levees as adopted by The Reclamation Board or the state Legislature." (**Galloway**, *A California Challenge*, 2007, 10)

Designated Period (Direct Federal Assistance):

- ***For Direct Federal Assistance:*** The period from 12:01 a.m. of the date of the Presidential declaration to 11:59 p.m. of the third full day after the date of the declaration.
- ***For Grant Assistance:*** The period selected by an applicant for eligibility for 100% Federal share assistance. The period will be 72 hours within a window from 12:01 a.m. of

the date of a Governor's or City or County official's declaration of emergency through 11:59 p.m. of the seventh full day after the date of the Presidential declaration of a major disaster. The period may be different for Category A and Category B work. (**FEMA**, *100% Funding for Direct Federal Assistance and Grant Assistance*, June 9, 2006)

DEST: Domestic Emergency Support Team.

Detection: "The Office [Homeland Security] shall identify priorities and coordinate efforts for collection and analysis of information within the United States regarding threats of terrorism against the United States and activities of terrorists or terrorist groups within the United States." (**White House**, *EO 13228*, October 8, 2001)

Detention Reservoir (also flood control reservoir): "Flood storage reservoir with uncontrolled outlets." (**UNDHA**, *Disaster Management Glossary*, 1992, 27)

Determined Accord: "…a table top exercise…[to increase] federal executive branch, state, tribal and local continuity of operations (COOP) readiness for a pandemic event. The interactive sessions…[were] conducted throughout August and September [2007] in the National Capital Region, and include[d] participants from a wide cross-section of federal departments and agencies and state organizations…. Exercise "Determined Accord" is designed to help identify gaps or weaknesses in pandemic planning in organization COOP plans, policies and procedures and is based on pandemic COOP guidance developed by FEMA and an interagency pandemic steering committee that includes representatives from across the executive branch. While all COOP elements are explored, the exercise encourages participates to give special consideration to ensuring the health and safety of employees and providing essential government functions and services with high absence rates." (**FEMA**, *"Determined Accord" Increases Pandemic Influenza Preparedness* 22 Sep 2007)

Determined Promise Exercise, 2004: "U.S. Joint Forces Command will support two major exercises, Determined Promise 04 (DP04) and Amalgam Virgo 04 (AV04)…this week for the North American Aerospace Defense Command (NORAD) and the U.S. Northern Command (USNORTHCOM) to test the commands' responses to terrorist attacks on national, state and local levels. USJFCOM developed DP04's scenario that will test USNORTHCOM's ability to assist civil and federal authorities in a coordinated response to simulate chemical, radiological, and explosive hazards, conducted in California and Virginia….

"The exercises will involve more than 4,000 Canadian and U.S. military personnel in three U.S. states [CA and VA] and two Canadian provinces…. The Southern California portion of DP-04 involves a simulated massive explosion of a radiological dispersion device in the Port of Los Angeles, resulting in casualties and thousands of resident exposures to the unknown substance "cloud," among several other events. State and federal partners, including the FBI, Transportation Security Administration, DoD, Department of Energy, the California National Guard Civil Support Teams, and the Federal Emergency Management Agency will participate in the full-scale exercise. In Virginia, the exercise will involve federal, state and local teams as well as those in the private sector. The exercise will test the abilities of Virginia's emergency managers and first responders to handle more than 12,000 deaths and 62,000 serious injuries

arising from simultaneous simulated "terrorist" attacks including a cruise ship, a major auto race, a bridge and two tunnels in Hampton Roads, a large suburban Richmond, Va. shopping complex and a Richmond area elementary school." (**USJFCOM**, *USJFCOM Supports Two Exercises*, 04)

Devolution: "The capability to transfer statutory authority and responsibility for essential functions from an agency's primary operating staff and facilities to other agency employees and facilities, and to sustain that operational capability for an extended period." (**DHS**, *FCD 1*, 2007, P-3)

Devolution Emergency Response Group (DERG) (COOP/COG): "Regional, interagency, and available… Headquarters staff that assume the responsibility and execution of… headquarters essential functions during a Devolution of Operations activation." (**FEMA**, *Department/Agency HQ Devolution of Operations Plan Template*)

Devolution Emergency Response Group (DERG) Director (COOP/COG): "The Successor who succeeds the Director…and serves as the Devolution Response Group Director. According to the delegation of authority for the Director…the Successor must be confirmed and not acting." (**FEMA**, *Department/Agency HQ Devolution of Operations Plan Template*)

Devolution of Authority: "The passing of an unexercised right, devolution of authority is an essential planning requirement for departments and agencies manifested as a formal list of personnel who are pre-delegated the authority and responsibility to assume leadership of organizational elements within a department or agency with the approval of the department or agency head." (**HSC**, *National Continuity Policy Implementation Plan*, August 2007, p. 61)

Devolution of Operations (COOP/COG): "Addresses the full spectrum of threats and all-hazard emergencies that may render an agency's leadership and staff unavailable to, or incapable of, supporting the execution of its essential functions from either its primary or alternate locations." (**FEMA**, *Department/Agency HQ Devolution of Operations Plan Template*)

Devolution of Operations Activation Conditions (COOP/COG):

- **Active Measures:** "Active measures or "triggers" are those that initiate Devolution of Operations plan activation because of a deliberate decision by senior…HQ authorities. In this situation, the Director…or designated successor activates the Devolution of Operations Plan based on an identified threat to the NCR [National Capital Region]….
- **Passive Measures:** Passive measures or "triggers" for activating the Devolution of Operations Plan occur when…HQ leadership is not available to initiate activation. For example, when the DERG Director cannot establish contact with the HQ senior leaders… and the Homeland Security Operations Center (HSOC) using all possible communications devices or media coverage portrays catastrophic events in and around the NCR, the DERG Director activates the…HQ Devolution of Operations Plan and Program and assumes the…HQ mission and essential functions." (**FEMA**, *Devolution of Operations Plan Template*)

Devolution of Operations Plan (COOP/COG): "A plan that provides for the transfer and continuity of essential functions of an organization in the event a catastrophic emergency prevents performance of these functions by the primary personnel at the primary or alternate locations." (**FEMA**, *Department/Agency HQ Devolution of Operations Plan Template*)

Devolution of Operations Phases (COOP/COG): "The three levels of operations implemented in response to a crisis, attack, or catastrophe that render headquarters personnel unavailable to, or incapable of, maintaining essential functions at the primary or alternate locations. The phases are implemented sequentially and include: Activation and Transfer of Authority, On-Site Operations, and Reconstitution." (**FEMA**, *Devolution of Operations Plan Template*)

Devolution of Operations Sites (COOP/COG): "The…facilities where the Devolution Response Group conducts the mission and essential functions of…headquarters." (**FEMA**, *Department/Agency HQ Devolution of Operations Plan Template*)

Devolution Planning: "Devolution planning supports overall continuity of operations planning and addresses catastrophes and other all-hazards emergencies that render an agency's leadership and key staff unavailable to or incapable of performing its essential functions from either the agency's primary or alternate facilities. Devolution planning also addresses notice and no notice events. A continuity of operations plan's devolution option should be developed so that it addresses how an agency will identify and transfer its essential functions and/or leadership authorities away from the primary facility or facilities, and to a location that offers a safe and secure environment in which essential functions can continue to be performed. The devolution option may be used when the agency's alternate facility is not available or the option can be activated as a continuity measure.

At a minimum a devolution plan will

1. Include the following elements of a viable continuity of operations capability: program plans and procedures, budgeting and acquisitions, essential functions, orders of succession, delegations of authority, interoperable communications, vital-records management, staff, test, training, and exercise (TT&E), and reconstitution
2. Identify prioritized essential functions for devolution, define tasks that support those essential functions, and determine the necessary resources to facilitate those functions' immediate and seamless transfer to the devolution site
3. Include a roster that identifies fully equipped and trained personnel who will be stationed at the designated devolution site and who will have the authority to perform essential functions and activities when the devolution option of the continuity of operations plan is activated
4. Identify what would likely activate or "trigger" the devolution option
5. Specify how and when direction and control of agency operations will be transferred to and from the devolution site
6. List the necessary resources (i.e., equipment and materials) to facilitate the performance of essential functions at the devolution site
7. Establish and maintain reliable processes and procedures for acquiring the resources necessary to continue essential functions and to sustain those operations for extended periods

8. Establish and maintain a capability to restore or reconstitute agency authorities to their pre-event status upon termination of devolution." (**DHS**, *FCD 1*, Nov. 2007, p. L-1)

Devolution Working Group (DWG) (COOP): "The DWG is a standing committee that will meet on an annual basis to address coordination issues and support needs for the Devolution of Operations counterpart organizations. The DWG is comprised of…HQ Offices and Divisions and Regional and interagency planners who ensure that the resources and authorities necessary to carry out the HQ essential functions are in place at the Devolution of Operations sites. The DWG responsibilities include the identification of corresponding organizations and individuals for the…HQ Offices and Divisions, the furnishing of critical equipment and materials necessary for the Devolution of Operations, and the evaluation and reporting of the Devolution of Operations counterparts to conduct the…HQ mission and essential functions." (**FEMA**, *Devolution of Operations Plan Template*)

Diablo Canyon Exercise, 2002: "On October 23, 2002, NRC [Nuclear Regulatory Commission] Headquarters and Region IV staff participated in an emergency preparedness exercise with Diablo Canyon Nuclear Power Plant in California. Multiple Federal agencies, including the Federal Bureau of Investigation, Office of Homeland Security, DOE, and Federal Emergency Management Agency participated. NRC activated its Headquarters Operations Center, Region IV's Incident Response Center, and sent a team to the site as part of the exercise. The exercise was unique in that it was the first FEMA-evaluated licensee exercise that featured

an integrated response, including aspects of the Concept of Operations Plan and the Federal Radiological Emergency Response Plan." (**NRC**, *Information Report*, October 20, 2002)

DIB: Defense Industrial Base. (**DSB**, *Report of DSB TF* on CHIP, 2007, p. 2)

Digital Emergency Alert System (DEAS): "The Digital Emergency Alert System-National Capital Region (DEAS-NCR) pilot has been designed to demonstrate how the capabilities of America's public broadcasters can be utilized to dramatically enhance the capabilities of the President to address the American people in the event of a national emergency. FEMA's Office of National Security Coordination serves as the federal government's Executive Agent for the national level of the Emergency Alert System (EAS)." (**DHS**, *National Capital Region Coordination, First Annual Report*, 2005, p. F-11 (51))

Digital Flood Insurance Map (DFIRM): "A Digital Flood Insurance Rate Map (DFIRM) includes all digital data required to create the hardcopy Flood Insurance Rate Map to FEMA FIA-21 standards and specifications (see the "Standards for Digital Flood Insurance Rate Maps"). It includes base map information, graphics, text, shading, and other geographic and graphic data. DFIRM specifications are consistent with those required for mapping at a scale of 1:24,000, or larger. DFIRMs generally are produced in a countywide format. They include information from the unincorporated areas of a county and all the incorporated communities within that county. Hardcopy maps printed from the DFIRMs are reviewed and approved by each community. They are the official basis for implementing the regulations and requirements of the NFIP. (**FEMA**, *FAQs: Digital Flood Data and Mapping*, 2007)

Diligent Endeavor Exercise, 2004: Defense Threat Reduction Agency (DTRA) sponsored interagency nuclear weapons accident Field Training Exercise (FTX) in preparation for Diligent Warrior Exercise 2004 (February 17-18, 2004, Washington, DC.

DIM: Domestic Incident Management.

Dingo King: National level domestic US nuclear weapons and special operations exercise August 22-26, 2005.

Direct Federal Assistance (DFA) (Object Class 2501): "FEMA's regulations at 44 CFR §206.208, Direct Federal Assistance, state, "When the State and local government lack the capability to perform or contract for eligible emergency work and/or debris removal under sections 402(4), 403 or 407 of the Act, the Grantee may request that the work be accomplished by a Federal agency." This assistance is subject to the cost share provisions contained in the FEMA/State agreement and the Stafford Act. In addition, 44 CFR §206.47(d) states, "If warranted by the needs of the disaster, we recommend up to one hundred percent (100%) Federal funding for emergency work under section 403 and section 407, including direct Federal assistance, for a limited period in the initial days of the disaster irrespective of the per capita impact." Generally, a "limited period in the initial days of the disaster" means the period of 100% funding will be limited the first 72 hours following the disaster declaration, or an applicant's selected 72-hour period. This period may be extended based on the gravity and scope of the disaster, as determined by the President….

"FEMA will provide direct Federal assistance through a mission assignment to another Federal agency - upon request of the State - when the State and local government certify they lack the capability to perform or contract for the requested work. The duration of mission assignments for debris removal will be limited to 60 days from the disaster declaration date. The Federal Coordinating Officer may approve extensions for up to an additional 60 days, if a State or local government demonstrates a continued lack of capability to assume oversight of the debris removal mission. Additional extensions will require approval by the Recovery Division Director at FEMA Headquarters. If the President has also authorized 100% Federal funding for emergency work and/or debris removal under sections 403 or 407 of the Stafford Act for the disaster, the Federal share of work mission-assigned by FEMA will be as follows:

- **Debris Clearance and/or Removal:** When FEMA directs another Federal agency to accomplish debris clearance and/or removal, FEMA will provide at 100% Federal share the cost of actual debris clearance and/or removal work accomplished, *not mission assignment task orders initiated*, during the designated period. This work includes whatever clearance, pick up, hauling, processing and disposal activities FEMA authorizes but only during the designated period. After the designated period, if further direct Federal assistance for debris clearance or removal is necessary, it will be provided at the prevailing Federal cost share rate for the particular disaster. The State shall agree in advance to reimburse FEMA for the appropriate non-Federal share of the work including the overhead of the Federal agency assigned the task of debris removal.

- **Food, Water, Ice and Other Consumable Commodities:** For a mission assignment task order approved during the designated period, such commodities and the work necessary to distribute them, but not including installation or set-up, shall be provided at 100% Federal share regardless of the work or project completion date. For task orders approved after the designated period, the commodities shall be provided at the prevailing Federal cost share rate for the particular disaster. The State shall agree in advance to reimburse FEMA for the appropriate non-Federal share of the work including the overhead of the Federal agency assigned the task.

- **Other Emergency Protective Measures:** For a mission assignment task order approved during the designated period, FEMA will provide at 100% Federal share the cost of the work actually completed during the designated period. Examples of these measures include: installation of generators, installation of large plastic sheet roofing, and shoring or demolition of unsafe structures. After the designated period, the work or supplies shall be provided at the prevailing Federal cost share rate for the particular disaster. The State shall agree in advance to reimburse FEMA for the appropriate non-Federal share of the work including the overhead of the Federal agency assigned the task." (**FEMA**, *100% Funding for Direct Federal Assistance and Grant Assistance, Recovery Policy 9523.9*, June 9, 2006; see also, **FEMA**, *Mission Assignment SOPs… Draft*, July 2007, p. 10)

Direct Mail Shelter Development System (DMSDS): "This program, administered by DCPA, involves use of a systematic procedure for contacting owners and architects of selected new buildings, to offer technical assistance for incorporating protection from natural and manmade

hazards in the design of new projects. The DMSDS uses direct-mail techniques, combined with personal contact by State or local government authorities and Advisory Service Centers to assist the project designers. Contacts are made early in the design phase while there is still time to incorporate protection into the building at little or no extra construction cost." (**DCPA**, *Foresight, Annual Report FY73*, 1974, pp. 16-17)

Director: "The ICS title for individuals responsible for supervision of a Branch." (**Capital Health Region**, Canada, *Incident Cmd. Sys. Training SM*, Mar 2007, 52)

Director of National Intelligence (DNI): "Position created pursuant to the Intelligence Reform Act of 2004. The DNI has "executive authority" to oversee the U.S. Intelligence Community. (**FEMA**, *IIFOG Version 3 Draft*, Feb 2008, p. 34)

Directorate of Military Support (DOMS), DOD/DOA: "The Army operates DOMS as the executive agent for the Department of Defense. The agency's mission is to plan for and commit DoD resources in response to requests from civil authorities -- often in the form of emergency requests for assistance in responding to natural or manmade disasters or civil disturbances. Other DOMS functions include special event support and assisting in domestic preparedness implementation in response to weapons of mass destruction. Its area of responsibility covers the United States and its territories." (**DOD**, "National Guard to Staff Half of DOMS," 1997) [Now JDOMS]

Directorate of Military Support (DOMS): "The organization which represents the DoD executive agent (Secretary of the Army) for provision of military assistance to civil authorities. DOMS exercises national-level oversight of the DCO function. The DCO will coordinate action and refer problems, through appropriate military channels to DOMS, which will facilitate resolution of problematic or contentious military support issues at the national level." (**FEMA**, *Mission Assignment SOPs*, 2007) [Note: Changed to JDOMS]

Direction and Control: "This part of the plan [D&C Annex, Emergency Operations Plan] covers operation of the EOC, to permit direction and control of coordinated operations by key officials. It shall include duties of each member of the EOC staff including the Radiological Defense Officer (RDO), displays, internal EOC procedures, etc., and use of locally available communications for operations directed from the EOC. If the community has public shelters, the organization of shelters (e.g., into shelter complexes, with headquarters reporting to the EOC) shall be identified." (**DCPA**, *Standards for Local Civil Preparedness* (CPG 1-5), 1978, p. 18)

Direction and Control: "Direction and control is a critical emergency management function. During the applicable phases (pre-, trans-, and post-) of the emergency response effort, it allows the jurisdiction to: Analyze the emergency situation and decide how to respond quickly, appropriately, and effectively; Direct and coordinate the efforts of the jurisdiction's various response forces; Coordinate with the response efforts of other jurisdictions; Use available resources efficiently and effectively." (**FEMA**, *Guide For All-Hazard Emergency Operations Planning* (SLG 101), 1996, p. 5-A-1)

Director of Operations Coordination (DHS): "The DHS Director of Operations Coordination is the Secretary's principal advisor for the overall departmental level of integration of incident management operations. Run by the Director, the DHS National Operations Center is intended to provide a one-stop information source for incident information sharing with the White House and other Federal departments and agencies at the headquarters level." (**DHS,** *National Response Framework* (Comment Draft), September 10, 2007, p. 52)

Dirty Bomb: "A Radiological Dispersion Devise, or "dirty bomb", is a mix of explosives with radioactive powder or pellets. When it explodes the blast scatters radioactive material.

- A dirty bomb is not the same as an atomic bomb, which produces an atomic mushroom cloud.
- A dirty bomb cannot create an atomic blast. It uses dynamite or other explosives to scatter radioactive materials which cause radioactive contamination….

The terrorists' purpose is to spread fear. The main danger from a dirty bomb is the explosion, which can cause serious injuries and damage. The radioactive materials in a dirty bomb would probably not lead to enough radiation exposure to cause serious illness immediately, except to those people who are very close to the blast site. However, the radioactive dust and smoke that spreads could be dangerous to health if they are inhaled." (**FEMA**, "Fact Sheet – Dirty Bombs" (FEMA 573), NIMS Integration Center, June 2007, p. 1)

Dirty Bomb: "A type of radiological dispersal device (RDD) that combines a conventional explosive with radioactive material." (**HSC**, *NCPIP*, August 2007, p. 61) [See "Radiological Dispersion Device"]

Dirty Bomb: "Basically, the principal type of dirty bomb, or Radiological Dispersal Device (RDD), combines a conventional explosive, such as dynamite, with radioactive material. In most instances, the conventional explosive itself would have more immediate lethality than the radioactive material. At the levels created by most probable sources, not enough radiation would be present in a dirty bomb to kill people or cause severe illness. For example, most radioactive material employed in hospitals for diagnosis or treatment of cancer is sufficiently benign that about 100,000 patients a day are released with this material in their bodies.

However, certain other radioactive materials, dispersed in the air, could contaminate up to several city blocks, creating fear and possibly panic and requiring potentially costly cleanup. Prompt, accurate, non-emotional public information might prevent the panic sought by terrorists.

A second type of RDD might involve a powerful radioactive source hidden in a public place, such as a trash receptacle in a busy train or subway station, where people passing close to the source might get a significant dose of radiation.

A dirty bomb is in no way similar to a nuclear weapon. The presumed purpose of its use would be therefore not as a Weapon of Mass Destruction but rather as a Weapon of Mass Disruption." (**NRC**, *Dirty Bombs* (Fact Sheet), March 2003, p. 1)

Disability (individual with). "A person who has a physical or mental impairment that substantially limits one or more major life activities, a person who has a history or record of such an impairment, or a person who is perceived by others as having such an impairment." (**FEMA**, *Accommodating Individuals With Disabilities In The Provision Of Disaster Mass Care, Housing, And Human Services: Reference Guide*, 2007, Glossary)

Disaster: An event that requires resources beyond the capability of a community and requires a multiple agency response.

Disaster: The result of a hazard impacting a community.

Disaster: Unless otherwise stated, a "disaster" includes any domestic disaster or act or terrorism that:

- Suddenly requires a much larger amount of blood than usual, OR
- Temporarily restricts or eliminates a blood collectors ability to collect, test, process and distribute blood, OR
- Temporarily restricts or prevents the local population from donating blood or restricts or prevents the use of the available inventory of blood products requiring immediate replacement or re-supply of the region's blood inventory from another region, OR
- Creates a sudden influx of donors requiring accelerated drawing of blood to meet an emergent need elsewhere." (**American Association of Blood Banks** (AABB) Task Force on Domestic Disasters and Acts of Terrorism, *Disaster Response*, July 25, 2007)

Disaster: "For insurance purposes a disaster is defined internationally as an event that causes at least US $5 million in reimbursable losses." (**Alexander**, no date, 4)

Disaster: "The distinction between natural hazards or disasters and their manmade (or technological) counterparts is often difficult to sustain…we are dealing with a physical event which makes an impact on human beings and their environment…a **natural disaster** can be defined as some rapid, instantaneous or profound impact of the natural environment upon the socio-economic system" (**Alexander** 1993, 4).

Disaster: "The label 'disaster' rather than 'accident' carries with it not only the implication that…an event…was of extraordinary misfortune…but also the implication that it could (unlike most accidents) have been prevented…disasters are events which fall within our scope of concern to prevent and in principle are events which may be prevented, and that we have a consequent obligation to attempt to prevent them" (**Allinson** 1993, 168-169).

Disaster: "…**Allen Barton** characterized disaster as a type of collective stress situation in which 'many members of a social system fail to receive expected conditions of life from the system' (1969: 38). For Barton, what distinguishes disasters from other types of collective stress, such as war, is that the sources of disasters are external rather than internal." (Tierney, Lindell and Perry 2001, 9)

Disaster: "Disasters are fundamentally social phenomena; they involve the intersection of the physical processes of a hazard agent with the local characteristics of everyday life in a place and larger social and economic forces that structure that realm" (**Bolin with Stanford** 1998, 27).

> "Disasters are easily characterized as unfortunate things that happen from time to time to people and their cities. What is missing in this view is any understanding of the ways that political and economic forces create conditions that result in an earthquake having disastrous impacts for *some* people and communities…
>
> "The disruptions of a disaster can unmask social inequalities and the injustices that accompany them…Too often…disasters become the basis for rebuilding social inequalities and perhaps deepening them, thus setting the stage for the next disaster" (**Bolin with Stanford** 1998, 2).
>
> "Disasters, from a vulnerability perspective, are understood as bound up in the specific histories and socio-cultural practices of the affected people taken in the context of their political and economic systems" (**Bolin with Stanford** 1998, 8).
>
> "The value of a vulnerability approach [to the study of hazards and disasters] lies in its openness to cultural specificity, social variability, diversity, contingency, and local agency" (**Bolin with Stanford** 1998, 20).
>
> "A vulnerability approach [to hazards and disasters] directs attention back to people and the common everyday aspects of their lives that make them more or less likely to be caught up in a disaster" (**Bolin with Stanford** 1998, 20).
>
> "It is the local struggles and strategies that can provide lessons for dealing with disaster across a range of societal contexts….Too often disaster research proceeds with the 'view from above'" (**Bolin with Stanford** 1998, 20).
>
> "Disasters and other environmental problems are too often treated, not as symptoms of more basic political and economic processes, but rather as accidents whose effects can be remedied by sufficient application of technical skill and knowledge" (**Bolin with Stanford** 1998, 231).

Disaster: "A sudden calamitous emergency event bringing great damage loss or destruction." (**CA OES**, *SEMS Guidelines*, 2006, Glossary, p. 7)

Disaster: "A disaster is…an event associated with the impact of a natural hazard, which leads to increased mortality, illness and/or injury, and destroys or disrupts livelihoods, affecting the people or an area such that they (and/or outsiders) perceive it as being exceptional and requiring external assistance for recovery" (**Cannon** 1994, 29, fn.2).

> "Many people now accept that human activity itself has created the conditions for disaster events. This is partly because of growing awareness that through negligence or inappropriate response, the workings of social systems have made a disaster out of a

> situation which otherwise might not have been so serious. There has also been a growth in understanding that it is *hazards* that are natural, but that for a hazard to become a disaster it has to affect vulnerable people" (**Cannon** 1994, 16).

Disaster: "Not every windstorm, earth-tremor, or rush of water is a catastrophe. A catastrophe is known by its works; that is to say, by the occurrence of disaster. So long as the ship rides out the storm, so long as the city resists the earth-shocks, so long as the levees hold, there is no disaster. It is the collapse of the cultural protections that constitutes the disaster proper" (**Carr** 1932, 211).

> "Carr's conclusion signifies that disasters are the result of human activities, not of natural or supranatural forces. Disasters are simply the collapse of cultural protections; thus, they are principally man-made. Deductively, mankind is responsible for the consequences of his actions as well as of his omissions" (**Dombrowsky** 1998, 24-25).

Disaster: "A disaster is an emergency considered severe enough by local government to warrant the response and dedication of resources beyond the normal scope of a single jurisdiction or branch of local government." (**Carroll** 2001, 467)

Disaster: "An event, natural or man-made, sudden or progressive, which impacts with such severity that the affected community has to respond by taking exceptional measures." (**Carter** 1991)

Disaster: "…a *disaster* is a singular event that results in widespread losses to people, infrastructure, or the environment. Disasters originate from many sources, just as hazards do (natural systems, social systems, technology failures). (**Cutter** 2001, 3)

Disaster: Calamity beyond the coping capacity of the effected population, triggered by natural or technological hazards or by human action. (**D&E Reference Center** 1998)

Disaster: "Disasters do not cause effects. The effects are what we call a disaster" (**Dombrowsky** 1998, 21).

Disaster: "An event in which a community undergoes severe danger and incurs, or is threatened to incur, such losses to persons and/or property that the resources available within the community are exceeded. In disasters, resources from beyond the local jurisdiction, that is State or Federal level, are required to meet the disaster demands." (**Drabek** 1996, 2-4)

Disaster: "I argue that disaster is a social, rather than a 'natural,' happening. Thus, any effort at disaster reduction involves planning and action by various social units." (**Dynes** 1993, 175) And, "…disasters are qualitatively as well as quantitatively different from accidents and everyday emergencies." (pp. 178-179)

Disaster: "A disaster is a normatively defined occasion in a community when extraordinary efforts are taken to protect and benefit some social resource whose existence is perceived as threatened" (**Dynes** 1998, 113).

Disaster: "Differentiating a disaster from an accident "is the extensiveness of the involvement of organizations and other segments within the community…In a community disaster, the pattern of damage may extend to several different places in the community rather than being focalized as it is within a community accident. Also, a number of community structures, perhaps including those that might house the traditional emergency organizations, might be damaged or destroyed….The increased involvement of other nonemergency organizations then creates the need for coordination of activity and for new patterns of communication among parts of the community that previously had no reason to communicate" (**Dynes** 1998, 119).

Disaster: "What is a disaster anyway? In social science usage as well as in everyday speech…it is a sharp and furious eruption of some kind that splinters the silence for one terrible moment and then goes away. A Disaster is an 'event' with a distinct beginning and a distinct end, and it is by definition extraordinary – a freak of nature, a perversion of the natural processes of life…the two distinguishing properties of a disaster are, first, that it does a good deal of harm, and, second, that it is sudden, unexpected, acute." (**Erikson** 1976, 253)

> "…instead of classifying a condition as a *trauma* because it was induced by a disaster, we would classify an event as *disaster* if it had the property of bringing about traumatic reactions. According to the terms of this rule, any event or condition that could be shown to produce trauma on a large scale would have earned a place on the current roster of 'disasters'." (**Erikson** 1976, 254)

Disaster/Emergency: "An event that causes, or threatens to cause, loss of life, human suffering, public and private property damage, and economic and social disruption. Disasters and emergencies require resources that are beyond the scope of local agencies in routine responses to day-to-day emergencies and accidents, and may be of such magnitude or unusual circumstances as to require response by several or all levels of government – Federal, State and local." (**FEMA**, *Hazards Analysis for Emergency Management (Interim Guidance)*, September 1983, p. 5)

Disaster: "An occurrence that has resulted in property damage, deaths, and /or injuries to a community." (**FEMA**, *Definitions and* Terms, Instruction 5000.2, **1990**)

Disaster: "An occurrence of a natural catastrophe, technological accident, or human-caused event that has resulted in severe property damage, deaths, and/or multiple injuries. As used in this Guide, a "large-scale disaster" is one that exceeds the response capability of the local jurisdiction and requires State, and potentially Federal, involvement. As used in the Stafford Act, a "major disaster" is "any natural catastrophe [...] or, regardless of cause, any fire, flood, or explosion, in any part of the United States, which in the determination of the President causes damage of sufficient severity and magnitude to warrant major disaster assistance under [the] Act to supplement the efforts and available resources or States, local governments, and disaster relief organizations in alleviating the damage, loss, hardship, or suffering caused thereby." (**FEMA**, *Guide For All-Hazard Emergency Operations Planning* (SLG 101), **1996**, p. GLO-1)

Disaster: "Based on the knowledge gained from various sources and documentation, a common definition for a disaster has been defined for this study, which entails the following:

- *Suddenness* – Unforeseen, unpredictable
- *Scale* – Has large impact and involves a large part of the public
- *Institutional Response* – Beyond the normal capacity for coping and involving many institutions
- *Prolonged Duration of Effect* – Impact does not quickly dissipate
- *Uncertainty in Behavioral Response* – Outside of normal range of experience." (**FHWA** DOT, *Evacuation Transportation Management Task Five: Operational Concept*, 2006, 1)

Disaster: Any event "concentrated in time and space, in which a society of a relatively self-sufficient subdivision of society, undergoes severe danger and incurs such losses to its members and physical appurtenances that the social structure is disrupted and the fulfillment of all or some of the essential functions of the society is prevented" (**Fritz** 1961, 655)

Disaster: "…a situation involving damage and/or loss of lives beyond one million German marks and/or 1,000 person killed." (**German insurance industry**. Dombrosky's words (1998, 20))

Disaster: "…such severe interference of the public order and safety that in intervention of the centralized, coordinated disaster protection units is necessary." (**German law**. Dombrowsky 1998, 20 citing Seeck 1980, 1)[17]

Disaster: An "extraordinary situation in which the everyday lives of people are suddenly interrupted and thus protection, nutrition, clothing, housing, medical and social aid or other vital necessities are requested." (**German Red Cross**. Dombrowsky 1998, 20, citing Katastrophen-Vorschrift 1988, 2)[18]

Disaster: The result of (1) the impact of external forces, (2) social vulnerability, or (3) uncertainty. (**Gilbert**, 1991)[19]

Disaster: "the loss of key standpoints in common sense, and difficulty of understanding reality through ordinary mental frameworks" (**Gilbert** 1995, 238).

Disaster: "The result of a vast ecological breakdown in the relations between man and his environment, a serious and sudden event (or slow, as in drought) on such a scale that the stricken community needs extraordinary efforts to cope with it, often with outside help or international aid." (**Gunn** 1990, 374)

Disaster: "Disasters are subjective phenomena. They arise from the behavior of complex systems, are perceived and take place in a specific socio-economic, historical, cultural and chronological context." (**Horlick-Jones and Peters** 1991a, 147)

Disaster: "…disasters arise from the exposure of vulnerable populations to hostile environments generated by the failure of complex systems…such systems are made vulnerable to failure by the

[17] *Gesetz uber den katastrophenschutz in Schlesig-Holsteni (LkatSG) vom 9 Dezember 1974*. Wiesbaden, Germany: Kommunal und Schul-Verlag A. Heinig (in German).
[18] Kasastrophen-Vorschrift (1988), Bonn: Deuches Rotesse Kreuz (in German).
[19] *Politique et compexite: Les crises sans ennemi*. Grenoble, France: CRISE. (Cited in Porfiriev 1995, 287).

complex interplay of factors including elements of the political economy environment in which the system is embedded." (**Horlick-Jones and Peters** 1991b, 41)

Disaster: Events that "…release repressed anxiety [and constitute a] loss of control of social order" (**Horlick-Jones** 1995, 305).[20]

Disaster: "Event that causes great damage or loss." (**ISO 22399**, *Societal Security*…, 2007, 2)

Disaster: A disaster is an *event* concentrated in time and space, in which a society or one of its subdivisions undergoes physical harm and social disruption, such that all or some essential functions of the society or subdivision are impaired (**Kreps** 1995, 256).

Disaster: "Disasters are non-routine events in societies or their larger subdivisions (e.g. regions, communities) that involve social disruption **and** physical harm. Among the key defining properties of such events are (1) length of forewarning, (2) magnitude of impact, (3) scope of impact, and (4) duration of impact" (**Kreps** 1998, 34).

Disaster: "…disasters are conjunctions of historical happenings and social definitions of physical harm and social disruption" (**Kreps** 1998, 34).

Disaster: "…consensus-type social crisis occasions wherein demands are exceeding resources and emergent responses may generate social change….the idea of social change is introduced to correct what is identified as a predisposition to focus on disasters as necessarily dysfunctional" [when there are "winners" as well]. (Summary of "the generic perspective" by **Kroll-Smith and Couch** 1991, 357.)

Disaster: "When viewed from an ecological-symbolic perspective, the real issue is not the quality of the disaster agent per se, but whether or not it significantly alters the relationship between a community, its built, modified or biophysical environments, and how people interpret and experience the changes in those environments" (**Kroll-Smith and Couch** 1991, 361).

Disaster: "…disaster must not be seen like the meteorite that falls out of the sky on an innocent world; the disaster, most often, is anticipated, and on multiple occasions." (**Lagadec** 1982, 495)

Disaster: "An occurrence or threat of widespread or severe damage, injury, or loss of property resulting from a natural or human-made cause, including, but not limited to, fire, flood, snowstorm, ice storm, tornado, windstorm, wave action, oil spill, water contamination, utility failure, hazardous peacetime radiological incident, major transportation accident, hazardous materials incident, epidemic, air contamination, blight, drought, infestation, explosion, or hostile military action, or paramilitary action, or similar occurrences resulting from terrorist activities, riots, or civil disorders." (**Michigan EMD** 1998, 5)

---

[20] Tierney, Lindell and Perry (2001, 14) state that "…Horlick-Jones (1995) argued in favor of defining disasters as originating in the fundamental social conditions of late-modern society and as involving disruptions of cultural expectations and the release of existential dread. Such dread or anxiety originates in turn in a loss of faith in the institutions that are supposed to keep risks under control."

Disaster: "Disasters, in contrast to risks and hazards, are singular or interactive hazard events…that have a profound impact on local people or places either in terms of injuries, property damages, loss of life, or environmental impacts" (**Mitchell and Cutte**r 1997, 10).

Disaster: "Disasters are commonly7 thought of as tragic situations over which persons, groups, or communities have no control – situations that are imposed by an outside force too great to resist. Disasters render ineffectual the customary behaviorf patterns, often nullify previous efforts, and block or drastiacally change the course of events. The loss of life is an essential element. Survivors are suddenly given a feeling if impotence. Institutions find themselves facing new tasks of undeniable immediacy which must be accomplished if survival is to be assured. On the community level, the situation can be described as one of acute disorganization; at the personal level, there is a high degree of frustration…. Nonpredictability may be an essential characteristic of disaster" (**Moore**, "Toward a Theory of Disaster," 1958, p. 310)

Disaster: "Examples of disaster definitions used by entities include the following:
(1) An occurrence or imminent threat to the entity of widespread or severe damage, injury, or loss of life or property resulting from natural or human causes
(2) An emergency that is beyond the normal response resources of the entity and would require the response of outside resources and assistance for recovery
(3) A suddenly occurring or unstoppable developing event that does the following: (a) Claims loss of life, suffering, loss of valuables, or damage to the environment (b) Overwhelms local resources or efforts (c) Has a long-term impact on social or natural life that is always negative in the beginning." (**NFPA 1600**, 2007, p. 11)

Disaster: "Disasters are the interface between an extreme physical event and a vulnerable population." (**Okeefe** et al 1976, 566)

Disaster: "In graphic ways, disasters signal the failure of a society to adapt successfully to certain features of its natural and socially constructed environments in a sustainable fashion" (**Oliver-Smith** 1996, 303).

Disaster: "…a process involving the combination of a potentially destructive agent(s) from the natural, modified and/or constructed environment and a population in a socially and economically produced condition of vulnerability, resulting in a perceived disruption of the customary relative satisfactions of individual and social needs for physical survival, social order and meaning" (**Oliver-Smith** 1998, 186)

> "A disaster is made inevitable by the historically produced pattern of vulnerability, evidenced in the location, infrastructure, sociopolitical structure, production patterns, and ideology, that characterize a society. The society's pattern of vulnerability is an essential element of a disaster. (**Oliver-Smith** 1998, 187).
>
> "…a disaster is at some basic level a social construction, its essence to be found in the organization of communities, rather than in an environmental phenomenon with destructive or disruptive effects for a society" (**Oliver-Smith** 1998, 181).

Disaster: "A major natural disaster, in the sociological sense, can be thought of as a failure of the social systems constituting a community to adapt to an environmental event…It should also be viewed as the failure to develop and distribute, among other things, technology in the form of housing and community infrastructure capable of withstanding such an event" (**Peacock/Ragsdale** 1997, 24).

Disaster: The result of negative social and environmental impacts, state (condition) of collective stress in a community, or a contradiction between the capacity to cope with destructive agents and their negative impacts. (C**. Pelanda**, 1982[21] according to Porfiriev 1995, 287-288.)

Disaster: "A disaster is a non-routine event that exceeds the capacity of the affected area to respond to it in such a way as to save lives; to preserve property; and to maintain the social, ecological, economic, and political stability of the affected region." (**Pearce** 2000, Chapter 2, 5)

Disaster: "…a state/condition destabilizing the social system that manifests itself in a malfunctioning or disruption of connections and communications between its elements or social units (communities, social groups and individuals); partial or total destruction/demolition; physical and psychological overloads suffered by some of these elements; thus making it necessary to take extraordinary or emergency countermeasures to reestablish stability" (**Porfiriev** 1995, 291)

Disaster: "Disasters occur when the demands for action exceed the capabilities for response in a crisis situation" (**Quarantelli** 1985, 50).

Disaster: An event in which emergency organizations need to expand and extend themselves (such as going to extra shifts) in order to cope. (**Quarantelli** 1987, 25)

Disaster: "Apparently the word etymologically entered the English language from a work in French (desastre), which in turn was a derivation from two Latin words (dis, astro), which combined meant, roughly, formed on a star. So, in its early usage, the word disaster had reference to unfavorable or negative effects, usually of a personal nature, resulting from a star or a planet….In time, the word disaster was applied more to major physical disturbances such as earthquakes and floods, or what came to be traditionally known as Acts of God. With the spread of more secular and non-religious ideologies, nature was increasingly substituted for the supernatural and the tern natural disaster came to the fore" (**Quarantelli** 1987, 8).

Disaster: "…earthquakes are quite harmless until you decide to put millions of people and two trillion dollars in real estate atop scissile fault zones" (**Riesner** 1993, 501).

Disaster: "A situation created by natural and or man-made events, other than war or internal strife which demands total integration and co-ordination, by those responsible for administration of the affected region including: 1. all rescue, relief and life support systems required to meet the needs of the victims, essential transportation and communication systems. 2. repairs to the infrastructure. 3. post-disaster rehabilitation and recovery." (**Ritchie**, et al. 2001, 2)

---

[21] C. Pelanda. 1982. *Disaster and Order: Theoretical Problems in Disaster Research*. Unpublished paper.

Disaster: "In the traditional view of disasters, two categories of *conditions* appear to be dominant. Self-evidently, the scourge of God together with social or political negligence have traditionally served as the principle conditions of natural disasters. Gradually, negligence has given way to more specific conditions such as deficiencies in mitigatory policies and preparatory measures" (**Rosenthal** 1998, 148).

"…a great many official investigations as well as public opinion still cling to technical failure or human error as the number one cause of man-made disaster. In determining the conditions of disaster, technical failures often take its place as an appropriate substitute for the act of God, whereas human error reflects the inherent weaknesses of mankind…" (**Rosenthal** 1998, 149).

"…mediazation…[creates] a new category of disasters and crises which is characterized by extreme collective stress rather than fatal casualties or significant physical damage" (**Rosenthal** 1998, 157).

Disaster: A Condition or situation of significant destruction, disruption and/or distress to a community. (**Salter** 1997–98, 27)

Disaster: All events which cause at least 100 human deaths, 100 human injuries, or US $1 million economic damages. (**Sheehan and Hewitt** 1969, p. 20)

Disaster: The occurrence of a sudden or major misfortune which disrupts the basic fabric and normal functioning of a society (or community). An event or series of events which gives rise to casualties and/or damage or loss of property, infrastructure, essential services or means of livelihood on a scale which is beyond the normal capacity of the affected communities to cope with unaided. Disaster is sometimes also used to describe a catastrophic situation in which the normal patterns of life (or eco-systems) have been disrupted and extraordinary, emergency interventions are required to save and preserve human lives and/or the environment. Disasters are frequently categorized according to their perceived causes and speed of impact. A disaster occurs when a disruption reaches such proportions that there are injuries, deaths, or property damage, and when a disruption affects many or all of the community's essential functions, such as water supply, electrical power, roads, and hospitals. Also, people affected by a disaster may need assistance to alleviate their suffering. (**Simeon Institute**)

Disaster: "…a disaster may be seen as 'the realization of hazard', although there is no universally agreed definition of the scale on which loss has to occur in order to qualify as a disaster" (**Smith** 1996, 5).

"Natural disasters…result from the conflict of geophysical processes with people. This interpretation gives humans a central role. First, through location, because it is only when people, their possessions and what they value get in the way of natural processes that a risk of disaster exists. Second, through perception, because humans place subjective judgments on natural processes as part of a general environmental appraisal whenever they settle and use land" (**Smith** 1996, 10).

"…a disaster generally results from the interaction, in time and space, between the physical exposure to a hazardous process and a vulnerable human population" (**Smith** 1996, 22).

Disaster: "…disasters are significant events…The disruption associated with disaster is, by customary standards, non-trivial. Disasters are neither confined to isolated subsystems (a single household) nor are they of fleeting duration….Disasters involve the disruption of important societal routines….If damage could be prevented or reduced through human protective action, then disaster—the physical consequence of the intersection of society and natural forces—would not exist. Disaster is a function of knowledge…When knowledge is adequate, no external force can produce disaster; ships ride out storms, buildings shake but do not collapse in earthquakes, flood levees hold, etc…When knowledge is inadequate, disaster results" (**Stallings** 1998, 128-129).

> "Disasters affect entire societies; they are neither trivial nor confined to localized social units. Disasters involve the disruption of everyday routines to the extent that stability is threatened without remedial action. Increasingly significant is the loss of certainty and the undermining of faith in orderliness. The state is a major institution for supplying counter-measures when routines are disrupted" (Stallings 1998, 131).
>
> "…in practice the definition [of disaster] will always have a physical component. The physical properties of events are triggers for disaster researchers…" (**Stallings** 1998, 132).

Disaster: "Disasters are the interface between an extreme physical event and a vulnerable human population." (**Susman** et al, 1983)

Disaster: "catastrophic events that (a) interfere severely with everyday life, disrupt communities, and often cause extensive loss of life and property, (b) overtax local resources, and (c) create problems that continue far longer than those that arise from the normal vicissitudes of life" (**Taylor** 1989, 10).

Disaster: "Disasters originate in the fact that all societies regularly face geophysical, climatological, and technological events that reveal their physical and social vulnerabilities." (**Tierney, Lindell and Perry** 2001, 4)

Disaster: "A *disaster* is usually defined as an event that has a large impact on society" (**Tobin and Montz** 1997, 6).

Disaster: An event, concentrated in time and space which threatens a society or a relatively self-sufficient subdivision of a society with major unwanted consequences as a result of the collapse of precautions which had hitherto been accepted as adequate. (**Turner**)

Disaster: "A serious disruption of the functioning of society, causing widespread human, material, or environmental losses which exceed the ability of affected society to cope using only its own resources." (**UNDHA**, *Disaster Management Glossary* 1992, 27; **National Science and Technology Council** 2005, 17; **EEA**, *EEA Environmental Glossary*, 2007)

Disaster: "A serious disruption of the functioning of a community or a society causing widespread human, material, economic or environmental losses which exceed the ability of the affected community or society to cope using its own resources. *A disaster is a function of the*

risk process. It results from the combination of hazards, conditions of vulnerability and insufficient capacity or measures to reduce the potential negative consequences of risk." (**UN/ISDR**, *Terminology: Basic Terms of Disaster Risk Reduction*, March 31, 2004)

Disaster: A "sudden and extraordinary misfortune" to signify the actual onset of a calamity (Allinson 1993, 93; referring to **Webster's *New International Dictionary,* *Unabridged***, 2nd ed.).

Disaster: "…any happening that causes great harm or damage; serious or sudden misfortune; calamity. Disaster implies great or sudden misfortune that results in loss of life, property, etc. or that is ruinous to an undertaking; calamity suggests a grave misfortune that brings deep distress or sorrow to an individual or to the people at large" (**Webster's *New World Dictionary of the American Language***).

Disaster, Ecological: Events "that are caused principally by human beings and that initially affect, in a major way, the earth, its atmosphere, and its flora and fauna." (**Drabek/Hoetmer** 1991, xxi)

Disaster, Geological: "Disasters caused by movements and deformation of the earth's crust." (**European Environmental Agency**, *EEA Environmental Glossary*, 2007)

Disaster, Natural: "A natural disaster is a serious disruption to a community or region caused by the impact of a naturally occurring rapid onset event that threatens or causes death, injury or damage to property or the environment and which requires significant and coordinated multi-agency and community response. Such serious disruption can be caused by any one, or a combination, of the following natural hazards: bushfire; earthquake; flood; storm; cyclone; storm surge; landslide; tsunami; meteorite strike; or tornado." (**Australian Government** 2002, 1)

Disaster, Natural: "'Natural' disasters have more to do with the social, political, and economic aspects of society than they do with the environmental hazards that trigger them. Disasters occur at the interface of vulnerable people and hazardous environments" (**Bolin/Stanford** 1998, Preface).

Disaster, Natural: "Violent, sudden and destructive change in the environment without cause from human activity, due to phenomena such as floods, earthquakes, fire and hurricanes." (**European Environment Agency**, *EEA Environmental Glossary*, 2007)

Disaster, Natural: "While human actions generally cannot cause an earthquake in the sense of doing something to provoke fault movement, they are often critically involved in the disaster that can follow a seismic event. In that sense then, 'natural' is an inappropriate adjective to describe such disasters (**Hewitt** 1997)[22]" (Bolin with Stanford 1998, 4).

Disaster, Natural: Any hurricane, tornado, storm, flood, high water, wind-driven water, tidal wave, tsunami, earthquake, volcanic eruption, landslide, mudslide, snowstorm, drought, fire, or other catastrophe in any part of the United States which causes, or which may cause, substantial damage or injury to civilian property or persons. (**Robert T. Stafford Act**, 602)

[22] K. Hewitt. 1997. *Regions at Risk: A Geographical Introduction to Disasters.* London: Longman.

Disaster, Natural: "In a seeming inversion of what was 'obvious' about natural disasters, a view has been developed by such geographers as Hewitt that seeks explanations of disaster primarily in the sociocultural and economic features of the societies that are variously affected by natural forces. Their focus has been to develop an understanding of the social structures and material practices that made people more or less vulnerable to environmental hazards. In this approach, the underlying causes of disaster are to be found not in nature, but in the organization of human societies (**Varley** 1994[23])" (Bolin with Stanford 1998, 5).

Disaster, Technological: "…technological disasters – meaning everything that can go wrong when systems fail, humans err, designs prove faulty, engines misfire, and so on." (**Erikson**, 1989, 141)

Disaster, Technological: "Man-made disaster due to a sudden or slow breakdown, technical fault, error, or involuntary or voluntary human act that causes destruction, death, pollution, and environmental damage." (**Gunn** 1990, 375)

Disaster, Technological: "**Miller and Fowlkes** (1984)[24] have argued that the term 'technological disaster' renders such events too impersonal in origin. They believe that such 'accidents' are due mainly to the excessive priority given to industrial profits and advocate the term 'man-made disaster' to indicate corporate responsibility" (**Smith** 1997, 14).

Disaster Agent: "A class or category of phenomena that cause disasters, such as hurricanes, tornadoes, or explosions. Hurricane Andrew is a specific disaster event which reflected one of the classes of disaster agents, that is, hurricanes. Andrew is the disaster, hurricane is the disaster agent." **(Drabek** 1996, Session 2, p.6)

Disaster Agent Variability: "Disaster agents may and do vary along different dimensions. These dimensions and their variants can be combined in multiple and almost endless ways. Thus, it is all but impossible to develop a meaningful but simple typology of disaster agents. Nevertheless, knowledge of how disaster agents may differ along one dimension is still useful for emergency planning. Such knowledge should sensitize the planner to possible variants that have to be taken into account. Furthermore…some dimensions are more likely to be operative and varying in certain localities than others."

- Predictability
- Frequency
- Controllability
- Speed of onset
- Length of forewarning
- Duration of impact
- Scope of impact
- Intensity of impact. (**Dynes,** et al., *A Perspective on Disaster Planning*, 1981, pp. 6-7)

---

[23] A. Varley. 1994. "The Exceptional and the Everyday: Vulnerability Analysis in the International Decade for Natural Disaster Reduction." In A. Varley (ed.), *Disasters, Development and Environment*. London: Wiley.
[24] P.Y. Miller and M.R. Fowlkes. 1984 "In Defense of 'Man-Made' Disaster." *Natural Hazards Observer*, Vol. 8, p. 11.

Disaster Area Survey Team (DAST): "A group that is deployed in an area after a disaster to ascertain the extent of damage to population and property and to recommend appropriate responses." (**UNDHA**, *Disaster Management Glossary*, 1992, 27)

Disaster Assistance Employee (DAE, FEMA): "Disaster Assistance Employee (DAE), also known as a Stafford Act employee or Reservist, is a nonpermanent, excepted service employee appointed under the authority of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, P.L. 93-288, as amended. DAEs perform disaster response and recovery activities, usually at temporary work sites located in disaster damaged areas. Initial appointments are for periods of up to one year and may be renewed in increments of one year.

DAEs are a critical staff resource to FEMA. They perform key program, technical, and administrative functions during disasters. Without this work, FEMA's ability to assist State and local governments in recovering from the effects of disasters would be significantly less effective. DAEs must be free to travel at a minimum of two to six weeks at a time, and sometimes longer, usually with as little as a day or two of notice. They need to be able to produce high quality work with minimal supervision, under pressure and in a hectic work environment. Their travel to and from a disaster scene is paid for, along with day-to-day expenses for lodgings and an allotment for meals and expenses. DAEs receive a salary which is based on the kinds of work they perform." (**FEMA**, *Disaster Assistance Employees (Reservists)*. October 11, 2007 update)

Disaster Assistance Improvement Plan (DAIP): "The Disaster Assistance Improvement Program (DAIP) is a government-wide initiative to improve the delivery of assistance to disaster victims. Through modification of an existing E-Gov initiative, GovBenefits.gov, DAIP provides a one-stop portal for those affected by disasters by providing information on programs offering disaster assistance and screening of benefits for which they may be eligible. After determining their eligibility, users may apply for disaster assistance benefits using a single application through FEMA, leading to a more simplified, streamlined process. All benefit applications are adjudicated by the appropriate agency. DAIP will also allow returning users to check the status of the request for benefits available through the single application. DAIP includes member agencies that have programs that: provide benefits for persons in response to disasters; help facilitate the application and delivery process through validation; have other resources that may assist disaster victims: or are otherwise relevant to those who are impacted by disasters." (**USTreas**, *E-Government Initiatives*, 2008)

Disaster Behavior: "…one is amazed how well populations stand up to major disasters and then how petty and irritated they can become on the minor furstrations which accompany these disasters. Accordingly, one should not be surprised to find that no heroes are found deserving the gratitude of the people; and no widespread appreciation is felt for the devoted services of administrators. Finally, no feeling of gratitude is evident in regard to the dispensing of relief and help." (**Vance**, *The Social and Psychological Consequenses of a Natural Disaster*, 1963, p. vi)

Disaster Control: "Measures taken before, during, or after hostile action or natural or manmade disasters to reduce the probability of damage, minimize its effects, and initiate recovery." (**DoD**, *DOD Dictionary of Military and Related Terms*, 2007)

Disaster Declaration: Under the Stafford Act a "disaster declaration" is made upon a state Governor's request, FEMA processing, and Presidential Declaration when an event is seen to overwhelm State and local governmental response capabilities.

"The forms of public assistance typically flow either from a disaster declaration or an emergency declaration. A **major disaster** could result from a hurricane, earthquake, flood, tornado or major fire which the President determines warrants supplemental Federal aid. The event must be clearly more than State or local governments can handle alone. If declared, funding comes from the President's Disaster Relief Fund, which is managed by FEMA, and disaster aid programs of other participating Federal departments and agencies." (**DHS,** *NRF* (Comment Draft), Sep, 2007, 39)

Disaster/Emergency Management: "An ongoing process to prevent, mitigate, prepare for, respond to, and recover from an incident that threatens life, property, operations, or the environment." (**NFPA 1600**, 2007, p. 7)

Disaster Emergency Planning Initiative (DEPI): "…2007…marked the beginning of a new thrust area for DRC [Disaster Research Center] as we launched our Disaster Emergency Planning Initiative. This initiative is aimed at using best practices from emergency management and insights from disaster research to help small communities plan for disaster response. Our initial project in this area was with the small Delaware community of Delaware City. After acquiring Department of Homeland Security funding to update and improve its emergency operations plan (EOP), the community contracted with the Disaster Research Center to request consultation services during the creation of their plan. In order to provide this outreach service, DRC applied expertise in the social science of disasters and research findings in order to create a document that not only meets the technical needs of Delaware City, but also takes into account a number of important principles of emergency management as discussed in the disaster research field. The following issues are the key elements that drove our approach to the creation of this document:

"All Hazards" Oriented
While different hazards (e.g. hurricane, flood, chemical release) will create different needs, planning under the constraints of a real world budget cannot account for every possibility. As a result, it is important to identify high probability events and plan more extensively for these, but it is also vital to create a model of response that attends to the many tasks that might be performed in any type of event.

Community Tailored
While the basic elements of formal emergency plans are fairly similar across communities that have engaged in planning activities, it is important to recognize that these plans are not simply interchangeable. It is extremely important to understand community demographics, resources, and special needs if an emergency plan is to be successful in making responses better. By taking into account the characteristics of the community, we can reduce unknowns and increase the appropriateness and rapidity of disaster response.

Moving Towards an Integrated Network
It is well documented that planning is most effective when it is integrated rather than

fragmented. Given this reality we need to understand this plan as a way of linking together both private and public organizations and people that will likely perform disaster related tasks in this community. By brining together these groups we can facilitate the pooling of collective strengths and capacities….

"Living Document"
As Clarke points out in his book Mission Improbable, "Some plans are highly instrumental, but others are little more than vague hopes of remote futures with no connection to human will or capacity." This suggestion serves as a powerful warning to all who engage in planning activities. Creating a book, document, or plan is simply the beginning of the process. As suggested by many organizational and disaster specialists true preparedness as the planning community become more like a high-reliability system with a constant reflective capacity. In essence, focus on "planning" rather than "the plan." Such systems thrive through constant communication, self-questioning, and adaptation. It is the Center's hope that this plan will become a living document that is revisited, revised, and constantly questioned. As a result a number of discussions were facilitated and suggestions made which were intended to help encourage the plan's evolution. In essence the "plan" is only half as important as the planning process. The former creates a document; the latter builds knowledge, creates familiarity, and leads to education." (**DRC**, *2007 Annual* Report, p. 43)

Disaster Epidemiology: "The medical discipline that studies the influence of such factors as the life style, biological constitution and other personal or social determinants on the incidence and distribution of disease as it concerns disasters." (**UNDHA**, *Disaster Mgmt. Glossary*, 1992, 27)

Disaster Field Office (DFO): "The office established in or near the designated area of a Presidentially declared major disaster to support Federal and State response and recovery operations. The DFO houses the FCO and ERT, and where possible, the SCO and support staff." (**FEMA**, *Guide For All-Hazard Emergency Operations Planning* (SLG 101), 1996, p. GLO-1)

[See **"Interagency Center**" for predecessor to the DFO.]

Disaster Finance Center (DFC): "The DFC is a permanent facility that provides financial services under the Disaster Relief Fund (DRF). The DFC is responsible for coordinating the review, approval, and payment of all bills submitted by departments and agencies for costs incurred in performing mission assignments." (**FEMA**, *Mission Assignment SOPs*, 2007, p. 4; see also p. 49)

Disaster Housing Assistance Program (DHAP): "On July 26, 2007, FEMA and HUD executed an Interagency Agreement (IAA) establishing the DHAP, a temporary housing rental assistance and case management program for eligible individuals and households displaced by Hurricanes Katrina and Rita. The program is currently being administered through HUD's existing infrastructure of Public Housing Agencies (PHAs). Local PHAs were awarded grants to provide rent subsidies to eligible individuals and households for a period not to exceed 15 months beginning December 1, 2007 and ending March 1, 2009. The designated PHAs will also provide case management services, which will include a needs assessment and individual development plan (IDP) for each family. The objective of the case management services is to

promote self-sufficiency for the participating individuals and households. Ultimately, over 40,000 eligible residents displaced by the 2005 Gulf Coast hurricanes will have been provided assistance through this partnership with HUD." (FEMA, *Written Statement of Carlos J. Castillo,* June 4, 2008, p. 6)

Disaster Insurance: "Government sponsored or private insurance policies for protection against economic losses resulting from disaster." (**UNDHA**, *DM Glossary*, 1992, 28; cites PAHO)

Disaster Insurance, Cross-Subsidization: "In most property and casualty insurance lines, state assessments are often passed through to policyholders. As a result, homeowners living in less risky locations also contribute to cover the shortfall—a scenario known as cross-subsidization." (**GAO**, *Natural Disasters: Public Policy Options*, Nov 2007, 22)

Disaster Insurance, Government versus Private-Sector: "Government natural catastrophe insurance programs were created because certain perils are difficult to insure privately and because, when private insurance is available, it may not be affordable. To keep natural catastrophe insurance available and affordable, government insurance programs operate differently than private insurance companies. Private insurance companies generally rely on premiums collected from those they insure to cover operating costs and losses and set premium rates at levels that are designed to reflect the risk that the company assumes in providing the insurance. These companies may also accumulate reserves to cover large losses. Federal and state government insurance programs also collect up-front premiums, but their rates do not always reflect the risks that the programs assume. Because premiums are inadequate to cover operating costs and losses, the government programs generally have limited resources and often face deficits after disasters. However, unlike private insurers, federal insurers may obtain funds after a catastrophic event through emergency appropriations. State programs may also access postevent funding through various means, including assessments on private insurers, bonds, and private reinsurance. State programs may also be postfunded through state general revenue funds and federal disaster relief payments. This structure has several implications. First, it may encourage homeowners in catastrophe-prone locations to seek coverage from government programs, crowding out the private market and increasing the government's financial exposure. Second, homeowners may not receive appropriate price signals about the risk of living in catastrophe-prone locations. Third, taxpayers who live in less risky locations may be subsidizing those living in catastrophe-prone locations. Finally, the added burden of private insurers' assessment obligations may provide another reason for them to leave already stressed markets. Federal natural catastrophe insurance programs fill gaps in private insurance markets and help limit disaster relief payments. (**GAO**, *Natural Disasters: Public Policy Options*, Nov 2007, 17)

"Unlike private insurance companies, government natural catastrophe insurance programs often do not employ accrual accounting and are not always required to accumulate adequate resources to meet their obligations." (**GAO**, *Natural Disasters: Public Policy Options*, Nov 2007, 22)

Disaster Insurance "Overarching Principles," Financial Services Roundtable:

• Insurable events ought to be insured to the maximum extent possible by the private market rather than by the government. Put another way, it is not the government's role to assume risks

that the private marketplace is fully capable of handling, especially if the government's "insurance" is provided after-the-fact through disaster relief, which is both uncertain in amount and not priced to its potential recipients in advance and, as discussed in Chapter 4, tends to impede before-the-event mitigation efforts.

• There are risks, however, that are so large and/or so uncertain that private insurers or the capital markets either are unwilling to insure them, or that the required premiums are so high that many will not want or cannot afford the insurance. In these cases, there is a role for the federal government to "backstop" the private sector.

"We believe that the costs of some Mega-CATs are insurable, and therefore, the main object of government policy as to these risks should be to facilitate the provision of private insurance. We also believe, however, that the costs of certain other Mega-CATs – terrorism in particular -- are not insurable by the private market, and as to these the federal government has an important backstop role to fill Some Commission members believe that this federal backstop function should also extend to largescale natural Mega-CATs.

"Overall, however, the main aim of policy should be to maximize the purchase of catastrophe insurance:
• Insurance provides better financial protection for individuals and firms than after-the-fact disaster relief.

• The broader the insurance coverage, the less disaster relief will be necessary. With insurance, the costs of risk are borne by those exposed to risk. In contrast, taxpayers (currently or in the future) who may or may not directly bear risks of suffering catastrophe losses pay for disaster relief. Comparing the two systems, insurance is more efficient (because insurance premiums induce more loss avoidance and mitigation) and fairer than disaster relief." (**FSR,** *Nation Unprepared*, 2007, 44)

Disaster Insurance, Public Policy Goals: "…four public policy goals that we (GAO) identified for federal involvement in natural catastrophe insurance programs:
(1) to have premium rates fully reflect actual risks,
(2) to encourage private markets to provide natural catastrophe insurance,
(3) to encourage broad participation in natural catastrophe insurance programs, and
(4) to limit costs to taxpayers before and after a disaster." (**GAO**, *Natural Disasters*, Nov '07, 6)

Disaster Insurance, Public Policy Options:

- All-Perils Homeowners Insurance
- Federal Reinsurance for State Catastrophe Funds
- Federal Lending to State Catastrophe Funds
- Insurance Company Catastrophe Reserving
- Homeowner Catastrophe Savings Accounts
- Favorable Tax Treatment for Catastrophe Bonds
- Property Tax Assessment for Private Insurance with Federal Deductible Payment (**GAO**, *Natural Disasters: Public Policy Options.…*, Nov 2007, 34)

Disaster Insurance, Underinsured and Uninsured Problem Area: "The 2005 hurricanes made clear that, even with the federal and state natural catastrophe insurance programs, significant numbers of Americans lacked adequate insurance against natural catastrophes for their homes. These property owners were either uninsured or underinsured, for a variety of reasons. Perhaps most significantly, buying natural catastrophe insurance is in many cases voluntary, and homeowners may choose not to buy it because they do not understand their risk exposure, do not understand the protection catastrophe insurance offers, or cannot afford it. In some cases, homeowners have insurance, but it covers less than the full replacement value of their property or has other policy limitations. Underinsurance can be exacerbated following a natural catastrophe, when rebuilding costs can increase substantially. Uninsured and underinsured homeowners may compound the challenge of providing affordable natural catastrophe insurance by relying on the federal government for postdisaster assistance to rebuild their homes. These homeowners may seek federal disaster relief from several federal agencies, including grants from FEMA and HUD, and real property loans from SBA. As we found, a significant portion of post-Katrina payments to Americans have gone to homeowners who were inadequately insured. We estimated that a quarter to a third of all federal emergency appropriations after the 2005 hurricanes, or around $26 billion in grants and loans, was obligated to homeowners and renters who lacked adequate natural catastrophe insurance." (**GAO**, *Natural Disasters: Public Policy Options*, Nov, 2007, 6)

Disaster Legislation: "The body of laws and regulations that govern and designate responsibility for disaster management concerning the various phases of disaster." (**UNDHA**, *DM Glossary*, 1992, 28)

Disaster Loan Program (DLP) SBA: "SBA's Disaster Loan Program (DLP) is the primary federal program for funding long-range recovery for private sector, nonfarm disaster victims. Eligible losses include under or uninsured damages and can not duplicate benefits received from another source (i.e. insurance recovery, FEMA, etc.). The Small Business Act authorizes SBA to make available the following two types of disaster loans: (1) physical disaster home loans to homeowners, renters, and businesses of all sizes, and (2) economic injury disaster loans to small businesses. Homeowners and renters can borrow up to $40,000 for repair or replacement of household and personal effects. Homeowners can also borrow up to $200,000 to repair or replace a primary residence. Businesses of all sizes can borrow up to $1.5 million to repair or replace disaster damaged real estate, machinery and equipment, inventory, etc. Small businesses can borrow up to $1.5 million for disaster related economic injury resulting from the declared disaster. The combined loans to a business for physical loss and economic injury cannot exceed $1.5 million. Homeowners and businesses must provide reasonable assurance that they can repay the loan out of personal or business cash flow, and they must have satisfactory credit and character." (**GAO**, *Natural Disaster: Public Policy Options*…, Nov 2007, 16)

Disaster Losses: "One catastrophe modeling company predicts that catastrophe losses will double every decade or so due to growing residential and commercial density and more expensive buildings." (**Insurance Info. Institute,** *Catastrophes: Insurance Issues*, Jan 2008, 1)

Disaster Management: The entire process of planning and intervention to reduce disasters as well as the response and recovery measures. It is a neglected element of development planning. (**D&E Reference Center** 1998)

Disaster Management: "Disaster management is the process of forming common objectives and common values in order to encourage participants to plan for and deal with potential and actual disasters." (**Pearce**, 2000, Chapter 2, 11)

"A process that assists communities to respond, both pre- and post-disaster, in such a way as to save lives, to preserve property; and to maintain the ecological, economic, and political stability of the impacted region." (**Pearce** 2000, Chapter 5, p. 6)

Disaster Management: "Romano contends that disaster management includes (1) preparedness planning to assess hazard vulnerability; (2) mitigation activities to reduce hazards in the structure of the facility, its equipment, its operations, and its personnel; (3) response planning to provide for key support operations, such as first aid, search and rescue, building evacuation, emergency communications, and general personnel training; and (4) recovery, in which an organization prioritizes its operations for efficient business continuation and determines how to protect and restore these components." (Light, *Predicting Organizational Crisis Readiness*, 2008, 20; citing Catherine **Romano**, "Is Your Business Protected?" *Management Review*, August 1, 1995, 44)

Disaster Management: "The body of policy and administrative decisions and operational activities which pertain to the various stages of a disaster at all levels." (**UNDHA**, *DM Glossary*, 1992, 28; **EEA**, *EEA Environmental Glossary*, 2007))

Disaster Management Interoperability Services (DMIS): "The Disaster Management initiative also provides a free incident management toolset called Disaster Management Interoperability Services or DMIS. DMIS is made up of two components. One is the basic incident management toolset that allows registered emergency management user groups to manage incidents by creating a common situational awareness and then securely sharing that information across the nation's emergency management community as appropriate. The second component is an interoperability backbone of software and hardware that allows disparate third party incident management software applications and devices to share information through a secured, open architecture platform. Emergency responders and incident managers can learn more about DMIS and its components at: https://interop.cmiservices.org/." (**White House**, OMB, E-Gov)

Disaster Medical Assistance Team (DMAT): "The basic deployable unit of the National Disaster Medical System (NDMS). All urban search and rescue medical teams are considered a "specialized DMAT" under NDMS." (**FEMA**, *Mission Assignment SOPs Draft*, 2007, p. 49)

Disaster Medicine: "The study and collaborative application of various health disciplines to the prevention, preparedness, immediate response and rehabilitation of the health problems arising from disaster, in co-operation with other disciplines involved in comprehensive disaster management." (**UNDHA**, *Disaster Management Glossary*, 1992, 28)

Disaster Mitigation Act (DMA) of 2002 (Public Law106-390, October 30, 2000)**:** "State governments have certain responsibilities for implementing Section 322, including:

- Preparing and submitting a standard or enhanced state mitigation plan;
- Reviewing and updating the state mitigation plan every three years;
- Providing technical assistance and training to local governments to assist them in developing local mitigation plans and applying for HMGP grants; and
- Reviewing and approving local plans if the state has an approved enhanced plan and is designated a managing state.

DMA 2000 is intended to facilitate cooperation between state and local authorities. It encourages and rewards local, tribal, and state pre-disaster planning and promotes sustainability as a strategy for disaster resistance. This enhanced planning network will better enable local, tribal, and state governments to articulate their needs for mitigation, resulting in faster allocation of funding and more effective risk reduction projects. To implement the new DMA 2000 requirements, FEMA prepared an Interim Final Rule, published in the Federal Register on February 26, 2002, at 44 CFR Part 201 and 206, which establishes planning and funding criteria for states, tribes, and local communities." (**FEMA**, *Developing the Mitigation Plan* (FEMA 386-3), 2003, p. i)

Disaster Mitigation Act (DMA) of 2002 (Public Law106-390, October 30, 2000)**:** "The Disaster Mitigation Act (DMA) of 2000 amended the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1988. The DMA authorizes the creation of a pre-disaster mitigation program to make grants to State, local and tribal governments. It also includes a provision that defines mitigation planning requirements for State, local and tribal governments. This new section (Section 322) establishes a new requirement for local and tribal mitigation plans; authorizes up to 7 percent of the HMGP funds available to a State to be used for development of State, local and tribal mitigation plans; and provides for States to receive an increased percentage of HMGP funds from 15 percent to 20 percent if, at the time of the disaster declaration, the State has in effect a FEMA approved State Mitigation Plan that meets the criteria established in regulations." (**FEMA**, *National Flood Insurance Program Description*, August, 2002, pp. 35-36; DMA accessed at: http://www.fema.gov/library/viewRecord.do?id=1935)

Disaster Mitigation Act of 2002, Congressional Findings: "FINDINGS - Congress finds that—
(1) natural disasters, including earthquakes, tsunamis, tornadoes, hurricanes, flooding, and wildfires, pose great danger to human life and to property throughout the United States;
(2) greater emphasis needs to be placed on—
(A) identifying and assessing the risks to States and local governments (including Indian tribes) from natural disasters;
(B) implementing adequate measures to reduce losses from natural disasters; and
(C) ensuring that the critical services and facilities of communities will continue to function after a natural disaster;
(3) expenditures for postdisaster assistance are increasing without commensurate reductions in the likelihood of future losses from natural disasters;
(4) in the expenditure of Federal funds under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), high priority should be given to mitigation of hazards at the local level; and

(5) with a unified effort of economic incentives, awareness and education, technical assistance, and demonstrated Federal support, States and local governments (including Indian tribes) will be able to—

(A) form effective community-based partnerships for hazard mitigation purposes;
(B) implement effective hazard mitigation measures that reduce the potential damage from natural disasters;
(C) ensure continued functionality of critical services;
(D) leverage additional non-Federal resources in meeting natural disaster resistance goals; and
(E) make commitments to long-term hazard mitigation efforts to be applied to new and existing structures." (**DMA**, Title 1, Sec. 101, 2000, pp. 2-3)

Disaster Mitigation Act of 2000 Purpose: "The purpose of this title is to establish a national disaster hazard mitigation program— (1) to reduce the loss of life and property, human suffering, economic disruption, and disaster assistance costs resulting from natural disasters; and (2) to provide a source of predisaster hazard mitigation funding that will assist States and local governments (including Indian tribes) in implementing effective hazard mitigation measures that are designed to ensure the continued functionality of critical services and facilities after a natural disaster." (**DMA**, Title 1, Sec. 101, 2000, pp. 3)

Disaster Mortuary Operational Response Teams (DMORTs): "(DMORTs) are composed of private citizens, each with a particular expertise, who are activated in the event of a disaster to deal with the myriad issues of victim identification and mortuary services. During an emergency response, DMORTs work under the guidance of local authorities, providing technical assistance and personnel to recover, identify, and process deceased victims." (**AHRQ/HHS**, *Mass Medical Care…*, 2007, p. 114)

Disaster Mortuary Operational Response Team (DMORT): "…a Federal Level Response team designed to provide mortuary assistance in the case of a mass fatality incident or cemetery related incident. We work under the local jurisdictional authorities such as Coroner/Medical Examiners, Law Enforcement and Emergency Managers." (Disaster Mortuary Operational Response Team. (*DMORT: A National Asset Available In Times Of Need*, October 9, 2007)

Disaster Plans, Historic Weaknesses:

- Domains [areas of organization responsibilities] not clearly defined
- Domains [areas of organization responsibilities] not clearly assigned
- Conceivable new emergency domains not, or inadequately, recognized
- Methods of interorganizational coordination not clearly defined
- Tasks not integrated
- Existing resources inadequately mobilized and allocated [to operationalize the planning]
- Insufficient new resources allocated [to operationalize the planning]
- Tasks not effectively performed.
- Planning for only most likely hazards
- Missing or inadequate planning for transition from emergency period to recovery
- Missing or inadequate planning for "the inevitable movement to normalcy" (restoration)

- Disaster plans not or inadequately exercised
- Disaster plans not updated and maintained

(**Dynes, Quarantelli and Kreps**, *A Perspective on Disaster Planning* (3rd Ed.), 1981, 74-76)

Disaster Planning: "Disaster Planning is about developing the ability to respond to an interruption in services by restoring an organization's critical business functions. In essence, this is business continuity planning. Disaster recovery for computer systems and services is only one component of an effective business continuity plan… Disaster planning is meant to include the planning and preparations which are necessary to minimize loss and ensure continuity of the critical business functions of an organization in the event of disaster." (**Davis Logic Inc**., *Disaster Planning*, 2005)

Disaster Planning: "…any kind of planning has to be realistic. It has to be built upon real knowledge…not stem from theoretical speculations but studies of actual disasters. Disaster planning has to be realistic also in that it cannot presuppose an ideal situation but the probable situation…good disaster plans are developed so that they can be adjusted to people rather than attempting to force people to conform to planning. Finally, disaster planning has to be realistic in the sense that it is taken for granted that planning can be undertaken. Persons with vivid imagination can always come up with hypothetical possibilities so horrendous that they serve to immobilize any effort at planning…. It is far more realistic to assume probable situations because that is what is likely to occur and for which community planning can be undertaken." (**Dynes**, et al., *A Perspective on Disaster Planning*, 1981, p. iv)

Disaster Planning Fundamental Requirements:

- Knowledge of disaster agents and impacts
- Knowledge of [hazard] agent and response-generated demands
- Knowledge of the disaster context
- Knowledge of the basic elements of organized disaster response.
- Necessity of someone or some organization to take on leadership responsibility for developing, coordinating, communicating, exercising, proselytizing, maintaining and operationalizing the plan. (**Dynes**, Quarantelli and Kreps, *A Perspective on Disaster Planning*, 1981, pp. 77-79)

Disaster Planning Issues:

- Setting priorities for the use of organizations, people and resources.
- Overlapping responsibilities – plan for coordination and cooperation of organizations addressing the same problem.
- The division of responsibilities into tasks.
- Planning for the performance of tasks.
- Interorganizational relationships.
- Integration of various levels of disaster planning – "Disaster plans can be and are developed at the organizational level [local governmental and local non-governmental] the community level, the regional level, the state level and the federal level." (**Dynes, Quarantelli and Kreps**, *A Perspective on Disaster Planning* (3rd Ed.), 1981, pp. 68-74)

Disaster Planning Principles:

1. Planning is a continuous process.
2. Planning involves attempting to reduce the unknowns in a problematical situation.
3. Planning aims at evoking appropriate actions.
4. Planning should be based on what is likely to happen.
5. Planning must be based on knowledge.
6. Planning should focus on principles.
7. Planning is partly an educational activity.
8. Planning always has to overcome resistance. (**Dynes**, *A Perspective on Planning* (3rd Ed., 1981, pp.1-4)

Disaster Preparedness Improvement Grant Program (DPIG): Authorized under Section 201 of the Stafford Act. Annual matching awards are provided to States to improve or update their disaster assistance plans and capabilities.

Disaster Readiness and Support: "The Budget [FY2009 Request] includes $200 million in a new Disaster Readiness and Support Activities account. This account will fund advanced readiness initiatives that assist FEMA in preparing for future disasters and will allow FEMA to perform critical administrative functions that support the timely delivery of services during disasters." (DHS, *Testimony of Secretary Chertoff Before the House Subcommittee on Homeland Security Appropriations*, April 10, 2008)

Disaster Recovery Center (DRC): "Places established in the area of a Presidentially declared major disaster, as soon as practicable, to provide victims the opportunity to apply in person for assistance and/or obtain information relating to that assistance. DRCs are staffed by local, State, and Federal agency representatives, as well as staff from volunteer organizations (e.g., the ARC)." (**FEMA**, *Guide For All-Hazard Emergency Operations Planning*, 1996, p. GLO-1; See also, FEMA, Mission Assignment SOPs Operating Draft, July 2007, p. 49))

Disaster Recovery Institute International (**DRII):** "DRI International was founded in 1988 as the Disaster Recovery Institute in order to develop a base of knowledge in contingency planning and the management of risk, a rapidly growing profession. Today DRI International administers the industry's premier educational and certification programs for those engaged in the practice of business continuity planning and management. More than 3,500 individuals throughout the world maintain professional certification through DRI International. DRII's goals are to:

- Promote a base of common knowledge for the business continuity planning/disaster recovery industry through education, assistance, and publication of the standard resource base;
- Certify qualified individuals in the discipline;

- Promote the credibility and professionalism of certified individuals." (**DRII**, *About DRII*, 2006)

Disaster Recovery Manager: "After a declaration is made, FEMA will designate the area eligible for assistance and the types of assistance available. With the declaration, the President appoints a Federal Coordinating Officer (FCO). The FCO is responsible for coordinating all Federal disaster assistance programs administered by FEMA, other Federal departments and agencies, and voluntary organizations. At the same time, the RA or one of his or her staff will be appointed as the Disaster Recovery Manager (DRM). The DRM is responsible for managing the FEMA assistance programs. The DRM authority often is delegated to the FCO." (**FEMA**, *Public Assistance Guide* (FEMA 322), June 2007)

Disaster Recovery Plan: "The management-approved document that defines the resources, actions, tasks and data required to manage the recovery effort. Usually refers to the technology recovery effort. This is a component of the BCM Program." (**DigitalCare**, *State of OR Business Continuity Workshop*, 2006, p. 52)

Disaster Recovery Plan: "The disaster recovery plan includes:
• reporting hierarchy, including executive management
• identifying primary and alternate disaster recovery team members; these are the people responsible to sustain the business operations and to restore or replace physical assets
• detailed description of each team member's responsibilities during a disaster condition
• a list of internal and external vendors and contact information
• a list of regulatory agencies and contact information
• a list of public service agencies and contact information
• appendix of control forms (report forms, expenses, etc.)
• minimum resources required to sustain the business operation while physical assets are restored or replaced." (**Glenn**, *What is Business Continuity Planning?* 2002)

Disaster Recovery Planning (DRP): "Disaster Recovery Planning (DRP) is not just about computer system availability. While this was the original concept, today, the definition of disaster recovery has been broadened to mean: "The ability to respond to an interruption in services by implementing a disaster recovery plan to restore an organization's critical business functions." Business continuity planning includes disaster recovery for computer systems and services as one component while stressing continuous availability of all critical services… Disaster recovery planning is the technological aspect of business continuity planning. This is meant to include the plans and preparations which are necessary to minimize loss and ensure continuity of the critical business functions of an organization in the event of disaster. (**Davis Logic**, *Disaster Recovery Planning*, 30 Oct 2005)

Disaster Recovery Planning (DRP): "*Disaster recovery planning* is a term used to describe IT recovery. Some companies use different terms to include the recovery of IT systems, data, information management systems and processes, and other related systems. The disaster recovery document should describe the IT and information management systems recovery strategies. The DRP should cover detailed recovery instructions that may include references to procedures, vendor references, system diagrams, and other related recovery materials. The detailed recovery procedures must be updated when system and business processes change." (**IIA**, *Business Continuity Management*, July, 2008, p. 12)

Disaster Recovery Planning (DRP): "Planning of actions an organization will take to resume normal operation if a disaster disrupts normal activity." (**Risky Thinking**, *A Glossary of Risk Related Terms*, 2007)

Disaster Reduction: "*Disaster reduction* is the sum of all the actions, which can be undertaken to reduce the vulnerability of a society to natural hazards. The solutions include proper land-use planning, aided by vulnerability mapping, to locate people in safe areas, the adoption of proper building codes in support of disaster resilient engineering, based on local hazard risk assessments, as well as ensuring the control and enforcement of such plans and codes based on economic or other incentives. Sound information and political commitment are the basis of successful disaster reduction measures. This is an ongoing process which is not limited to a singular disaster event. It motivates societies at risk to become engaged in conscious disaster management, beyond traditional response to the impact of natural phenomena. Disaster reduction is multi-sectoral and interdisciplinary in nature and involves a wide variety of interrelated activities at the local, national, regional and international level." (**UN/ISDR**, *Targeting Vulnerability: Guidelines for Local Activities and Events*, 2001, p. 3)

Disaster Reduction: "The conceptual framework of elements considered with the possibilities to minimize vulnerabilities and disaster risks throughout a society, to avoid (prevention) or to limit (mitigation and preparedness) the adverse impacts of hazards, within the broad context of sustainable development. *The disaster risk reduction framework is composed of the following fields of action, as described in ISDR's publication 2002 "Living with Risk: a global review of disaster reduction initiatives", page 23:*

- *Risk awareness and assessment including hazard analysis and vulnerability/capacity analysis;*
- *Knowledge development including education, training, research and information;*
- *Public commitment and institutional frameworks, including organisational, policy, legislation and community action;*
- *Application of measures including environmental management, land-use and urban planning, protection of critical facilities, application of science and technology, partnership and networking, and financial instruments;*
- *Early warning systems including forecasting, dissemination of warnings, preparedness measures and reaction capacities*." (**UN/ISDR**, *Terminology: Basic Terms of Disaster Risk Reduction*, March 31, 2004)

Disaster Relief Act of 1950 (Pub. L. No. 81-875, 64 Stat. 1109): Congress for the first time authorized a coordinated federal response to major disasters. Formally passed as the Federal Disaster Relief Act of 1950). (**FEMA**, *Disaster Basics* (IS-292), May 24, 2007 update, p. 2-2)

"*Public Law 81-875* was significant for a number of reasons. Funding was authorized for a disaster relief program rather than a single-incident response. The responsibility for determining when Federal disaster relief is required was transferred from Congress to the President. The basic philosophy of Federal disaster relief was developed establishing that Federal assistance is supplemental to State and local resources. The basis for later legislation on cost-sharing between Federal and State or local governments was put into place. Provisions were made for emergency

repairs to or temporary replacement of essential public facilities. Aid was provided only to State and local governments." (**FEMA**, *Disaster Basics* (IS-292), May 24, 2007 update, p. 2-5)

"The act authorized federal agencies, "[i]n any major disaster ... when directed by the President, to provide assistance" to states and localities by lending federal equipment, supplies, facilities, personnel, and other resources; "by distributing, through the Red Cross or otherwise, medicine, food, and other consumable supplies"; by donating surplus federal property; and "by performing ... protective and other work essential for the preservation of life and property, clearing debris and wreckage," repairing and temporarily replacing damaged or destroyed local public facilities, and providing grants to states and localities for these purposes. After the President determined that a natural catastrophe had overwhelmed state and local capabilities, federal aid was to be provided. The act authorized the President to coordinate related agency activities, prescribe related rules and regulations, and "exercise any power or authority conferred on him [by the act] either directly or through such Federal agency as he may designate." The President and agencies were also given budget flexibility with regard to the repair or reconstruction of damaged or destroyed federal facilities." (CRS, *Federal Emergency Management and Homeland Security Organization: Historical Developments and Legislative Options*, June 1, 2006)

Disaster Relief Act of 1969 (Public Law 91-79): "The Disaster Relief Act of 1969…became law on October 1, expands the Federal disaster assistance program. Permanent provisions of the Act include assistance (matching funds) to States in planning for State and 1oca1 aid to individuals suffering disaster losses and appointment of a Federal coordination officer for each major disaster." (*Report on Federal Disaster Assistance in 1969)*

Disaster Relief Act of 1974 (Public Law 93-288)**:** A Federal statute designed to supplement the efforts of the affected States and local governments in expediting the rendering of assistance, emergency services, and the reconstruction and rehabilitation of devastated areas (PL 93-288), as amended. (**FEMA** *Instruction 5000.2*)

"In April 1974, there was a series of devastating tornadoes that hit six Midwestern States. This confirmed the need to add individual and family assistance to the disaster relief program. As a result, the *Disaster Relief Act of 1974 (Public Law 93-288)* was established. Under this law:

- The Individuals and Households Grant Program is available.
- Federal and State disaster relief operations are conducted on a partnership basis, and a State Coordinating Officer (SCO) works jointly with an FCO.
- Federal assistance supports local, Tribal, and State activities and resources.
- Assistance is contingent upon a Presidential Declaration. (**FEMA**, *Disaster Basics* (IS-292), May 24, 2007 update, p. 2-6)

Disaster Relief Act, 1980: "…the Public Assistance (PA) Program, which provided disaster assistance to State and local governments, was in the form of a 100-percent Federal grant. The response to the eruption of Mount St. Helens in May 1980 was the first administrative

implementation of a 75-percent Federal and 25-percent State and local cost sharing of disaster expenses. This response was the first step toward a cost-sharing, full-partnership concept of managing disaster response and recovery." (**FEMA**, *Disaster Basics* (IS-292), May 24, 2007 update, p. 2-6)

Disaster Relief Act of 1988 (Stafford Act): (See, also, Robert T. Stafford Act & Stafford Act):

"In November *1988, the Robert T. Stafford Disaster Relief and Emergency Assistance Act* was passed. This act provided a framework for continued disaster relief and provided the authority for FEMA's role in managing Federal disaster assistance. It also legislated a minimum 75-percent Federal/25-percent State and local cost sharing for the PA Program. The Stafford Act refocused assistance for non-natural disasters, unless caused by fire, flood, or explosion, to a more limited scope. It also confirmed the importance of individual assistance and added an emphasis on mitigation of future losses. Key features of the act are:

- State, Tribal, and local governments have the primary responsibility to respond to a disaster.

- Federal assistance is designed to supplement the efforts and available resources of State, Tribal, and local governments, and voluntary relief organizations in alleviating the damage, loss, hardship, or suffering resulting from a disaster.

- FEMA may task any Federal agency, with or without reimbursement, to provide assistance to State, Tribal, and local disaster efforts in a declared disaster.

Disaster assistance programs included in the Stafford Act are:

- Individual Assistance (IA), in the form of individual and household grants and temporary housing.

- PA, including grants for emergency work, repair and restoration, and debris removal.

Mitigation grants, to reduce long-term risk to life and property from natural or technological disasters." (**FEMA**, *Disaster Basics* (IS-292), May 24, 2007 update, pp. 2-7, 2-8)

Disaster Relief Act, 1993: "Congress amended the Stafford Act in October 1993 to expand the scope of mitigation to include acquisition of properties in floodplains." (**FEMA**, *Disaster Basics* (IS-292), May 24, 2007 update, p. 2-8)

Disaster Relief Act, 1994: "An October 1994 amendment incorporated most of the former Civil Defense Act of 1950, 50 U.S.C. App., into the Stafford Act. This amendment allows FEMA to implement an all-hazards approach to preparedness." (**FEMA**, *Disaster Basics* (IS-292), May 24, 2007 update, p. 2-8)

Disaster Relief Act, 2000: "The Disaster Mitigation Act of 2000 further modified the Stafford Act to establish a national program for pre-disaster mitigation, streamline administration of

disaster relief, and control Federal costs of disaster assistance." (**FEMA**, *Disaster Basics* (IS-292), May 24, 2007 update, p. 2-8)

Disaster Relief Fund (DRF): "A fund appropriated by Congress to pay for FEMA's disaster operations. This includes public assistance, individual assistance, mitigation, emergency response and recovery, and disaster management." (**FEMA**, *Mission Assignment Draft Operating SOPs*, 2007, p. 50)

Disaster Research Center (DRC): "Established at Ohio State University in 1963 by Professors E. L. Quarantelli, Russell Dynes, and Eugene Haas, and moved to its current location at the University of Delaware in 1985, DRC was the first Center in the world devoted to the social scientific study of disasters. Historically, the Center has conducted field interviews and extended research projects on group, organizational, and community preparation for, response to, and recovery from natural and technological disasters and other community-wide crises for both academic and practical development of the field of disaster research and mitigation." (DRC, *2007 Annual* **Report**, July 2008, p. 5)

Disaster Reserve Workforce, FEMA, Office of Management, Disaster Reserve Workforce Division.

Disaster Resilience: "Disaster resilience refers to the capability to prevent or protect against significant multihazard threats and incidents, including terrorist attacks, and to expeditiously recover and reconstitute critical services with minimum damage to public safety and health, the economy, and national security." (**TISP**, *Regional Disaster Resilience*, 2006, p. 2)

Disaster Resistant Community: "Becoming disaster resistant requires a community-wide effort over a long period of time. Participation and commitment are required of all sectors of the community: employers, businesses, community associations, services, and local government. Project Impact…provide guidance on how to accomplish this cooperative effort. Under Project Impact guidelines, a community goes through a number of steps in four phases, including:

Phase 1: Build the Partnership

- Form a partnership team of local officials, representatives of industry and business, infrastructure, transportation, utilities, housing, volunteer organizations, health care, government, work force, education--all community elements having a stake in reducing losses.
- Designate a project impact coordinator to provide staff assistance for the partnership team and to assist with community education and outreach.
- Establish subgroups to tackle identified issues.
- Develop or reproduce Project Impact materials to explain objectives and how to get there.

Phase 2: Identify Hazards and Community Vulnerabilities

- Determine which areas of your community can be affected by disasters, how likely it is that a disaster may occur, and how intense the disaster might be.
- Identify the facilities that are at risk and to what degree they might be affected, as well as how their damage might affect the vulnerability of other structures.

- Do a risk assessment to define the potential consequences of a disaster based on a combination of your hazard and vulnerability studies.

Phase 3: Prioritize and Take Hazard Risk-Reduction Actions

- Plan for open space acquisition of high hazard potential areas.
- Develop policies, incentives and legislation to encourage property owners to invest in projects that will reduce losses in disasters.
- Adopt policies that require consideration and mitigation of identified hazards in subdividing or consolidating parcels, changing land uses, or redevelopment.
- Support community efforts to improve or replace vulnerable utilities and transportation systems.

Phase 4: Communicate Successes

Develop and distribute promotional mitigation materials, organize a speakers bureau, and ask the news media to become partners or sponsors in communicating the value of reducing hazards and the progress toward making your community disaster resistant." (**FEMA**, *Becoming a Disaster-Resistant Community: How and Why*, Dec. 26, 1999)

Disaster Resistant University FEMA Initiative: "Five U.S. universities have been chosen to participate in the pilot phase of a unique undertaking by…FEMA to help the nation's colleges and universities limit future property and economic damage from natural disasters. The five universities will each receive about $100,000 from FEMA for the project and each university will match equally the resources provided by FEMA. The five pilot Disaster Resistant Universities are Tulane University, University of Alaska/ Fairbanks, University of Miami, University of North Carolina/Wilmington and the University of Washington at Seattle.

"These five universities have already shown their commitment to making their campuses more disaster resistant," said FEMA Director James Lee Witt. "When an institution takes action like these universities are doing, their activities will improve the ability of their surrounding community and regions to recover from a major disaster."

"FEMA's Disaster Resistant Universities initiative uses the same strategic approach as FEMA's Project Impact: Building Disaster Resistant Communities. Through Project Impact communities are encouraged to come together to assess their vulnerabilities to natural hazards and implement strategies to limit damage before disasters occur. Project Impact bases its work and planning on three simple principles: Risks must be identified and preventive actions decided at the local level; private-public partnerships are essential; and long-term efforts and investments in prevention measures are necessary.

"The first part of the project consisted of a University of California at Berkeley study of the economic consequences of a disaster on a university and its surrounding community and state. The study substantiated the premise that a disaster in a community's predominant business - the university - will have severe economic consequences locally and even statewide. As part of the study, UC Berkeley also developed a plan to limit future disaster losses and guidelines for other universities to use in the pilot phase of the initiative. "It is clear that disasters do much more than destroy buildings," FEMA Director James Lee Witt said. "They impact a locality in many different ways for a long time." The federal government alone invests nearly $15 billion per year in university-based research… "Witt said that he expects the Disaster Resistant University

initiative will be an important component of FEMA's efforts to change the way America deals with disasters." (**FEMA**, *Five U.S. Universities Selected to Participate in Pilot Phase of FEMA Initiative to Help Universities Avoid Damage from Natural Disasters*, September 28, 2000)

Disaster Response: "A sum of decisions and actions taken during and after disaster, including immediate relief, rehabilitation, and reconstruction." (**UNDHA**, *DM Glossary*, 1992, 29; **EEA**, *EEA Environmental Glossary*, 2007)

Disaster Response Organizational Requirements: "The constructin and maintenance of a coherent response to an emergency situation…represents a considerable accomplishement. The organizational approach must

- Continually map to the requisite variety of a dynamic and risky situation…
- Be able to expand and contract, change strategic orientation, modity or switch tactics, and so forth, as an incident unfolds…." (**Bigley and Roberts**, "The Incident Command System..." 2001, p. 1286)

Disaster Risk: "The chance of a hazard event occurring and resulting in a disaster." (**National Science and Technology Council** 2005, 17)

Disaster Risk Indexing: "A quantitative analysis technique that uses statistical indicators to measure and compare risk variables. Benefits of the technique are efficiency in measuring key elements of risk, repetitive application of the indictor system may allow the monitoring of disaster risk reduction progress, and because the system can be applied rapidly and with little cost it is also a useful tool for the national level to identify risk exposed communities. Limitations of the technique include the use of indicators that may not reflect the complex reality; local and sub-national databases are not currently using uniform data collection and analysis frameworks; lack of availability of data with a suitable coverage and accuracy; and while indexing allows a comparison of relative risk between geographic areas, it cannot be used to depict actual risk for any one area." (**UNDAP**, *Techniques Used in Disaster Risk Asmt.*, 2008)

Disaster Risk Management: "Disaster risk management and reduction are about looking beyond hazards alone to considering prevailing conditions of vulnerability. It is the social, cultural, economic, and political setting in a country that makes people vulnerable to unfortunate events. The basis of this understanding is simple: the national character and chosen form of governance can be as much of a determinant in understanding the risks in a given country, as are the various social, economic and environmental determinants." (**UN/ISDR**, *Internationally Agreed Glossary of Basic Terms Related to Disaster Management*, 2002, p. 27)

Disaster Risk Management: "The systematic process of using administrative decisions, organization, operational skills and capacities to implement policies, strategies and coping capacities of the society and communities to lessen the impacts of natural hazards and related environmental and technological disasters. This comprises all forms of activities, including structural and non-structural measures to avoid (prevention) or to limit (mitigation and preparedness) adverse effects of hazards." (**UN/ISDR**, *Terminology: Basic Terms of Disaster Risk Reduction*, March 31, 2004)

Disaster Risk Reduction (DRR): "…the broad development and application of policies, strategies and practices to minimize vulnerabilities and disaster risks throughout society.1 DRR is a systematic approach to identifying, assessing and reducing the risks of disaster. It aims to reduce socio-economic vulnerabilities to disaster as well as dealing with the environmental and other hazards that trigger them…. The term 'disaster reduction' is often used to mean much the same thing. 'Disaster risk management' is also sometimes used in this way, although it is normally applied specifically to the practical implementation of DRR initiatives." (Twigg, *Characteristics of a Disaster-resilient Community A Guidance Note*, August 2007, p. 6)

Disaster Risk Reduction: "The systematic development and application of policies, strategies and practices to minimize vulnerabilities and disaster risks throughout a society, to avoid (prevention) or to limit (mitigation and preparedness) adverse impact of hazards, within the broad context of sustainable development." (**UN/ISDR**, *Internationally Agreed Glossary of Basic Terms Related to Disaster Management*, 2002, p. 25)

Disaster Risk Reduction: "The conceptual framework of elements considered with the possibilities to minimize vulnerabilities and disaster risks throughout a society, to avoid (prevention) or to limit (mitigation and preparedness) the adverse impacts of hazards, within the broad context of sustainable development. *The disaster risk reduction framework is composed of the following fields of action, as described in ISDR's publication 2002 "Living with Risk: a global review of disaster reduction initiatives", page 23:*

- *Risk awareness and assessment including hazard analysis and vulnerability/capacity analysis;*
- *Knowledge development including education, training, research and information;*
- *Public commitment and institutional frameworks, including organisational, policy, legislation and community action;*
- *Application of measures including environmental management, land-use and urban planning, protection of critical facilities, application of science and technology, partnership and networking, and financial instruments;*
- *Early warning systems including forecasting, dissemination of warnings, preparedness measures and reaction capacities*." (**UN/ISDR**, *Terminology: Basic Terms of Disaster Risk Reduction*, March 31, 2004)

Disaster Situational Awareness Teams (DSATs): "These teams deploy at the discretion of the Secretary of DHS. Members report to the Principal Federal Official—or Joint Field Office Coordination Group if the Principal Federal Official is not on site—upon arrival in the affected areas." (**FEMA**, *Federal Interim Contingency Plan--Predecisional Draft: NMSZ*, Dec. 2007, 20)

Disaster Situational Awareness Teams (DSATs): "These teams are to be comprised of field staff from Immigrations and Customs Enforcement since they can be more easily deployed and are to be at a site within 24 hours to provide situational awareness reporting and other assistance." (GAO, *Homeland Security: Guidance from Operations Directorate*…, 2007, 17)

Disaster Syndrome: "A form of shock reaction, called a 'disaster syndrome,' has sometimes been observed in the aftermath of relatively sudden and extensive disasters. This reaction involves an apathetic response and some disorientation in thinking, However, the 'disaster syndrome' does not appear in great numbers of people; seems confined only to the most sudden traumatic kinds of disasters; has been reported only in certain cultural settings; and is generally of short duration, hours only, if not minutes." (**Dynes**, *A Perspective on Disaster Planning*, 1981, p. 20)

Disaster Team: "Multidisciplinary, multisectoral group of persons qualified to evaluate a disaster and to bring the necessary relief." (**UNDHA**, *DM Glossary*, 1992, 29)

Disaster Time Phases: "There are several discernible phases in the history of any disaster. The *pre-disaster phase* is the everyday situation in the community. A *pre-impact phase* begins with the earliest sign of possible danger and is the time between initial warning and actual impact. Warning may be official as in the case of a weather bulletin, or spontaneous such as the spotting of a gas leak by a passerby. The *impact phase* is that period when the disaster actually strikes… this period may be of limited or long duration, from a few minutes (tornado) to several weeks or more (flooding). The *emergency phase* is the period of response to the immediate demands presented by the agent. *Recovery* is the final phase and includes attempts to mitigate any long-term effects of the disaster agent and return the community to normal, everyday conditions." (**Dynes**, et al, *A Perspective on Disaster Planning* (3rd Ed.), 1981, p. 8)

Disaster Typology – The Suiter Scale:

- Incident
- Emergency
- Disaster
- Catastrophe
- Chaos
- Anarchy

(**Woodbury**, *Catastrophic Disaster Planning and Lessons Learned from Hurricanes Katrina and Rita*. December 2, 2005, slide 3)

DISC: Disaster Information Systems Clearinghouse. (**DHS**, *JFO Activation*…, 2006, p. 2)

Discharge (synonym flux, rate of flow): "Volume of water flowing through a river (or channel) cross-section in unit time." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 29)

Disciplines: "A group of personnel with similar job roles and responsibilities. [e.g. law enforcement, firefighting, Hazardous Materials (HazMat), Emergency Medical Services (EMS)]. (**FEMA**, *Glossary of Key Terms*, Incident Management Systems Division, March 12, 2008)

Disciplines, First Responder and Related Served by Training and Exercise Integration Secretariat Training Operations, NIC, NPD, FEMA:

- Emergency Management Agency (EMA)
- Emergency Medical Services (EMS)

- Fire Service (FS)
- Governmental Administrative (GA)
- Hazardous Materials Personnel (HZ)
- Healthcare (HC)
- Law Enforcement (LE)
- Public Safety Communications (PSC)
- Public Health (PH)
- Public Works (PW) (**FEMA**, TEI/TO *Course Catalog*, 2008, pp. 2-3)

Disciplines, NIMS:

- Emergency Management
- Law Enforcement
- Firefighting
- HazMat
- Search & Rescue
- Emergency Medical Services
- Hospital
- Public Health
- Coroner/Medical Examiner
- Amateur Radio
- Public Safety Communications
- Public Works/Utilities
- Agriculture/Natural Resources
- Public Administration
- Educational Institution
- Private Industry
- Community Group/Volunteer Agency
- Transportation Authorities
- Animal Control & Care
- Non-Governmental Organization. (**FEMA**, *NIMSCAST Technical Users Guide Version 1.1*. April 30, 2007, p. 12)

Disciplines, State and Urban Area Homeland Security Illustrative Disciplines:

- Emergency Management
- Law Enforcement
- Fire
- Public Health and Healthcare
- Public Works (**DHS/ODP**, *State and Urban Area Homeland Security Strategy: Guidelines on Aligning Strategies with the NPG*, 2005, p. 9)

Discussion-Based Exercises: "Discussion-based exercises are normally used as a starting point in the *building-block approach* to the cycle, mix, and range of exercises. Discussion-based exercises include *seminars*, *workshops*, *TTXs*, and *games*. These types of exercises typically highlight existing plans, policies, mutual aid agreements (MAAs), and procedures, and are

exceptional tools to familiarize agencies and personnel with current or expected jurisdictional *capabilities*. Discussion-based exercises typically focus on strategic, policy-oriented issues, whereas *operations-based* exercises tend to focus more on tactical, response-related issues. *Facilitators* and/or presenters usually lead the discussion and keep *participants* on track to meet exercise *objectives*." (**FEMA**, *HSEEP Glossary*, 2008)

Discussions-based Exercises: "Discussions-based Exercises familiarize participants with current plans, policies, agreements and procedures, or may be used to develop new plans, policies, agreements, and procedures. Types of Discussion-based Exercises include:

- *Seminar.* A seminar is an informal discussion, designed to orient participants to new or updated plans, policies, or procedures (e.g., a seminar to review a new Evacuation Standard Operating Procedure).

- *Workshop.* A workshop resembles a seminar, but is employed to build specific products, such as a draft plan or policy (e.g., a Training and Exercise Plan Workshop is used to develop a Multi-year Training and Exercise Plan).

- *Tabletop Exercise (TTX).* A tabletop exercise involves key personnel discussing simulated scenarios in an informal setting. TTXs can be used to assess plans, policies, and procedures.

- *Games.* A game is a simulation of operations that often involves two or more teams, usually in a competitive environment, using rules, data, and procedure designed to depict an actual or assumed real-life situation." (**FEMA**, *About HSEEP*, 2008)

Disease Control: "All policies, precautions and measures taken to prevent the outbreak or spread of communicable diseases." (**UNDHA**, *Disaster Mgmt. Glossary*, 1992, p. 30)

Disk Mirroring: "Disk mirroring is the duplication of data on separate disks in real time to ensure its continuous availability, currency and accuracy. Disk mirroring can function as a disaster recovery solution by performing the mirroring remotely. True mirroring will enable a zero recovery point objective. Depending on the technologies used, mirroring can be performed synchronously, asynchronously, semi-synchronously, or point-in-time. Similar terms: data mirroring, data replication, file shadowing, and journaling." (**DigitalCare**, *State of OR Business Continuity Workshop*, 2006, p. 54)

Displaced Person: "Persons who, for different reasons or circumstances, have been compelled to leave their homes. They may or may not reside in their country of origin, but are not legally regarded as refugees." (**UNDHA**, *Disaster Mgmt. Glossary*, 1992, p. 30)

Disruption: "Incident, whether anticipated (e.g. hurricane) or unanticipated (e.g. a blackout or earthquake) which disrupts the normal course of operations at an organization location." (**ISO 22399**, *Societal Security*…, 2007, 2)

Dissemination: "The timely release, distribution and delivery of raw intelligence and finished intelligence products to the appropriate recipients in compliance with defined protocols. Dissemination is the general policy and rule; and, raw and finished intelligence and information will be disseminated unless the dissemination is legally or procedurally prohibited. These prohibitions, also known as Dissemination restrictions/caveats, are not a level of Classification, but they are used in conjunction with the appropriate Classification level and caveat the sharing, distribution and delivery of intelligence/information. Some examples of Dissemination restrictions/caveats are:

- ORCON (Dissemination and Extraction of Information Controlled by Originator) – no further dissemination can occur without the prior approval of the originator
- NOFORN (Not Releasable to Foreign Nationals) – may not be provided, in any form, to foreign governments, international organizations, coalition partners, foreign nationals or immigrant aliens
- REL TO – authorized for release to… (specify country)
- RELIDO – Releasable by Information Disclosure Officer
- FISA – Foreign Intelligence Surveillance Act
- Grand Jury Information – protected by Federal and State statute
- Taxpayer Information – protected by Federal statute." (**FEMA**, *IIFOG Ver 3 Draft*, 2008, p. 35)

Distribution Management Strategy Working Group: "The LMD [Logistics Mgmt. Directorate, FEMA] initiated a Distribution Management Strategy Working Group, with federal, private and nongovernmental organizations logistics partners, to conduct a comprehensive analysis to develop and approve a comprehensive distribution and supply chain management policy. Partners in this group include GSA, DoD, Defense Logistics Agency (DLA), Health and Human Services, U.S. Army Corps of Engineers, and the American Red Cross. This group's analysis includes rightsizing inventory levels and determining the most effective strategic supply and service infrastructure locations in order to transition into a regional area support strategy. The working group is considering all critical distribution and supply chain management criteria in developing a concept that is effective in meeting our emergency management support responsibilities." (**FEMA**, *LMD Fact Sheet*, January 31, 2008 modification)

Division (NIMS): "The partition of an incident into geographical areas of operation. Divisions are established when the number of resources exceeds the manageable span of control of the Operations Chief. A division is located within the ICS organization between the branch and resources in the Operations Section." (**DHS**, *NIMS*, 2004, p. 128)

Division of Bioterrorism Preparedness and Response (DBPR) CDC: The DBPR "provides leadership for CCID in preparedness for infectious disease emergencies as well as operational support for non-infectious disease emergencies such as natural disasters. Since the program's establishment in 1999, DBPR has been involved in virtually all of CDC's large-scale responses. Major projects include the LRN, the Early Aberration Reporting System, and the All Threats Agent Content System." (**CDC**, *About the National Center for Preparedness, Detection, and Control of Infectious Diseases (NCPDCID)*, December 26, 2007 update)

DLA: Defense Logistics Agency. (**Senate HSGA**, *Katrina: A Nation Still Unprepared*, p. 631)

DLP: Disaster Loan Program, SBA. (**GAO**, *Natural Disaster: Public Policy*…, Nov 2007, 16)

DNDO: Domestic Nuclear Detection Office, DHS. (**FEMA**, *Statement of Cannon*, 2007, 10)

DNI: Director, National Intelligence. (**DHS**, *FCD 1*, Nov. 2007)

DO: Domestic Operations. (**Dept. of the Army**, *WMD-CST Ops*, Dec 2007, Glossary-2)

Doctrine: "*Doctrine* is a body of knowledge for guiding collective action. Good doctrine does not tell people what to think, but it guides them in how to think, particularly in how to address complex, ambiguous, and unanticipated challenges when time and resources are both in short supply." (**Carafano**, "Managing Mayhem," *JFQ*, 2008, p. 136)

Doctrine: An "authoritative statement of one or more guiding principles. Doctrine encompasses the fundamental principles which guide an organization and 'shapes the effort.' Policy includes the process implemented through plans and procedures towards realization of doctrine and 'guides the effort.' Strategy is the course of action to achieve policy goals and 'accomplishes the effort'. Example: DHS doctrine describes the planning process for incidents of national significance." (**DHS**, *DHS Lexicon: Terms.*…, Oct 2007, 9)

Doctrine: "Doctrine influences the way in which policy and plans are developed, forces are organized and trained, and equipment is procured. It promotes unity of purpose, guides professional judgment and enables [first responders] to fulfill their responsibilities."[25]

[25] Sited: *United States Coast Guard: America's Maritime Guardian*, Coast Guard Publication 1 (Washington, DC: January 2002, second printing), p. 3. The term "doctrine" has clear and rich meaning

(**DHS,** *National Response Framework* (Comment Draft), September 10, 2007, p. 8)

Doctrine: The NRF is grounded in "doctrine that demands a tested inventory of common organizational structures and capabilities that are scalable, flexible and adaptable for diverse operations. Its adoption across all levels of government and with businesses and NGOs will facilitate interoperability and improve operational coordination." (**DHS,** *NRF Draft*, Sep07, 10)

Doctrine: "Fundamental principles by which the military forces or elements thereof guide their actions in support of national objectives. It is authoritative but requires judgment in application." (**DOD** *Dictionary of Military and Associated Terms*, 2007, p. 166)

Doctrine: "Within the NWL [Navy Warfare Library], doctrine refers to overarching guidance that allows collections of Navy units to operate effectively as a Navy force. Doctrine therefore refers to both fundamental principles and operational-level guidance. This operational-level doctrine is distinct from the tactics, techniques, and procedures (TTP) used to guide the specific operation of platforms and systems. Doctrine is issued in top-level JPs, NDPs, and NWPs. Navy doctrine forms a bridge between the naval component of our nation's military strategy and our TTP. A commander, however, cannot operate solely under the guidance of broad strategy. Neither can the commander make appropriate mission decisions if guided only by TTP. Doctrine guides our actions toward well-defined goals and provides the basis for mutual understanding within and among the Services and the national policymakers. It ensures our familiarity and efficiency in the execution of procedures and tactics." (**Navy**, *Navy Warfare Library*, 2005, 1-1)

Doctrine: "Doctrine is a set of fundamental principles which guide actions - authoritative, but requiring judgment in application. They are most important during periods of great chaos, such as on a battlefield or during a major natural disaster when communications and unity of command are difficult." (**Perkins**, *Shaping DHS Doctrine for Operational Success*, July 2007, 1)

"**…**doctrine reduces "mission creep." The Coast Guard, for example, has long prided itself on 'getting the job done' no matter what was asked of it, completing unusual missions timely and effectively. Over a number of decades, missions accreted even while resources dried up, eventually resulting in a "dull knife". Doctrine outlines what a service or agency must be competent in and, in general or specific terms, how it should do it. With only 40,000 active duty members, the Coast Guard cannot be all things to all people. Doctrine will describe what can be done and what can't without reducing its flexibility." (Ibid, 4)

"Clear doctrine prevents or at least reduces miscommunication by creating common frames of reference. It shows at a glance what other organizations will do, and therefore improves clarity of purpose and definition of roles in disaster prevention and response." (Ibid, 6)

"Sound doctrine enables sound training, and it is training that permits thoughtful action during periods of chaos." (Ibid, 7)

---

as a guide to action within the military services. See also U.S. Department of Defense's *Joint Operations Planning and Execution System*; overview at http://www.dtic.mil/doctrine/jel/other_pubs/jopes.pdf

"*The Doctrine-Training-Operations Cycle*: Any organization that tries to stay efficient creates a structure that enables a cycle of continuous improvement. New procedures (doctrine) and methods are taught to new members and to senior staff in refresher courses. Training results in operations that are consistent with the new and improved doctrine. Based upon feedback, the procedures are further modified and new training is given until the desired end result indicates that doctrine and training are producing the best results reasonably achievable." (Ibid, 10)

"*Doctrine Pyramids*: For any…organization, doctrine should assume the shape of a multi-tiered pyramid…that guides operations in increasing detail with each level down. Each component of an organization or service within the Department should have its own doctrine pyramid that is guided by the overarching Department's pyramid. The highest level doctrine is typically summed up in a single book so that a new member or student can quickly get a sense of key concepts (by convention this single book is often titled Doctrine Publication 1)." (Ibid, 11)

Doctrine: "Like strategy, doctrine should assume a top-down direction and permeate the entire pyramid…" (**Read**, "Irregular Warfare…" *Air & Space Power*, Winter 2007, p. 47)

Doctrine: "…doctrine; that is, fundamental principles that guide our actions in support of the nation's objectives…. Doctrine influences the way in which policy and plans are developed, forces are organized and trained, and equipment is procured. It promotes unity of purpose, guides professional judgment, and enables Coast Guard men and women to best fulfill their responsibilities." (**USCG** *Pub 1*, 2002, p. 3)

Doctrine: "Fundamental principles by which military forces or elements thereof guide their actions in support of national objectives. It is authoritative but requires judgment in application." (**USCG** *Pub 1*, 2002, p. 60)

Doctrine, Environmental: "Environmental doctrine is a compilation of beliefs about the employment of military forces within a particular operating medium; thus, land, sea, and air doctrine fit in this category…. Environmental doctrine is…international in its application and should thus apply equally well to any nation's military force." (**Friedenstein**, "The Uniqueness of Space Doctrine," *Air University Review,* Nov-Dec 1985)

Doctrine, Fundamental: "Fundamental doctrine is grounded in an examination of history, and it applies in all operating mediums in any nation. Instantly recognized as elements of fundamental doctrine are purposes of the military, the nature of war, and the relationship of the military to other national instruments of power. Since fundamental doctrine is characterized by its timeless significance and universal application, it is rarely, if ever, rewritten in response to technological change." (**Friedenstein**, "The Uniqueness of Space Doctrine," *Air University Review,* Nov-Dec 1985)

Doctrine, Homeland Security: "Doctrine describes the fundamental principles and concepts that shape the Nation's homeland security effort. It broadly tells us what planning is supposed to achieve, how it is structured and resourced, and how it is executed. Doctrine describes the systems, processes, intellectual underpinnings, and terminology that are the bedrock of homeland security planning. The doctrinal concepts and principles laid out here are consistent with

planning systems already in place, or being considered for adoption. Specifically, this doctrine underpins and supports:

- Homeland Security Presidential Directive-5 (HSPD-5)
- Homeland Security Presidential Directive–8 (HSPD-8), Annex I
- National Response Framework (NRF)
- National Incident Management System (NIMS)
- National Preparedness Guidelines (NPG)
- National Strategy for Homeland Security (NSHS)

(**FEMA**, *(Interim) Integrated Planning System (IPS) for Homeland Security (Draft Version 2.3)*, July 3, 2008 copy, p. 2-1)

Doctrine, Multi-Direction: "Federated planning is a 'multi-direction' doctrine — it flows bottom-up, top-down, left-right, and right-left. It recognizes that planning begins with strategic direction from senior executives at each level of government. This strategic direction is converted to concept plans (CONPLANS), which are, in turn, converted to operations plans (OPLANS). This planning process takes place throughout the planning community, with planners at each level interacting with each other and often with planners at other levels to acquire and integrate support." (**FEMA**, *(Interim) Integrated Planning System (IPS) for Homeland Security (Draft Version 2.3)*, July 3, 2008 copy, p. 2-2)

Doctrine, Organizational: "Organizational doctrine defines the basic beliefs of a particular military organization about how best to conduct warfare in its operating medium. Soviet and U.S. doctrine would diverge at this point. Organizational doctrine is very dependent on technology and is often tempered by local political constraints. If a statement of doctrine did not apply a decade ago or if it is obviously tied to the capability of a particular weapon system, it is organizational doctrine." (**Friedenstein**, "The Uniqueness of Space Doctrine," *Air University Review,* Nov-Dec 1985)

DOA: Department of the Army.

DOC: Department of Commerce.

DOC: Department Operations Center. (**DHS**, *NIMS,* 2004, p. 27)

DOD or DoD: U.S. Department of Defense. (**DA**, *WMD-CST Ops*, Dec 2007, Glossary-2)

DoD Immediate Response: "…the majority of DOD support is coordinated using the concept of DSCA. However, imminently serious conditions resulting from any civil emergency may require immediate action to save lives, prevent human suffering or mitigate property damage. When such conditions exist, and time does not permit approval from higher headquarters, local military commanders and responsible officials from DOD components and agencies are

authorized to take necessary action to respond to requests from civil authorities. This response must be consistent with the Posse Comitatus Act, which generally prohibits Federal military personnel (and units of the National Guard when they are acting under Federal authority) from acting in a law enforcement capacity (e.g., search, seizures, arrests) within the United States, except where expressly authorized by the Constitution or Congress." (**DHS**, *National Response Framework -- Federal Partner Guide* (Comment Draft), September 10, 2007, p. 20)

DOJ: U. S. Department of Justice. (**Senate HSGA**, *Katrina: A Nation Still Unprepared*, p. 631)

DOM: Devolution of Operations Plan. (**FEMA**, *Continuity of Operations Programs*, 2007)

Domain. "A major grouping of activities related to the "life cycle" of a domestic incident. The four domains are prevention, preparedness, response, and recovery." (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, p. 74)

Domain Awareness: "…obtaining effective knowledge of activities, events, and persons in the dimensions of air, land, sea, and cyber-space." (**Sauter & Carafano** 2005, 243)

Domain, Air: "`Air Domain' is defined as the global airspace, including domestic, international, and foreign airspace, as well as all manned and unmanned aircraft operating, and people and cargo present in that airspace, and all aviation-related infrastructure." (**DH**S, *Air Domain Surveillance and Intelligence Integration…*, March 26, 2007, p. i)

Domain, Air: "The air domain consists of both the skies above the United States, and the skies that allow entry into U.S. airspace. As the National Strategy for Aviation Security notes, "the differences between ground-based and airborne aviation security measures implemented in different jurisdictions throughout the world, the volume of domestic and international air traffic, the speed with which events unfold, and the complexity of aviation assets make the Air Domain uniquely susceptible to attack or exploitation by terrorist groups, hostile nation-states, and criminals." (**DHS**, *Capstone Doctrine Pub 1 Draft*, Chapter 2, 2008, p. 2-6)

Domain, Land: "The homeland security land domain entails the entire geographic area of the United States and its territories. Protecting the land domain entails both border protection, to prevent illicit entry of people and goods into the U.S., as well as protection of the country's infrastructure. This involves both a "borders out" and a "borders in" approach to security operations." (DHS, Capstone Doctrine Pub 1 Draft, Chapter 2, 2008, p. 2-6)

Domain, Maritime: "The maritime domain is all areas and things of, on, under, relating to, adjacent to, or bordering on a sea, ocean, or other navigable waterway, including all maritime related activities, infrastructure, people, cargo, and vessels and other conveyances."[26] (**DHS**, *Capstone Doctrine Pub 1 Draft*, Chapter 2, 2008, p. 2-6)

Domain, Cyber: "The cyber domain is composed of hundreds of thousands of interconnected computers, servers, routers, switches, and fiber optic cables that allow the Nation's critical infrastructures to work. Thus, the healthy functioning of cyberspace is essential to the economy and the Nation's well-being."[27] (**DHS**, *Capstone Doctrine Pub 1 Draft*, Chapter 2, 2008, p. 2-6)

[26] Definition from "The National Strategy for Maritime Security."
[27] Definition of cyber space from "The National Strategy to Secure Cyberspace"

Domain, Security: "Security domains are those areas of flow of goods, people, and technologies, where a breach in security with malicious intent threatens the overall homeland security of the country. Achieving homeland security means exercising dominion over each of the homeland security domains so as to have information about the threats and vulnerabilities within the domains and be able to prevent, protect, respond and recover from security incidents in that domain. For example, achieving security in the cyber domain is not merely related to building fire-walls to prevent cyber attacks, but also includes increasing domain awareness, building a cyber response and recovery system, and developing partnerships among a range of legitimate participants in activities (including commerce) in cyber space, particularly the private sector, to reduce the consequences of an attack to the cyber network." (**DHS**, *Capstone Doctrine Pub 1 Draft*, Chapter 2, 2008, p. 2-6)

Dome: "Lava which is too viscous to flow laterally and therefore forms a dome above the erupting vent." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 30)

Domestic Battlespace: "…the placed formerly known as our communities and homes…" (Tierney, *The 9/11 Commission and Disaster Management,* 2005, p. 5)

Domestic Battlespace: "Homeland security should not be viewed as exclusively or even primarily a military task. Securing the "domestic battlespace"--a highly complex environment--requires Federal departments and agencies, state and local governments, the private sector, and individual citizens to perform many strategic, operational, and tactical level tasks in an integrated fashion. These actions must be synchronized with others that are being taken on the international front to prosecute the war against global terrorism. The challenges and demands associated with this undertaking are immense. Success will depend largely upon the Nation's ability to achieve unity of effort at all levels of government." (**Tomisek**, "Homeland Security…, Feb. 2002)

Domestic Battlespace: The US in a homeland security context. (**USCG**, *Charting a Course for Homeland Security Strategic Studies*, November 2004)

Domestic Chemical, Biological, Radiological, Nuclear, High-Yield Explosives Crisis Management: "Domestic CBRNE CM are those actions taken to maintain or restore essential services and manage and mitigate problems resulting from disasters and catastrophes, including natural, manmade, or terrorist incidents." (**JCS/DoD**, *CBRNE CM*, 2006, p. vi)

Domestic Emergencies: "Emergencies affecting the public welfare and occurring within the 50 states, District of Columbia, Commonwealth of Puerto Rico, US possessions and territories, or any political subdivision thereof, as a result of enemy attack, insurrection, civil disturbance, earthquake, fire, flood, or other public disasters or equivalent emergencies that endanger life and property or disrupt the usual process of government. Domestic emergencies include civil defense emergencies, civil disturbances, major disasters, and natural disasters. (This term and its definition modify the existing term and its definition and are approved for inclusion in JP 1-02.)" (**DOD**, *Homeland Defense*, 2007, p. GL-8 (177).

Domestic Emergency: "Any natural disaster or other emergency that does not seriously endanger national security, but which is of such a catastrophic nature that it cannot be managed effectively without substantial Federal presence, or which arises within spheres of activity in which there is an established Federal role." (**FEMA** *Disaster Dictionary* 2001, 36; cites *Domestic Emergencies Handbook*, US Army Forces Command, March 15, 1999).

Domestic Emergency Support Team (DEST): "Relative to terrorism incident operations, an organization formed by the Federal Bureau of Investigation (FBI) to provide expert advice and assistance to the FBI On-Scene Commander (OSC) related to the capabilities of the DEST agencies and to coordinate follow-on response assets. When deployed, the DEST merges into the existing Joint Operations Center (JOC) structure." (**FEMA** *Disaster Dictionary* 2001, 36; cites FEMA FRP, "Terrorism Incident Annex")

Domestic Incident Management: "(3) To prevent, prepare for, respond to, and recover from terrorist attacks, major disasters, and other emergencies, the United States Government shall establish a single, comprehensive approach to domestic incident management. The objective of the United States Government is to ensure that all levels of government across the Nation have the capability to work efficiently and effectively together, using a national approach to domestic incident management. In these efforts, with regard to domestic incidents, the United States Government treats crisis management and consequence management as a single, integrated function, rather than as two separate functions.

"(4) The Secretary of Homeland Security is the principal Federal official for domestic incident management. Pursuant to the Homeland Security Act of 2002, the Secretary is responsible for coordinating Federal operations within the United States to prepare for, respond to, and recover from terrorist attacks, major disasters, and other emergencies. The Secretary shall coordinate the Federal Government's resources utilized in response to or recovery from terrorist attacks, major disasters, or other emergencies if and when any one of the following four conditions applies: (1) a Federal department or agency acting under its own authority has requested the assistance of the Secretary; (2) the resources of State and local authorities are overwhelmed and Federal assistance has been requested by the appropriate State and local authorities; (3) more than one Federal department or agency has become substantially involved in responding to the incident; or (4) the Secretary has been directed to assume responsibility for managing the domestic incident by the President.

"(5) Nothing in this directive alters, or impedes the ability to carry out, the authorities of Federal departments and agencies to perform their responsibilities under law. All Federal departments and agencies shall cooperate with the Secretary in the Secretary's domestic incident management role.

"(6) The Federal Government recognizes the roles and responsibilities of State and local authorities in domestic incident management. Initial responsibility for managing domestic incidents generally falls on State and local authorities. The Federal Government will assist State and local authorities when their resources are overwhelmed, or when Federal interests are involved. The Secretary will coordinate with State and local governments to ensure adequate planning, equipment, training, and exercise activities. The Secretary will also provide assistance

to State and local governments to develop all-hazards plans and capabilities, including those of greatest importance to the security of the United States, and will ensure that State, local, and Federal plans are compatible….

"(15) The Secretary shall develop, submit for review to the Homeland Security Council, and administer a National Incident Management System (NIMS). This system will provide a consistent nationwide approach for Federal, State, and local governments to work effectively and efficiently together to prepare for, respond to, and recover from domestic incidents, regardless of cause, size, or complexity. To provide for interoperability and compatibility among Federal, State, and local capabilities, the NIMS will include a core set of concepts, principles, terminology, and technologies covering the incident command system; multi-agency coordination systems; unified command; training; identification and management of resources (including systems for classifying types of resources); qualifications and certification; and the collection, tracking, and reporting of incident information and incident resources.

"(16) The Secretary shall develop, submit for review to the Homeland Security Council, and administer a National Response Plan (NRP). The Secretary shall consult with appropriate Assistants to the President (including the Assistant to the President for Economic Policy) and the Director of the Office of Science and Technology Policy, and other such Federal officials as may be appropriate, in developing and implementing the NRP. This plan shall integrate Federal Government domestic prevention, preparedness, response, and recovery plans into one all-discipline, all-hazards plan. The NRP shall be unclassified. If certain operational aspects require classification, they shall be included in classified annexes to the NRP.

(a) The NRP, using the NIMS, shall, with regard to response to domestic incidents, provide the structure and mechanisms for national level policy and operational direction for Federal support to State and local incident managers and for exercising direct Federal authorities and responsibilities, as appropriate….

"(18) The heads of Federal departments and agencies shall adopt the NIMS within their departments and agencies and shall provide support and assistance to the Secretary in the development and maintenance of the NIMS. All Federal departments and agencies will use the NIMS in their domestic incident management and emergency prevention, preparedness, response, recovery, and mitigation activities, as well as those actions taken in support of State or local entities. The heads of Federal departments and agencies shall participate in the NRP, shall assist and support the Secretary in the development and maintenance of the NRP, and shall participate in and use domestic incident reporting systems and protocols established by the Secretary." (**White House**, *Homeland Security Presidential Directive 5 (Management of Domestic Incidents*), Feb 28, 2003)

Domestic Incident Manager: The Secretary of the Department of Homeland Security. (**DHS**, *Statement of Frank DiFalco, Director of the National Operations Center*, June 20, 2007, p. 1)

Domestic Nuclear Defense Policy Coordinating Committee: "Created in 2004 by the Homeland Security Council and the National Security Council, the committee is a joint policy coordination body that is made up of representatives of all federal agencies with management

responsibilities for nuclear defense, detection, and interdiction. This committee has been instrumental in providing guidance on developing DNDO's nuclear detection response protocols. Policy Coordinating Committee meetings are attended by an under or assistant secretary of each cabinet department." (**DHS/OIG**, *DHS' DNDO Progress*…, Dec 2007, p. 16)

Domestic Nuclear Defense Research and Development Working Group: Federal interagency entity. (**DHS/OIG**, *DNDO Progress*…, Dec 2007, p. 35)

Domestic Nuclear Defense Research and Development Working Group: "This interagency working group addresses the coordination of: R&D strategies for domestic nuclear defense; the identification and filling of critical technology gaps, enhance efforts to develop and sustain critical capabilities through appropriate investments in the foundational science and research, interagency funding for necessary science and technology; and collaboration and exchange of vital R&D information." (**DHS**, *Opening Statement of Vayl Oxford*, July 27, 2006, p. 3)

Domestic Nuclear Detection Office (DNDO): "The Domestic Nuclear Detection Office (DNDO) is a jointly staffed office established April 15, 2005 to improve the Nation's capability to detect and report unauthorized attempts to import, possess, store, develop, or transport nuclear or radiological material for use against the Nation, and to further enhance this capability over time.
Strategic Objectives

- Develop the global nuclear detection and reporting architecture
- Develop, acquire, and support the domestic nuclear detection and reporting system
- Fully characterize detector system performance before deployment
- Establish situational awareness through information sharing and analysis
- Establish operation protocols to ensure detection leads to effective response
- Conduct a transformational research and development program
- Establish the National Technical Nuclear Forensics Center to provide planning, integration, and improvements to USG nuclear forensics capabilities."

(**DHS**, *DNDO*, Oct. 12, 2007 mod.)

[Note: The DNDO was established as a statutory entity via Section 501 of the *SAFE Port Act of 2006*. (**DHS/OIG**, *DHS' DNDO Progress*…, Dec 2007, p. 3)

Domestic Nuclear Detection Office (DNDO) Advisory Council: "Members of the Advisory Council include intra-agency senior officials from CBP, TSA, the U.S. Coast Guard, and other DHS components as appropriate. The Advisory Council provides guidance to DNDO, and is the forum used to address intra-agency issues and activities related to DNDO strategies and initiatives. It also plays a role in coordinating and communicating across DHS components on nuclear detection requirements and related security programs." (**DHS/OIG**, *DHS' DNDO Progress*…, Dec 2007, p. 17)

Domestic Nuclear Detection Office (DNDO) Domestic State and Local Integrated Product Team: "DNDO's Domestic State and Local Integrated Product Team manages all DNDO activities with states to ensure outreach efforts are coordinated. The team is made up of DNDO staff from each directorate. The team identifies state requirements for preventative radiological

and nuclear detection and ensures DNDO working groups, exercises, training, and technical assistance for detector deployment programs are coordinated to benefit state and local entities. The team reviews fixed and portable detectors to identify personnel, equipment, and network requirements, as well as training, exercise, and operational procedure needs." (**DHS/OIG**, *DHS' DNDO Progress*…, Dec 2007, p. 26)

Domestic Nuclear Detection Office (DNDO) Exercise Program: "The U.S. Department of Homeland Security Domestic Nuclear Detection Office (DNDO), Operations Support Directorate is responsible for establishing and operating a real-time situational awareness and support capability. In this capacity, the Exercise Program provides exercise support as a validation instrument to test and evaluate the radiological/nuclear (RN) detection, deterrence, prevention, reporting, vulnerability reduction, and capabilities in a risk-free environment. The utilization of these services assist in validating that the equipment is properly employed and the alarm adjudication process is in accordance with federal, state, and local alarm adjudication protocols and appropriate notifications are escalated to the proper agencies at the national and international level, as appropriate. The Exercise Program assists in the development and implementation of improvement plans and protocols, as well as the design, development, and conduct of radiological/nuclear prevention exercises for state and local entities, in compliance with the Homeland Security Exercise and Evaluation Program (HSEEP) methodology. DNDO exercise support is available to states and designated Urban Area Security Initiative (UASI) jurisdictions to help develop, test, and improve their radiological/nuclear prevention and detection capabilities." (**DHS**, *DNDO Exercises*, 2007)

Domestic Nuclear Detection Office (DNDO) Interior Layer Detection Program: "*Mission:* Reduce risk to high-density urban areas by developing, demonstrating, acquiring, and supporting the deployment of integrated rad/nuc detection and reporting systems for the domestic interior layer.
Strategic Objectives:

- Develop urban and regional detector deployment strategies and CONOPs
- Identify effective and operationally-feasible detector systems
- Integrate detection reporting systems into regional and national command and control networks
- Establish support infrastructure, including training, response protocols, and technical reachback
- Identify alternatives for Federal support to State and local detection operations during periods of heightened risk
- Engage State and local agencies to facilitate the development of informed grant applications in support of the domestic detection architecture." (**DHS/DNDO**, *DNDO Overview*, April 20, 2007, slide 24)

Domestic Nuclear Detection Office (DNDO) Red Team: "DNDO is working toward implementing a red team program to assess the effectiveness of deployed detection systems. The term red team is used to describe adversarial role-playing to test a system's security vulnerabilities or readiness. Red teams provide DNDO the ability to identify vulnerabilities or gaps within radiological and nuclear detection and reporting systems before adversaries can exploit them." (**DHS/OIG**, *DHS' DNDO Progress*…, Dec 2007, p. 18)

Domestic Nuclear Detection Office (DNDO) Southeast Transportation Corridor Pilot: "In an effort to build upon existing state collaboration on transportation initiatives, DNDO has engaged states in the Southeast region through the Southeast Transportation Corridor Pilot. With this pilot, DNDO has supported Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and the District of Columbia in deploying radiological and nuclear detectors that target commercial traffic on highways and at interstate weigh stations. Through the Southeast Transportation Corridor Pilot, DNDO assists states with developing radiological and nuclear threat detection capabilities." (**DHS/OIG**, *DHS' DNDO Progress*…, Dec 2007, pp. 27-28)

Domestic Nuclear Detection Office (DNDO) State and Local Affairs Office: "DNDO's State and Local Affairs Office has engaged state Homeland Security Advisors and other state officials and has informed those officials of DNDO's mission and programs. DNDO uses its State and Local Working Group as a forum to provide information to states, and for states to exchange information on best practices. DNDO also uses the working group as means to obtain information on states' detection capabilities, requirements, and future plans. The State and Local Affairs Office assists states with developing grant applications for preventative radiological and nuclear equipment and projects. Also, DNDO holds working group meetings to discuss ongoing or upcoming preventative detection initiatives." (**DHS/OIG**, *DHS' DNDO Progress*…, Dec 2007, p. 25)

Domestic Nuclear Detection Office (DNDO) State and Local Stakeholder Working Group: "The DNDO State and Local Stakeholder Working Group works to improve concepts of operations development and to identify environments where detection equipment may be used. The group is made up of DNDO staff, and state and local officials. The group considers various factors affecting the deployment and function of detectors such as operational environments, detector capabilities, and the potential for connecting newly acquired detection equipment with existing radiological and nuclear detection systems. Through the State and Local Stakeholder Working Group, DNDO incorporates stakeholder concerns and feedback into exercise development and training opportunities to assist detector users better." (**DHS/OIG**, *DHS' DNDO Progress*…, Dec 2007, p. 26)

Domestic Readiness Group (DRG). "The DRG is an interagency body convened on a regular basis to develop and coordinate preparedness, response, and incident management policy. This staff-level group evaluates various policy issues of interagency import regarding domestic preparedness and incident management and makes recommendations to Cabinet and agency deputies and principals for decision. As appropriate, the chair of the HSC [Homeland Security Council] and Cabinet principals will present such policy issues to the President for decision. The DRG has *no role regarding operational management* during an actual incident." (**DHS,** *National Response Framework* (Comment Draft), September 10, 2007, p. 51)

Domestic Readiness Group (DRG): "The DRG is an interagency body convened on a regular basis to develop and coordinate preparedness, response, and incident management policy. This group evaluates various policy issues of interagency importance regarding domestic preparedness and incident management and makes recommendations to senior levels of the

policymaking structure for decision. During an incident, the DRG may be convened by DHS to evaluate relevant interagency policy issues regarding response and develop recommendations as may be required." (**DHS**, *NRF*, 2008, 54)

Domestic Readiness Group (DRG): "The DRG is activated and directed by the White House to provide strategic direction to the national response to a major incident or catastrophic event. The DRG facilitates interagency coordination, resolves policy issues and addresses national-level resource allocation issues that cannot be resolved by the NRCC." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 4; see also, p. 50)

Domestic Terrorist Incident: "A form of civil disturbance, that is a distinct criminal act that is committed or threatened to be committed by a group or single individual to advance a political objective, and which endangers safety of people, property, or a Federal function in the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, and the U.S. territories and possessions." (**DoD**, *MACDIS*, 1994, p. 18)

DOMS: Director of Military Support. (**DoD**, *MACA*, 1997, p. 3; **DA**, *WMD-CST Ops*, 2007)

DOMS: Directorate of Military Support. (**DoD**, *MACDIS*, 1994, p. 11) Transferred from the Secretary of the Army to the Assistant Secretary of Defense for Homeland Defense, May 2003.

DO: Devolution of Operations, COOP/COG.

DOP: Devolution of Operations Plan/Planning, COOP/COG.

DOR: Disaster Operations and Recovery Section, Emergency Management Institute, FEMA.

DOT: Department of Transportation. (**Senate HSGA**, *Katrina: A Nation Still Unprepared*, 631)

DP: Diphosgene. (**Dept. of the Army**, *WMD-CST Operations*, December 2007, Glossary-2)

DPA: Defense Production Act of 1950.

DPG: Defense Planning Guidance. (**DA**, *WMD-CST Operations*, December 2007, Glossary-2)

DPMU: Disaster Portable Morgue Unit. (**DHS**, *TCL*, 2007, p. 527)

DPP: Domestic Preparedness Program. (**Skidmore**, *Acute Care Center…*, 2003, v)

DR: Disaster Recovery. (**DigitalCare**, *State of Oregon BC Workshop Desk Ref*., 2006, p. 8)

Drainage Basin (synonym catchment, river basin, watershed): "Area having a common outlet for its run-off." (**UNDHA**, *DM Glossary*, 1992, p. 30)

DRBA: Disaster Recovery Business Alliance.

DRC: Disaster Recovery Center.

DRC: Disaster Research Center, University of Delaware.

DRF: Disaster Relief Fund, FEMA

DRG: Domestic Readiness Group.

DRII: Disaster Recovery Institute International.

Drill: "A standardized technique or procedure that prepares students to execute critical collective tasks in an instinctive and spontaneous manner. The drill includes the methods by which it is trained." (**DHS**, *DHS Training Glossary*, 2006, p. 22)

Drill: "A drill is a coordinated, supervised activity usually employed to validate a specific operation or function in a single agency or organization. Drills are commonly used to provide training on new equipment, develop or test new policies or procedures, or practice and maintain current skills. Drills are narrow in scope and typically focus on a specific aspect of an operation…. Drills can be used to determine if plans can be executed as designed, to assess whether more training is required, or to reinforce best practices. In addition to being a valuable stand-alone tool, a series of individual drills can also be useful in preparation for a larger exercise." (**DHS**, *HSEEP*, Vol. V, 2005, p. 40)

Drill. "A drill is a coordinated, supervised activity usually employed to test a single, specific operation or function within a single entity (e.g., a fire department conducts a decontamination drill)." (**FEMA**, *About HSEEP*, 2008)

Drill: "A coordinated, supervised activity usually used to test a single specific operation or function in a single agency. Drills are commonly used to provide training on new equipment, develop or test new policies or procedures, or practice and maintain current skills. Typical attributes include the following: A narrow focus, measured against established standards; Instant feedback; Performance in isolation; Realistic environment." (**FEMA**, *NIMS Compliance Metrics Terms of Reference* (For FY 2007), Oct.23, 2006, p. 3) [See "Exercise Types"]

Drive-Away Kit: "A kit prepared by, and for, an individual who expects to deploy to an alternate location during an emergency. The kit contains items needed to minimally satisfy an individual's personal and professional needs during deployment." (**DHS**, *FCD 1*, 2007, P-3)

DRM: Disaster Recovery Manager.

Drop Ship: "A strategy for **a)** Delivering equipment, supplies, and materials at the time of a business continuity event or exercise. **b)** Providing replacement hardware within a specified time period via prearranged contractual arrangements with an equipment supplier at the time of a business continuity event. Similar term: quick ship." (**DigitalCare**, *State of OR Business Continuity Workshop*, 2006, p. 54)

Drought: "A prolonged period with no rain, particularly during the planting and growing season in agricultural areas. Drought can also affect urban areas particularly those dependent in reservoirs for their water. Decreased water levels due to insufficient rain can lead to the restriction of water use to certain amounts and types of uses. Droughts are difficult to predict or forecast both as to when they may begin and how long they will last. Increased pumping of groundwater and surface irrigation occurring in drought periods can result in severe land subsidence problems. Almost all areas of the country are subject to direct impact of drought as it affects their water supply systems. The most vulnerable regions are the arid southwest and the semiarid part of the mid-continent, particularly the Great Plains. During the last 100 years, major sustained droughts have occurred in these regions roughly once every 20 years." (**FEMA**, *IEMS HICA MYDP* (CPG-1-34), 1985, p. A-1)

Drought: (1) Prolonged absence or marked deficiency of precipitation. (2) period of abnormally dry weather sufficiently prolonged for the lack of precipitation to cause a serious hydrological imbalance. (**WMO** 1992, 198)

Drought Index: "Computed value which is related to some of the cumulative effects of a prolonged and abnormal moisture deficiency." (**UNDHA**, *DM Glossary*, 1992, p. 31)

DRP: Devolution Response Group, COOP.

DRP: Disaster Recovery Planning. (**Davis Logic**, *Disaster Recovery Planning*, 30 Oct 2005)

DRR: Disaster Risk Reduction.

Dry Spell: "Period of abnormally dry weather. Use of the term should be confined to conditions less severe than those of a drought." (**UNDHA**, *DM Glossary*, 1992, p. 31)

DSA: Disaster Support Account, FEMA Emergency Management Institute funding account, 2008.

DSAT: DHS Situational Awareness Team, Department of Homeland Security. (**DHS**, *Notice of Change to the National Response Plan*, May 25, 2006, Version 5.0, p. 23)

DTRA: Defense Threat Reduction Agency, Department of Defense.

DTRIM: Domestic Threat Response and Incident Management Policy Coordinating Committee, Office of Homeland Security (OHS), Executive Office of the President. [Became the Homeland Security Council during the George W. Bush Administration..] (**NRT**, *Reconciling Federal Emergency Response Plans*…, Nov. 13, 2003, Foreword)

Dual-Use (1972): From a 1972 "Presidential decision that the U.S. should maintain the 'current overall level of effort in its civil defense activities' and that there should be 'increased emphasis on dual-use plans, procedures and preparedness [for peacetime as well as attack emergencies] within the limitations of existing authority'." (**Chipman**, *CD for the 1980's*, 1979, pp. 4-5)

"The views and judgments of those in DCPA familiar with dual-use issues can be summarized as follows:

1. In general, the Federal view has been that attack preparedness is the primary objective of the CD program, with improved State and local readiness for peacetime emergencies being a secondary but desirable objective….The State and local vies is in general the reverse – attack preparedness tends to be seen as the secondary but desirable objective.
2. State and local CD agencies are responsible for preparedness for peacetime emergencies, under their own legislation, whereas the Federal Civil Defense Act of 1950 as amended, defines CD solely in terms of attack preparedness operations….
3. The historical record for two decades is conclusive that if the Federal Government wishes to develop attack readiness, it must provide full funding for the programs required. Examples include the procurement as well as the maintenance of radiological defense instruments, the shelter survey (started in 1962), development of local plans for use of shelters, crisis relocation (evacuation) planning, and training.
4. Local governments, including CD Directors, will however cooperate to the extent necessary to develop attack readiness in communities throughout the country, provided the Federal Government takes the lead and provides assistance on-site in attack-oriented planning, training, and related areas….
5. The State and local view that attack preparedness is primarily (though not entirely) a Federal responsibility is clearly consistent with both the Constitution and the Federal Civil Defense Act.
6. State and local concern for peacetime preparedness has increased progressively since the latter 1960's, influenced primarily by the ever-decreasing Federal budget and patent lack of commitment of CD attack preparedness, also by the climate of détente. Increased concentration on peacetime disaster has been seen as essential to their survival, by local and State CD agencies, as well as having merit in its own right and being their legal responsibility….
7. State and local concern for peacetime preparedness has advantages for attack-oriented preparedness, such as motivating State and local officials to commit some funds and effort to general emergency preparedness, in addition to the obvious desirability on the merits of saving live and property in a tornado or other peacetime disaster. Also, planning and training for peacetime emergencies has considerable benefit for attack readiness – as do local operations in an actual peacetime emergency….

8. Assets provided under the civil defense program have been of great value in peacetime emergencies: Emergency Operating Centers have been used to good effect on many occasions… CD sirens are routinely used to warn the public of tornadoes….
9. Reasonable attack readiness cannot be developed as a bonus or by-product of readiness for peacetime emergencies. The latter type of preparedness gets a community perhaps 20 or 30 percent of the way to a reasonable level of attack readiness – which requires a large number of additional, special systems and capabilities.
10. Developing attack preparedness, however, cannot help but improve local and State readiness for peacetime emergencies…
11. The *modus vivendi* that has evolved over the past two decades is in general that the Federal Government provides full funding for uniquely attack-oriented systems and capabilities…while the capabilities supported by matching funds are for the most part 'dual-use' in nature – necessary for both peacetime and attack emergencies (e.g., support of local and State CD staffs, or local warning systems).
12. This *modus vivendi* works well in practice, notwithstanding the difference in Federal as contrasted to State and local priorities and concerns. However, it is essential that *balance* be maintained: Some local and State governments, if left to their own devices, will emphasize peacetime disaster readiness to the exclusion of attack preparedness. That is, their notion of 'dual' use is not in fact dual.
13. The rhetoric, and to a degree, policy, of the Federal agency has varied over the years: In the early 1960's, nearly total emphasis on attack preparedness, under the accelerated CD program of President Kennedy; mid- and latter 1960's some recognition of peacetime preparedness; early to mid-1970's, stronger emphasis on peacetime preparedness… FY 1977, attack-only (per OMB direction); FY 1978-1979, significant emphasis again on peacetime preparedness but with attack preparedness being the primary objective….
14. ….
15. Opinion in Congress has been to the effect that attack preparedness is the primary mission, under the Federal Civil Defense Act, but that assistance provided under the Act can be used to prepare for peacetime disasters, provided this benefits both the attack and peacetime-preparedness missions.
16. ….
17. Many thus feel that FEMA would do well to stress attack preparedness while of course recognizing preparedness for peacetime disasters as a welcome bonus, and a significant and legitimate concern of States and localities. The latter can be relied on to add an ample tincture of emphasis on peacetime disaster readiness, so there is no compelling need for FEMA to stress peacetime preparedness at the expense (real or perceived) of attack readiness." (**Chipman**, *CD for the 1980's*, 1979, pp. 63-66)

Dual-Use (1974): "Local government is the keystone of civil preparedness. The Federal and State governments provide guidance and assistance to municipal and county governments in this readiness effort. The objective at all levels is to develop the capability to protect life and property in any type of disaster. In furthering that objective, the 'dual-use' concept long advocated by the Defense Civil Preparedness Agency is applied wherever possible. This is the concept of developing emergency systems useful both in the everyday routine of government as well as during emergencies; and of being useful both during peacetime or in event of war." (**DCPA**, *Foresight (FY 1973 DCPA Annual Report)*, 1974, p. 1)

"The main thrust of the National Civil Preparedness Program is to help States and communities develop dual-use emergency systems to protect people from both peacetime disasters or the effects of nuclear attack." (**DCPA**, *Foresight*, 1974, p. 4)

Dual-Use (1974): "A major objective of the DCPA public information program during the fiscal year was to reorient the American public, both in the public and private sector, about the new, dual-purpose nature of the national civil preparedness program. For many years, the objective of the national program was to prepare Americans solely to cope with the effects of nuclear attack. Now it is two-fold: to protect people from the emergencies and disasters of peacetime as well as from the effects of nuclear attack." (**DCPA**, *Foresight*, 1974, p. 23)

Dual-Use (1971): "There is…a growing awareness that communities prepared to meet the effects of attack are better prepared to deal with peacetime hazards and disasters. The nationwide civil defense system—involving federal, state, and local governments—affords an ever-increasing capability for protecting the citizen from environmental hazards and from natural as well as man-made disasters.

"During fiscal year 1971, increased emphasis was placed on finding ways and means to increase civil defense capabilities through the dual use of people, equipment, and dollars to meet critical peacetime community needs. Communications, education, and training for emergencies were stressed, and exchange of information on lifesaving emergency operations was encouraged…. Dual use is encouraged by OCD [Office of Civil Defense, DOA]" (**DOA Center of Military History**, *Department of the Army Historical Summary: FY 1971* (Chapter II, Operational Forces, Section "Civil Defense"), 1973, pp. 19-21)

Dual-Use (1953): "Communities, Cities and States throughout the Nation learned that an organized, trained Civil Defense was an important asset whenever and wherever natural disaster struck. In 1953 Civil Defense truly became a recognized community service – a new dimentsion of peacetime citizenship." (**FCDA**, *1953 Annual Report*, p. 1) "Our local Civil Defense organizations even now are gaining much needed experience – and paying their way – by serving in rescue and relief capacities in time of fire, flood, drought, or tornado damage. I count the dedication of the Federal Civil Defense Administration to these worthy emergency causes as one of the most practicable and forward-looking acts of the new administration." (**FCDA**, *1953 Annual Report*, p. 6)

Due Care: "A concept involving either the performance of an assessment of a business or person, or the performance of an act with a certain standard of care. Although "due care" can connote a legal obligation, it is commonly used when discussing voluntary assessments." (**DHS**, *Federal Continuity Directive* 1, November 2007, P-3)

DUNS: Data Universal Numbering System.

Dust Storm (Sand Storm): "Dust (sand) energetically lifted to great heights by strong and turbulent winds." (**UNDHA**, *DM Glossary*, 1992, p. 31)

DWG: Devolution Working Group (COOP). (**FEMA**, *Devolution of Operations Plan Template*)

Dynamic Testing: "Analysis of the response of structures under simulated loads of the type imposed by natural hazards." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 31)

EA: Enterprise Archtecture.

EAG: EMAC Advisory Group.

Early Warning: "The provision of timely and effective information, through identified institutions, that allows individuals exposed to a hazard to take action to avoid or reduce their risk and prepare for effective response. *Early warning systems include a chain of concerns, namely: understanding and mapping the hazard; monitoring and forecasting impending events; processing and disseminating understandable warnings to political authorities and the population, and undertaking appropriate and timely actions in response to the warnings*." (**UN/ISDR**, *Terminology: Basic Terms of Disaster Risk Reduction*, March 31, 2004)

Earth Flow: "A mass movement characterized by down slope translation of loose material." (**UNDHA**, *DM Glossary*, 1992, 31-32)

Earthquake: "The sudden motion or trembling in the earth caused by an abrupt release of slowly accumulating strain which results in ground shaking, surface faulting, or ground failures. Most areas of the United States are subject to earthquakes, and they occur literally thousands of times per year. Most earthquake occurrences result in little or no damage; however, even a moderate earthquake (magnitude 6-7) such as the San Fernando quake in 1971 can result in $500 million in damages and the loss of life of 60 or more people." (**FEMA**, *IEMS, HICA MYDP* (CPG 1-34), 1985, p. A-1)

Earthquake: "An earthquake is the sudden, sometimes violent movement of the earth's surface from the release of energy in the earth's crust. Earthquakes are one of the most costly natural hazards faced by the Nation, posing a risk to 79 million Americans in 39 states. Although there are no guarantees of safety during an earthquake, identifying potential hazards ahead of time and advance planning can save lives and significantly reduce injuries and property damage. The number one cause of death in an earthquake is running out of a building and being struck by falling debris! With the stringent construction standards in force in the U.S. today, you are far safer staying **inside** a building when an earthquake occurs." (**FEMA**, "Fact Sheet – Earthquake" (FEMA 559), January 2007. p. 1)

Earthquake: "An earthquake is a sudden and rapid shaking of the earth caused by the breaking and shifting of rock beneath the earth's surface. This shaking can sometimes trigger landslides, avalanches, flash floods, fires and tsunamis. Unlike other natural disasters such as hurricanes, there are no specific seasons for earthquakes…. In the United States about 5,000 quakes strike each year. Since 1900 earthquakes have occurred in 39 states and caused damage in all 50…. The potential cost of earthquakes has been growing because of increasing urban development in seismically active areas and the vulnerability of older buildings, which may not have been built or upgraded to current building codes…. only about 12 percent of homeowners in California now

buy earthquake coverage…. In April 2008 experts from the U.S. Geological Survey, USC's Southern California Earthquake Center and the State Geological Survey released an earthquake forecast indicating that a huge quake is far more likely in Southern California than in Northern California in the next 30 years. The report also concluded that the state is virtually certain to be hit by a major earthquake by 2028. The researchers found that the chance of a 6.7 magnitude temblor, equal to the 1994 Northridge quake, is 97 percent in Southern California and 93 percent in Northern California. The likelihood of a 7.5 quake, which is 16 times more intense than a 6.7 quake, is 37 percent in Southern California and 15 percent in Northern California. The study used new information about prehistoric earthquakes, locations of faults and their slip rates, and satellite data of the movement of the Earth's crust to calculate the likelihood of earthquakes in the state. Thomas Jordan, director of the Southern California Earthquake Center, said that both the data and the method of its collection have been improving. The report will be used to update seismic hazard maps that warn residents and local governments about areas at highest risk of property damage and loss of life." (**III**, *Earthquakes: Risk & Insurance Issues*, May 2008)

Earthquake: "Ground shaking caused by a sudden movement on a fault or by volcanic disturbance." (**USGS**, *Putting Down Roots in Earthquake Country*, 2007, Glossary)

Earthquake Hazards Reduction Act of 1977, Public Law 95-124 (USC 7701 et. Seq.) as amended by Public Laws 101614, 105-47, 106-503, and 108-360.]: "SECTION 3. PURPOSE. It is the purpose of the Congress in this Act to reduce the risks of life and property from future earthquakes in the United States through the establishment and maintenance of an effective earthquake hazards reduction program. The objectives of such program shall include:

(1) the education of the public, including State and local officials, as to earthquake phenomena, the identification of locations and structures which are especially susceptible to earthquake damage, ways to reduce the adverse consequences of an earthquake, and related matters;

(2) the development of technologically and economically feasible design and construction methods and procedures to make new and existing structures, in areas of seismic risk, earthquake resistant, giving priority to the development of such methods and procedures for power generating plants, dams, hospitals, schools, public utilities and other lifelines, public safety structures, high occupancy buildings, and other structures which are especially needed in time of disaster;

(3) the implementation, to the greatest extent practicable, in all areas of high or moderate seismic risk, of a system (including personnel, technology, and procedures) for predicting damaging earthquakes and for identifying, evaluating, and accurately characterizing seismic hazards;

(4) the development, publication, and promotion, in conjunction with State and local officials and professional organizations, of model building codes and other means to encourage consideration of information about seismic risk in making decisions about land-use policy and construction activity;

(5) the development, in areas of seismic risk, of improved understanding of, and capability with respect to, earthquake-related issues, including methods of mitigating the risks from earthquakes,

planning to prevent such risks, disseminating warnings of earthquakes, organizing emergency services, and planning for reconstruction and redevelopment after an earthquake;

(6) the development of ways to increase the use of existing scientific and engineering knowledge to mitigate earthquake hazards; and

(7) the development of ways to assure the availability of affordable earthquake insurance."

Earthquake Hypocenter (focus): "The place inside the earth where the faulting which is associated with the earthquake originated." (**UNDHA**, *DM Glossary*, 1992, 32)

Earthquake Legislation: "In 1977 the United States Congress enacted the Earthquake Hazards Reduction Act, in recognition of the fact that earthquakes pose the greatest potential threat of any single-event natural hazard confronting the nation. The Act directed the President to "establish and maintain an effective earthquake hazards reduction program."

Congress then created the National Earthquake Hazards Reduction Program, which gave lead responsibility to the federal government to provide direction, coordination, research and other support to efforts aimed at earthquake hazard mitigation and preparedness. The Federal Emergency Management Agency (FEMA), the United States Geological Survey, the National Science Foundation, and the National Institute of Standards and Technology were assigned specific roles. Recommendations were included on the duties of state governments, local governments, private organizations and individuals." (**III**, *Earthquakes*…, May 2008)

Earthquake Measurement: "The size and magnitude of an earthquake is measured in several different ways. The *Richter Scale* measures the size of earthquake waves. It was developed by Charles Richter in the 1930s and is a logarithmic measurement of the amount of energy released by an earthquake, see below. The *Mercalli Intensity Scale* evaluates the intensity of a quake according to observed severity at specific locations. It rates the intensity on a Roman numeral scale that ranges from I to XII. Today, seismologists are using the *Moment Magnitude Scale*, which measures the size of the earthquake's fault, and how much of the earth slips at the time of the quake. A number of readings are taken, averaged and then adjusted to generate numbers similar to the *Richter Scale*. This allows the magnitude of earthquakes measured on these new scales to be compared with earthquakes recorded earlier. According to the Moment Magnitude Scale, the severity of an earthquake is categorized as the following:

5.0 Small
5.0 – 6.0 Moderate
6.0 – 7.0 Large
7.0 - 7.8 Major
7.8 Great" (**Insurance Information Institute**, *Earthquakes*…, May 2008)

Earthquake Preparedness – Top 10 Recommendations: "As part of the preparations for the centennial of the 1906 San Francisco earthquake and fire, earthquake scientists, engineers, and emergency management experts in Northern California developed a top ten list of action items to

increase safety, reduce losses, and ensure a speedier recovery from the next major earthquake. Their list follows:

Develop a Culture of Preparedness
1. Every household, government agency, and business must know the seismic risks of the buildings they occupy, the transportation systems they use, and the utilities that serve them, as well as the actions they can take to protect themselves.
2. Every household, government agency, and business needs to be prepared to be self-sufficient for at least three days (72 hours) following a disaster.
3. Citizens and governments need to take steps to ensure adequate response care for special needs and vulnerable populations.
4. Government agencies, the region's major industries, and earthquake professionals have to work together to prepare the region to respond to and recover from major earthquakes. This can be done through region-wide, multi-organizational plans, training, exercises and coordination assessments, as well as continuing improvements in our collective understanding of seismic risks.
Invest in Reducing Losses
5. Building owners, governments, and the earth science and engineering professions must target potential collapse-hazard buildings for seismic mitigation, through retrofit, reduced occupancy, or reconstruction.
6. Governments and other relevant agencies must retrofit or replace all facilities essential for emergency response to ensure that they function following earthquakes. These facilities include fire and police stations, emergency communications centers, medical facilities, schools, shelters, and other community-serving facilities.
7. Governments and other relevant agencies must set priorities and retrofit or replace vulnerable response- and community-serving infrastructure, including cellular communications, airports, ports, roads and bridges, transportation, water, dams and levees, sewage and energy supplies, to ensure that functions can be resumed rapidly after earthquakes.
Ensure Resiliency in Recovery
8. Government agencies, the region's major industries, and earthquake professionals have to plan collaboratively for the housing, both short- and long-term, of residents displaced by potential fires, large numbers of uninhabitable buildings, and widespread economic and infrastructure disruption following a major earthquake.
9. Every household, government agency, and business has to assess and plan for financing the likely repair and recovery costs following a major earthquake.
10. Federal, state and local governments, the insurance industry, and the region's major industries have to collaborate to ensure adequate post-event funding to provide economic relief to individuals and communities after a major earthquake, when resources are most scarce yet crucial for recovery and reconstruction." (**Moehle**, *Risk of a Major Earthquake*…, 2007, pp. 5-6)

Earthquake Preparedness Center of Expertise: USACE, San Francisco. Renamed as a Readiness Support Center in 1998.

Earthquake Risk Nationally: "The first national study of earthquake risk in the United States was released by the Federal Emergency Management Agency (FEMA) in September 2000. The study estimated that over time earthquake losses in the United States could average $4.4 billion

dollars a year. This estimate includes only capital losses, such as repairing or replacing buildings, contents and inventory ($3.49 billion), and loss of income, including business interruption, rental income and wage losses ($0.93 billion). It does not cover damage and losses to critical facilities, transportation and utility lines or indirect economic losses.

The $4.4 billion estimate of probable annual earthquakes losses is close to the losses from floods and hurricanes. Flood losses averaged $5.2 billion annually during the period 1989 to 1998, according to the National Weather Service. The National Climatic Data Center estimates $5.4 billion in annual hurricane losses for the same period.

The report also points out that the potential cost of earthquakes has been growing because of increasing urban development in seismically active areas and the vulnerability of older buildings, which may not have been built or upgraded to current building codes. According to the study, 84 percent of the nation's annual losses are expected to occur in California, Oregon and Washington, with California accounting for the lion's share. Other areas at risk include the central United States, within the New Madrid Seismic zone, which includes parts of Illinois, Kentucky, Tennessee, Missouri, and Arkansas, and the Charleston, South Carolina area. In addition to California metropolitan areas, cities ranked among the top 40 high-loss potential urban areas include Seattle, Portland, New York City, Salt Lake City and St. Louis.

The study pointed out the need for increased recognition of metropolitan areas with "low seismic hazard" but "high seismic risk," such as New York City and Boston, which have high concentrations of buildings and an infrastructure that was built without taking into account seismic codes. Although the likelihood of catastrophic quakes occurring in these areas is statistically low, the potential cost is very high. In addition, because of the perception of low risk, neither the public nor the private sector has developed earthquake preparedness programs that teach people how to protect against earthquake damage and injury.

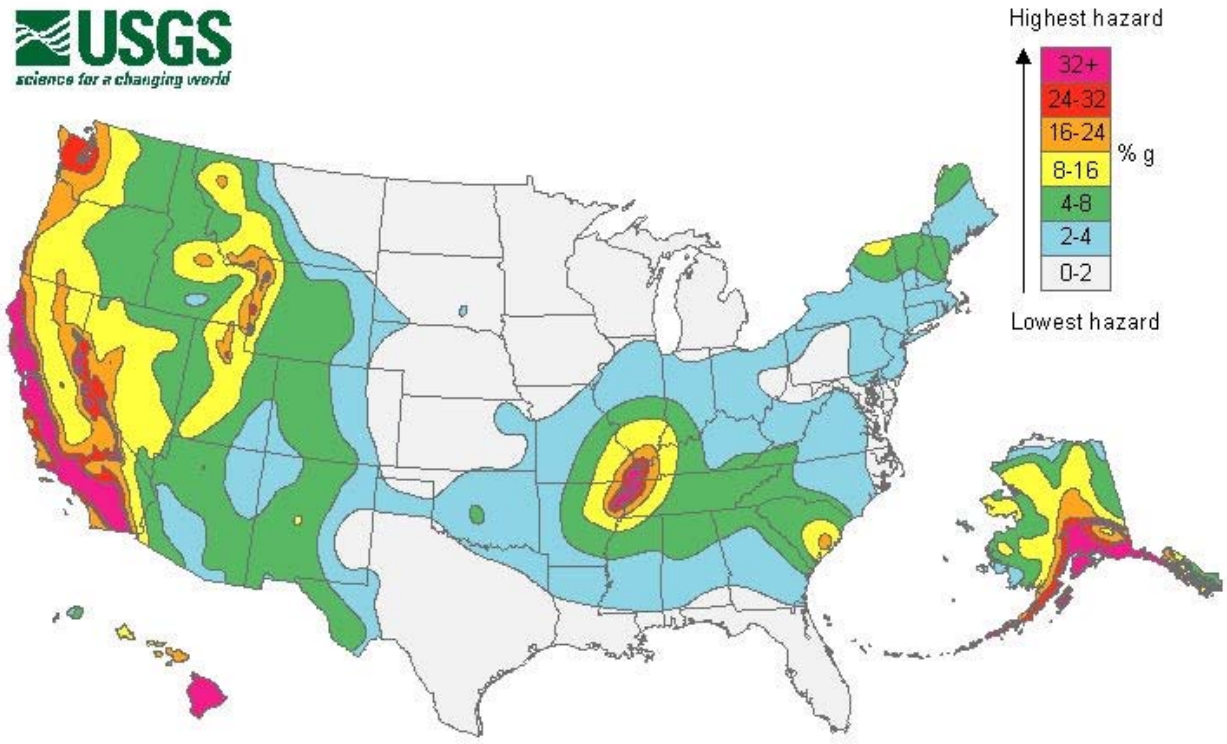
In the continental United States, earthquakes occur most frequently west of the Rocky Mountains. While the United States experiences only two percent of the world's earthquakes, some 90 percent of its population lives in seismically active areas. Statistics show that since 1900, earthquakes have occurred in 39 states and caused damage in all 50 states. More than 3,300 Americans have died in earthquakes during the last century.

Historically, the most violent earthquakes have occurred in the central United States. The largest earthquake in the continental United States was along the New Madrid Fault in Missouri, where a three-month long series of quakes in 1811-1812 included three quakes larger than a magnitude of 8. The state with the most major earthquakes is Alaska, but the one with the most damaging earthquakes is California." (**Insurance Information Institute**, *Earthquakes*…, May 2008)

Earthquake Risk Nationally: "Earthquakes pose the greatest natural danger in the United States for potential casualties and damage to buildings and infrastructure. According to a 2006 National Research Council (NRC) report,[28] 42 states have some degree of earthquake risk and 18 of those states have areas of high or very high seismicity. Over 75 million Americans live in

[28] National Research Council, *Improved Seismic Monitoring, Improved Decision Making – Assessing the Value of Reduced Uncertainty*, 2006.

urban areas with moderate to high earthquake risk. The NRC report notes that the estimated value of structures in all states prone to earthquake damage is approximately $8.6 trillion (2003 dollars)." (**NEHRP**, *Strategic Plan for the National Earthquake Hazards Reduction Program Fiscal Years 2008-2012* (Draft), April 2008, p.1)



The USGS National Seismic Hazard Maps emphasize that earthquakes are a national challenge with moderate to high hazard in 38 states. The data from these maps are incorporated into seismic provisions of model building codes — one of the central ways that NEHRP translates knowledge into practice. Image courtesy of USGS.

Earthquake Swarm: "A series of minor earth tremors (none of which may be identified as the main shock) that occurs within a limited area and time." (**UNDHA**, *DM Glossary*, 1992, 33)

EAS: Emergency Alert System.

ECAPS: Enterprise Coordination & Approval Processing System. (**FEMA**, *FAAT List*, 2005)

ECG: Enduring Constitutional Government. (**White House**, *HSPD-20*, May 9, 2007)

Ecological Disaster: See, "Disaster, Ecological"

Economic Injury Disaster Loan (EIDL, SBA): "Small businesses and small agricultural cooperatives that have suffered substantial economic injury resulting from a physical disaster or an agricultural production disaster designated by the Secretary of Agriculture may be eligible for the SBA's Economic Injury Disaster Loan Program. Substantial economic injury is the inability

of a business to meet its obligations as they mature and to pay its ordinary and necessary operating expenses. An EIDL can help you meet necessary financial obligations that your business could have met had the disaster not occurred. It provides relief from economic injury caused directly by the disaster and permits you to maintain a reasonable working capital position during the period affected by the disaster. The SBA provides EIDL assistance only to those businesses we determine are unable to obtain credit elsewhere. The SBA can provide up to $1.5 million in disaster assistance to a business. This loan cap includes both economic injury and physical damage assistance. Your loan amount will be based on your actual economic injury and financial needs. The interest rate on EIDLs cannot exceed 4 percent per year. The term of these loans cannot exceed 30 years. Your term will be determined by your ability to repay the loan. (See SBA publication No. DA-2, Physical Disaster Business Loans.) (**SBA**, *Economic Injury Loans*, 2007)

Economy Act (Title 31 USC, Section 1535). "The Economy Act permits one federal agency to request the support of another provided that the requested services cannot be obtained more cheaply or conveniently by contract. Under this act, a federal agency with lead responsibility may request the support of DOD without a Presidential declaration of an emergency as required by the Stafford Act." (**JCS/DoD**, *Civil Support*, 2007, p. F-2)

Economy of Effort: "A principle of design process that says that design and production time should be in proportion to the value it produces in the quality of the final product serving users' needs." (**Usability First**, *Usability Glossary: Economy of Effort*, 2005)

Ecosystem: "Basic ecological unit formed by the living environment of the animal and vegetable organisms interacting as a single functional entity." (**UNDHA**, *DM Gloss*., 1992, 33)

EDAP: Excess Delivery Acquisition Program. (**FEMA**, *TEI/TO Course Catalog*, 2008, 6)

Education: "Programs or courses designed to increase cognition or understanding of a subject as opposed to training which is provided to increase proficiency of a stated task." (**DHS**, *DHS Training Glossary*, 2006, p. 23)

EDXL: Emergency Data Exchange Language.

EEA: European Environmental Agency.

EEG: Exercise Evaluation Guides. (**DHS**, *HSEEP*, Vol. IV, 2006, p. 4)

EEGL: Exercise Evaluation Guide Library. (**FEMA**, *Welcome to the EEGL*, 2008)

EEI: Essential Elements of Information. (**USACE,** *Response Planning Guide*, 1995, p. 3-2)

EF: Essential Function. (**DHS**, *FCD 1*, Nov. 2007, p. O-1)

Effective Dose: "a measure of dose which takes into account both the type of radiation involved

and the radiological sensitivities of the organs and tissues irradiated…" (**Commonwealth of Australia, National Occupational Health & Safety Commission**, *Recommendations for Limiting Exposure to Ionizing Radiation*, 1995, Glossary, p. r-33)

Effective Dose: "The effective dose is a quantity developed by the International Commission on Radiological Protection (1991) for purposes of radiation protection. The effective dose is assumed to be related to the risk of a radiation-induced cancer or a severe hereditary effect. It takes into account (1) the absorbed doses that will be delivered to the separate organs or tissues of the body during the lifetime of an individual due to intakes of radioactive materials, (2) the absorbed doses due to irradiation by external sources, (3) the relative effectiveness of different radiation types in inducing cancers or severe hereditary effects, (4) the susceptibility of individual organs to develop a radiation-related cancer or severe hereditary effect, (5) considerations of the relative importance of fatal and nonfatal effects, and (6) the average years of life lost from a fatal health effect." (**Health Physics Society**, *Guidance for Protective Actions Following a Radiological Terrorist Event*, 2004, p. 4)

Effectiveness Assessment Used to Adjust Risk Scores in DHS Terrorism Risk Assessment: "Since fiscal year 2006, DHS has also implemented an Effectiveness Assessment to assess and score the effectiveness of the proposed investments submitted by grant applicants in addition to determining relative risk using the risk analysis model. This effectiveness assessment process has remained largely unchanged since it was first introduced by DHS. To assess the anticipated effectiveness of the various risk mitigation investments that states and urban areas proposed, DHS required states and urban areas to submit investment justifications as part of their grant application. The investment justifications included up to 15 "investments" or proposed solutions to address homeland security needs, which were identified by the states and urban areas through their strategic planning process. DHS used subject-matter experts as peer reviewers to assess these investment justifications. The criteria reviewers used to score the investment justifications included the following categories: relevance to the National Preparedness Guidance and to state and local homeland security plans, anticipated impact, sustainability, regionalism, and the implementation of each proposed investment. Reviewers on each panel assigned scores for these investment justifications, which according to DHS officials were averaged to determine a final effectiveness score for each state and urban area applicant. DHS then used these effectiveness assessment scores to calculate the final allocation of funds to states and urban areas." (**GAO**, *Homeland Security*: *DHS Improved its Risk-Based Grant Programs' Allocation and Management Methods, But Measuring Programs' Impact on National Capabilities Remains a Challenge*, March 11, 2008, p. 12)

Eight National Preparedness Priorities, 2007:

1. Expand Regional Collaboration
2. Implement NIMS and National Response Plan
3. Implement National Infrastructure Protection Plan
4. Strengthen Information Sharing and Collaboration Capabilities
5. Strengthen Interoperable and Operable Communications Capabilities
6. Strengthen CBRNE Detection, Response, and Decontamination Capabilities
7. Strengthen Medical Surge and Mass Prophylaxis Capabilities
8. Strengthen Planning and Citizen Preparedness (DHS, *NPG*, 2007, p. 11)

EIIP: Emergency Information Infrastructure Project.

Ejecta: "Material ejected from a volcano, including large fragments (bombs), cindery material (scoria), pebbles (lapilli) and fine particles (ash)." (**UNDHA**, *DM Glossary*, 1992, 33)

El Niño: "An anomalous warming of ocean water resulting from the oscillation of a current in the South Pacific, usually accompanied by heavy rain fall in the coastal region of Peru and Chile, and reduction of rainfall in equatorial Africa and Australia." (**UNDHA**, *DM Glossary*, 1992, 33)

ELE: Extinction Level Event. (**BBC**, *Extinction Level Events*, 1999)

Electro-Magnetic Pulse (EMP): "In addition to other effects, a nuclear weapon detonated in or above the earth's atmosphere can create an electromagnetic pulse (EMP), a high-density electrical field. An EMP acts like a stroke of lightning but is stronger, faster, and shorter. An EMP can seriously damage electronic devices connected to power sources or antennas. This includes communication systems, computers, electrical appliances, and automobile or aircraft ignition systems. The damage could range from a minor interruption to actual burnout of components. Most electronic equipment within 1,000 miles of a high-altitude nuclear detonation could be affected. Battery-powered radios with short antennas generally would not be affected. Although an EMP is unlikely to harm most people, it could harm those with pacemakers or other implanted electronic devices." (**FEMA,** *Are You Ready? Nuclear Blast*, March 23, 2006)

Electro-Magnetic Pulse (EMP): "EMP damage from a nuclear detonation may cause national disruptions in the information and communications infrastructures. EMP will be widespread, possibly across entire continental areas if nuclear detonation occurs at high altitudes, generally several tens to hundreds of miles above the ground. Nuclear detonations at any height will generate EMP, but the intensity and duration of the pulse and the affected area will vary with the height of detonation. It is expected that at a minimum, local disruptions in information and communications infrastructures will result from EMP. Nuclear detonations may also affect radio transmissions for some hours after the burst. It is important to understand that commercial electromagnetic interference standards are not designed to protect against EMP attacks. During such an event, there could be widespread disruption of electronics. All electronics may not be affected; however, because in order to do so, they would need to be connected to some larger

"antenna." For example, a turned-off computer without any cables or wires attached to it would likely avoid damage from an EMP, since the physical size of the computer may be small enough that it may not collect enough energy to be affected. But when it is plugged in, and/or when other cables are attached, it becomes part of a much larger network of wires, which form an antenna. Additionally, national concern triggered by the incident will demand immediate, accurate information flow both to the public and for emergency managers and leaders at all levels of government to manage the response effectively and efficiently." (**JCS**, *CBRNE CM*, 2006, I-9)

Electromagnetic Pulse (EMP) Vulnerability and Threat: "States or terrorists may well calculate that using a nuclear weapon for EMP attack offers the greatest utility

- EMP offers a "bigger bang for the buck" against US military forces in a regional conflict; or a means of damaging the US homeland
- EMP may be less provocative of US massive retaliation, compared to a nuclear attack on a US city that inflicts many prompt casualties
- Strategically and politically, EMP attack can: threaten entire regional or national infrastructures that are vital to US military strength and societal survival; challenge the integrity of allied regional coalitions; and pose an asymmetrical threat more dangerous to the high-tech West than to rogue states
- Technically and operationally, EMP attack can compensate for deficiencies in missile accuracy, fusing, range, reentry vehicle design, target location intelligence, and missile defense penetration." (**Commission to Access the Threat from High Altitude Electromagnetic Pulse (EMP)**, *Overview*. November 10, 2004, slide 7)

- "EMP is one of a small number of threats that may
  – Hold at risk the continued existence of today's US civil society
  – Disrupt our military forces and our ability to project military power
- The number of US adversaries capable of EMP attack is greater than during the Cold War
- Potential adversaries are aware of the EMP strategic attack option." (**EMP Commission**, 2004, slide 10)

Electronic Vaulting: "Electronically forwarding backup data to an offsite server or storage facility. Vaulting eliminates the need for tape shipment and therefore significantly shortens the time required to move the data offsite. Similar terms: vaulting, electronic backup. Associated terms: electronic journaling." (**DigitalCare**, *State of OR Business Continuity Wkshop*, 2006, 54)

Elements at Risk: "The population, buildings and civil engineering works, economic activities, public services and infrastructure, etc. exposed to hazards." (**UNDHA**, *DM Glossary*, 1992, 34)

Elevations in the Threat Alert Level: "The term 'elevations in the threat alert level' means any designation (including those that are less than national in scope) that raises the homeland security threat level to either the highest second highest threat level under the Homeland Security Advisory System." (U.S. Congress, *Implementing the 9/11 Commission Recommendations Act of 2007*, August 7, 2007, pp. 8-9)

Eligible Receiver: "Eligible Receiver is the code name of a 1997 internal exercise initiated by the Department of Defense. A "red team" of hackers from the National Security Agency (NSA)

was organized to infiltrate the Pentagon systems. The red team was only allowed to use publicly available computer equipment and hacking software. Although many details about Eligible Receiver are still classified, it is known that the red team was able to infiltrate and take control of the Pacific command center computers, as well as power grids and 911 systems in nine major U.S. cities." (**PBS Frontline**, *Cyber War*!, April 24, 2003)

ELT: Evacuation Liaison Team. (**NEMA**, *NEMA Committee Reports*, 2007 Annual Conf., p. 7)

EM: Emergency Management

EMA: Emergency Management Agency. (**DHS/ODP**, *FY 2006 EMPG Program*, 2005, p. B1)

EMAC: Emergency Management Assistance Compact. (**Senate HSGA**, *A Nation Still Unprepared*, p. 631) [See, "Emergency Management Assistance Compact"]

EMAC Advisory Group (EAG): "The EAG, comprised of representatives from national organizations whose membership are EMAC stakeholders, facilitates the effective integration of multi-discipline emergency response and recovery assets for nation-wide mutual aid through EMAC. Many of these resources are local teams which need the ability to be brought on as temporary state employees." (**NEMA**, *2007 EMAC Operational Manual*, April 2007. p. V-2)

EMAP: Emergency Management Accreditation Program.

Embedded Assessment: "Embedded assessment is a process whereby a faculty member consciously, explicitly and systematically monitors whether or not students are meeting the core curriculum goals in a specific core curriculum course. Assessment items are incorporated into existing evaluative instruments (e.g., exams, quizzes, short papers) already being administered in a course. The Purpose of Embedded Assessment: Embedded assessment allows a faculty member teaching a core curriculum course to determine whether or not students are fulfilling the core curriculum goals relevant that faculty member's course. In many cases, this knowledge will enable a faculty member to confirm that his or her pedagogical approach is effective in giving students the opportunity to meet core curriculum goals. When data indicate that students are not meeting core curriculum goals, a faculty member may want to reflect on how he or she might alter pedagogical approaches to provide more opportunity for students to master core goals." (**Raymond**, *Embedded Assessment Plan*, 2004, p. 1)

Emergencies, Disasters, and Crises: "What do emergencies, disasters, and crises have in common? Simply, that something bad has happened or is happening. When something bad and/or unexpected happens, it may be called an emergency, a disaster, or a crisis depending on the magnitude of the event and the current phase of the event." (**CDC,** *CERC*, 2002, p. 6)

Emergencies Involving Chemical or Biological Weapons: "Pursuant to 10 U.S.C. 382, in response to an emergency involving biological or chemical WMD that is beyond the capabilities of civilian authorities to handle, the Attorney General may request DOD assistance directly. Assistance to be provided includes monitoring, containing, disabling, and disposing of the weapon, as well as direct law enforcement assistance that would otherwise violate the Posse

Comitatus Act. Among other factors, such assistance must be considered necessary for the immediate protection of human life." (**DHS**, *NRP* (Draft #1), February 25, 2004, 70)

Emergencies Involving Nuclear Materials. "18 U.S.C. 831(e) authorizes the Attorney General to request DOD law enforcement assistance – including the authority to arrest and conduct searches – notwithstanding the prohibitions of the Posse Comitatus Act -- when both the Attorney General and Secretary of Defense agree that an "emergency situation" exists and the Secretary of Defense determines that the requested assistance will not impede military readiness. An emergency situations involving nuclear material is defined as a circumstance that poses a serious threat to the United States in which (1) enforcement of the law would be seriously impaired if the assistance were not provided and (2) civilian law enforcement personnel are not capable of enforcing the law. In addition, the statute authorizes DOD personnel to engage in "such other activity as is incident to the enforcement of this section, or to the protection of persons or property from conduct that violates this section." (**DHS**, *NRP* (Draft #1), Feb 25, 2004, pp. 70-71)

Emergency: "A condition of disaster or of extreme peril to the safety of persons and property caused by such conditions as air pollution, fire, flood, hazardous material incident, storm, epidemic, riot, drought, sudden and severe energy shortage, plant or animal infestations or disease, the Governor's warning of an earthquake or volcanic prediction, or an earthquake or other conditions, other than conditions resulting from a labor controversy." (**CA OES**, *SEMS Guidelines*, Glossary, p. 7)

Emergency/Exigent Circumstances: "Circumstances that may include the existence of a threat to public health or public safety, or other unique circumstances that warrant immediate action." (**DHS**, *Procedural Manual…CVI*, June 2007, p. 7)

Emergency: "An unexpected event which places life and/or property in danger and requires an immediate response through the use of routine community resources and procedures. Examples would be a multi-automobile wreck, especially involving injury or death, and a fire caused by lightning strike which spreads to other buildings." Emergencies can be handled with local resources. (**Drabek** 1996, Session 2, p. 3)

Emergency: Any hurricane, tornado, storm, flood, highwater, wind-driven water, tidal wave, tsunami, earthquake, volcanic eruption, landslide, mudslide, snowstorm, drought, fire, explosion, nuclear accident, or other natural or manmade catastrophe in any part of the United States. Any occasion or instance for which, in the determination of the President, Federal assistance is needed to supplement State and local efforts and capabilities to save lives and to protect property and public health and safety or to lessen the threat of a catastrophe in any part of the United States. (**FEMA**, *Definitions of Terms*, **1990**)

Emergency: "Any occasion or instance--such as a hurricane, tornado, storm, flood, tidal wave, tsunami, earthquake, volcanic eruption, landslide, mudslide, snowstorm, fire, explosion, nuclear accident, or any other natural or man-made catastrophe--that warrants action to save lives and to protect property, public health, and safety." (**FEMA**, *Guide For All-Hazard Emergency Operations Planning* (SLG 101), **1996**, p. GLO-2)

Emergency: "Any occasion or instance for which, in the determination of the President, Federal assistance is needed to supplement State and local efforts to save lives and to protect property and public health and safety, or to lessen or avert the threat of a catastrophe in any part of the United States. The Governor of a State, or the Acting Governor in his/her absence, may request that the President declare an emergency when an incident occurs or threatens to occur in a State which would not qualify under the definition of a major disaster. Assistance authorized by an emergency declaration is limited to immediate and short-term assistance, and may not exceed $5 million, except when authorized by the FEMA Associate Director for Response and Recovery under certain conditions." (**FEMA** *Disaster Dictionary* **2001**, 39; cites Robert T Stafford Act 102; 44 CFR 206.2, 206.35; 206.63, 206.66, and 503)

Emergency: "Emergencies include acts of terrorism, hurricanes and severe storms." (**FEMA**, *Strategic Plan* (Draft), October 10, 2007, p. 1)

Emergency: "Sudden, urgent, usually unexpected occurrence or event requiring immediate action." (**ISO 22399**, *Societal Security*…, 2007, 2)

Emergency: "An event that threatens people, property, business continuity, or the community and may develop into a disaster or critical incident." (**Jones**, *Critical Incident* Protocol, 2000, 37)

Emergency: "Any event requiring increased coordination or response beyond the routine in order to save lives, protect property, protect the public health and safety, or lessen or avert the threat of a disaster." (**Michigan EMD** 1998, 6)

Emergency: "A sudden and unexpected event calling for immediate action." (**NFPA 471**, 1997, p. 7)

Emergency: A more serious situation than an incident, but less serious than a disaster. (**Oxford Canadian Dictionary**, 1998; noted by Pearce 2000, Chapter 2, 2)

Emergency: "…an unexpected occurrence or sudden situation that requires immediate action…It may involve communities (as a disaster does) or individuals (which a disaster does not)…" (**Porfiriev** 1995, 291).

Emergency: An event in which established emergency organizations (such as the American Red Cross or utilities) need to expand their activities. (**Quarantelli** 1987, 25.)

Emergency: An extraordinary situation in which people are unable to meet their basic survival needs, or there are serious and immediate threats to human life and well being. An emergency situation may arise as a result of a disaster, a cumulative process of neglect or environmental degradation, or when a disaster threatens and emergency measures have to be taken to prevent or at least limit the effects of the eventual impact. (**Simeon Institute** 1998)

Emergency: "Any occasion or instance for which, in the determination of the President, Federal assistance is needed to supplement State and local efforts to save lives and to protect property and

public health and safety, or to lessen or avert the threat of a catastrophe in any part of the United States." (**Stafford Act**, (FEMA 592), June 2007, p. 14)

Emergency: "…a sudden critical juncture demanding immediate remedial action." (**Terry** 2001, 327)

Emergency: "A sudden and usually unforeseen event that calls for immediate measures to minimize its adverse consequences." (**UNDHA**, *Disaster Management Glossary*, 1992, 34)

Emergency, States of Emergency (California State Law):[29]

Local emergency: Conditions of disaster or extreme peril to the safety of persons and property within a city or county, which require the combined forces of other cities or counties to combat.

State of emergency: Conditions of disaster or of extreme peril to the safety of persons and property that require the combined forces of one or more of the state's six mutual aid regions to combat.

State of war emergency: When the state or nation is attacked by an enemy of the United States, or upon receipt by the state of a warning from the federal government indicating that such an enemy attack is probable or imminent." (**Little Hoover**, *Safeguarding Golden State*, 2007, 7)

Emergency Alert System (EAS): "A national communications network and public warning system started in 1994 that replaced the Emergency Broadcast System jointly administered by the Federal Communications Commission, FEMA, and the National Weather Service. The System requires broadcasters, cable television systems, wireless cable systems, satellite digital audio radio service (SDARS) providers and, effective in May 2007, direct broadcast satellite (DBS) service providers to provide the communications capability to the President to address the American public during a national emergency. The system also may be used by state and local authorities to deliver important emergency information such as AMBER alerts and weather information targeted to a specific area." (**HSC**, *NCPIP*, August 2007, p. 61)

Emergency Alert System (EAS) Purpose and Scope:

- National-level EAS provides the President & senior officials an assured method for addressing the nation during emergencies
- Provides unlimited duration audio message; auto-seizes radio/TV networks
- National-level EAS activation rests solely with President
- National-level EAS cascades from the FEMA Operations Center (FOC) →Primary Entry Point (PEP) stations →all major radio/TV broadcasters
- Planned Digital EAS will allow President and senior officials to send text, voice, and video messages; permits a voluntary broadcast option
- State and local EAS activations permitted/encouraged:
    - Audio message length of up to two minutes; voluntary broadcast

[29] Cited: California Government Code, Chapter 7. *Emergency Services Act*. http://www.leginfo.ca.gov. Also, State of California. September 2005. *Emergency Plan*.

- Used frequently; National Weather Service originates ~ 80% of EAS alerts
- EAS is also used as the main method to disseminate AMBER Alerts. (**FEMA** *IPAWS Update*, 2007, slide 11)

Emergency Assessment/Diagnosis: "The ability to achieve and maintain a common operating picture, including the ability to detect an incident, determine its impact, determine its likely evolution and course, classify the incident, and make government notifications." (**Homeland Security Council**, *National Planning Scenarios*, 2006, p. vi)

Emergency Assistance: "Assistance required by individuals, families, and their communities to ensure that immediate needs beyond the scope of the traditional "mass care" services provided at the local level are addressed. These services include support to evacuations (including registration and tracking of evacuees); reunification of families; pet evacuation and sheltering; support to specialized shelters; support to medical shelters; nonconventional shelter management; coordination of donated goods and services; and coordination of voluntary agency assistance." (**DHS**, *National Response Framework Emergency Support Function #6 – Mass Care, Emergency Assistance, Housing, and Human Services Annex* (Comment Draft), September 10, 2007, p. 2)

Emergency Assistance Declaration Procedure, Stafford Act (Title V, Sec. 501, 42 U.S.C. 5191): "(a) Request and declaration - All requests for a declaration by the President that an emergency exists shall be made by the Governor of the affected State. Such a request shall be based on a finding that the situation is of such severity and magnitude that effective response is beyond the capabilities of the State and the affected local governments and that Federal assistance is necessary. As a part of such request, and as a prerequisite to emergency assistance under this Act, the Governor shall take appropriate action under State law and direct execution of the State's emergency plan. The Governor shall furnish information describing the State and local efforts and resources which have been or will be used to alleviate the emergency, and will define the type and extent of Federal aid required. Based upon such Governor's request, the President may declare that an emergency exists.

(b) Certain emergencies involving Federal primary responsibility - The President may exercise any authority vested in him by section 502 or section 503 with respect to an emergency when he determines that an emergency exists for which the primary responsibility for response rests with the United States because the emergency involves a subject area for which, under the Constitution or laws of the United States, the United States exercises exclusive or preeminent responsibility and authority. In determining whether or not such an emergency exists, the President shall consult the Governor of any affected State, if practicable. The President's determination may be made without regard to subsection (a)." (**Stafford Act**, June 2007 (**FEMA 592**), p. 51)

Emergency Coordinator: "The key senior official appointed within an organizational element or higher, who serves as the coordinator for all National Response Framework (NRF) and National Incident Management System (NIMS) continuity of operations related issues." (**DHS**, *Federal Continuity Directive 1*, November 2007, P-3)

Emergency Declaration: Under the Stafford Act, "An **emergency declaration** is more limited in scope and without the long-term Federal recovery programs of a major disaster declaration." **(DHS**, *NRF Comment Draft*, September 2007, p. 39)

Emergency/Disaster Management: "An ongoing process to prevent, mitigate, prepare for, respond to, and recover from an incident that threatens life, property, operations, or the environment." (**NFPA 1600**, 2007, p. 7)

Emergency Health Services: "**SEC. 1102 Definitions.** As used in this part:
(1) "Emergency health services" means medical and dental care for the civilian population in all of their specialties and adjunct therapeutic fields, and the planning, provision, and operation of first aid stations, hospitals, and clinics; preventive health services, including detection, identification and control of communicable diseases, their vectors, and other public health hazards, inspection and control of purity and safety of food, drugs, and biologicals; vital statistics services; rehabilitation and related services for disabled survivors; preventive and curative care related to human exposure to radiological, chemical, and biological warfare agents; sanitary aspects of disposal of the dead; food and milk sanitation; community solid waste disposal; emergency public water supply; and the determination of the health significance of water pollution and the provision of other services pertaining to health aspects of water use and water-borne wastes as set forth in an agreement between the Secretary of Health, Education, and Welfare and the Secretary of the Interior, approved by the President, pursuant to Reorganization Plan No. 2 of 1966, which plan placed upon the Secretary of the Interior responsibilities for the prevention and control of water pollution. It shall be understood that health services for the purposes of this order, however, do not encompass the following areas for which the Department of Agriculture has responsibility: plant and animal diseases and pest prevention, control, and eradication, wholesomeness of meat and meat products, and poultry and poultry products in establishments under continuous inspection service by the Department of Agriculture, veterinary biologicals, agricultural commodities and products owned by the Commodity Credit Corporation or the Secretary of Agriculture, livestock, agricultural commodities stored or harvestable on farms and ranches, agricultural lands and water, and registration of pesticides." (**White House**, *Executive Order 11490, Assigning Emergency Preparedness Functions to Federal Departments and Agencies*, October 28, 1969) [Note 1: Revoked and replaced by *Executive Order 12656*, *Assignment of Emergency Preparedness Responsibilities* (**White House** (President Ronald Reagan) November 18, 1988). Note 2: See E.O. 11001, Feb 16, 1962 for earlier and similar definition.]

Emergency Incident: "Any situation to which the emergency services organization responds to deliver emergency services, including rescue, fire suppression, emergency medical care, special operations, law enforcement and other forms of hazard control and mitigation." (**Capital Health Region**, Canada, *ICS Training SM*, 2007, 53)

Emergency Information Infrastructure Project (EIIP): The EIIP "is a non-profit educational organization, dedicated to enhancing the practice of emergency management, and thereby public safety, through offering professional development opportunities to practitioners and other interested persons. One of the ways It achieves this goal is through…presentations in the "Virtual

Forum" of timely disaster-related topics by experts in their fields, by means of Internet-based Live Chat technology." (**EIIP**, *About the EIIP and the Virtual Forum*, 2000)

Emergency Management: "Definition: the coordination and integration of all activities necessary to build, sustain and improve the capabilities to prepare for, respond to, recover from, or mitigate against threatened or actual disasters or emergencies, regardless of cause. Extended Definition: emergency management activities in response to an incident are a component of overall incident management and are aligned with parallel response processes associated with prevention and protection. Annotation: The body of knowledge with respect to comprehensive emergency management includes the concept of emergency management "programs." These "programs" are comprised of functional areas including operations and procedures, hazard and risk identification, plans and procedures (strategic plans, operational plans, recovery plans), hazard mitigation, public information and public education, finance and administration, etc. etc." (**DHS**, *Lexicon*, October 23, 2007, p. 9)

Emergency Management: The entire process of planning and intervention for rescue and relief to reduce impact of emergencies as well as the response and recovery measures, to mitigate the significant social, economic and environmental consequences to communities and ultimately to the country, usually through an emergency operation center, EOC. (**Disaster and Emergency Reference Center** 1998)

Emergency Management: The process by which the uncertainties that exist in potentially hazardous situations can be minimized and public safety maximized. The goal is to limit the costs of emergencies or disasters through the implementation of a series of strategies and tactics reflecting the full life cycle of disaster, i.e., preparedness, response, recovery, and mitigation. (**Drabek**1997)

Emergency Management: "Emergency management is the discipline and profession of applying science, technology, planning, and management to deal with extreme events that can injure or kill large numbers of people, do extensive damage to property, and disrupt community life." (**Drabek and Hoetmer** 1991, xvii).

Emergency Management: "Activities that include prevention, preparedness, response, recovery, rehabilitation, advocacy, and legislation, of emergencies irrespective of their type, size, and location, and whose purpose is reduction in death, disability, damage, and destruction." (**Dykstra** 2003, 3)

"…improving the livelihoods of individuals, communities and nations by measures required to put a stop to unwarranted deaths, disability, damage, and destruction." (**Dykstra** 2003, 4)

Emergency Management: "…the managerial function charged with creating the framework within which communities reduce vulnerability to hazards and cope with disasters." (**EM Roundtable**, 2007, p. 4)

Emergency Management: Organized analysis, planning, decision-making, and assignment of available resources to mitigate (lessen the effect of or prevent) prepare for, respond to, and recover

from the effects of all hazards. The goal of emergency management is to save lives, prevent injuries, and protect property and the environment if an emergency occurs. (**FEMA** 1995, I-6).

Emergency Management: "The process through which America prepares for emergencies and disasters, responds to them, recovers from them, rebuilds, and mitigates their future effects." (**FEMA**, *Disaster Dictionary* 2001, 40, citing FEMA Strategic Plan)

Emergency Management: "The process through which the Nation prepares for emergencies and disasters, mitigates their effects, and responds to and recovers from them." (**FEMA**, *A Nation Prepared – FEMA Strategic Plan – Fiscal Years 2003-2008*, 2002, p. 57)

Emergency Management: "Emergency management is really about building relationships, whether you are in the public or private sector. And in building those relationships, it is important to remember not to *tell*, but to *talk*." (**Gabriel**, Edward, Director of Crisis Management at Walt Disney Corp., cited in **AHRQ**, Mass Medical Care, 2007, p. 44 in Chapter 4, "Prehospital Care")

Emergency Management: "A simple definition is that emergency management is the discipline dealing with risk and risk avoidance." (**Haddow and Bullock** 2003, 1)

Emergency Management: "Describes the science of managing complex systems and multidisciplinary personnel to address extreme events, across all hazards, and through the phases of mitigation, preparedness, response, and recovery." (**HHS**, *Medical Surge Capacity and Capability Handbook*, August 2004, p. D-3, Glossary)

Emergency Management: "…'emergency management' means the preparation for and the coordination of all emergency functions, other than functions for which military forces or other federal agencies are primarily responsible, to prevent, minimize, and repair injury and damage resulting from disasters. The functions include the following:

(1) Firefighting services.
(2) Police services.
(3) Medical and health services.
(4) Rescue.
(5) Engineering.
(6) Warning services.
(7) Communications.
(8) Radiological, chemical, and other special weapons defense.
(9) Evacuation of persons from stricken areas.
(10) Emergency welfare services.
(11) Emergency transportation.
(12) Plant protection.
(13) Temporary restoration of public utility services.
(14) Other functions related to civilian protection.
(15) All other activities necessary or incidental to the preparation for and coordination of the functions described in subdivisions (1) through (14). (**Indiana Code,** 2005)

Emergency Management: "Imagine that you were somehow able to watch, from a distance, a major disaster unfold. You would see suffering and devastation, but that would only be part of the story. You would also see lots of people move into action – people from government agencies, private organizations, businesses, and volunteer groups. You would see them **working as a team** to keep the essential services in operation, provide first aid, food and water, clear debris, rebuild homes and businesses, and prevent the disaster from happening again.

"Over time you would begin to see a pattern to this activity. You would see how people work together when disasters occur. You would see how "first responders" risk their lives to help others. You would see the results of planning and coordination in the execution of an effective response. And you would learn that communities and individuals could lessen the damage that disasters cause, and sometimes avoid it altogether.

"The pattern behind this activity is called emergency management. It is the process through which America prepares for emergencies and disasters, responds to them, recovers from them, rebuilds and mitigates their future effects." (**Libby**, *Statement by*, July 19, 2007, pp. 2-3)

Emergency Management: "A Comprehensive system of policies, practices, and procedures designed to protect people and property from the effects of emergencies or disasters. It includes programs, resources, and capabilities to mitigate against, prepare for, respond to, and recover from effects of all hazards." (**Michigan DEM** 1998, 6)

Emergency Management: "An ongoing process to prevent, mitigate, prepare for, respond to, and recover from an incident that threatens life, property, operations, or the environment." (**NFPA 1600**, 2007, p. 7)

"The emergency management and business continuity community comprises many different entities including the government at distinct levels (e.g., federal, state/provincial, territorial, tribal, indigenous, and local levels); business and industry; nongovernmental organizations; and individual citizens. Each of these entities has its own focus, unique missions and responsibilities, varied resources and capabilities, and operating principles and procedures. Each entity can have its own definition of disaster. (**NFPA 1600**, 2007, p. 11)

Emergency Management: "...the term 'emergency management' means the governmental function that coordinates and integrates all activities to build, sustain, and improve the capability to prepare for, protect against, respond to, recover from, or mitigate against threatened or actual natural disasters, acts of terrorism or other man-made disasters;..." (**Public Law 109-295 (120 Stat. 1394)** October 4, 2006, *Department of Homeland Security Appropriations Act, 2007* (also referred to as **Post-Katrina Emergency Management Reform Act of 2006**), Title 6, p. 40).

Emergency Management: Emergency management refers to "the expert systems that manage people and resources to deal with disasters." (**Rubin** 2000, 1)

Emergency Management: A range of measures to manage risks to communities and the environment. It involves the development and maintenance of arrangements to prevent the effect of,

prepare for, respond to or recover from events causing significant community disruption or environmental damage. (**Salter** 1997–98, 28)

Emergency Management: "The organization and management of resources and responsibilities for dealing with all aspects of emergencies, in particularly preparedness, response and rehabilitation. *Emergency management involves plans, structures and arrangements established to engage the normal endeavours of government, voluntary and private agencies in a comprehensive and coordinated way to respond to the whole spectrum of emergency needs. This is also known as disaster management*." (**UN/ISDR**, *Terminology: Basic Terms of Disaster Risk Reduction*, March 31, 2004)

Emergency Management: The organization and management of resources for dealing with all aspects of emergencies. Emergency management involves the plans, structures and arrangements which are established to bring together the normal endeavors of government, voluntary and private agencies in a comprehensive and coordinated way to deal with the whole spectrum of emergency needs including prevention, response and recovery. (**Victorian Department of Justice** 1997)

Emergency Management: "In simplest terms, emergency management is the management of risk so that societies can live with environmental and technical hazards and deal with the disasters that they cause." (**Waugh** 2000, 3)

Emergency Management, 1st Usage in a FEMA Predecessor Organization Known to Drafter: "The Staff College gave 8 courses to a total of 263 persons. The courses were 'Elements of Nonmilitary Defense for State and Local Officials,' given three times; 'State and Local Action in Natural Disasters,' given twice; and 'Emergency Management and Operations for State and Local Officials,' 'Emergency Management and Operations for County Officials,' and 'Federal Action in Major Disasters," each given once." (**FCDA**, *Annual Report 1958*, 20)

Emergency Management (Local): "Local emergency management programs mitigate, prepare for, and coordinate the response to and recovery from both natural and human-caused disasters. In doing so, local emergency management performs the tasks required to meet local government's first responsibility to protect lives, preserve property and the environment, and protect public health." (**Wa State EM Council**, *A Study of Emergency Management at the Local Program Level*, 2004, p. 12)

Emergency Management (Local): "Local emergency management is most successful when it is supported by a system of national guidelines, state outreach, local priority, and public awareness." (**Wa State EM Council**, *A Study of EM at the Local Program Level*, 2004, p. 22)

Emergency Management Agency (EMA): "Organizations, both local and State, that coordinate preparation, recognition, response, and recovery for WMD and/or catastrophic incidents." (**FEMA**, *TIE/TO Course Catalog*, 2008, p. 2)

Emergency Management (and/or Business Continuity Advisory Committees): "Members of the advisory committee should participate with the clear understanding that the objective is to minimize turnover of committee members to maintain an effective committee. Within the

private sector, representatives can include, but are not limited to, information technology and communications, plant operations, transportation, maintenance, engineering, personnel, public relations, environment, legal, finance, risk management, health and safety, security, stakeholders, and fire fighting/rescue. Within the public sector, representatives can include police, fire, emergency medical services, engineering, public works, environmental protection, public health, finance, education, emergency management, legal, transportation authorities, homeland security, stakeholders, and the military (e.g., the National Guard). When determining the representation on the committee, consideration should be given to public sector representation on a private sector committee and vice versa. This will help to establish a coordinated and cooperative approach to the program." (**NFPA 1600**, 2007, p. 12)

Emergency Management and Response Information Sharing and Analysis Center (**EMR-ISC):** "About EMR-ISAC: The U.S. Fire Administration established the Emergency Management and Response-Information Sharing and Analysis Center (EMR-ISAC) to:
• Collect, analyze and disseminate Critical Infrastructure Protection (CIP) information in support of federal government initiatives, and
• Encourage the leaders, owners and operators of the ESS throughout the nation to practice CIP [Critical Infrastructure Protection]." (**EMR-ISC**, *MRISC Brochure*, March 2005)

Emergency Management and Response Information Sharing and Analysis Center (**EMR-ISC) Mission:** "The Mission of EMR-ISAC: The EMR-ISAC promotes CIP by providing timely and consequential information to the nation's ESS. It performs the following major tasks to accomplish this mission:
• Facilitates CIP information sharing between DHS and ESS.
• Disseminates CIP For Official Use Only (FOUO) Notices.
• Conducts daily research for current CIP issues.
• Publishes weekly INFOGRAMs and periodic CIP Bulletins.
• Develops instructional materials for CIP implementation or training needs.
• Provides no-cost technical CIP assistance to the ESS leadership.
• Encourages the reporting of CIP suspicious activities to the NICC." (**EMR-ISC**, *Brochure*)

Emergency Management Assistance Compact (EMAC): "The EMAC was congressionally ratified in 1996 to provide a fast and flexible response system through which States send requested personnel and equipment to help disaster relief efforts in other States. All 50 States, the District of Columbia, Puerto Rico, and the U.S. Virgin Islands have enacted legislation to become members of the EMAC." (**DHS**, *National Preparedness Guidelines*, Sep. 2007, p. 12)

Emergency Management Assistance Compact (EMAC): "Administered by the National Emergency Management Association, EMAC is a congressionally ratified organization that provides form and structure to the interstate mutual aid and assistance process. Through EMAC, a State can request and receive assistance from other member States." (**DHS**, *NRF Comment Draft*, 2007, p. 38) For more detail about EMAC, see http://www.emacweb.org/.

Emergency Management Assistance Compact (EMAC): "EMAC, Emergency Management Assistance Compact, is a national Governor's interstate mutual aid compact that facilitates the

sharing of resources, personnel and equipment across state lines during times of disaster and emergency. EMAC is formalized into law by member parties. (**EMAC**, *EMAC Overview*, 2007)

Emergency Management Assistance Compact (EMAC): "EMAP uses NFPA 1600 as the basis for guidelines that are used to accredit state, local, and tribal emergency management programs. Accreditation involves review of documentation, observations, and interviews with program officials (e.g., officials with the emergency management agency and from partner agencies, such as transportation, health, utilities, environmental, and law enforcement). (**NFPA 1600**, 2007, 11)

Emergency Management Assistance Compact (EMAC): "Because of the scale of the Hurricane Andrew disaster in 1992, the governors of the Southern states organized a regional mutual aid system to facilitate the sharing of resources among their states. The EMAC system was created to supplement state and local resources and to provide essential manpower and equipment in the early stages of disaster. In 1995, the compact was expanded into a national state-to-state mutual aid agreement, and it has become a critical resource for dealing with catastrophic disasters. Its also serves as a mechanism for collaboration at the local, state, and federal levels…It facilitates the sharing of resources across state borders and encourages similar arrangements within state borders…. The EMAC system requires that governors formally request assistance and that funding be available — or at least anticipated — to cover the negotiated expenses. " (**Waugh**, "EMAC, Katrina, and the Governors of Louisiana." *Public Administration Review* (Special Edition), December 2007, pp. 107-108)

EMAC is administered by the National Emergency Management Association, the professional organization for state emergency management directors, through its National Coordination Group. EMAC supports a broadcast system for the sharing of information, processes requests for assistance, and provides a Web site with the operations manual, points of contact for state contract officers, and other information… When governors declare states of emergency, EMAC deploys Advance Teams (also known as "A-Teams") to assist with the process for requesting assistance. The request is communicated to member states by email, the EMAC broadcast system, the EMAC Web site, and other means. Member states consider available resources and costs and contact the state needing assistance. The requesting state considers the offers, makes its choice, and negotiates the terms of the agreement. Changes in mission require further negotiation." (Ibid, p. 109)

Emergency Management Challenges/Problems/Areas for Improvement:

- While performance standards for emergency management are gaining broader acceptance, the absence of a single standard applied consistently across the nation makes it difficult to define baseline capabilities or assess current levels of preparedness.

- EM capabilities at the local level often do not meet…basic needs of local jurisdictions.[30]

[30] Of the jurisdictions surveyed in this study, those with full-time emergency management directors or managers, rate overall preparedness higher than those whose directors or managers are not full-time. Overall preparedness is significantly lower in jurisdictions with directors or managers who are only able to devote less than 20 percent of their time to these responsibilities. Small cities in particular struggle to maintain readiness for a disaster. Cities with a population less than 5,000 that are responsible for their own emergency management consistently report

- While most state and local laws are sufficient to support local emergency management efforts, a lack of procedural compliance and limited enforcement contribute to a patchwork of capable and less-than-capable emergency management programs as well as inconsistencies in disaster preparedness.[31]

- Disparities in resources for local programs have led to significant inconsistencies in State capability and preparedness.[32]

- A lack of adequate dedicated support resources available at the state level contributes to lower levels of overall local preparedness, specifically inadequate capability levels in mitigation and planning, and insufficient training and exercises, regional collaboration, and local outreach.[33]

- There is a lack of routine communication within and among local jurisdictions regarding emergency management requirements, roles, responsibilities, and resources.[34]

- A lack of consistent emergency management…education programs for local elected officials has created uncertainty among those officials concerning their statutory and

---

inadequate capability to mitigate, plan for, respond to, and recover from an emergency or disaster. Such cities commonly delegate emergency management responsibilities to a director who is not full-time and who also occupies another significant position, such as city mayor, administrator, police, or fire official. (p. 19)

[31] Existing state law requires each political subdivision to establish a local emergency management organization, or to be a member of a joint local organization. The law also directs political subdivisions to appoint a director, develop a comprehensive emergency management plan, and submit an annual emergency management program paper. It further encourages local programs to develop hazard mitigation plans, and to use a uniform incident command system for disaster response operations. Existing state law does little, however, to measure the quality of local programs or the commitment of emergency management directors. It does not compel cities and counties to meet these requirements, nor does it give the Washington State Emergency Management Division (EMD) the authority to compel local jurisdictions to comply. State law does not establish a mechanism to enforce the law, nor does it clarify such terms as "local organization," or "director." Many jurisdictions currently comply with this law by delegating emergency management responsibilities to a sheriff, police chief or fire chief as additional duties. The result is a mix of capable and less-than-capable emergency management programs across the state. This wide range of response capability, from very capable to inadequate, compromises overall preparedness, especially in multi-jurisdictional emergencies and disasters. (p. 18)

[32] "....survey findings and research results of this study demonstrate that inconsistencies across local emergency management programs compromise overall statewide disaster preparedness." (p. 15)

[33] The short turn-around time and tremendous administrative requirements of homeland security grants have subsumed other activities at the Washington State Emergency Management Division (EMD), according to both EMD staff and local directors. As a result, mitigation activities, local planning assistance, and outreach efforts are not being performed at previous levels and are inadequate to effectively support local emergency management programs. Many local programs, struggling to maintain even a minimum of preparedness, report that a state liaison that is able to provide assistance, guidance and technical expertise could make the most significant impact on local preparedness and capabilities. (p. 19)

[34] Many of these small cities, as well as other jurisdictions participating in this study, identify a lack of planning assistance, training and exercise support, sample documents, guidelines, and other technical resources. Many of these resources, however, are available to varying degrees from the Washington State Emergency Management Division (EMD), the Washington State Emergency Management Association (WSEMA), Municipal Research and Services Center (MRSC) and other sources. While many local programs use this resource sharing, many others are unaware that such resources exist. (pp. 19-20)

operational…[EM] responsibilities. Such ambiguities contribute to statewide inconsistencies in funding, resources, and prioritizing of emergency management.[35]

- Though increasing, the still limited collection of local public education programs has left the general public largely unaware of its role in emergency preparedness and its responsibilities when a disaster occurs.[36]

- Reliance on funding sources that are sometimes insufficient, inaccessible, or restricted is increasing the administrative requirements for grants management and limiting local programs' ability to effectively maintain adequate disaster preparedness.[37] (Derived from **WA State EM Council**, *A Study of EM at the Local Program Level,* 2004, pp. x-xi)

Emergency Management Community:

- Fire and Rescue Community

---

[35] Local governing bodies are an integral part of the statewide system of emergency management in Washington. They are the legal entities that establish policy, enact legislation, and hold the legal authority to determine the ways public and private monies are acquired, used, and disposed of. Washington state law assigns to local elected officials the responsibility for emergency management, establishing a local program, and appointing an emergency management director. Nonetheless, local jurisdictions participating in the study report that local support for emergency management is well below what it should be. This is partly due to the lack of consistent, ongoing training and education for local officials on the scope and importance of their emergency management responsibilities. Approximately two out of every five local programs that participated in this study report lacking an effective way to communicate with their chief elected or appointed official during a disaster. Frequent turnover, limited training or education, lack of familiarity with state requirements and local ordinances, and lack of communication and interaction with the emergency management program and its delegated director leaves some local elected officials ill equipped to meet their primary responsibilities during an emergency or disaster. While emergency management training courses for elected officials have been developed jointly by the Washington State Emergency Management Association (WSEMA), the Association of Washington Cities (AWC) and the Washington State Association of Counties (WSAC), no standard approved curriculum exists. The official training that is offered is unavailable on an ongoing basis and further limited by inadequate local funds to support travel and training. (p. 20)

[36] According to the Washington State Emergency Management Council's (EMC) 2004 Annual Assessment, much of the public is still largely unaware of its responsibilities when a disaster occurs. Residents tend to be confused about what assistance to expect and what may be required of them until that assistance arrives. Only 58 percent of jurisdictions participating in this study have an emergency preparedness public education program. Even fewer have a Public Information Officer. Citizen Corps is expanding public awareness and increasing the number of Washington residents trained in neighborhood preparedness. Nevertheless, much more public outreach, education, and training are still required to reach the majority of Washington's residents. (pp. 20-21)

[37] In Washington, funding for local programs is complex, due to the large number of funding sources that must be managed. Furthermore, available funding may fluctuate each year, rendering the process somewhat unpredictable. Managing homeland security costs and funding add to this complexity. The majority of jurisdictions participating in this study report that available funding is inadequate to meet all of emergency management's needs. As a result, planning and response efforts are emphasized and mitigation, training, exercises, and long-term recovery efforts are compromised. Local programs rely largely upon grants and federal dollars, in addition to some state funding. The most common federal grant program is the Emergency Management Performance Grant (EMPG). However, the EMPG requires non-federal matching funds, leaving some small jurisdictions without these grant dollars altogether. Furthermore, there is a real concern that EMPG funding will be reduced nationwide in the near future. The State Emergency Management Division (EMD) is funded by an annual allocation from the State General Fund as well as a variety of state and federal grants, including EMPG funds that require non-federal matching dollars and homeland security funds. Without these multiple federal funding sources, EMD would be unable to sustain program operations or its current levels of service and support to local programs, even considering their significant restrictions governing expenditures.

- Transportation/HAZMAT Community
- Infrastructure Community
- Military/National Guard
- Resident/Tribal/NGO Community
- Volunteer Community
- Law Enforcement Community

Emergency Management Coordinator: "The individual within each jurisdiction that is delegated the day-to-day responsibility for the development and maintenance of all emergency management coordination efforts." (**CA OES**, *SEMS Guidelines*, 2006, Glossary, pp. 7-8)

Emergency Management Coordinator/Director Core Responsibilities:

"*Building strong partnerships.* Partnering with other state leaders, local government, academia, the private sector, the public and the media is central to the role of the emergency services leader. These partnerships will bolster preparedness by facilitating recruitment and training, establishing credibility and enabling collaboration, creating a reliable communication mechanism, and leveraging new knowledge to assess risks and manage response. And the director will rely on these partnerships when leading response to catastrophic events.

Infusing preparedness throughout the executive branch. The emergency services leader must build upon the relationships established with leaders of other agencies to integrate emergency preparedness as a priority in the operations of all state departments.

Using fiscal policy to meet goals. The emergency services leader must be aware of state and federal fiscal policies to enable the leader to fully leverage available resources and to achieve outcomes.

Empowering civil servants to work for outcomes. The director must inspire in emergency managers the confidence, innovation and passion necessary to protect…[a jurisdiction's residents].

Viewing residents as customers. The best interest of victims of past and future events must be at the core of every decision made by the emergency services leader. Each stage of policy formation, resource allocation and management decisions must focus on the needs of [residents]. Soliciting feedback from victims and residents about the department's prevention and mitigation, preparation, response, and recovery efforts – and improving service based on satisfaction levels – is essential." (**James Lee Witt**, March 16, 2006 communication with Little Hoover Commission and included in *Safeguarding the Golden State: Preparing for Catastrophic Events, 2006, 38)*

Emergency Management Director (Emergency Services Director): "The individual within each political subdivision that has overall responsibility for jurisdiction emergency management. For cities and counties, this responsibility is commonly assigned by local ordinance." (**CA OES**, *SEMS Guidelines*, 2006, Glossary, p. 8)

Emergency Management Effectiveness: "While most counties and cities with local emergency management programs have established sufficient planning and response capabilities, the survey and research results of this study indicate that most local programs lack the funding, training, exercises, facilities, equipment, and staff to adequately mitigate and recover from emergencies or disasters." (**WA State EM Council**, *A Study of Emergency Management…Local Program Level,* 2004, 18)

Emergency Management for Higher Education Grant (EMHE): Inaugurated in April 2008. "This grant program is designed to fund higher education institution projects to develop, or review and improve, and fully integrate all-hazards campus-based emergency management planning efforts. A program funded under this absolute priority is required to use the framework of the four phases of emergency management (Prevention-Mitigation, Preparedness, Response, and Recovery) to:

1. Develop, or review and improve, and fully integrate a campus-wide emergency management plan;
2. Train campus staff, faculty, and students in emergency management procedures;
3. Ensure coordination of planning and communication across all relevant offices and departments on the campus;
4. Coordinate with local and State government emergency management efforts;
5. Develop a written plan that incorporates medical, mental health, communication, and transportation needs to include those with disabilities, special needs, and other circumstances (such as cultural, language, location relative to campus, etc.) into emergency protocols;
6. Develop or update a written plan that prepares the campus for a possible infectious disease outbreak, such as pandemic influenza, methicillin-resistant Staphylococcus aureus (MRSA), or food contamination; and
7. Develop or enhance a written plan for preventing violence by assessing and addressing the mental health needs of students who may be at risk of causing harm to self or others.

Types of Projects

An EMHE grant will enable higher education institution to develop, or review and improve, and fully integrate, all-hazards emergency management planning efforts to include:

1. All four phases of emergency management: Prevention-Mitigation, Preparedness, Response and Recovery;
2. Training for campus staff, faculty, and students in emergency management procedures;
3. Coordination of planning and communication across all relevant departments within the institution of postsecondary education;
4. Coordination with local and State government emergency management efforts;
5. Coordination with the State or local Homeland Security Plan;
6. Support of the National Incident Management System;
7. A comprehensive plan that is based on an all-hazards approach;
8. Support from top leadership within the institution;
9. Pre-established roles for faculty, staff, students and first responders;

10. Drills and exercises for faculty, staff, and students;
11. A plan that meets the needs of students, staff, and faculty-addressing the medical, mental health, communication, and transportation needs to include those with disabilities, special needs, and other circumstances (such as cultural, language, location relative to campus, etc.) into emergency protocols;
12. A written plan that prepares the higher education institution for a possible infectious disease outbreak, such as pandemic influenza, methicillin-resistant *Staphylococcus aureus* (MRSA), or food contamination;
13. A written plan that seeks to prevent violence by assessing and addressing the mental health needs of students who may be at-risk of causing harm to self or others; and
14. Emergency equipment and technology (but not as a majority of the requested funding)." (**Depart of Ed**, *Emergency Management for Higher Education*, April 23, 2008)

Emergency Management Framework: "I'd like to talk for a minute about the standard framework for managing a disaster….

"By law, local government is responsible for providing for the safety and security of citizens in advance of a hurricane. That means they are in charge of developing emergency plans, determining evacuation routes, providing public transportation for those who can't self-evacuate, and setting up and stocking local shelters with relief supplies.

"State government is responsible for mobilizing the National Guard, pre-positioning certain assets and supplies, and setting up the state's emergency management functions. They are also in charge of requests for Federal support though the formal disaster declaration process.

"The Federal government is responsible for meeting those requests from the state – both during the disaster and in its aftermath. As we saw during Katrina, that includes logistical support for search and rescue, providing food, water and ice, establishing disaster centers and processing federal disaster claims, and participating in short- and long-term public works projects – such as debris removal and infrastructure rebuilding. This is the basic framework." (**DHS**, *Remarks as Prepared for Delivery by Homeland Security Secretary Michael Chertoff at the National Hurricane Conference*, April 12, 2006)

Emergency Management Functional Areas (See Emergency Support Functions):

1. Emergency Management Organization
2. Emergency Operations Planning
3. Resource Management
4. Direction and Control
5. Emergency Communication
6. Alerting and Warning
7. Emergency Public Information
8. Continuity of Government
9. Shelter Protection
10. Evacuation
11. Protective Measures

12. Emergency Support Services
13. Training and Education
14. Tests and Exercises (**FEMA**, *IEMS MYDP*, 1984, p. II-5 (FEMA Form 76-20)

Emergency Management Functions (EMF): Those "identified through the EMAP Standard (e.,., Resource Management, Communications and Warning, etc.)." (**FEMA**, *EMPG Work Plans* (FY08), 2008, p. 2)

Emergency Management Information Management System (EMIMS): "As part of the ongoing NRCC [National Response Coordination Center (FEMA HQ)] capabilities upgrade, a new Emergency Management Information Management System (EMIMS) is being installed. EMIMS is a web-based software system that will provide greater support to the NRCC, RRCCs, and JFOs in managing disaster response operations and information flow, maintaining situational awareness, and coordinating information sharing. Our intent is to incorporate the initial RDD list already developed by the Office of Operations Coordination, expand it, and incorporate it into EMIMS as a secure resource module. Ultimately, with the capability provided by EMIMS, vital statistics on the location and content of RDD teams and resources can be loaded into the system by location and continuously updated by the responsible Federal department or agency and used on a real time basis by the interagency community to support responses. Our longer term goal is to use EMIMS to create a larger national asset database containing all Federal response teams and resources for all-hazards responses. This expanded database would also be protected and available to the interagency community for use to support disaster response." (**FEMA**, *Statement of Glenn Cannon*, November 2007, p. 5)

Emergency Management Institute (EMI), FEMA: Component of FEMA's National Emergency Training Center at Emmitsburg, MD. Under the National Integration Center of the National Preparedness Directorate in the Federal Emergency Management Agency. "The EMI maintains responsibility for emergency management training by developing and conducting courses for Federal, State, local, and tribal; emergency responders; and the public." (**FEMA/NPD/NIC**, slide 3)

Emergency Management Mission: "Emergency management protects communities by coordinating and integrating all activities necessary to build, sustain, and improve the capability to mitigate against, prepare for, respond to, and recover from threatened or actual natural disasters, acts of terrorism, or other man-made disasters." (**EM Roundtable**, 2007, p. 4)

Emergency Management Mission: "The mission of emergency management agencies today is much broader than the mission given the predecessor civil defense agencies of the 1950s and 1960s. Today emergency management agencies respond to almost all disasters and emergencies that occur…natural disasters…as well as man-made and homeland security type incidents." (**NEMA.** *If Disaster Strikes Today Are You Ready To Lead?: A Governor's Primer on All-Hazards Emergency* Management, 2003)

Emergency Management of the Transportation System: "In emergencies, the Secretary of Homeland Security is the principal Federal official for domestic incident management. However, DOT is responsible for the emergency management of the transportation system, coordination of

alternative transportation services, the restoration and recovery of transportation infrastructure, and other functions. FRA has the lead role in investigating rail accidents and for reporting and coordinating accident response until it is determined that the accident may have been deliberately caused, at which time TSA gets involved." (**House Transportation and Infrastructure Committee**. *Hearing, Subcommittees on Highways & Transit, and Railroads, Pipelines, & Hazardous Materials – Transit & Rail Security*, March 7, 2007)

Emergency Management Performance Grants: "State emergency management agencies use EMPG funding to enhance their emergency management capabilities, structure programs based on targeted needs and build capabilities for priorities outlined in the interim National Preparedness Goal." (DHS, *DHS Announces Additional $*260M…, 16 Aug 2007)

Emergency Management Performance Grants: "…to sustain and enhance emergency management capabilities in support of the Goal [National Preparedness Goal], the Emergency Management Performance Grants (EMPG) program is designed to assist States and Urban Areas achieve the target levels of capability to sustain and enhance the effectiveness of their emergency management program." (**DHS/ODP**, *Fiscal Year 2006 Emergency Management Performance Grants: Program Guidance and Applications Kit*, November 2005, 40 pages, p. 4).

"A comprehensive state emergency management system must be inclusive of local programs and input. Local emergency management organizations should remain informed and have the opportunity to provide input to State planning processes. Although DHS expects States to include support for their local jurisdictions in the EMPG programs, each State is responsible for determining the appropriate amount of funding to be passed through to support the development or enhancement of local emergency management capabilities." (**DHS/ODP**, *FY 06 EMPG*, p. 6)

"As a condition for receipt of funds, States must also comply with FY06 NIMS implementation Requirements… States are not required to receive accreditation under the EMAP Standard, but are required to use the EMAP Standard, the NEMB-CAP process, the NRP, and NIMS as a baseline around which to design their EMPG work plans." (**DHS/ODP**, *FY 06 EMPG*, p. 7)

"EMPG has a 50% Federal and 50% State cost-share cash or in-kind match requirement. Unless otherwise authorized by law, Federal funds can not be matched with other Federal funds." (**DHS/ODP**, *FY 06 EMPG*, p. 11)

"EMPG allowable costs are divided into planning, organization, equipment, training, and exercises categories. In addition, management and administration (M&A) costs are allowable." (**DHS/ODP**, *FY 06 EMPG*, p. 13)

"While the EMPG program is not intended to support construction activities, DHS recognizes that an updated, functioning emergency operations center (EOC), accessible to and usable by individuals with disabilities, is a core component of an effective emergency management system. Therefore, limited construction and renovation activities for EOCs are allowable under EMPG, consistent with past EMPG practices. The State must match 50% of any money used for construction and must comply with the Davis-Bacon Act." (**DHS/ODP**, *FY 06 EMPG*, p. 16)

Emergency Management Performance Grants Eligibility: "FY 2008 EMPG allocations are determined as authorized by the Implementing Recommendations of the 9/11 Commission Act of 2007. All 50 States, the District of Columbia, and Puerto Rico will receive a base amount of 0.75 percent of the total available grant funding. Four Territories (American Samoa, Guam, Northern Mariana Islands, and the U.S. Virgin Islands) will receive a base amount of 0.25 percent of the total available grant funding. The balance of EMPG funds is distributed on a population-share basis. Pursuant to the Compact of Free Association, funds are available for the Federated States of Micronesia and for the Republic of the Marshall Islands." (**FEMA**, *EMPG Overview*, 1 Feb 2008)

Emergency Management Performance Grants, Fiscal Year 2008 Priority: "The principal priority for the FY 2008 EMPG funds is to sustain and enhance catastrophic planning capabilities, to include addressing the findings of the FEMA gap analysis program and similar capability assessment efforts, and assisting state and local jurisdictions to address national and regional catastrophic planning needs. State and local jurisdictions should also continue to focus on addressing state-specific planning issues identified through the 2006 Nationwide Plan Review. In FY 2008, specific planning focus areas of evacuation planning, logistics and resource management, continuity of operations (COOP) / continuity of government (COG) planning, and recovery planning have been identified as national planning focus areas. Total Funding Awarded in FY 2008: $291,450,000." (**FEMA**, *EMPG Overview*, 1 Feb 2008)

Emergency Management Performance Grants, Fiscal Year 2009 Request: "The EMPG request of $200 million helps states and urban areas achieve target levels of capability to sustain and enhance the effectiveness of their emergency management programs. The EMPG Program provides critical planning and staffing assistance to sustain and enhance state and local emergency management capabilities." (**FEMA**, *Statement of R. David Paulison, Administrator, on the Fiscal Year 2009 President's Budget Before the Committee on Appropriations Subcommittee on Homeland Security, U.S. House of Representatives*, March 11, 2008, p. 6)

Emergency Management Phases: "Emergency Management Phases: Emergency-related activities are clustered into four phases that are related by time and function to all types of disasters. The phases are also related to each other, and each involves different types of skills." [Mitigation, Preparedness, Response, Recovery.] (**NGA**, *CEM Governors' Guide*, 1979, p. 12)

Emergency Management Professionalism: "Emergency management…has been strengthened by a growing trend toward professionalization in the discipline. As emergency management systems nationwide mature, emergency management is increasingly recognized as a vital discipline and a growing profession….. The emergency management profession benefits from a proliferation of training and educational opportunities." (**WA State EM Council**, *A Study of Emergency Management at the Local Program Level*, 2004, p. 15)

Emergency Management Program: "…the CAE [Chief Audit Executive] must understand the role of BCM as one of three elements of an Emergency Management Program…

Emergency response (ER) is the first action that focuses on avoiding, deterring, and preventing disasters and preparing the organization to respond to a disaster. The goal of ER is lifesaving, safety, and initial efforts to limit the impact to asset damage.

Crisis management (CM) focuses on managing external — and in some companies, internal — communications and senior management activities during a disaster. Even in an environment where ER and CM are mature and effective, BCM may remain inadequately addressed. BCM capabilities are focused on the recovery of critical business processes to minimize the financial and other impacts to a business caused during a disaster or business disruption.

BCM [Business Continuity Management] must be integrated with ER and CM but should be a separate program. (**IIA**, *Business Continuity Management*, July, 2008, page 2).

Emergency Management Program: "A program that implements the mission, vision, and strategic goals and objectives as well as the management framework of the program and organization." (**NFPA 1600**, 2007, p. 7)

Emergency Management Program Coordinator: "The program coordinator should ensure the preparation, implementation, evaluation, and revision of the program. It is not the intent of this standard to restrict the users to program coordinator titles. It is recognized that different entities use various forms and names for their program coordinator that performs the functions identified in the standard. An example of a title for the public sector is emergency manager, and an example of a title for the private sector is business continuity manager. A written position description should be provided." (**NFPA 1600**, 2007, p. 12)

Emergency Management/Response: "The ability to direct, control, and coordinate a response; manage resources; and provide emergency public information – this outcome includes direction and control through the Incident Command System (ICS), Multiagency Coordination Systems, and Public Information Systems." (**Homeland Security Council**, *National Planning Scenarios*, 2006, p. vi)

Emergency Management/Response Personnel: "Emergency management/response personnel include Federal, State, territorial, tribal, substate regional, and local governments, private sector organizations, critical infrastructure owners and operators, nongovernmental organizations, and all other organizations and individuals who assume an emergency management role." (**FEMA**, *National Incident Management System* (FEMA 501/Draft), August 2007, p. 23)

Emergency Management Responsibility – Federal and State/Local "Joint" Responsibility: "The purpose of this title is to provide a system of emergency preparedness for the protection of life and property in the United States from hazards and to vest responsibility for emergency preparedness jointly in the Federal Government and the States and their political subdivisions. The Congress recognizes that the organizational structure established jointly by the Federal Government and the States and their political subdivisions for emergency preparedness purposes can be effectively utilized to provide relief and assistance to people in areas of the United States struck by a hazard. The Federal Government shall provide necessary direction, coordination, and guidance, and shall provide necessary assistance, as authorized in this title so that a

comprehensive emergency preparedness system exists for all hazards. (**Robert T. Stafford Act**, Title VI -- Emergency Preparedness Sec. 601. Declaration of policy (42 U.S.C. 5195)

Emergency Management Standards: "While performance standards for emergency management are gaining broader acceptance, the absence of a single standard applied consistently across the state makes it difficult to define baseline capabilities or assess current levels of preparedness. One of the earliest attempts at developing standards for emergency management can be traced back to the Civil Preparedness Guide, published by the U.S. Defense Civil Preparedness Agency—forerunner to the Federal Emergency Management Agency (FEMA)—in 1972. More than 30 years later, no commonly accepted national standards for emergency preparedness exist. As a result, the essential capabilities that every jurisdiction of a particular size should have or have immediate access to are not understood consistently across the nation.

While there have been more recent attempts to establish minimum standards, such as the National Fire Protection Association's (NFPA) *Standard on Disaster/Emergency Management and Business Continuity Programs*, these standards remain voluntary and have not been formally adopted by local jurisdictions in Washington." (**WA State EM Council**, *A Study of Emergency Management at the Local Program Level*, 2004, p. 17)

Emergency Management System Central Premise: The EMC [WA State Emergency Management Council] believes that local ability to respond effectively to any emergency is central to the system of emergency management…" (**WA State EMC**, *A Study of Emergency Management at the Local Program Level*, 2004, p. viii)

Emergency Management System Premise: All Disasters are local disasters first. (Blanchard)

Emergency Management Team: "The Business Continuity Institute defines the EMT as 'the group of management staff who command the resources needed to recover the enterprise's operations at the recovery site.' I prefer to extend that concept to mean the group of executives who manage and control an emergency situation on behalf of the enterprise. In other words, these people are in charge of the destiny of the total enterprise, with all the attendant responsibility. Indeed it can be said that their influence extends beyond their own enterprise and may affect the long term success of a whole industry. It is crucial that they perform well, both as individuals and as a well-matched team." (**Burtles**, "Building a Capable Emergency Management Team." *Continuity Central*, January 21, 2005)

Emergency Management Team Gold, Silver and Bronze Levels: "The Gold, Silver and Bronze control model is commonly used by the police and other authorities and can easily be adapted for our purposes. Gold provides the high level strategic command unit, Silver is the management level operational command whilst Bronze is the functional level tactical command that may comprise more than one unit.

"It provides empowerment and control in a manner that everyone can understand and respect. In the typical crisis situation **Bronze Control** would take charge of the actual incident area. Bronze Control would be a single point of contact, in charge of liaison, access and communications

within that inner zone. Access to this region would normally be restricted to the recovery and salvage teams, together with the emergency services.

"The immediate surroundings, perhaps the whole building or the whole site would come under the supervision of **Silver Control**. This would be another single point of contact, perhaps with a higher level of authority, in charge of liaison, access and communications within the middle zone of the incident. Typically they would be responsible for organising and controlling the essential border activities such as parking arrangements, dealing with members of staff and the public in and around the site. They would co-ordinate deliveries and supplies into and out of the site area.

"Meanwhile, **Gold Control** would be more concerned with dealing with external interests, such as customers, the media and the authorities. This would be the highest level of corporate authority representing the company's interests and taking full responsibility for the ongoing management of the incident. Regular communication between these three parties ensures everyone sings from the same hymn sheet and the recovery efforts are neither restricted by lack of support nor compromised by interruptions and distractions." (**Burtles**, "Building a Capable Emergency Management Team." *Continuity Central*, January 21, 2005)

Emergency Management versus Homeland Security: "Deciphering Specialties: Emergency management and homeland security are not the same, nor are they two differing views of the same core competencies. They draw on some of the same supporting specialties, they are both multidisciplinary by definition and regularly overlap, especially at the operational or post-event level.

To use a very crude and rather limited set of comparisons:

- Emergency management is very local and is about preserving life, property and, with voter approved limitations, ensuring freedom.

- Homeland security starts as far from home as possible and is about denying freedom to those who believe violence and intimidation are legitimate means to an end.

- Building on that, emergency management is a specific and critical function of local government, while homeland security is essentially, but not solely, a federal government function.

- Using a different lens, emergency management focuses on science, facts and the environment in its broadest sense, while homeland security focuses on people, beliefs and ideology…..

The U.S. Department of Homeland Security (DHS) absorbed the Federal Emergency Management Agency (FEMA) including FEMA's mission, but has yet to figure out how to manage that mission. In crafting the DHS, Congress has created a multibillion dollar funding stream for training, education and research, but it also consistently uses language that has forced everyone - not just academic institutions - to alter their product offerings so they meet what are

basically arbitrary, and oftentimes capricious, homeland security definitions terms, and conditions - not emergency management definitions, terms and conditions.

The size of that funding stream and the limiting language that the DHS adopted has led to the creation of many new programs in homeland security. This is all well and good, but unfortunately the larger effect has been a slowdown in emergency management funding, the forcing of many institutions to reconfigure existing and planned emergency management programs to look like homeland security programs so they qualify for DHS money, and the general de-emphasis on the critical importance of a separate emergency management discipline - all to further solidify a DHS supremacy….

Neither discipline is inherently more important or better than the other. The issue is determining your strengths and deciding how or where you want to grow….

If you want to help build strong and resilient communities and contribute directly to your community's well-being on a daily basis - whether that community is local, regional or state - then emergency management is the track to pursue.

If you want to protect the public from bad people, then homeland security is the track to pursue. (Jaffin, "Education: Emergncy Management and Homeland Security Aren't the Same." *Emergency Management* (Government Technology), June 27, 2008)

Emergency Management Vision: "Emergency management seeks to promote safer, less vulnerable communities with the capacity to cope with hazards and disasters." (**EM Roundtable**, 2007, p. 4)

Emergency Manager: The person who has the day-to-day responsibility for emergency management programs and activities. The role is one of coordinating all aspects of a jurisdiction's mitigation, preparedness, response, and recovery capabilities.

(The local emergency management position is referred to with different titles across the country, such as civil defense coordinator or director, civil preparedness coordinator or director, disaster services director, and emergency services director.)

Emergency Manager: "The local emergency manager has the day-to-day responsibility of overseeing emergency management programs and activities. He or she works with chief elected and appointed officials to ensure that there are unified objectives with regard to the community's emergency response plans and activities. This role entails coordinating all aspects of a jurisdiction's *mitigation, preparedness, response and recovery* capabilities.[38] The emergency manager coordinates all components of the emergency management program for the community, to include assessing the availability and readiness of local resources most likely required during an incident and identifying any shortfalls. Other duties of the local emergency manager might include the following:

[38] The italicized words were dropped in the Jan 2008 NRF, p. 16.

- Coordinate the planning process and work cooperatively with other community agencies and private sector enterprises.
- *Oversee* damage assessments during an incident. (Changed to "Coordinating," NRF 2008 17)
- Advise and inform local officials about emergency management activities during an incident.
- Develop and execute public awareness and education programs.
- Involve private sector businesses and relief organizations[39] in planning, training and exercises." (**DHS**, *NRF Comment Draft*, September 2007, p. 14)
- Developing mutual aid and assistance agreements. (Added in Jan 2008 NRF, p. 17)
- Conducting exercises to test plans and systems and obtain lessons learned. (NRF 2008, 17

Emergency Manager: "Responders and emergency managers are both doers and planners, which is to say that to lead **response** and **recovery** efforts effectively, they must also **prepare** effectively (i.e., plan, organize, equip, train, exercise, and continuously evaluate actual performance)." (**DHS**, *NRF*, Jan 2008, 27)

Emergency Manager: "Emergency managers are professionals who practice the discipline of emergency management by applying science, technology, planning and management techniques to coordinate the activities of a wide array of agencies and organizations dedicated to preventing and responding to extreme events that threaten, disrupt, or destroy lives or property." (**Drabek** 2002, Student Handout 1-2)

Emergency Managers Weather Information Network (EMWIN): "As an integral part of its mission, the NWS recognizes the need to provide the emergency management community with access to a set of NWS warnings, watches, forecasts, and other products at no recurring cost. Toward that end, the Emergency Managers Weather Information Network (EMWIN) system was developed. In partnership with the Federal Emergency Management Agency (FEMA) and other public and private organizations, EMWIN is now evolving into a fully operational and supported NWS service. EMWIN is a suite of data access methods which make available a live stream of weather and other critical emergency information. Each method has unique advantages. EMWIN's present methods in use or under development for disseminating the basic datastream include: Radio; Internet; Satellite." (**NOAA**, *Emergency Mgrs. Weather Information Network*)

Emergency Medical Services (EMS): "Individuals who, on a full-time, part-time, or voluntary basis, serve as first responders, emergency medical technicians (EMT) (basic), and paramedics (advanced) with ground-based and aero-medical services to provide pre-hospital care." (**FEMA**, *TEI/TO Course Catalog*, 2008, 2)

Emergency Medical System (EMS): "The aggregate of resources and personnel required to deliver medical care to those with an unpredicted, immediate health need outside established medical facilities." (**UNDHA**, *Disaster Management Glossary*, 1992, 34)

Emergency Medical Technician (EMT): "A health-care specialist with particular skills and knowledge in pre-hospital emergency medicine." (**CA OES**, *SEMS Guidelines*, Glossary, p. 8)

[39] "Relief organizations" changed to "NGOs" in Jan 2008 NRF, p. 17.

Emergency Medical Technicians (EMTs): "…the Nation's 600,000 emergency medical technicians serve 36,000 plus communities." (**DHS**, Chap. 2, *Capstone Doctrine Pub Draft*, 08)

Emergency Medicine: "The specialized institutional system and resources required to meet immediate and unexpected medical needs." (**UNDHA**, *DM Glossary*, 1992, 34)

Emergency of Primary Federal Responsibility: "An emergency for which the primary responsibility for response rests with the United States (rather than a State) because the emergency involves a subject area for which, under the Constitution or laws of the United States, the Federal government exercises exclusive or pre-eminent responsibility and authority. In determining whether such an emergency exists, the President consults the Governor of the affected State, if practicable." (**FEMA**, *Mission Assignment SOPs Operating Draft*, 2007, p. 50)

Emergency Operating Records: "Records that support the execution of an agency's essential functions." (**DHS**, *Federal Continuity Directive 1*, December 2007, P-3)

Emergency Operating Records (COOP): "Vital records, regardless of media, essential to the continued functioning or reconstitution of an organization during and after an emergency. Included are emergency plans and directives; orders of succession; delegations of authority; staffing assignments; and related records of a policy or procedural nature that provide agency staff with guidance and information resources necessary for conducting operations during any emergency, and for resuming formal operations at its conclusion." (**FEMA**, *Department/Agency HQ Devolution of Operations Plan Template,* December 2007)

Emergency Operations: "Commitment and efficient use of *all* community resources, as required, to minimize the effects of an extraordinary emergency." (**DCPA**, *Local Disaster Preparedness Course Syllabus*, 1973, p. 127)

Emergency Operations Center (EOC): "A location from which centralized emergency management can be performed. EOC facilities are established by an agency or jurisdiction to coordinate the overall agency or jurisdictional response and support to an emergency." (**CA OES,** *SEMS Guidelines*, 2006, Glossary, p. 8)

Emergency Operations Center (EOC): "Local EOCs are the physical location where multi-agency coordination occurs. EOCs help form a **common operating picture** of the incident, relieve on-scene command of the burden of external coordination and secure additional resources. The core functions of an EOC include coordination, communications, resource dispatch and tracking and information collection, analysis and dissemination. EOCs may be permanent organizations and facilities that are staffed 24 hours a day, 7 days a week, or they may be established to meet short-term needs. Standing EOCs – or those activated to support larger, more complex incidents – are typically established in a central or permanently established facility. Such permanent facilities in larger communities are typically directed by a full-time emergency manager. EOCs may be organized by discipline (fire, law enforcement, medical services, etc.), by jurisdiction (city, county, region, etc.), by Emergency Support Function (communications, public works, engineering, transportation, resource support, etc.) or, more likely, by some combination thereof." (**DHS**, *NRF Comment Draft*, 2007, pp. 48-49)

Emergency Operations Center (EOC): "The operating facility that serves as the command and control point for emergency management officials (State, local, and/or Federal) responding to, or preparing for, the onset of an incident." (**FEMA**, *Mission Assignment SOPs*, 2007, p. 50)

Emergency Operations Center (EOC): "The EOC is a location where senior public sector officials who represent primary governmental functions assemble to resolve a critical incident. Monitors and directs emergency response and recovery activities. Supplies the public sector Incident Commander with the necessary resources to resolve the critical incident. Analogous to the private sector Crisis Management Team (CMT). (**Jones**, *Critical Incident* Protocol, 2000, 37)

Emergency Operations Center (EOC): Emergency operations centers (EOCs) represent the physical location at which the coordination of information and resources to support incident management activities normally takes place." (**NFPA 1600**, 2007, p. 18)

Emergency Operations Center (EOC): "The pre-designated facility established by an agency or jurisdiction to coordinate the overall agency or jurisdictional response and support to an emergency. The EOC coordinates information and resources to support domestic incident management activities." (**USCG**, *IM Handbook*, 2006, Glossary 25-6)

Emergency Operations Center (EOC) Functions and Problems:

1. "There is often both lack of clarity and consensus, even in pre-planned local EOCs, on the major function of EOCs and the specific tasks to be undertaken therein.
2. Irrespective of prior planning or intent, at least six different tasks are typically carried on at EOCs: coordination, policy making, operational, information gathering, dispersal of public information, and hosting of visitors.
3. Coordination tasks (i.e., those directed at relating organizations to one another effectively, and relating capabilities of organizations to disaster demands are usually handled initially rather poorly because of lack of adequate information inputs.
4. Policy making (i.e., those tasks involving decision making vis-à-vis the overall community response) often is given precedence over coordination even to the point of organizational officials looking for matters on which to make decisions.
5. Operations (i.e., those tasks which directly meet disaster demands rather than those directed at coordination or other response demands) are particularly entered into if some slack or failure is seen in the activities of operational emergency organizations.
6. Information gathering tasks (i.e., those directed at efforts to determine the nature and extent of disaster conditions) are not just always the initial focus of activities of EOCs, but at times are continued to the extent that they degenerate into the seeking of information for information's sake.
7. Dispersal of public information (i.e., those tasks directed at informing the news media and the general public) at times dominates and in fact may interfere with other EOC tasks.
8. Hosting of visitors (i.e., those tasks necessary to handle the convergence of VIPs and others in EOCs) is frequently a major source of conflict and stress, although often kept latent, between local community officials and people, and all outsiders.
9. The very concept of coordination is interpreted in a wide variety of ways ranging from the formulizing of overall community priorities on emergency problems, to the act of an organization announcing to others what it has already done.

10. The role of chief coordinator at EOC's is far from standardized either as to who should take or how the role is to be played - although generally it is taken by an official usually associated with civil defense in some way, with the effort to exercise influence depending more on pre-emergency social ties than on formal or planned official relationships.
11. There sometimes develops at EOCs a high degree of coordination within clusters of organizations working on the same or similar disaster problems, a coordination not extended to groups outside of the given cluster.
12. EOCs are more effective at gathering than at exchanging information, and more effective at exchanging information than distributing it between organizations.

13. In general record keeping is rather poor at most EOCs.
14. More specific tasks in an EOC are emergent than is usually recognized in pre-planning, especially with respect to the obtaining and processing of information.

Overall, local EOCs tend to have multiple and far from integrated functions and tasks, and particularly have a variety of problems both with respect to coordination and information." (**Quarantelli**, *Problems and Difficulties in the Use of Local EOC's in Natural Dis.*, 1972, 2-3)

Emergency Operations Center (EOC) Management, Capability Definition: "Emergency Operations Center (EOC) Management is the capability to provide multi-agency coordination (MAC) for incident management by activating and operating an EOC for a pre-planned or no-notice event. EOC management includes EOC activation, notification, staffing, and deactivation; management, direction, control, and coordination of response and recovery activities; coordination of efforts among neighboring governments at each level and among local, regional, State, and Federal EOCs; coordination public information and warning; and maintenance of the information and communication necessary for coordinating response and recovery activities. Similar entities may include the National (or Regional) Response Coordination Center (NRCC or RRCC), Joint Field Offices (JFO), National Operating Center (NOC), Joint Operations Center (JOC), Multi-Agency Coordination Center (MACC), Initial Operating Facility (IOF), etc." (**DHS**, *Target Capabilities List*,, 2007)

Emergency Operations Plan (EOP): An all-hazards document that specifies actions to be taken in the event of an emergency or disaster event; identifies authorities, relationships, and the actions to be taken by whom, what, when, and where, based on predetermined assumptions, objectives, and existing capabilities.

Emergency Operations Plan (EOP): "The plan that each jurisdiction has and maintains for responding to appropriate hazards." (**CA OES**, *SEMS Guidelines*, 2006, Glossary, p. 8)

Emergency Operations Plan: "The "steady-state" plan maintained by various jurisdictional levels for responding to a wide variety of potential hazards." (**DHS,** *NIMS*, 2004, p. 129)

Emergency Operations Plan (EOP): "A plan should be developed with functional annexes common to the hazards identified in Step 1 [Hazard Analysis]. Those activities unique to specific hazards should be described separately, perhaps in appendices to the appropriate functional annexes. This approach is a departure from previous guidance which stressed development of hazard-specific plans. Existing plans should be reviewed and modified as

necessary to ensure their applicability to all hazards that pose a potential threat to the jurisdiction. The exact format of the plan is less important than the assurance that the planning process considers each function from a multihazard perspective." (**FEMA**, *IEMS Process Overview*, **1983**, p. 8)

Emergency Operations Plan (EOP): "A jurisdiction's emergency operations plan is a document that:

- Assigns responsibility to organizations and individuals for carrying out specific actions at projected times and places in an emergency that exceeds the capability or routine responsibility of any one agency, e.g., the fire department.
- Sets forth lines of authority and organizational relationships, and shows how all actions will be coordinated.
- Describes how people and property will be protected in emergencies and disasters.
- Identifies personnel, equipment, facilities, supplies, and other resources available--within the jurisdiction or by agreement with other jurisdictions--for use during response and recovery operations.
- Identifies steps to address mitigation concerns during response and recovery activities.

"As a public document, an EOP also cites its legal basis, states its objectives, and acknowledges assumptions." ." (**FEMA**, *Guide For All-Hazard Emergency Operations Planning* (SLG 101), **1996**, p. 1-1)

Emergency Operations Plan (EOP): "A document that: describes how people and property will be protected in disaster and disaster threat situations; details who is responsible for carrying out specific actions; identifies the personnel, equipment, facilities, supplies, and other resources available for use in the disaster; and outlines how all actions will be coordinated." (**FEMA**, *Guide For All-Hazard Emergency Operations Planning* (SLG 101), **1996**, p. GLO-4)

Emergency Operations Plan (EOP): "The 'response' plan that an entity (facility, jurisdiction, State, etc.) maintains for reacting to any hazard event. It provides action guidance for management and emergency response personnel." (**HHS**, *Medical Surge Capacity and Capability Handbook*, August 2004, p. D-4, Glossary)

Emergency Operations Plan Annexes/Appendices (Recommended to Localities, 1978):

- Radiological Defense
- Fire
- Rescue
- Police
- Public Works Engineering
- Emergency Health and Medical-Health
- Emergency Welfare
- Schools
- Industry (**DCPA**, *Standards for Local Civil Preparedness* (CPG 1-5, 1978, pp. 19-20)

Emergency Operations Plan (EOP) Annexes (Recommended to States by FEMA, 1984):

- Warning

- Communications
- Shelter
- RADEF
- Crisis Relocation
- Fire
- Law Enforcement
- Health, Medical
- Emergency Public Information
- Damage Assessment
- Public Works, Engineering
- Transportation
- Resources Management
- EOC
- Evacuation
- Hazard Mitigation
- Hazardous Materials
- Rescue
- Crisis Counseling
- Training
- Legal Services (**FEMA**, *IEMS MYDP*, 1984, p. III-18)

Emergency Operations Plan (EOP) Annexes (Recommended to States by FEMA, 1993):

- Direction and Control
- Commutations
- Warning
- Emergency Public Information
- Evacuation
- Reception and Care
- In-Place Protective Shelter
- Health and Medical
- Law Enforcement
- Public Works
- Fire and Rescue
- Radiological Defense
- Human Services
- Resources Management

(**FEMA**, *Survivable Crisis Management: Plan Development Guide*, April 1993)

(Compare to Federal Response Plan Essential Support Functions, FEMA, **1996**)

- Direction and Control
- Communications
- Warning
- Emergency Public Information
- Evacuation

- Mass Care
- Health and Medical
- Resource Management Federal Emergency Management Agency.

(*State and Local Guide (SLG 101) Guide For All-Hazard Emergency Operations Planning*, Sep)

- Resource Support
- Public Health and Medical Services
- Search & Rescue
- Oil and Hazardous Materials Response
- Agriculture and Natural Resources
- Energy
- Public Safety and Security
- Long Term Community Recovery
- External Affairs

(**DHS**, *NRF Comment Review*, September 2007, pp. 56-57; includes expanded list)

Emergency Operations Plan (EOP) Components (Organization and Content): 'No standard format or organization is specified for a local government's emergency plan…. While the organization of local plans is not specified, there are a number of emergency functions that should be covered in the plans of each local jurisdiction. First, it is essential that the local plan outline the organizations, systems, and procedures which add up to the jurisdictions *basic emergency operating capability*. This refers to the jurisdiction's ability to handle any of the types of major emergency identified in the hazard analysis. The elements of this basic operating capability are usually reflected in the jurisdiction's Basic Plan and in certain additional parts or annexes in the overall local emergency plan. The Basis Plan is a relatively brief 'umbrella' for the balance of the emergency plan, and as such covers organization, responsibilities, and operations in any type of emergency.

"The parts of the local plan which reflect the basic operating capability are those of general *applicability*, outlining functions needed in any emergency severe enough to call for coordinated emergency operations. These supporting parts of the plan are often designated as annexes to the Basis Plan, and should cover:

(1) Direction and Control, spelling out local emergency organization for centralized direction of coordinated operations by key officials. Emphasis is on EOC organization and functions.
(2) Warning, spelling out responsibilities and procedures for warning the population of impending threats.
(3) Emergency Communications.

(4) Emergency Public Information, spelling out responsibilities and procedures for getting official information and instructions to the public promptly, before, during, and as necessary after an emergency.

"Radiological Defense for both peacetime and attack emergencies is sometimes also covered in an annex of general applicability. However, it is preferable to cover radiological defense operations for attack emergencies separately from those for peacetime emergencies (e.g., a transportation accident involving radioactive material, or a severe accident at a nuclear power plant). This is because different concepts of operation, assessment methodologies, and protective actions are involved in peacetime radiological emergencies.

"The balance of the local plan addresses operations which many be required in specific types of emergencies." (**DCPA**, *Standards for Local Emergency Preparedness* (CPG 1-5) 1978, p. 16)

"Certain additional nuclear-related contingencies should be covered in local emergency plans, where applicable. These may include

(1) plans for peacetime radiological emergencies…
(2) plans for warning the population should warning ever be received of an accidental missile launch,, or any other unauthorized or unexplained incident involving a possible detonation of a nuclear device; and
(3) plans for a possible threat by terrorists or criminals, involving an alleged nuclear device or weapon." (**DCPA**, *Standards for Local Emergency Preparedness*, 1978, p. 17)

Emergency Operations Plan (EOP) Components (Organization and Content): "EOPs developed using the functional approach consist of a Basic Plan, functional annexes, and hazard-specific appendices. These are supplemented by the SOPs and checklists necessary for implementation of the EOP." (**FEMA**, *SLG 101*, 1996, p. 37)

Emergency Operations Plan (EOP) Components Checklist:

1. Does your EOP define the scope of preparedness and incident management activities necessary for your local or tribal jurisdiction?
2. Does your EOP describe organizational structures, roles and responsibilities, policies, and protocols for providing emergency support?
3. Does your EOP facilitate response and short-term recovery activities?
4. Is your EOP flexible enough to use in all emergencies?
5. Does your EOP have a description of its purpose?
6. Does your EOP describe the situation and assumptions?
7. Does your EOP describe the concept of operations?
8. Does your EOP describe the organization and assignment of responsibilities?
9. Does your EOP describe administration and logistics?
10. Does your EOP contain a section that covers the development and maintenance of your EOP?
11. Does your EOP contain authorities and references?
12. Does your EOP contain functional annexes?

13. Does your EOP contain hazard-specific appendices?
14. Does your EOP contain a glossary?
15. Does your EOP pre-designate functional area responsibilities to the Emergency Operations Center/Multi-agency Coordination System?
16. Does your EOP include pre-incident and post-incident public awareness, education, and communications plans and protocols?" (**DHS**, *Local and Tribal NIMS Integration: Integrating the National Incident Management System into Local and Tribal Emergency Operations Plans and Standard Operating Procedures* (Version 1.0), 15 Nov 2005, p. 5)

Emergency Operations Plan Elements:

1. *Purpose:* The plan discusses how emergency operations planning fits into the applicable government overall emergency planning structure.
2. *Structure and Assumptions:* The plan describes, in general terms, situations pertinent to the jurisdiction and their potential scope and impact. Assumptions about the emergency organization in relation to emergency preparedness capabilities should be stated.
3. *Concept of Operations:* The plan describes the various levels of government roles in the four phases (preparedness, mitigation, response, and recovery) of emergency management including capabilities, interjurisdictional and Interorganizational relationships, authorities, and responsibilities for continuity of government (COG) as addressed in the seven COG measures in CPG 1-10,
4. *Organization and Assignment of Responsibilities:* This element of the plan expands item 3 in detail. It should include procedures for monitoring/evaluating assignment accomplishments.
5. *Administration and Logistics:* The plan describes implementation alternatives to regular procedures for transition to emergency operations. The plan further includes administrative details for State Government transport and establishment of emergency operations from an alternate EOC.
6. *Plan Development and Maintenance:* The plan describes the process of determining hazard identification, required capabilities, available resources, organizational structure, agreements, and vulnerabilities. It provides processes for implementation, evaluation, review, and revision/updating. It contains annexes as needed.
7. *Authorities and References:* The plan cites applicable laws, ordinances, and agreements and the plan's implementation.
8. *Definition of Terms:* The plan defines unique specialized terms and vocabulary to aid effective communication." (**FEMA**, *Survivable Crisis Management: Plan Development Guide*, April 1993

Emergency Operations Plan Evaluation: "The outcome of…emergency operations…should be analyzed and assessed in terms of actual vs. required capabilities and considered in subsequent updates…. Tests and exercises should be undertaken for the purpose of evaluation, especially where disasters occur infrequently." (**FEMA**, *IEMS Process Overview*, 1983, p. 8)

Emergency Operations Plan (EOP), Need For and Utility: "Conducting coordinated operations in peacetime or attack-caused emergencies is basically executing or carrying out local emergency plans. The payoff from emergency operations is the lives that are saved and the property that is preserved. This payoff results from the forces that have emergency missions

doing 'the right thing at the right time,' making maximum effective use of *existing* resources and capabilities. Taking prompt and effective action in emergencies is facilitated by planning. Experience in peacetime disasters has shown repeatedly that when emergency plans are known to the heads of local operating departments and their forces, and operations are conducted in accordance with these plans, reaction times are reduced and coordination improved. On the other hand, *'paper plans' prepared by the civil preparedness Director/Coordinator alone, with little participation by local operating departments, are of little value – because they are not used.*…the *process of planning* that leads to the development of a written plan is extremely valuable." (**DCPA/DOD**, *Standards for Local Civil Preparedness* (CPG 1-5), 1978, p. 15)

Emergency Operations Plan (EOP) Planning Process: "The local government's emergency plan should…document and reflect a planning process conducted by a local government planning team. This team should include representatives from each department of local government with an emergency mission, and from each non-governmental group to which such a mission should be assigned (e.g., news media, county medical society, Red Cross chapter). The chief executive himself should if possible participate in the work of the planning team. The emergency planning process should be led and coordinated by the local civil preparedness Director/Coordinator, on behalf of the chief executive. As part of this planning leadership, the Director/Coordinator is responsible to inform the planners of local operating departments, as well as non-governmental planners, of the special conditions arising out of nuclear attack or peacetime disasters that would call for a modification of traditional operating techniques…. In many jurisdictions, the local planning agency can play an important role in emergency planning, working in close cooperation with the civil preparedness Director/Coordinator and planners of the operating departments." (**DCPA/DOD**, *Standards for Local Civil Preparedness*, 1978, p. 15)

Emergency Operations Plan (EOP) Planning Process: "Following are the basics for development and continual refinement of an EOP. They may be adapted to the needs of a jurisdiction."

- Research
  - Review jurisdictions planning process
  - Analyze hazards faced by the jurisdiction
  - Determine resource base
  - Note characteristics of jurisdiction that could affect emergency operations
- Review
  - Review local and/or State laws, rules, regulations, executive orders
  - Review Federal regulatory requirements
  - Review guidance, existing plans for the jurisdiction, neighboring jurisdiction plans
  - Review agreements with neighboring jurisdictions, military installations, private sector organizations, etc.
  - Become familiar with plans of higher levels of government
- Development
  - Develop rough draft of basic plan, functional annexes, and hazard-specific appendices to serve as point of departure for the planning team
  - Develop agenda and invitation lists for first cycle of planning meetings

  - Brief the "CEO"
  - Conduct a presentation meeting, establish committees for parts of the EOP, appoint committee chairs, schedule a follow-up meeting
  - Work with committees on successive drafts
  - Prepared graphics (e.g., maps, organizational charts)
  - Produce a final draft and circulate to planning team for review and comment
  - Hole meeting to incorporate final changes, discuss implementation strategy and distribution, obtain commitments to provide information that could necessitate revision
  - Obtain concurrence from organizations with identified responsibilities for EOP implementation
  - Present EOP to local elected officials and obtain official promulgation of the EOP (advise the local media in advance)
  - Print and distribute, with a copy or press release to local media
- Validation
  - Consult next level of government about EOP review cycle
  - Conduct "table top" exercise involving key representatives of each tasked organization
  - Conduct functional and full scale emergency management exercises
- Maintenance
  - Establish a remedial action process to help planning team identify, illuminate, and correct problems
  - Establish revision process
  - Ensure that each tasked organization or individual develops necessary implementing documents, such as SOPs (**FEMA**, SLG 101, 1997, pp. 2-1-12)

Emergency Operations Plan (EOP) Standard Operating Procedures: "Standing Operating Procedures…shall be developed by operating departments concerned, as necessary to supplement and detail annexes. An SOP important to both peacetime and attack-emergency operations is an inventory of publicly and privately owned operational equipment or resources that would be available to the jurisdiction in emergencies (e.g., earthmoving equipment). SOP's for attack emergencies shall include provision for sheltering the dependents of emergency service personnel (e.g., policemen, firefighters, auxiliaries). Other SOP's that may be needed include warning system procedures, call-up or alerting lists, RADEF system procedures, decontamination priorities and procedures, and specific traffic control and shelter assignments of police and other personnel. All governmental and auxiliary personnel with emergency assignments should be issued an appropriate identification card." (**DCPA**, *Standards for Local Civil Preparedness*, 1978, p. 20)

Emergency Operations Simulation (EOS): An exercise meant "to inform and train key officials and department heads in emergency operations….EOS is an experience which motivates. Few local executives undergo it without resolving that civil preparedness needs more of their attention, or more funds, better planning, or additional equipment and personnel. EOS also provides a test of existing facilities – it can demonstrate to top officials and budget-makers whether an EOC or emergency plans are equal to the potential disasters for which they are designed. In on on-site assistance project, an EOS may be used to evaluate a community's

resources, pinpoint its deficiencies, or show the steps needed to remove them" (**DCPA**, *Foresight, DCPA Annual Report FY73*, 1974, p. 13)

Emergency Planning: "Emergency planning is a cycle of planning, training, exercising, and revision that continues throughout the five phases of the emergency management cycle (preparedness, prevention, response, recovery, and mitigation). One purpose of the planning process is the development and maintenance of an up-to-date EOP….Emergency planning is a team effort and requires collaboration with personnel from other agencies and organizations. Building an effective team takes time and effort as members go through several stages." (**FEMA**, *Emergency Planning* IS-235, May 24, 2007 update, p. 2.16)

Emergency Planning & Community Right to Know Act (42 U.S.C. 11001 et seq., 1986): "Also known as Title III of SARA, EPCRA was enacted by Congress as the national legislation on community safety. This law was designated to help local communities protect public health, safety, and the environment from chemical hazards. To implement EPCRA, Congress required each state to appoint a State Emergency Response Commission (SERC). The SERC's were required to divide their states into Emergency Planning Districts and to name a Local Emergency Planning Committee (LEPC) for each district. Broad representation by fire fighters, health officials, government and media representatives, community groups, industrial facilities, and emergency managers ensures that all necessary elements of the planning process are represented." (**EPA**, EPCRA)

Emergency Planning & Community Right to Know Act, 1986 (Title III, SARA): "The objectives of Title Ill are to improve local chemical emergency response capabilities (primarily through improved emergency planning and notification) and to provide citizens and local governments access to information about chemicals in their localities. Title Ill addresses planning by: (1) identifying the EHSs that trigger the planning process: (2) requiring facilities to identify themselves if they have quantities of EHSs exceeding the TPQs [Threshold Planning Quantities]; (3) requiring the establishment of a State and local planning structure and process (including specifics on committee membership); (4) requiring facilities to make information available to local planners: and (5) specifying the minimum contents of local emergency plans." (**EPA**, *Technical Guidance for Hazards Analysis*, 1987, 13)

Emergency Planning Zones (EPZ): "Areas around a facility for which planning is needed to ensure prompt and effective actions are taken to protect the health and safety of the public if an accident occurs. The REP [Radiological Emergency Preparedness] Program and CSEPP use the EPZ concept." (**FEMA**, *Guide For All-Hazard Emergency Operations Planning*, 1996, GLO-3)

Emergency Preparedness: "The discipline that ensures an organization or community's readiness to respond to an emergency in a coordinated, timely, and effective manner to prevent the loss of life and minimize injury and property damage." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 54)

Emergency Preparedness: "The term 'emergency preparedness' means all those activities and measures designed or undertaken to prepare for or minimize the effects of a hazard upon the civilian population, to deal with the immediate emergency conditions which would be created by

the hazard, and to effectuate emergency repairs to, or the emergency restoration of, vital utilities and facilities destroyed or damaged by the hazard. Such term includes the following:

(A) Measures to be undertaken in preparation for anticipated hazards (including the establishment of appropriate organizations, operational plans, and supporting agreements, the recruitment and training of personnel, the conduct of research, the procurement and stockpiling of necessary materials and supplies, the provision of suitable warning systems, the construction or preparation of shelters, shelter areas, and control centers, and, when appropriate, the nonmilitary evacuation of the civilian population).

(B) Measures to be undertaken during a hazard (including the enforcement of passive defense regulations prescribed by duly established military or civil authorities, the evacuation of personnel to shelter areas, the control of traffic and panic, and the control and use of lighting and civil communications).

(C) Measures to be undertaken following a hazard (including activities for fire fighting, rescue, emergency medical, health and sanitation services, monitoring for specific dangers of special weapons, unexploded bomb reconnaissance, essential debris clearance, emergency welfare measures, and immediately essential emergency repair or restoration of damaged vital facilities)." (**Stafford Act**, Title VI, Emergency Preparedness, Sec. 602. Definitions (42 U.S.C. 5195a), June 2007 (FEMA 592), pp. 54-55)

Emergency Preparedness Atlas: The *Emergency Preparedness Atlas: U.S. Nursing Home and Hospital Facilities* "is intended to help local communities identify the health care facilities (hospitals and nursing homes) that could be available and prepared to provide assistance under emergency conditions in their communities. [It]…includes six case studies in North Carolina, Oregon, Pennsylvania, southern California, Washington, and Utah that each include a series of maps depicting the locations and capacity of nursing homes and hospitals as well as their geographic relationship to a variety of emergency management and bioterrorism preparedness regions, such as HAZMAT response regions, emergency management regions, and Red Cross chapters. The *Atlas* includes maps for all 50 states with the location of hospitals and nursing homes in each state, and it displays the locations relative to the distribution of the elderly population in the case study states." (**AHRQ**, "New AHRQ Resources…" July 19, 2007)

Emergency Preparedness Liaison Officer (EPLO): "A senior reserve officer who represents their Service at the appropriate joint field office conducting planning and coordination responsibilities in support of civil authorities. Also called EPLO." (**JCS/DoD**, *Civil Support*, 2007, p. GL-8)

Emergency Preparedness Mobilization Board (EMPB): A "senior level inter-agency forum to coordinate all aspects of national preparedness [in the early 1980s]. The EMPB was chaired by the National Security Advisor and consisted of the deputy secretaries of the departments and the heads of several independent agencies. During the EMPB era, a national plan was prepared and approved by President Reagan, and actions were taken to implement it…. From 1981 until 1984, the Emergency Mobilization Preparedness Board (EMPB) was the primary interagency coordination mechanism within the executive branch of the federal government for all matters

pertaining to emergency preparedness, civil defense, and what is now termed homeland security. The EMPB was designed not only to coordinate matters but also to ensure that the President's policies and programs were carried out. The EMPB was a high-level leadership structure. Initially and for several years, the EMPB was a success, but ultimately it failed." (**Brinkerhoff**, *The EMPB*, October 2001)

Emergency Preparedness Mobilization Board (EMPB): "Resource mobilization planning for a coordinated federal response was energized when on December 17, 1981, the President through the Assistant to the President for National Security Affairs signed a memorandum establishing the Emergency Preparedness Mobilization Board (hereinafter EMPB). This action was taken in response to a Memorandum for Edwin Meese, III, Counselor to the President from Frank C. Carlucci, Deputy Secretary of Defense and Louis O. Giuffrida, Director of FEMA, dated May 26, 1981

"Two National Security Decisions (NSD 30 "Managing Terrorist Incidents" April 10, 1982 and NSD 47 "Emergency Mobilization Preparedness" July 22, 1982) were soon issued that established two fundamentals. First in the event of threatened or actual terrorist attacks lead agencies were designated as responsible, principally State for international terrorism, Justice for domestic terrorism, and FEMA for response to actual events. Second, the principal was established that even natural disasters could impact national security, and a single system was required for the national security community and its assets to respond. NSD 47 in particular identified a large catastrophic earthquake (the placement of the principal research, development, and manufacturing capability of the nation for the technology sector in California was the specific catalyst) as potentially damaging national security. It therefore concluded that a single response system was necessary and empowered the EMPB to design such as system. By 1985, in NSD 188 the EMPB was disestablished having completed a plan of action. (It should be noted that the Los Angeles Olympics had energized the Department of Justice in the assigned lead role in domestic terrorism and DOJ was increasingly anxious to assert that role)." (**Cumming**, "The NSC's 1988 Staff Effort to Create a National Security Emergency Plan for Large Scale Domestic Events," *VLG Backgrounder*, October 2005, 1-2)

Emergency Preparedness Resource Inventory (EPRI), AHRQ, HHS: "The Emergency Preparedness Resource Inventory (EPRI) is a tool allowing local or regional planners to assemble an inventory of critical resources that would be useful in responding to a bioterrorist attack. In addition to a Web-based software tool, EPRI includes an Implementation Report, a Technical Manual, and an Appendix." (**Hassol**, *EPRI: A Tool for Local, Regional and State Planners*, 2005)

Emergency Preparedness System and Responsibilities, Stafford Act (Title VI, Sec. 601. Declaration of Policy (42 U.S.C. 5195)):

"The purpose of this title is to provide a system of emergency preparedness for the protection of life and property in the United States from hazards and to vest responsibility for emergency preparedness *jointly in the Federal Government and the States and their political subdivisions*. The Congress recognizes that the organizational structure established jointly by the Federal Government and the States and their political subdivisions for emergency preparedness purposes

can be effectively utilized to provide relief and assistance to people in areas of the United States struck by a hazard. The Federal Government shall provide necessary direction, coordination, and guidance, and shall provide necessary assistance, as authorized in this title so that a comprehensive emergency preparedness system exists for all hazards." (**Stafford Act**, 1994; see FEMA 592, p. 54)

Emergency Procedures: "A plan of action to commence immediately to prevent the loss of life and minimize injury and property damage." (**DigitalCare**, *State of OR BC Workshop*, 2006, 54)

Emergency Program, NFIP, FEMA: "The Emergency Program is the initial phase of a community's participation in the NFIP if no flood hazard information is available or the community has a Flood Hazard Boundary Map (FHBM), but no Flood Insurance Rate Map (FIRM). A limited amount of flood insurance coverage at less than actuarial rates is available for all residents of the community. The community is required to adopt minimum floodplain management standards to control future use of its floodplains. Communities are converted to the Regular Program upon completion of a Flood Insurance Study and issuance of a FIRM or a determination that the community has no special flood areas (NSFHA). Under the Regular Program, more comprehensive floodplain management requirements are required of the community and higher amounts of flood insurance coverage are provided." (**FEMA**, *Emergency Program*, 2007)

Emergency Protective Measures: "Actions (other than debris removal) eligible as Category B measures, including installation of plastic sheeting for temporary roofing, generators requiring installation, and shoring or demolition of unsafe structures." (**FEMA**, *100% Funding for Direct Federal Assistance and Grant Assistance*, June 9, 2006)

Emergency Public Information (EPI): "The EPI function gives the public accurate, timely, and useful information and instructions throughout the emergency period. The EPI organization initially focuses on the dissemination of information and instructions to the people at risk in the community. However, the EPI organization also must deal with the wider public's interest and desire to help or seek information. People may call to find out about loved ones. They may call to offer help, or simply send donations. They may even urge Federal action. Good, timely information can help prevent overloading a jurisdiction's communications network, its transportation infrastructure, and its staff." (**FEMA**, *Guide For All-Hazard Emergency Operations Planning* (State and Local Guide (SLG) 101), **1996**, p. 5-D-1)

Emergency Public Information (EPI): "Information that is disseminated primarily in anticipation of, during, or after an emergency that relates to the emergency and provides public safety or other information for the general welfare of the public." (**FEMA**, *Accommodating Individuals With Disabilities In The Provision Of Disaster Mass Care, Housing, And Human Services: Reference Guide*, **2007**, Glossary)

Emergency Public Information (EPI): Information which is disseminated primarily in anticipation of an emergency or at the actual time of an emergency and in addition to providing information as such, frequently directs actions, instructs, and transmits direct orders. (**Simeon Institute** 1998)

Emergency Public Information (EPI) Causes of Credibility Gaps:

- Rumors
- False Information
- Inconsistent Information
- Feel Information is being withheld
- Multiple Sources of Information
- Information given in bits so people add them up wrong.
- Errors in translation/transmission. (**DCPA**, *Local Disaster Preparedness Course,* 1973, p. 69)

Emergency Public Transportation: "Temporary public transportation assistance authorized by the FCO to meet emergency needs and to provide transportation to governmental offices, supply centers, stores, post offices, schools, major employment centers, and other places necessary to enable the community to resume its normal pattern of life as soon as possible." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 50)

Emergency Readiness: "`Emergency readiness' means that a community is prepared to react promptly to save life and protect property if it is threatened or hit by a disaster or major emergency of any type. This requires that planning and preparatory actions be taken *before* there is an emergency." (**DCPA**, *Disaster Operations* (CPG 1-6), 1972, p. 3)

Emergency Readiness: "Local emergency readiness is the ability actually to conduct coordinated operations in extraordinary emergencies, making maximum use both of existing governmental forces and resources and of non-governmental groups (doctors, hospitals, news media), that have emergency capabilities. Emphasis is on tying together, and making operationally effective, local capabilities in the areas of facilities and equipment and of trained manpower. This means the ability to execute emergency plans. This Standard establishes criteria for evaluating the ability of local governments to conduct such coordinated emergency operations…. Local readiness for emergencies, to assure that all forces with lifesaving capability would actually "do the right things at the right time," is built by a repetitive cycle of planning, exercising, planning, and so on." (**DCPA**, *Standards for Local Civil Preparedness* (CPG 1-5), 1978, p. 35)

Emergency Relocation Group (ERG): "Pre-designated staff who move to a relocation site to continue essential functions in the event that their normal work locations are threatened or have been incapacitated by an incident. The ERG is composed of an advance team plus emergency personnel." (**DHS**, *Federal Continuity Directive 1*, November 2007, P-4)

Emergency Relocation Group (ERG): "Pre-designated… principals and staff who will move to an emergency relocation site to continue…HQ essential functions in the event the…HQ building is threatened or otherwise unavailable." (**FEMA**, *Department/Agency HQ Devolution of Operations Plan Template*)

Emergency Relocation Group (ERG) Member: "A person who has been assigned responsibility to report to an alternate site, as required, to perform agency essential functions or other tasks related to continuity of operations." (**DHS**, *Fed. Cont. Direct. 1*, Nov 2007, P-4)

Emergency Relocation Sites (ERS): "By definition, an ERS is a site located outside a prime target area to which all or portions of a civilian or military headquarters may be moved. The ERS location must provide adequate protection from blast, heat, fire, and radiation. Although no area of the United States is safe from fallout, prevailing winds and target locations provide areas with a higher probability of reduced radiological hazard in the event of a nuclear attack. In that the danger zone for heat and fire are smaller than the danger zone for blast over-pressures, the effects of nuclear blast over-pressures are used as the primary consideration to identify safe distances from targets. The hazard zone, of course, depends upon the size of the explosion. For planning purposes, a location which limits the maximum over-pressure to 1.0 p.s.i. was used. For a 1 MT surface burst, the less than 1.0 p.s.i. over-pressure zone starts at approximately 7.0 miles from point of impact. For a 5 MT surface burst the distance is approximately 13 miles and for a 25 MT surface burst the distance is approximately 22 miles." (**USACE**, *Planning and Operations Guidelines*, *Annex B: ERS*, 1985, pp. B-3, B-4))

Emergency Responder: "As used in this plan [FEMA Strategic Plan, 2002] an individual who performs an operational role in responding to an incident." (**FEMA**, *A Nation Prepared – FEMA Strategic Plan – Fiscal Years 2003-2008*, 2002, p. 58 (Glossary))

Emergency Responder: "Anyone involved in the response to an incident, and therefore contributing to the resolution of the problems brought about by the incident. The same definition is applied to an emergency response organization. Emergency Responders may therefore include the private sector, non-governmental organizations, and/or the public sector (community/municipal, ministry, provincial, federal)." (**Emergency Management Ontario**, *Incident Management System*, November 2007 Draft, p. 122)

Emergency Response: "Coordinated emergency response requires survivable and compatible communications and information collection, processing and reporting capabilities, and comprehensive plans that are exercised and tested with all levels of government." (**FEMA**, *An Introduction to SCM*, Sep 1992, 3)

Emergency Response: "Emergency response (ER) is the first action that focuses on avoiding, deterring, and preventing disasters and preparing the organization to respond to a disaster. The goal of ER is lifesaving, safety, and initial efforts to limit the impact to asset damage." (**IIA**, *Business Continuity Management*, July, 2008, pages 1-2)

Emergency Response: "Emergency response is generally described as the tactical planning and practical activities designed to protect life and property immediately following some type of event…. Some of the key elements of an ER program include:

- Evacuation planning and assembly.
- Escalation protocols.
- Damage assessment and reporting.
- Hazmat response and spill control.

- Medical response.
- Salvage and reclamation.
- Specialty issues such as fire brigades, first aid, high angle or confined space rescue, etc." (**IIA**, *Business Continuity Management*, 2008, 19)

Emergency Response Agency: "Any organization responding to an emergency, or providing mutual aid support to such an organization, whether in the field, at the scene of an incident, or to an operations center." (**CA OES**, *SEMS Guidelines*, 2006, p. 8)

Emergency Response Personnel: "Personnel involved with an agency's response to an emergency." (**CA OES**, *SEMS Guidelines*, 2006, p. 8)

Emergency Response Capability Key Personnel Requirements: "In personnel terms, the keys to an effective emergency response capability are: (1) well qualified emergency response personnel with clearly assigned roles and responsibilities, and (2) thorough training, followed by frequent, periodic exercising and retraining of personnel in their specific roles. To borrow a term from the military, good training is a 'force multiplier'." (**FEMA**, *An Introduction to SCM*, Sep 1992, 3)

Emergency Response Provider: "Includes Federal, State, local, and tribal emergency public safety, law enforcement, emergency response, emergency medical (including hospital emergency facilities), and related personnel, agencies, and authorities. (See section 2(6), Homeland Security Act of 2002, Public Law 17-296, 116 Stat. 2135 (2002).)" (**DHS**, *UTL 2.1*, 2005, p. B-1 (142))

Emergency Response Team (ERT): "(1) A team composed of Federal program and support personnel, which FEMA activates and deploys into an area affected by a major disaster or emergency. This team assists the FCO in carrying out his/her responsibilities under the Stafford Act, the declaration, applicable laws, regulations, and the FEMA-State agreement. (2) The team is an interagency team, consisting of the lead representative from each Federal department or agency assigned primary responsibility for an Emergency support Function and key members of the FCO's staff, formed to assist the FCO in carrying out his/her responsibilities. The team provides a forum for coordinating the overall Federal consequence management response requirements." (**USG**, *USG Interagency Domestic Terrorism CONPLAN*, 2001, Appendix B: Definitions)

Emergency Response Teams (ERT): "The ERT is the principal interagency group that supports the PFO and/or the FCO in coordinating the overall Federal incident operation. The ERT can be augmented by an advanced element known as the ERT-A and/or a national headquarters-level team, known as the ERT-N, deployed for large-scale high visibility events. The ERT provides staffing for the JFO and ensures Federal resources are available to meet incident management and State requirements identified by the State Coordinating Officer. The size and composition of the ERT is scalable and can range from a small organization focusing on recovery operations to all ESF primary and support agencies undertaking the full range of prevention, preparedness, response and recovery activities." (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, p. 36)

[Note: "to be replaced by the Federal Incident Response Support Teams (FIRST) and Incident Management Assistance Teams (IMAT)." (**White House**, *National Strategy for Homeland Security*, Homeland Security Council, October 2007, p. 35)]

Emergency Response Team (ERT): "A team composed of Federal program and support personnel, which the FCO activates and deploys into an area affected by a major disaster or emergency. This team assists the FCO in carrying out his/her responsibilities under the Stafford Act, the declaration, applicable laws, regulation, and the FEMA/State agreement. Any Federal agency can be directed to detail personnel within the Federal agency's administrative jurisdiction to temporary duty with the FCO. The ERT provides a forum for coordinating the overall Federal response, reporting on the conduct of specific operations, exchanging information, and resolving issues related to ESFs and other response requirements." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 50)

Emergency Response Teams - Advanced Element (ERT-A): "The ERT-A responds during the early stages of an incident. It is headed by a team leader from FEMA and is composed of program and support staff and representatives from selected ESF primary agencies. A part of the ERT-A deploys to the State EOC or to other locations to work directly with the State to obtaining information on the impact of the event and to identify specific State requests for Federal incident management assistance. Other elements of the ERT-A (including Mobile Emergency Response Support (MERS) personnel and equipment) deploy directly to or near the affected area to establish field communications, locate and establish field facilities, and set up operations. The ERT-A identifies or validates the suitability of candidate sites for the location of mobilization center(s) and the JFO." (**DHS**, *National Response Plan* (Draft #1), 25Feb2004, 36)

[Note: "to be replaced by the Federal Incident Response Support Teams (FIRST) and Incident Management Assistance Teams (IMAT)." (**White House**, *National Strategy for Homeland Security*, Homeland Security Council, October 2007, p. 35)]

Emergency Response Team–Advanced Element (ERT-A): "The ERT-A is a small interagency "advance" team that deploys to the State Emergency Operations Center (EOC). Normally the ERT-A does not issue mission assignments but communicates with the RRCC to ensure that any requirements identified by the State for Federal assistance are passed to the RRCC for action." (**FEMA**, *Mission Assignment SOPs Operating Procedures*, 2007, p. 4; p.50)

Emergency Response Teams – Advanced Element (ERT-A): "ERT-As are located in each of FEMA's Regions and are deployed in the early phases of an incident to work directly with the States to assess the disaster impact, gain situational awareness, help coordinate the disaster response, and supports specific State requests for assistance. ERT-As are made up of approximately 25 individuals who establish an initial presence in a State EOC. They can later staff the JFO to support the disaster response. The ERT-As deploy with basic communications capabilities including cell phones, wireless laptop computers, and a limited number of satellite cell phones. A small component of an ERT-A, the Rapid Needs Assessment Team, also provides the capability to collect disaster information in the field needed to determine more specific disaster response requirements." (**FEMA**, *Statement of Glenn Cannon*, Nov.15, 2007, pp. 6-7)

Emergency Response Teams – National (ERT-N): "An ERT-N is a headquarters-level national team that deploys to large-scale, high visibility incidents. An ERT-N may pre-deploy based on threat conditions. The Secretary of Homeland Security determines the need for ERT-N deployment, coordinating the plans with the affected region and other Federal agencies. The ERT-N includes staff from FEMA Headquarters and regional offices as well as other Federal agencies. (Three ERT-N teams are structured with one team on call every third month. A fourth standing team is on-call year-round exclusively to respond to incidents in the National Capital Region (NCR)). (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, p. 36)

[Note: "to be replaced by the Federal Incident Response Support Teams (FIRST) and Incident Management Assistance Teams (IMAT)." (**White House**, *National Strategy for Homeland Security*, Homeland Security Council, October 2007, p. 35)]

Emergency Response Team–National (ERT-N): "The ERT-N is a nationally organized ERT that is deployed by the FEMA Administrator for high visibility or catastrophic disasters." (**FEMA,** *Mission Assignment SOPs Operating Draft*, July 2007, p. 4)

Emergency Response Teams – National (ERT-N): "FEMA's ERT-Ns are deployed by FEMA Headquarters in response to significant disaster events… Their purpose is to coordinate disaster response activities, coordinate and deploy key national response assets and resources, provide situational awareness, and maintain connectivity with key DHS operations centers and components. ERT-Ns are made up of approximately 32 individuals and are organized according to National Incident Management System/Incident Command System (NIMS/ICS) standards to provide a systematic, proactive, and coordinated response approach. ERT-N members can provide the initial staffing for a JFO." (**FEMA**, *Statement of Glenn Cannon*, November, 2007, 6)

Emergency Risk Management: "Emergency risk management is a 'systematic process that produces a range of measures that contribute to the well-being of communities and the environment'. It includes: context definition; risk identification; risk analysis; risk evaluation; risk treatment; monitoring and reviewing; and, communicating and consulting." (**Emergency Management Australia** 2000, 1)

Emergency Services Personnel:
1.1 million firefighters, 750,000 volunteer – 1 for every 265 people.[40]
465,000 sworn law enforcement personnel; 291,000 shorn sheriff's office personnel – 1 for every 334 people.[41]
890,000 all levels of pre-hospital services (basic EMT, intermediate EMT, paramedic) – 1 for every 324 people.[42] (Citizen Corps, *Citizen Corps Uniting Communities, Preparing the Nation*, DHS, slide presentation, slide 4)

Emergency Services Sector (ESS): "The emergency services sector (ESS) is our first line of defense: local police, fire and rescue, emergency medical services, public health departments,

[40] Cites *National Fire Protection Association*, 2003.
[41] Cites *National Law Enforcement Officers Memorial Fund*, 2003.
[42] Cites *Journal of Emergency Medical Services*, 2004.

and public works departments." (**University Consortium for Infrastructure Protection**, *Critical Infrastructure Protection in the National Capital Region*, September 2005, p. 4)

Emergency Services Sector (ESS) Personnel: "Our nation's three million firefighters, police officers, and EMTs are the first on the scene in a crisis and the last to leave." (DHS, *The Nomination of The Honorable Tom Ridge to be Secretary of the DHS*, January 19, 2003)

Emergency Severity Index (ESI): The ESI is a five-level ED triage algorithm that provides clinically relevant stratification of patients into five groups, from 1 (most urgent) to 5 (least urgent), on the basis of acuity and resource needs. (**AHRQ/HHS**, Mass Casualty Care, 2007, 72)

Emergency Support Function (ESF): "A functional grouping of Federal agencies providing the types of Federal response assistance that a State is most likely to need. Each ESF is headed by a primary Federal agency designated based on its authorities, resources, and capabilities in the particular functional area. Other agencies have been designated as support agencies for one or more ESFs based on their resources and capabilities to support the functional areas." (**FEMA** Mission Assignment SOPs Operating Draft, July 2007, p. 51)

Emergency Support Function (ESF): "From the National Response Plan (NRP), a grouping of government and certain private-sector capabilities into an organizational structure to provide support, resources, and services." (**HSC**, *NCPIP*, August 2007, p. 61; **DHS**, *FCD 1*, 2007, P-3)

Emergency Support Function (ESF): "A functional area of response activity established to facilitate coordinated Federal delivery of assistance required during the response phase to save lives, protect property and health, and maintain public safety. These functions represent those types of Federal assistance which the State likely will need most because of the overwhelming impact of a catastrophic event on local and State resources." (**USG**, *USG Interagency Domestic Terrorism CONPLAN*, 2001, Appendix B: Definitions)

Emergency Support Function Leaders Group (ESFLG): "At Headquarters, the principal body that addresses NRP planning and implementation at the working level. It handles issue formulation and resolution, review of after-action reports, significant changes to NRP planning and implementation and NRP strategies, and other NRP-related operations issues that cannot be resolved at the working level." (**FEMA**, *Mission Assignment SOPs Operating Draft*, 2007, 51)

Emergency Support Functions (ESFs): "ESFs provide the structure for coordinating Federal interagency support for a Federal response to an incident. ESFs may be selectively activated for both Stafford Act and non-Stafford Act incidents where Federal departments or agencies request DHS assistance or under other circumstances as defined in HSPD-5. Not all national incidents result in the activation of ESFs. ESFs may be activated to support headquarters, regional and/or field activities." (**DHS**, *Overview: ESF and Support Annexes Coordinating Federal Assistance In Support of the National Framework* (Draft), September 10, 2007, p. 9)

Emergency Support Functions (ESFs): "A grouping of government and certain private-sector capabilities into an organizational structure to provide the support, resources, program implementation, and services that are most likely to be needed to save lives, protect property and the

environment, restore essential services and critical infrastructure, and help victims and communities return to normal, when feasible, following domestic incidents. Also called ESFs." (**DoD**, *DOD Dictionary of Military and Associated Terms*, 2007)

Emergency Support Functions (ESFs): "The Federal Government organizes much of its resources and capabilities – as well as those of certain private sector and non-governmental organizations – under 15 Emergency Support Functions. ESFs align categories of resources and provide strategic objectives for their use. ESFs utilize standardized resource management concepts such as typing, inventorying and tracking to facilitate the dispatch, deployment and recovery of resources before, during and after an incident. The *Framework* identifies primary ESF agencies on the basis of authorities and resources. Support agencies are assigned based on the availability of resources in a given functional area. ESFs provide the greatest possible access to Federal department and agency resources regardless of which organization has those resources." (**DHS**, *NRF Comment Draft*, September 2007, p. 28) The ESFs are:

ESF #1: Transportation (Coordinator: Department of Transportation)
ESF #2: Communications (Coordinator: DHS, National Communications Systems)
ESF #3: Public Works and Engineering (Coordinator: DOD, Army Corps of Engineers)
ESF #4: Firefighting (Coordinator: USDA, U.S. Forest Service)
ESF #5: Emergency Management (Coordinator: DHS: FEMA)
ESF #6: Mass Care, Emergency Assistance, Housing/Human Services (DHS, FEMA)
ESF #7: Resource Support (Coordinator: General Services Administration)
ESF #8: Public Health and Medical Services (Coordinator: HHS)
ESF #9: Search & Rescue (Coordinator: DHS, FEMA)
ESF #10: Oil and Hazardous Materials Response (Coordinator: EPA)
ESF #11: Agriculture and Natural Resources (Coordinator: USDA)
ESF #12: Energy (Coordinator: Department of Energy)
ESF #13: Public Safety and Security (Coordinator: Department of Justice)
ESF #14: Long Term Community Recovery (Coordinator: DHS, FEMA)
ESF #15: External Affairs (Coordinator: DHS)
(**DHS**, *NRF Comment Review*, September 2007, pp. 56-57; includes expanded list)

Emergency Support Function (ESF) #1 – Transportation: Purpose: "provides support to the Department of Homeland Security (DHS) by assisting Federal, State, tribal, and local governmental entities, voluntary organizations, nongovernmental organizations, and the private sector in the management of transportation systems and infrastructure during domestic threats or in response to incidents. ESF #1 also participates in prevention, preparedness, and recovery activities. ESF #1 carries out the Department of Transportation (DOT)'s statutory responsibilities, including regulation of transportation, management of the Nation's airspace, and ensuring the safety and security of the national transportation system." (**DHS**, *NRF Emergency Support Function #1 – Transportation Annex* (Comment Draft). September 10, 2007, p. 1)

Emergency Support Function (ESF) #2 – Communications: Purpose: "supports the restoration of public communications infrastructure, facilitates the recovery of systems and applications from cyber attacks, and coordinates Federal communications support to response efforts during incidents requiring a coordinated Federal response (hereafter referred to as

"Incidents"). This ESF implements the provisions of the Office of Science and Technology Policy (OSTP) National Plan for Telecommunications Support in Non-Wartime Emergencies (NPTS). ESF #2 also provides communications support to State, tribal and local first responders when their systems have been impacted, and provides communications and information technology support to the Joint Field Office (JFO) and JFO field teams. With the rapid convergence of communications, Internet, and information technology (IT), the National Communications System (NCS) and the National Cyber Security Division (NCSD) work closely to coordinate the ESF #2 response. This convergence requires increased synchronization of effort and capabilities between the communications and information technology sectors." (**DHS**, *NRF Emergency Support Function #1 – Communications Annex* (Comment Draft). September 10, 2007, p. 1)

Emergency Support Function (ESF) #3 -- Public Works and Engineering: "Scope: ESF #3 is structured to provide public works and engineering-related support for the changing requirements of domestic incident management to include preparedness, response, and recovery actions. Activities within the scope of this function include conducting preincident and postincident assessments of public works and infrastructure; executing emergency contract support for life-saving and life-sustaining services; providing technical assistance to include engineering expertise, construction management, and contracting and real estate services; providing emergency repair of damaged infrastructure and critical facilities; and implementing and managing the DHS/Federal Emergency Management Agency (FEMA) Public Assistance Program and other recovery programs." (DHS, *NRF Emergency Support Function #3 – Public Works and Engineering Annex* (Comment Draft), September 10, 2007, p. 1)

Emergency Support Function (ESF) #4 – Firefighting: "Purpose: Emergency Support Function (ESF) #4 – Firefighting provides Federal support for the detection and suppression of wildland, rural, and urban fires resulting from, or occurring coincidentally with, an incident requiring a coordinated Federal response for assistance. Scope: ESF #4 manages and coordinates firefighting activities, including the detection and suppression of fires on Federal lands, and provides personnel, equipment, and supplies in support of State, tribal, and local agencies involved in rural and urban firefighting operations." (**DHS**, *National Response Framework Emergency Support Function #4 – Firefighting Annex* (Comment Draft), Sep.10, 2007, p. 1)

Emergency Support Function (ESF) #5 – Emergency Management: "Purpose: ESF #5 – Emergency Management is responsible for supporting overall activities of the Federal Government for domestic incident management. ESF #5 provides the core management and administrative functions in support of National Response Coordination Center (NRCC), Regional Response Coordination Center (RRCC), and Joint Field Office (JFO) operations. Scope: ESF #5 serves as the coordination ESF for all Federal departments and agencies across the spectrum of domestic incident management from hazard mitigation and preparedness to response and recovery. ESF #5 will identify resources for alert, activation, and subsequent deployment for quick and effective response." (**DHS**, *NRF Emergency Support Function #5 – Emergency Management Annex* (Comment Draft), September 10, 2007, p. 1)

Emergency Support Function (ESF) #6 – Mass Care, Emergency Assistance, Housing, and Human Services Annex: "Purpose: Emergency Support Function (ESF) #6 – Mass Care, Emergency Assistance, Housing, and Human Services supports and augments State, regional,

tribal, local, and nongovernmental organization (NGO) mass care, emergency assistance, housing, and human services missions. The purpose of this ESF is to ensure that the needs of disaster-impacted populations are addressed by coordinating Federal assistance to impacted areas…. Scope: When directed by the President, ESF #6 services and programs are implemented to assist individuals and households impacted by potential or actual disaster incidents. The Department of Homeland Security/Federal Emergency Management Agency (DHS/FEMA) coordinates and leads Federal resources as required to support State, tribal, and local governments and NGOs in the performance of mass care, emergency assistance, housing, and human services missions." (**DHS**, *National Response Framework Emergency Support Function #6 – Mass Care, Emergency Assistance, Housing, and Human Services Annex* (Comment Draft), September 10, 2007, p. 2)

Emergency Support Function #7 – Resource Support Annex: "*Purpose* -- Emergency Support Function (ESF) #7 – Resource Support assists the Department of Homeland Security (DHS), supporting Federal agencies and State, tribal, and local governments requiring resource support prior to, during, and/or after incidents requiring a coordinated Federal response. *Scope* -- Resource support to Federal, State, tribal, and local governments consists of emergency relief supplies, facility space, office equipment, office supplies, telecommunications (in accordance with the Office of Science and Technology Policy (OSTP) National Plan for Telecommunications Support in Non-Wartime Emergencies), contracting services, transportation services (in coordination with ESF #1 – Transportation), and personnel required to support immediate response activities. ESF #7 provides support for requirements not specifically identified in other ESFs, including excess and surplus property. Resource support may continue until the disposition of excess and surplus property, if any, is completed." (**DHS**, *NRF ESF #7 – Resource Support Annex* (Comment Draft), September 10, 2007, p. 1)

Emergency Support Function (ESF) #8 – Public Health and Medical Services: "…provides the mechanism for coordinated Federal assistance to supplement State, tribal, and local resources in response to a public health and medical disaster, potential or actual incidents requiring a coordinated Federal response, and/or during a developing potential health and medical emergency. Public Health and Medical Services includes behavioral health needs consisting of both mental health and substance abuse considerations for incident victims and response workers and, as appropriate, at-risk population groups defined in the Base Plan as individuals in need of additional medical response assistance, and veterinary and/or animal health issues." (**DHS**, *NRF ESF #8 – Public Health and Medical Services Annex* (Comment Draft), September 10, 2007, p.1)

Emergency Support Function (ESF) #9 – Search and Rescue (SAR): '…rapidly deploys components of the Federal SAR Response System to provide specialized lifesaving assistance to State, tribal, and local authorities when activated for incidents or potential incidents requiring a coordinated Federal response. The Federal SAR Response System is composed of the primary agencies that provide specialized SAR operations during incidents or potential incidents requiring a coordinated Federal response.

- Structure Collapse (Urban) Search and Rescue (US&R)
- Waterborne Search and Rescue
- Inland/Wilderness Search and Rescue
- Aeronautical Search and Rescue

SAR services include the performance of distress monitoring, communications, location of distressed personnel, coordination, and execution of rescue operations including extrication or evacuation along with the provisioning of medical assistance and civilian services through the use of public and private resources to assist persons and property in potential or actual distress." (**DHS**, *NRF ESF #9 –* Search *and Rescue Annex* (Comment Draft), September 10, 2007, p.1)

Emergency Support Function (ESF) #10 – Oil and Hazardous Materials Response: "ESF #10 provides for a coordinated response to actual or potential oil and hazardous materials incidents by placing the hazard-specific response mechanisms of the NCP within the broader National Response Framework coordination structure. ESF #10 includes the appropriate response and recovery actions to prepare for, prevent, minimize, or mitigate a threat to public health, welfare, or the environment caused by actual or potential oil and hazardous materials incidents. Hazardous materials addressed under the NCP include chemical, biological, and radiological substances, whether accidentally or intentionally released. These include certain chemical, biological, and radiological substances considered weapons of mass destruction (WMD)." (**DHS**, *National Response Framework Emergency Support Function #10 – Oil and Hazardous Materials Response Annex* (Comment Draft), September 10, 2007, p. 1)

Emergency Support Function (ESF) #11 – Agriculture and Natural Resources: "…supports State, tribal, and local authorities and other Federal agency efforts to address:
(1) provision of nutrition assistance;
(2) control and eradication of an outbreak of a highly contagious or economically devastating animal/zoonotic disease, highly infective exotic plant pest, or economically devastating plant pest infestation;
(3) assurance of the safety and security of the commercial food supply (under Department of Agriculture (USDA) jurisdictions and authorities);
(4) protection of natural and cultural resources and historic properties (NCH) resources when activated by the Secretary for incidents requiring a coordinated Federal response; and
(5) the safety and well-being of household pets." (**DHS**, *National Response Framework Emergency Support Function #11 – Agriculture and Natural Resources Annex* (Comment Draft), Sep. 10, 2007, p. 1)

Emergency Support Function (ESF) #12 – Energy: ESF12 "is intended to facilitate the restoration of damaged energy systems and components when activated by the Secretary for incidents requiring a coordinated Federal response. Under Department of Energy (DOE) leadership, ESF #12 is an integral part of the larger DOE responsibility of maintaining continuous and reliable energy supplies for the United States through preventive measures and restoration and recovery actions. ESF #12 collects, evaluates, and shares information on energy system damage and estimations on the impact of energy system outages within affected areas. Additionally, ESF #12 provides information concerning the energy restoration process such as projected schedules, percent completion of restoration, geographic information on the restoration, and other information as appropriate. ESF #12 facilitates the restoration of energy systems through legal authorities and waivers. ESF #12 also provides technical expertise to the utilities, conducts field assessments, and assists government and private-sector stakeholders to overcome challenges in restoring the energy system." (**DHS**, *NRF Emergency Support Function #12 –Energy Annex* (Comment Draft). September 10, 2007, p.1)

Emergency Support Function (ESF) #13 – Public Safety and Security: ESF 13 "integrates Federal public safety and security capabilities and resources to support the full range of incident management activities associated with potential or actual incidents requiring a coordinated Federal response. ESF #13 provides a mechanism for coordinating and providing Federal-to-Federal support; Federal support to State, tribal, and local authorities; and/or support to other ESFs, consisting of noninvestigative law enforcement, public safety, and security capabilities and resources during potential or actual incidents requiring a coordinated Federal response. ESF #13 capabilities support incident management requirements including but not limited to, force and critical infrastructure protection, security planning and technical assistance, technology support, and general law enforcement assistance in both pre-incident and pos-incident situations. ESF #13 is activated in situations requiring extensive public safety and security and where State and local government resources are overwhelmed or are inadequate, or in pre-incident or post-incident situations that require protective solutions or capabilities unique to the Federal Government." (**DHS**, *National Response Framework Emergency Support Function #13 –Public Safety and Security Annex* (Comment Draft), Sep.2007, 1)

Emergency Support Function (ESF) #14 – Long Term Community Recovery Annex: "…provides a mechanism for coordinating Federal support to State, tribal, regional, and local governments, nongovernmental organizations (NGOs), and the private sector to enable community recovery from the long-term consequences of extraordinary disasters. ESF #14 accomplishes this by identifying and facilitating availability and use of sources of recovery funding, and providing technical assistance (such as impact analyses) for community recovery and recovery planning support." (**DHS**, *NRF ESF #14*, Jan 2008, 1)

Emergency Support Function (ESF) #15 – External Affairs Annex: "Purpose… ensures that sufficient Federal assets are deployed to the field during incidents requiring a coordinated Federal response to provide accurate, coordinated, timely, and accessible information to affected audiences, including governments, media, the private sector, and the local populace, including the special needs population. ESF #15 provides the resource support and mechanisms to implement the *National Response Framework (NRF)* Incident Communications Emergency Policy and Procedures (ICEPP) described in the Public Affairs Support Annex…. ESF #15 integrates Public Affairs, Congressional Affairs, Intergovernmental Affairs (State, tribal, and local coordination), Community Relations, and the private sector under the coordinating auspices of External Affairs. Another component, the Joint Information Center (JIC), ensures the coordinated release of information under ESF #15. The Planning and Products component of External Affairs develops all external and internal communications strategies and products for the ESF #15 organization." (**DHS**, *NRF ESF 15*, Jan 2008, 1)

Emergency Support Functions Coordinator: "The ESF coordinator is the entity with management oversight for that particular ESF. The coordinator has ongoing responsibilities throughout the preparedness, response, and recovery phases of incident management." (**DHS**, *Overview: ESF and Support Annexes Coordinating Federal Assistance In Support of the National Framework* (Draft), September 10, 2007, p. 10)

Emergency Support Functions Primary Agency(ies): "An ESF primary agency is a Federal agency with significant authorities, resources, or capabilities for a particular function within an ESF. Some ESFs have more than one primary function and, therefore, more than one primary agency. ESFs with multiple primary agencies designate one of those primary agencies to serve as the ESF coordinator for the purposes of pre-incident planning and coordination." (**DHS**, *Overview: ESF and Support Annexes Coordinating Federal Assistance In Support of the National Framework* (Draft), Sep.10, 2007, p. 10)

Emergency Support Functions Support Agencies: "Support agencies are those entities with specific capabilities or resources that support the primary agency(ies) in executing the mission of the ESF." (**DHS**, *Overview: ESF and Support Annexes Coordinating Federal Assistance In Support of the National Framework* (Draft), Sep.10, 2007, p. 10)

Emergency Support Function Teams (ESFTs): "FEMA coordinates incident response support from across the Federal Government by calling up, as needed, one or more of the 15 ESF teams. The ESF teams are coordinated by FEMA through its NRCC. During a response, ESFs are a critical mechanism to coordinate functional capabilities and resources provided by Federal departments and agencies, along with certain private sector and nonprofit organizations. They represent an effective way to bundle and funnel resources and capabilities to local, State and other responders. These functions are coordinated by a single agency but may rely on several agencies that provide resources for each functional area. The mission of the ESF is to provide the greatest possible access to capabilities of the Federal Government regardless of which agency has those capabilities. The ESFs serve as the primary operational-level mechanism to provide assistance in functional areas such as transportation, communications, public works and engineering, firefighting, mass care, housing, human services, public health and medical services, search and rescue, agriculture and energy." (**DHS**, *NRF Comment Draft*, 2007, p. 55)

Emergency Support Services: The departments of local government that have the capability to respond to emergencies 24 hours a day. They typically include law enforcement, fire, rescue, and public works. They may also be referred to as emergency response personnel or emergency operating forces.

Emergency Support Team (Sec. 303, 42 U.S.C. 5144): "The President shall form emergency support teams of Federal personnel to be deployed in an area affected by a major disaster or emergency. Such emergency support teams shall assist the Federal coordinating officer in carrying out his responsibilities pursuant to this Act. Upon request of the President, the head of any Federal agency is directed to detail to temporary duty with the emergency support teams on either a reimbursable or nonreimbursable basis, as is determined necessary by the President, such personnel within the administrative jurisdiction of the head of the Federal agency as the President may need or believe to be useful for carrying out the functions of the emergency support teams, each such detail to be without loss of seniority, pay, or other employee status." (**Stafford Act**, June 2007 (FEMA 592), p. 23)

Emergency System for Advance Registration of Volunteer Health Professionals (ESAR-VHP): "The Emergency System for Advance Registration of Volunteer Health Professionals (ESAR-VHP) program helps states develop standardized programs for registering volunteer health professionals in advance of emergencies. Each state program collects verified information

on the identity, licensure status, clinical privileges, and professional credentials of volunteers. State ESAR-VHP systems are intended to be the mechanism for recording the registration and credential information of all potential health volunteers in a state. They will provide a single, centralized volunteer information database to facilitate intra-state, state-to-state, and state-to-federal transfer of volunteers. These systems should include information about volunteers involved in organized efforts at the local level (such as the MRC units) and the state level. The system also will serve a critical statewide role in recruiting, registering, verifying credentials, and classifying health professionals willing to serve in emergencies but not interested in being part of a trained, organized volunteer structure." (**Trust for America's Health**, *Ready or Not? 07*, 67)

Emergency Types: "Types of Emergencies: Emergencies take many forms. They can involve any combination of consequences stemming from:

- *Technological and man-made hazards:* nuclear waste disposal spills; radiological, toxic substance, or hazardous materials accidents; utilities failures; pollution; epidemics; crashes; explosions; urban fires.
- *Natural disasters:* earthquakes, floods, hurricanes, tornadoes, tsunami, sea surges, freezes, blizzards of snow and ice, extreme cold, forest fires, drought, and range infestation.
- *Internal disturbances:* civil disorders such as riots, demonstrations run amok, large-scale prison breaks, strikes leading to violence, and acts of terrorism.
- *Energy and material shortages:* from strikes, price wars, labor problems, and resource scarcity.
- *Attack:* the ultimate emergency—nuclear, conventional, chemical, or biological warfare." (**NGA**, *CEM: A Governors' Guide*, 1979. p.12.

Emergency Welfare Services: "`Emergency welfare services' means feeding; clothing; lodging in private and congregate facilities; registration; locating and reuniting families; care of unaccompanied children, the aged, the handicapped, and other groups needing specialized care or services; necessary financial or other assistance; counseling and referral services to families and individuals; aid to welfare institutions under national emergency or post-attack conditions; and all other feasible welfare aid and services to people in need during a civil defense emergency. Such measures include organization, direction, and provision of services to be instituted before attack, in the event of strategic or tactical evacuation, and after attack in the event of evacuation or of refuge in shelters." (**White House**, *Executive Order 11490, Assigning Emergency Preparedness Functions to Federal Departments and Agencies*, October 28, 1969) [Notes: Revoked and replaced by *Executive Order 12656, Assignment of Emergency Preparedness Responsibilities* (**White House** (President Ronald Reagan) November 18, 1988). See also E.O. 11001, February 16, 1962.]

Emergency Work: "All activities eligible under section 403 of the Stafford Act, including such activities when performed by a Federal agency as direct Federal assistance." (**FEMA**, *100% Funding for Direct Federal Assistance and Grant Assistance*, June 9, 2006)

Emergency Work: Relevant to public assistance, emergency work is work which must be done immediately to save lives and to protect improved property and public health and safety, or to avert or lessen the threat of a major disaster. Under the Stafford Act section related to essential

assistance, emergency work is defined to include clearance and removal of debris and wreckage, and temporary restoration of essential public facilities and services. Under a Presidential declaration, DFA costs for emergency work that is tasked during the first 72 hours following a declaration may be authorized for reimbursement at 100-percent Federal funding, if warranted." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 51)

Emergent Risk: "The term *Emergent Risk* is used to describe risks that are poorly understood, but are expected to grow greatly in significance. Unlike other risks, emergent risks do not have a track record which can be used to estimate likely probabilities and expected losses." (Risky Thinking, *A Glossary of Risk Related Terms*, 2007)

Emerging Agents: "As defined in the National Strategy for *Medical Countermeasures against Weapons of Mass Destruction...* Emerging Agents are previously unrecognized pathogens that might be naturally occurring and present a serious risk to human populations, such as the virus responsible for Severe Acute Respiratory Syndrome (SARS); and Advanced Agents are novel pathogens or other materials of biological nature that have been artificially engineered in the laboratory to bypass traditional countermeasures or produce a more severe or otherwise enhanced spectrum of disease. (**HHS**, *Public Health Emergency Medical Countermeasure Enterprise*, 2007, p. 8)

EMF: Emergency Management Functions. (**FEMA**, *EMPG Work Plans* (FY08), 2008, p. 2)

EMG: Emergency Management Group. (**FEMA**, *EM Guide for Business & Industry*, 1993, 27)

EMHE: Emergency Management for Higher Education Grant. (Depart of ED, *Emergency Management for Higher Education*, April 23, 2008)

EMHSCC: Emergency Management and Homeland Security Coordinating Council, CT.

EMI: Emergency Management Institute, FEMA/DHS, Emmitsburg, MD.

EMIMS: Emergency Management Information Management System. (**FEMA**, *Cannon* 2007, 5)

EMIS: Emergency Management Information System. (FEMA, Compendium of Federal Terrorism Training Courses, 2003, p. 6)

EMMA: Emergency Managers Mutual Aid (CA). (Orange County (CA) EM Organization Schools Committee, *SEMA Emergency Operations Center (EOC) Course for Schools*)

EMP: Electromagnetic Pulse.

EMPB: Emergency Preparedness Mobilization Board.

EMPG: Emergency Management Performance Grants.

EMPOWER: Emergency Management Professional Organization for Women's Enrichment.

EMR-ISC: Emergency Management and Response Information Sharing and Analysis Center.

EMRS: Emergency Management Reporting System. (**DHS**, *TCL*, p. 291)

EMS: Emergency Medical Services. (**Senate HSGA**, *A Nation Still Unprepared*, p. 631)

EMS: Emergency Medical System**.** (**UNDHA**, *Disaster Management Glossary*, 1992, 34)

EMS: Environmental Management System. (**DHS**, *IPG FY 2011-2015 Draft*, p. 19)

EMT: Emergency Medical Technician.

EMTS: Emergency Management of the Transportation System. (**DHS** *Doctrine*, Ch. 2, 2008)

EMWIN: Emergency Managers Weather Information Network.

Enabling Learning Objective (ELO): "A statement in behavioral terms of what is expected of the student in demonstrating mastery at the knowledge and skill level necessary for achievement of a terminal learning objective (TLO)." (**DHS**, *DHS Training Glossary*, 2006, p. 23)

E-NAWAS: Enhanced National Warning System.

ENDEC: EAS Encoder/Decoder. (**FEMA**, *IPAWS Update*, 2007, slide 28)

Enduring Constitutional Government (ECG): "`Enduring Constitutional Government,' or 'ECG,' means a cooperative effort among the executive, legislative, and judicial branches of the Federal Government, coordinated by the President, as a matter of comity with respect to the legislative and judicial branches and with proper respect for the constitutional separation of powers among the branches, to preserve the constitutional framework under which the Nation is governed and the capability of all three branches of government to execute constitutional responsibilities and provide for orderly succession, appropriate transition of leadership, and interoperability and support of the National Essential Functions during a catastrophic emergency." (**White House**, *HSPD-20*, May 9, 2007)

Energetic Materials Research and Testing Center (EMRTC), New Mexico Institute of Mining and Technology (NMIMT): "EMRTC provides specialized training that focuses on explosives and incendiary devices. This training includes controlled detonations of improvised explosives providing responders first-hand understanding of and experience with a range of improvised explosive devices from letter bombs to vehicle bombs."(**FEMA**, *TEI/TO*, 2008, 4-5)

Engaged Partnership: "The Federal Government also works to establish *engaged partnership* with States, as well as the private sector. Our national response is more effective when all levels of government work together well before an incident to develop effective plans and achieve a heightened state of preparedness." (**DHS**, *NRF Comment Draft*, Sep. 2007, p. 21)

Engaged Partnership – First of Five Key National Response Framework Principles: "Leaders at all levels must communicate and actively support engaged partnerships by developing shared goals and aligning capabilities so that no one is overwhelmed in times of crisis. Layered, mutually supporting capabilities at Federal, State, tribal, and local levels allow for planning together in times of calm and responding together effectively in times of need. Engaged partnership includes ongoing communication of incident activity among all partners to the *Framework*, and shared situational awareness for a more rapid response. In particular, the potential for terrorist incidents requires *a heightened state of readiness* and nimble, practiced capabilities baked into the heart of our preparedness and response planning." (**DHS**, *NRF*, Jan 2008, 9)

Engaged Partnership: "We are well on the way to transforming the quality of the assistance we are capable of providing to support you. FEMA will no longer wait for you to call before we consider our options. Today, FEMA is leaning further forward to plan for your needs and be ready to respond quickly. This approach is what we call "Engaged Partnership" and it is guiding our plans and our actions. (**FEMA**, *David Paulison, Administrator, FEMA, International Association of Emergency Managers Annual Conference, Reno, NV: A Declaration of Inter-Dependence*, 12 Nov 2007, p. 3)

Enhanced Agents: "As defined in the National Strategy for *Medical Countermeasures against Weapons of Mass Destruction:* Enhanced Agents are traditional agents that have been modified or selected to enhance their ability to harm human populations or circumvent current countermeasures, such as a bacterium that has been modified to resist antibiotic treatment." (**HHS**, *Public Health Emergency Medical Countermeasure Enterprise*, 2007, p. 8)

Enhanced National Warning System (E-NAWAS): "E-NAWAS (Enhanced National Warning System) upgrades NAWAS with 21st century voice, video, and data collaboration technologies, as well as including a geo-targeted alert and warning message dissemination capability." (**DHS**, *FEMA OMA FY 2009*, 2008, 15)

Enhanced National Warning System (E-NAWAS):

- Backward compatible with the existing NAWAS
- Provide two simultaneous circuits
  - One for full-time monitoring
  - One for ad-hoc point-to-point and conference calls
- Use IP packets for voice, data, and video collaboration
- Add capability to rapidly geo-target conference calls & collaboration
- Use dual-paths (landline and satellite) for greater reliability/resilience
- Add independent power and radio frequency protection
- Provide a mobile E-NAWAS capability
- Allow for EAS activation option. (**FEMA**, *IPAWS Update*, 2007, slide 21)

Enhancement Plan: "A comprehensive, statewide management plan for enhancing State homeland security programs and capabilities to align with the National Preparedness Goal

and to achieve the goals and objectives from the State Homeland Security Strategy." (DHS, *Fiscal Year 2007 Homeland Security Grant Program: Investment Justification Reference Guide*, January 2007, p. 53, Appendix A: Definitions)

Enterprise Architecture (EA): "One essential tool for facilitating organizational transformation is an enterprise architecture (EA)—a corporate blueprint that serves as an authoritative frame of reference for information technology investment decision making." (**GAO**, *Homeland Security: DHS Enterprise Architecture Continues to Evolve*…, May 2007)

Enterprise Business Services: The 7th DHS "Functional Area": "Common or shared business services supporting the core mission areas. Business services are defined by the agency business model and include the foundational mechanisms and back office services used to achieve the purpose of the agency." (**DHS**, *IPG FY 2011-2015 Draft*, 2008, p. 19)

Enterprise Coordination Approvals Processing System (eCAPS): "A Web-based software program for generating and approving mission assignment forms." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 51)

Enterprise Resilience: "Enterprise resilience is the ability and capacity to withstand infrastructure discontinuities and adapt to new risk environments. A resilient organization effectively aligns its strategy, operations, management systems, governance structure, and decision-support capabilities so that it can uncover and adjust to continually changing risks and better endure disruptions." (DoA, *Infrastructure Risk Management (Army)*, June 22, 2004, p. 14)

Enterprise Risk Management (ERM): "The underlying premise of enterprise risk management is that every entity exists to provide value for its stakeholders. All entities face uncertainty, and the challenge for management is to determine how much uncertainty to accept as it strives to grow stakeholder value. Uncertainty presents both risk and opportunity, with the potential to erode or enhance value. Enterprise risk management enables management to effectively deal with uncertainty and associated risk and opportunity, enhancing the capacity to build value. Value is maximized when management sets strategy and objectives to strike an optimal balance between growth and return goals and related risks, and efficiently and effectively deploys resources in pursuit of the entity's objectives. Enterprise risk management encompasses:

• *Aligning risk appetite and strategy* – Management considers the entity's risk appetite in evaluating strategic alternatives, setting related objectives, and developing mechanisms to manage related risks.
• *Enhancing risk response decisions* – Enterprise risk management provides the rigor to identify and select among alternative risk responses – risk avoidance, reduction, sharing, and acceptance.
• *Reducing operational surprises and losses* – Entities gain enhanced capability to identify potential events and establish responses, reducing surprises and associated costs or losses.
• *Identifying and managing multiple and cross-enterprise risks* – Every enterprise faces a myriad of risks affecting different parts of the organization, and enterprise risk

management facilitates effective response to the interrelated impacts, and integrated responses to multiple risks.
• *Seizing opportunities* – By considering a full range of potential events, management is positioned to identify and proactively realize opportunities.
• *Improving deployment of capital* – Obtaining robust risk information allows management to effectively assess overall capital needs and enhance capital allocation.

"These capabilities inherent in enterprise risk management help management achieve the entity's performance and profitability targets and prevent loss of resources. Enterprise risk management helps ensure effective reporting and compliance with laws and regulations, and helps avoid damage to the entity's reputation and associated consequences. In sum, enterprise risk management helps an entity get to where it wants to go and avoid pitfalls and surprises along the way." (**American Institute of Certified Public Accountants**. *Enterprise Risk Management – Integrated Framework: Executive Summary*, 2004, p. 1)

Enterprise Risk Management (ERM): "Under the ERM approach, all of a company's risks—whether financial or strategic, liability or regulatory compliance—are examined together with an eye toward their potential consequences for the ongoing operation." (Geisel, "Enterprise Risk Management for IT." *Business Insurance*, May 21, 2007)

Entity: "A governmental agency or jurisdiction, private or public company, partnership, nonprofit organization, or other organization that has emergency management and continuity of operations responsibilities." (**NFPA 1600**, 2007, p. 7)

Environmental Degradation: "Unfavourable modification of the ecological state and environment through natural processes and/or human activities." (**UNDHA**, *DM Glossary*, 1992, 35)

Environmental Hazard: "A condition capable of posing an unreasonable risk to air, water, or soil quality and to plants or wildlife." (**NFPA 471**, 1997, p. 8)

Environmental Health Capability Definition: "Environmental Health is the capability to protect the public from environmental hazards and manage the health effects of an environmental health emergency on the public. The capability minimizes human exposures to environmental public health hazards (e.g., contaminated food, air, water, solid waste/debris, hazardous waste, vegetation, sediments, and vectors). The capability provides the expertise to run fate and transport models; design, implement, and interpret the results of environmental field surveys and laboratory sample analyses; develop protective guidance where none exists; and use available data and judgment to recommend appropriate actions for protecting the public and environment. Environmental Health identifies environmental hazards in the affected area through rapid needs assessments and comprehensive environmental health and risk assessments. It works closely with the health community and environmental agencies to link exposures with predicted disease outcomes, provides input in the development of Crisis and Emergency Risk Communication (CERC) messages, provides guidance on personal protective measures, and advises on environmental health guidelines." (**DHS**, *TCL*, 2007, p. 309)

Environmental Historic Program (EHP): (See "FEMA Environmental Planning and Historic Preservation (EHP) Program," below.

Environmental Impact Assessment (EIA): "A policymaking tool that provides information on the environmental impacts of activities. The benefits of an EIA are encouraging the private sector and individuals to consider the impacts of their actions on vulnerability factors; as part of a detailed risk assessment it can provide alternative solutions, and it could be used to reorient disaster impact assessments as planning tools. Limitations of the technique include the current focus on post-event impact assessment and not promoting its use as part of the planning process, although the results can feed into future planning. In addition, there is still some way to go before EIA processes are fully mastered." (**UNDAP**, *Techniques Used in Dstr. Risk Asmt.*, 2008)

Environmental Protection Agency (EPA): "EPA serves as a support agency to the FBI for technical operations, and a support agency to DHS/FEMA for CM. EPA provides technical personnel and supporting equipment to the LFA during all aspects of WMD incidents. EPA assistance may include threat assessment; DEST and regional emergency response team deployment; LFA advisory requirements, technical advice, and operational support for chemical, biological, and radiological releases; consultation; agent identification; hazard detection and reduction; environmental monitoring; sample and forensic evidence collection/analysis; identification of contaminants; feasibility assessment; clean-up; and on-site safety, protection, prevention, decontamination, and restoration activities. EPA and USCG share responsibilities for response to oil discharges into navigable waters and releases of hazardous substances, pollutants, and contaminants into the natural and physical environment. EPA provides the pre-designated federal on-scene coordinator for inland areas while USCG coordinates resources for the containment, removal, and disposal activities and resources during an oil, hazardous substance, or WMD incident in coastal areas." (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, pp. II 20-21)

Environmental Restoration: "Recreation of the critical business operations in an alternate location, including people, equipment and communications capability." (**DigitalCare**, *State of OR BC Workshop*, 2006, 55)

Environmental Risk: "Likelihood, or probability, of injury, disease, or death resulting from exposure to a potential environmental hazard." (*European Environmental Agency*, **EEA Environmental Glossary**, 2007; cites *ETS/CDS*, *General Environmental Multilingual Thesaurus* (GEMET), 2000)

EO: Executive Order. (**OCD**, *Abbreviations and Definitions*, 1971, p. 2)

EOC: Emergency Operations Center. (**Senate HSGA**, *A Nation Still Unprepared*, p. 631)

EOP: Emergency Operations Plan/Planning. (**Senate HSGA**, *A Nation Still Unprepared*, 631)

EOP: Executive Office of the President. (**DHS**, *FCD 1*, Nov. 2007, p. A-4)

EOS: Emergency Operation(s) Simulation**. (DCPA,** *Foresight*, 1974, p. 13)

EP: Emergency Preparedness. (**JCS/DoD**, *Homeland Security* (JP 3-26) 2005, p. I-4)

EPA: Environmental Protection Agency.

EPI: Emergency Public Information. (**DCPA**, *On-Site Assistance Appendices*, 1974, p. B-9)

Epicenter: "The point on the Earth's surface above the point at depth in the Earth's crust where an earthquake begins." (**USGS**, *Putting Down Roots in Earthquake Country*, 2007, Glossary)

Epidemic: "The occurrence of more cases of a disease than would be expected in a community or region during a given time period. A sudden severe outbreak of a disease such as SARS. From the Greek "epi-", "upon" + "demos", "people or population" = "epidemos" = 'upon the population'." (**MedicineNet.com**, *Definition of Epidemic*, 2003)

Epidemic: "1. An unusual increase in the number of cases of an infectious disease which already exists in the region or population concerned.
2. The appearance of a significant number of cases of an infectious disease introduced in a region or population that is usually free from that disease." (**UNDHA**, *DM Glossary*, 1992, 35)

Epidemiologic Surveillance: "The term 'epidemiologic surveillance' means the process of actively gathering and analyzing data related to human health and disease in a population in order to obtain early warning of human health events, rapid characterization of human disease events, and overall situational awareness of disease activity in the human population." (**White House**, *HSPD 21*, October 18, 2007)

Epidemiological Surveillance and Investigation capability Definition: "The Epidemiological Surveillance and Investigation capability is the capacity to rapidly conduct epidemiological investigations. It includes exposure and disease (both deliberate release and naturally occurring) detection, rapid implementation of active surveillance, maintenance of ongoing surveillance activities, epidemiological investigation, analysis, and communication with the public and providers about case definitions, disease risk and mitigation, and recommendation for the implementation of control measures." (**DHS**, *TCL*, 2007, p.161)

EPLO: Emergency Preparedness Liaison Officer. (**JCS/DoD**, *Civil Support*, 2007, p. GL-8)

EP&R: Emergency Preparedness and Response.

EPR: Epidemic and Pandemic Alert and Response. (**UN WHO**, EPR, 2007)

EPRI: Emergency Preparedness Resource Inventory, AHRQ, HHS.

EQPCE: Earthquake Preparedness Center of Expertise. (USACE, Response Planning Guide, 1995, p. 6)

Equipment and Systems Capability Elements (TCL): "Paid and volunteer staff who meet relevant qualification and certification standards necessary to perform assigned missions and tasks." (**DHS**, *TCL*, 2007, p. 9)

ER: Emergency Response. (**IIA**, *Business Continuity Management*, 2008, 19)

ERAT: Emergency Response Assessment Team. (EG&G, *San Diego County Firestorms* AAR, Feb 2008, p. 59)

ERC: Emergency Response Center.

ERD: Equivalent Residual Dose. (**OCD**, *Abbreviations and Definitions*, 1971, p. 2)

ERDO: Explosive Devise Response Operations. (**DHS**, *TCL*, 2007, p. 202)

ERFOG: Emergency Responder Field Operations Guide. (**FEMA**, *IIFOG Ver 3*, 2008, 17)

ERG: Emergency Relocation Group. (**DHS**, *FCD 1*, Nov. 2007, p. J-1)

ERG: Emergency Response Guidebook. (**DA**, *WMD-CST Operations*, Dec 2007, Glossary-2)

ERM: Enterprise Risk Management. (**URMIA**, *ERM in Higher Education*, September 2007)

Erosion: "Loosing or dissolving and removal of rock or soil as a result of water, ice or wind action." (**UNDHA**, *Disaster Management Glossary*, 1992, 36)

ERP(s): Emergency Response Plan(s). (**Dept. of the Army**, *WMD-CST Ops*, Dec 2007, p. 6-2)

ERS: Emergency Relocation Site. (**USACE**, *Annex B: Emergency Relocation Sites*, 1985, p. 1)

ERSAC: Emergency Response Senior Advisory Committee/Team, HSAC, DHS.

ERT: Emergency Response Team. (**Senate HSGA**, *Katrina: A Nation Still Unprepared*, 631)

ERT-A: Emergency Response Team, Advance Element.

ERT-N: Emergency Response Team, National.

ERV: Emergency Response Vehicle, American Red Cross.

ESAR-VHP: Emergency Systems for Advance Registration of Volunteer Health Care Personnel (Public Health Security and Bioterrorism Preparedness and Response Act of 2002, Public Law 107-188). (**AHRQ**, *Altered Standards of Care in Mass Casualty Events*, 2005, 35)

ESF: Emergency Support Function. (**DHS**, *FCD 1*, Nov. 2007, p. O-1)

ESF Coordinator: "ESFs with multiple primary agencies designate an ESF coordinator for the purposes of pre-incident planning and coordination. The ESF coordinator has ongoing responsibilities throughout the prevention, preparedness, response, recovery and mitigation phases of incident management." (**FEMA**, *Mission Assignment SOPs Draft*, 2007, 51)

ESFLG: Emergency Support Function Leaders/Leadership Group. (**FEMA**, *FEMA/DHS Draft 2008 Hurricane CONPLAN*, October 31, 2007, p. 5)

ESG: Expeditionary Strike Group, Navy.

ESI: Emergency Severity Index. (**AHRQ/HHS**, *Mass Casualty Care*…, 2007, p. 72)

ESL: English as a Second Language. (CDC, *Locating and Reaching At-Risk Populations*, 2007)

ESRI: Environmental Systems Research Institute. (**DA**, *WMD-CST Ops*, Dec 2007, Glossary-2)

ESS: Emergency Services Sector.

Essential Elements of Information (EEI): "The Essential Elements of Information provide a good starting point for information collection through the life cycle of an event. Items may be eliminated on the Information Collection Plan depending on the phase of the disaster. For example, during the initial phases of an event, the boundaries of the disaster area are of critical importance. Toward the end of the recovery effort, this item is dropped as the boundaries have become stable. However, mitigation and recovery statistics and items take on greater importance in the later stages of an event and, therefore, will be listed and likely expanded." (**FEMA**, *Federal Interim CONPLAN – Predecisional Draft: NMSZ*, December 15, 2007. p. 22)

Essential Functions (COOP): "Functions that enable Federal Executive Branch Agencies to provide vital services, exercise civil authority, maintain the safety and well-being of the general populace, and sustain the industrial and economic base during an emergency." (**FEMA**, *Department/Agency HQ Devolution of Operations Plan Template*)

Essential Functions: "The critical activities that are performed by organizations, especially after a disruption of normal activities. There are three categories of essential functions: National Essential Functions (NEFs), Primary Mission Essential Functions (PMEFs), and Mission Essential Functions (MEFs)." (**HSC**, *National Continuity Policy Implementation Plan*, p. 62)

Essential Functions: "USACE functions that are considered necessary, in consonance with the direction of the Department of the Army, for the accomplishment of indispensable operations of USACE in national emergency situations. (**USACE**, *Planning and Operations Guidelines, Annex V: Definitions and Common* Terms, 1985, p. V-2)

Essential Service: "A service without which a building would be 'disabled'. Often applied to the utilities (water, gas, electricity, etc.) it may also include standby power systems, environmental control systems or communication networks." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 55)

Essential Services Provider (within the context of the Stafford Act): "…`essential services provider' means an entity that provides: telecommunications service; electrical power; natural gas; water and sewer services; or any other essential service, as determined by the President; and is a municipal entity; a nonprofit entity; or a private, for-profit entity; and is contributing to efforts to respond to an emergency or major disaster." (**DHS**, *National Response Framework List of Authorities and References* (Draft), September 10, 2007, p. 3)

ETA: Estimated Time of Arrival. (**DA**, *WMD-CST Operations*, Dec 2007, Glossary-2)

ETA: Event-Tree Analysis. (**UNDAP**, *Techniques Used in Disaster Risk Assessment*, 2008)

ETC: Emergency Transportation Center.

ETIS: Emergency Traffic Information System. (**NEMA**, *Committee Reports*, 2007, p. 6)

ETO: Emergency Transportation Operations.

EU: European Union.

Evacuation: "The movement of employees, visitors and contractors from a site and/or building to a safe place (assembly area) in a controlled and monitored manner at time of an event." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 55)

Evacuation: "Organized, phased, and supervised withdrawal, dispersal, or removal of civilians from dangerous or potentially dangerous areas, and their reception and care in safe areas." (**DHS**, *National Response Framework* (Draft) *Glossary/Acronyms*, September 10, 2007; **DHS**, *Lexicon: Terms and Definitions*, October 23, 2007, p. 10)

Evacuation: "Organized, timed, and supervised dispersal of civilians from dangerous and potentially dangerous areas, their reception and care in safer areas, and their return to their home communities." (**FCDA**, *1954 Annual Report*, p. 31; citing FCDA Supplement 1 entitled *Evacuation of Civil Populations in Civil Defense* (September 23, 1954) to FCDA Advisory Bulletin No. 158 (Jan 1954). [Note: according to the 1954 FCDA Annual Report (Ibid), the Jan 1954 Advisory Bulletin No. 158 was "…the first definitive statement on evacuation developed in the United States."]

Evacuation: "Evacuation is the organized removal of civilians from any given area and it may be of two types:

a) Organized, voluntary evacuation wherein people leave an area under supervision of constituted authority. This usually involves the removal of priority groups.
   i) Hospitalized sick and injured.
   ii) Pre-school age children accompanied by mothers or guardians.
   iii) School age children up to and including 15 years.
   iv) Pregnant women, aged and infirm.
   v) All others, except those serving in essential capacities.

b) Organized compulsory evacuation which is the mandatory removal of a portion or all of the civilian population from an area." (**OCDP**, *Hopley Report*, 1948, pp. 220-221)

Evacuation: "Organized, phased, and supervised dispersal of civilians from dangerous or potentially dangerous areas, and their reception and care in safe areas." (**USG**, *USG Interagency Domestic Terrorism CONPLAN*, 2001, Appendix B: Definitions) [Note: Compare to 1954 FCDA definition.]

Evacuation (Mandatory or Directed): "This is a warning to persons within the designated area that an imminent threat to life and property exists and individuals MUST evacuate in accordance with the instructions of local officials." (**FEMA**, *Guide For All-Hazard Emergency Operations Planning* (State and Local Guide (SLG) 101), September 1996, GLO-6)

Evacuation (Non-Evacuation/Compliance Reasons): "…there are several explanations as to why people will not evacuate:

- Delay in official warning (Sorensen and Mileti, 1988)
- No request for evacuation was made (Fischer et. al., 1995)
- People downplay risk (Perry, 1983)
- Warning messages are unclear (Cutter and Barnes, 1982)
- Fear of looting (Cutter and Barnes, 1982)
- Age or the inability of the elderly to evacuate (Cutter and Barnes, 1982)
- Inconvenience (Baker, 1991)
- Expectation of re-entry delays (Dash and Morrow, 2001)
- Job constraints (Cutter and Barnes, 1982)
- Lack of economic resources (Dash and Morrow, 2001) (**Kendra**, et al., Evacuating Large Urban Areas, 2008, pp. 5-6)

Evacuation (Notice versus No-Notice). "These evacuations are also in the context of either a notice evacuation where sufficient planning time exists to warn citizens and to effectively implement a plan, or a no-notice evacuation where circumstances require immediate implementation of contingency plans." (**DOT**, *Catastrophic Hurricane Evacuation Plan Evaluation: Report to Congres*s, June 1, 2006, p. 2-2)

Evacuation (Phases of a No-Notice Emergency Evacuation): "For the purpose of this study, a no-notice disaster that results in an emergency evacuation can be divided into phases, based on a timeline of events… The six phases of activities that form a general progression of events are:

- Phase 1 – Advanced Planning
- Phase 2 – Incident Notification
- Phase 3 – Activation and Mobilization
- Phase 4 – Evacuation Operations
- Phase 5 – Re-Entry
- Phase 6 – Debrief and Assessment." (FHWA DOT, *Evacuation Transportation Management Task Five: Operational Concept*, 2006, 1)

Evacuation (Shadow): "…some people may evacuate even though they are not officially considered to be at risk. Known as an 'evacuationo shadow.' This spontaneious evacuation is prompted when people feel they are in danger and begin to leave in advance of, or in spite of, official instructions to avoid doing so (Wolshon, Hamilton, Wilmot et al., 2005; Mitchell, Cutter, and Edmonds, 2007). Shadow evacuations are not a new phenomenon. During the 1999 Hurricane Floyd evacuations in Florida, it was estimated that about one-half of the 2 million persons who evacuated were shadow evacuees (Ballingrund, 2000)." (**Kendra**, Evacuating Large Urban Areas, 2008, 5)

Evacuation (Spontaneous): "Residents or citizens in the threatened areas observe an emergency event or receive unofficial word of an actual or perceived threat and without receiving instructions to do so, elect to evacuate the area. Their movement, means, and direction of travel is unorganized and unsupervised." (**FEMA**, *Guide For All-Hazard Emergency Operations Planning* (State and Local Guide (SLG) 101), September 1996, p. GLO-5)

Evacuation (Strategic, Tactical, Remidial, Assisted, Directed and Spontaneous): There are three stages in evacuation. *Strategic evacuation* during a period of international tension indicating a possible attack, when certain dependent, nonproductive people may be moved away from danger areas. *Tactical evacuation* during a period of warning after enemy planes have been detedted, when, if time permits, there will be a mass evacuation of people from target areas. *Remedial evacuation* during the period following an attack when all affected pe34rsons and those not needed for civil defense services may be removed. During any of the three types of evacuation, movement may be of three kinds: *Assisted*, where, in advance of attack warning, civil defense authorities may decide to encourage and assist the voluntary movement of priority groups out of danger areas so that essential workers in defense or production may remain at thir posts knowing their families are safe; *directed*, where, after attack warning, civil defense authorities may decide to move large segments of the population according to preattack evacuation plans; and *spontaneious*, where some parts of the populatin may feel it necessary for self-preservation, to remove themselves as rapidly as possible from an area they consider dangerous. Spontaneous evacuation usually will be unorganized and unsupervised and may be impractical and unwise." (**FCDA**, *1954 Annual Report*, p. 32)

Evacuation (Voluntary): "This is a warning to persons within a designated area that a threat to life and property exists or is likely to exists in the immediate future. Individuals issued this type of waning or order are NOT required to evacuate, however it would be to their advantage to do so." (**FEMA**, *Guide For All-Hazard Emergency Operations Planning* (State and Local Guide (SLG) 101), September 1996, GLO-6)

Evacuation Exercise Problems (1954): "Two great problems were uncovered as a result of the evacuatin tests [conducted by a number of cities in 1954]. The first was getting the public to accept the plan and getting intergroup communication so that every segment of the public would be informed on plans and procedures. The second was the selection and preparatin of reception areas for the people to be evacuated, caring for the people, supplying potable water, sanitation, food, and shelter and restoring them to their home communities as rapidly as possible." (**FCDA**, *1954 Annual Report*, p. 33)

Evacuation Liaison Team (ELT): "The Evacuation Liaison Team (ELT) is made up of emergency management and transportation specialists that facilitate the coordination and sharing of information between state jurisdictions during multi-state hurricane evacuations." (**FEMA**, *National Hurricane Program*, 2007)

Evacuation Liaison Team (ELT): "Provides support in State and local emergency response efforts by compiling, analyzing, and disseminating traffic-related information that can be used to facilitate the rapid, efficient, and safe evacuation of threatened populations. Primarily operates in the State or local EOC as an extension of ESF #1–transportation." (**FEMA**, NIMSonline, *Resource: Evacuation Liaison Team (ELT)*, April 2003.

Evacuation Planning: "In this area [evacuation planning], plans must include:

- The lead time required for various scenarios, including no-notice and forewarned events.
- Weather contingencies.
- Transportation.
- Interdependencies between shelter locations and transportation.
- Provisions for special needs populations and those with household pets.

Specific procedures and protocols should augment these plans to guide rapid implementation." (**DHS**, *NRF*, Jan 2008, 28)

Evacuation Planning: "Planning for the orderly evacuation of the civilian population in any given are involves:

a) The assignment, equipment and training of individuals qualified to give leadership in an emergency.
b) The registration of every individual in the area classified with respect to his priority in the evacuation procedure.
c) The designation of one or more gathering points and assembly areas through which appropriate means of transportation to reception centers can be routed, loaded and dispatched.
d) The formulation of procedures fro keeping currently informed as to changes in the address or the status of registered civilians.
e) The coordination of plans with the Police, Transportation, and Medical and Health Services, and Civilian War Aid of the local Civil Defense organization.
f) The integration of the local plan with procedures developed by those responsible for evacuation on a state, regional or national level. (**OCDP**, *Hopley Report*, 1948, p. 220)

Evacuation Traffic Information System (ETIS): "ETIS covers the eighteen states of the eastern seaboard and Gulf states of the United States. ETIS is a GIS, Web-based tool that assists with collection and dissemination of transportation information during an evacuation. Transportation officials in each threatened State are responsible for inputting information for coastal counties on evacuation status, tourist occupancy, evacuation participation rates, and traffic count information. The ETIS provides a platform for States and the FEMA Regional Operations Center to monitor the evacuation process. The system also provides a forecast of total cross-State traffic and the likely destinations of the evacuees. Reports generated by ETIS and which can be viewed through the website include: 1) Shelter capacity by state, 2) Traffic count by state, 3) Traffic volumes by corridor, 4) Destination percentages by city, and 5) Estimated

state to state traffic. Links are provided from this main page to the state agencies that would be involved in and responsible for mass evacuations from these areas in the event of hurricanes." (**DOT**, *TRIS Online*, Jan 18, 2008)

Evacuee: "Definition: an individual subject to an organized and supervised withdrawal, dispersal, or removal from a hazardous or potentially hazardous area." (**DHS**, *Lexicon: Terms and Definitions*, October 23, 2007, 10)

EvalPlan: Evaluation Plan. (**FEMA**, *HSEEP Glossary*, 2008)

Evaluation: "One of the five phases of the exercise process, evaluation is the cornerstone of exercises; it documents strengths and opportunities for improvement in a jurisdiction's preparedness and is the first step in the improvement process. Under the *Homeland Security Exercise and Evaluation Program* (*HSEEP*), evaluations are conducted through *player* observation and the use of *Exercise Evaluation Guides (EEGs)*, which outline exercise performance measures expected from *participants*." (**FEMA**, *HSEEP Glossary*, 2008)

Evaluation: "Post disaster appraisal of all aspects of the disaster and its effects." (**UNDHA**, *DM Glossary*, 1992, 36)

Evaluation Plan (EvalPlan): "The EvalPlan is typically used for *operations-based* exercises of a large *scope* and scale; this document provides specific guidance to exercise *evaluators*. The EvalPlan is designed to help exercise evaluators understand their roles and responsibilities in exercise data collection and evaluation in order to conduct an effective *analysis* of the exercise and produce a comprehensive *AAR/IP*. For most exercises, however, the EvalPlan can be combined with a *COSIN* to produce a *C/E Handbook*." (**FEMA**, *HSEEP Glossary*, 2008)

Evaluation Team: "The evaluation team consists of evaluators trained to observe and record *participant* actions. These individuals should be familiar with the exercising jurisdiction's plans, policies, procedures, and agreements." (**FEMA**, *HSEEP Glossary*, 2008)

Evaluator: "Evaluators, selected from participating agencies, are chosen based on their expertise in the functional areas they will observe. Evaluators use *EEGs* [Exercise Evaluation Guides] to measure and assess performance, capture unresolved issues, and *analyze* exercise results. Evaluators passively assess and document participants' performance against established emergency plans and exercise evaluation criteria, in accordance with *HSEEP* standards. Evaluators have a passive role in the exercise and only note the actions/decisions of players without interfering with exercise flow." (**FEMA**, *HSEEP Glossary*, 2008)

Event: "A planned, non-emergency activity. ICS can be used as the management system for a wide range of events, e.g., parades, concerts or sporting events." (**CA OES**, *SEMS Guidelines*, 2006, Glossary, p. 8)

Event: "Definition: planned, non-emergency activity occurring in a particular place during a particular interval of time." (**DHS**, *Lexicon: Terms and Definitions*, October 23, 2007, p. 10)

Event: "Any occurrence that may lead to a business continuity incident." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 55)

Event (HSEEP): Within the *MSEL* [Master Scenario Events List] , an event is an expected action that is expected to take place during an exercise." (**FEMA**, *HSEEP Glossary*, 2008)

Event: "Occurrence of a particular set of circumstances." (**ISO 22399**, *Societal Security* 2007, 3)

Event: "A planned, non-emergency activity. ICS can be used as the management system for a wide range of events, e.g. NSSES, Opsail, parades, concerts, or sporting activities. The event IAP usually includes contingency plans for possible incidents that might occur during the event." (**USCG**, *IM Handbook*, 2006, Glossary 25-7)

Event (Catastrophic): "For purposes of this plan [NRP 2004], a catastrophic event is any natural or manmade incident, including terrorism, which leaves extraordinary levels of mass casualties, damage and disruption severely affecting the population, infrastructure, environment, and economy. A catastrophic event results in sustained national impacts over a prolonged period of time; exceeds resources normally available in the local, State, Federal, and private sectors; and significantly interrupt governmental operations and emergency services to such an extent that national security could be threatened. In contrast to a Major Disaster or Emergency as defined in the Stafford Act, a catastrophic event is characterized as an incident of low or unknown probability but extremely high consequences." (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, p. 60)

Event-Tree Analysis (ETA): "A consequence based analysis in which an event either has or has not happened or a component has or has not failed. An event tree begins with an initiating event. The consequences of the event are followed through a series of possible paths. Each path is assigned a probability of occurrence and the probability of the various possible outcomes can be calculated. The benefits of the technique are its value in analyzing the consequences arising from a failure or undesired event." (**UNDAP**, *Techniques Used in Disaster Risk Asmt.*, 2008)

EVUNS: Evaluating the Vulnerability of National Systems. (**DCPA**, *Foresight*, 1974, p. 27)

EWS: Entity Wide Security.

Exceedance Probability: "Probability that a given magnitude of an event will be equaled or exceeded." (**UNDHA**, *DM Glossary*, 1992, 36)

Exclusion Zone: See "Hot Zone."

Executive/Management Succession: "A predetermined plan for ensuring the continuity of authority, decision-making, and communication in the event that key members of senior management suddenly become incapacitated, or in the event that a crisis occurs while key members of senior management are unavailable.**"** (**DigitalCare**, *State of OR BC Wkshop*, 55)

Executive Agent: "An 'executive agent' is an individual who has been designated by his or her superior to act on behalf of that superior. This designation involves a delegation of authority from the superior to the selected subordinate. The executive agent may be limited to providing only administration and support or to coordinating common functions, or the executive agent may be delegated authority, direction, and control over specified resources for specified purposes." (**DHS**, *Fed. Cont. Direct. 1*, Nov 2007, P-4)

Executive Departments and Agencies: "Executive departments enumerated in 5 U.S.C. 101, along with DHS, independent establishments as defined by 5 U.S.C. § 104(1), Government corporations as defined by 5U.S.C. § 103(1), and the United States Postal Service." (**DHS**, *Fed. Cont. Direct. 1*, Nov 2007, P-4)

Executive Order 8248: *Establishing the Divisions of the Executive Office of the President and Defining Their Functions and Duties* (8 Sep1939). (**National Archives**, *EO 8248*, 8Sep39)

Pursuant to Executive Order 8248, the Office for Emergency Management was established in the Executive Office of the President by an administrative order of May 25, 1940. (**CRS**, *Federal Emergency Management and Homeland Security Organization: Historical Developments and Legislative Options*. June 1, 2006, 5, fn. 6)

Executive Order 8757 (May 20, 1941)**:** Established the Office of Civilian Defense within the Office of Emergency Management (which had been established in the Executive Office of the President on May 25, 1940.) (**Gessert**, *Federal Civil Defense Organization*, 1965, p. 60)

Executive Order 9134 (April 15, 1942): Expands the responsibilities of the Office of Civilian Defense. (**Gessert**, *Federal Civil Defense Organization*, 1965, p. 60)

Executive Order 9562 (June 30, 1945): Abolishes the Office of Civilian Defense (Germany signed an unconditional surrender on May 7, 1945). (**Gessert**, 1965, p. 61)

Executive Order 10186: *Establishing the Federal Civil Defense Administration in the Office for Emergency Management of the Executive Office of the President* (December 1, 1950)**:** Names Millard F. Caldwell as Administrator. (**National Archives**, *Federal Register, Executive Orders Disposition Tables: Harry S. Truman – 1950*)

Executive Order 10193: *Providing for the Conduct of the Mobilization Effort of the Government* (December 16, 1950): President Truman establishes Office of Defense Mobilization in the Executive Office of the President and assigns it the task of coordinating all mobilization activities of the Federal Government. (**Gessert** 1965, p. 66)

Executive Order 10221: *Providing for the Administration of Disaster Relief* (Federal Register, vol. 16, Mar 6, 1951, p. 2051). President "Truman issued an executive order delegating to the Housing and Home Finance Administrator (HHFA) emergency management authorities that had been delegated to the President under the Disaster Relief Act. These authorities included directing federal agencies to provide assistance and agency resources during any major disaster, coordinating these activities, proposing to the President related rules and regulations for his

issuance under the act, and proposing to the President annual and supplemental reports for his transmittal to Congress as provided for in the act. The HHFA administered disaster relief authorities until 1953, when the functions were turned over to the Federal Civil Defense Administration." (**CRS**, *Federal Emer. Mgmt. and* [HLS] *Organization: Historical Developments and Legislative Options*, 1June2006) [EO10221 revoked by EO 10427, 16Jan53]

Executive Order 10346: *Preparation by Federal Agencies of Civil Defense Emergency Plans*. (**White House** (President Harry S. Truman), April 17, 1952)

"In 1952, FCDA was given a key role in assisting federal agencies with planning for service provision and continued functioning during emergencies (now referred to as "continuity of operations"). President Truman issued an executive order directing federal departments and agencies to consult with FCDA and to "prepare plans for providing [their] personnel, materials, facilities, and services ... during ... a civil defense emergency" and plans for maintaining continuity of government during such a time." (**CRS**, *Federal Emergency Management and Homeland Security Organization: Historical Developments and Legislative Options*, 1Jun2006)

"…E.O. 10346 mandated that each federal department or agency should cooperate with the Federal Civil Defense Administration to prepare plans for providing its personnel, materials, facilities, and services during the existence of a Civil Defense Emergency….. The plans were to be designed to include continuity of department and agency operations and coordination of such arrangements with other national, state, and local civil defense plans. No consolidated emergency response plan appeared until 1958, with final issuance as a document signed by President Lyndon B. Johnson in 1964 under the auspices of the Office of Emergency Preparedness (originally, the Office of Emergency Management in WWII, and then the Office of Emergency Planning from 1958-61)." (**Cumming**, "The NSC's 1988 Staff Effort to Create a National Security Emergency Plan for Large Scale Domestic Events," *VLG Backgrounder,* 2005)

Executive Order 10421: *Providing for the Physical Security of Facilities Important to the National Defense*. (**White House**, President Harry S. Truman, December 31, 1952)

Executive Order 104273, 1953: *Administration of Disaster Relief*, January 16, 1953 [Revoked EO 10221 of 2Mar1951; was revoked by EO 11575, 31Dec1970.] (National Archives, Federal Register, Harry S. Truman – 1953) "At the Federal level, Executive Order 10427 issuede on January 16, 1953, gave FCDA responsibility for providing assistance to localities stricken by major disasters. This responsibility involved investigating and evaluating natural disasters in the States and recommending to the President whether or not the disaster was of sufficient magnitude to warrant Federal aid. The order named FCDA the coordinating agency for all Federal assistance, when authorized, to stricken areas." (**FCDA**, *1953 Annual Report*, p. 15)

Executive Order 10480: *Further Providing for the Administration of the Defense Mobilization Program*, 14 Aug 1953. [Revoked by EO 12148, July 20, 1979] (National Archives, EO 10480)

Executive Order 10660: *Providing for the Establishment of a National Defense Executive Reserve*. (**White House**, February 15, 1956)

Executive Order 10773: *Delegating and Transferring Certain Functions and Affairs to the Office of Defense and Civilian Mobilization*. (**White House**, President Dwight Eisenhower, July 1, 1958) President Eisenhower delegates all functions and responsibilities transferred to the President by Reorganization Plan No 1 of 1958 to the Office of Defense and Civilian Mobilization (later renamed the Office of Civil and Defense Mobilization). (**Gessert**, *Federal Civil Defense Organization*, 1965, p. 71; for copies of both, see Appendix 2 of *OCDM Annual Report 1959*, pp. 61-64, and Appendix 3, p. 65)

Executive Order 10782: *Amending Executive Order No. 10773 of July 1, 1958, Relating to Civil and Defense Mobilization*, 6 Sep1958. (**National Archives**, *Federal Register, Executive Orders Disposition Tables Dwight D. Eisenhower – 1958*)

Executive Order 10902: *Providing for the Issuance of Emergency Preparedness Orders by the Director of the Office of Civil and Defense Mobilization*. (**White House**, January 9, 1961; see also, **OCDM**, *Annual Report 1961*, pp. 8-10)

Executive Order 10952: *Assigning Civil Defense Responsibilities to the Secretary of Defense and Others*. (**White House**, President John F. Kennedy, July 20, 1961)

"This provided further for the later creation of the Office of Civil Defense by the transfer of certain property, facilities, personnel, and funds from the Office of Civil and Defense Mobilization to the Department of Defense, and for the reorganization of OCDM as a smaller advisory agency to be named the Office of Emergency Planning." Five days later he announces the civil defense reorganization during a televised address to the nation. (**Gessert**, *Federal Civil Defense Administration*, 1965, p. 73)

Functions transferred "included the development and execution of a fallout shelter program; a chemical, biological, and radiological warfare defense program; arrangements for warning or alerting federal military and civilian authorities, state officials, and the civilian population; various other communications functions; post-attack emergency assistance to states and localities; continuity of government plans; and funding for state civil defense needs. The Secretary of Defense was further tasked with planning for, and undertaking, postattack damage and hazard assessments and with arranging for the donation of federal surplus property as provided for in law. The Secretary of Defense established the Office of Civil Defense (OCD) to administer these functions.

"Although many operational civil defense functions were transferred to the Defense Department, the role of "coordinating ... civil defense preparations with other non-military defense preparations" remained in OCDM. Under E.O. 10952, OCDM was to "advise and assist the President" with

> (i) determining policy for, planning, directing, and coordinating the total civil defense program;
> (ii) reviewing and coordinating the civil defense activities among federal agencies and between federal agencies and the states and other countries;

(iii) determining appropriate civil defense roles of federal agencies and gaining state and local participation, mobilizing national support, evaluating program progress, and reporting to Congress on civil defense matters;
(iv) promoting and facilitating interstate civil defense compacts and reciprocal civil defense legislation; and
(v) assisting states with arranging for mutual civil defense aid with neighboring countries.

"The order also charged OCDM with developing plans, conducting programs, and coordinating preparations related to continuity of federal, state, and local governments in the event of an attack." (**CRS**, *Federal Emergency Management and Homeland Security Organization: Historical Developments and Legislative Options*, June 1, 2006)

Executive Order 10958: *Delegating Functions Respecting Civil Defense Stockpiles of Medical Supplies and Equipment and Food.* (**White House**, President John F. Kennedy, 14 Aug 1961)

"One month after issuing…executive order [10952], President Kennedy issued another executive order redelegating additional duties from OCDM. He delegated to the Secretary of Health, Education, and Welfare and the Secretary of Agriculture, respectively, certain medical stockpile and food stockpile functions contained in the Federal Civil Defense Act of 1950, and vested in the President by Reorganization Plan No. 1 of 1958." (**CRS**, *Federal Emer. Mgmt. and* [HLS] *Organization: Historical Developments and Legislative Options*, 1 June 2006)

Executive Order 10998, February 16, 1962: *Assigning Emergency Preparedness Functions to the Secretary of Agriculture*. "By virtue of the authority vested in me as President of the United States, including authority vested in me by Reorganization Plan No. 1 of 1958 (72 Stat. 1799), it is hereby ordered as follows: **SECTION 1. Scope.** The Secretary of Agriculture (hereinafter referred to as the Secretary) shall prepare national emergency plans and develop preparedness programs covering: Food resources, farm equipment, fertilizer, and food resource facilities, as defined below; rural fire control; defense against biological warfare, chemical warfare, and radiological fallout pertaining to agricultural activities; and rural defense information and education. These plans and programs shall be designed to develop a state of readiness in these areas with respect to all conditions of national emergency, including attack upon the United States." (**White House**, President John F. Kennedy)

Executive Order 11001: *Assigning Emergency Preparedness Functions to the Secretary of Health, Education, and Welfare.* February 16, 1962. "…assigned the United States Public Health Service of the Department of Health, Education, and Welfare primary responsibility for developing and coordinating programs for the prevention, detection and identificatin of human exposure to, or contamination of foods and drugs with, toxic chemicals or giologicals that might be used in an attack upon the United States." (**OCD**, *Annual Report 1962*, pp. 53-54; see also: **White House**, *Executive Order 1100*, February 16, 1962)

Executive Order 11051: *Prescribing Responsibilities of the Office of Emergency Planning in the Executive Office of the President.* (**White House**, President John F. Kennedy, 27 Sep 1962)

"WHEREAS national preparedness must be achieved and maintained to support such varying degrees of mobilization as may be required to deal with increases in international tension, with

limited war, or with general war including attack upon the United States; and WHEREAS the national security and our continuing economic growth and prosperity are interdependent, appropriate attention must be directed to effective coordination of emergency preparedness measures with national economic policies and objectives; and WHEREAS mobilization readiness and civil defense activities can be accomplished most effectively and efficiently through the performance by departments and agencies of the Government of those emergency preparedness functions related to their established roles and capabilities; and WHEREAS responsibility for emergency preparedness involves virtually every agency of the Federal Government, and there is need to provide a central point of leadership and coordination in the Executive Office of the President: NOW, THEREFORE, by virtue of the authority vested in me as President of the United States, including the authorities contained in the National Security Act of 1947, the Defense Production Act of 1950 (50 U.S.C. App. 2061 et seq.), the Federal Civil Defense Act of 1950 (50 U.S.C. App. 2251 et seq.), and other authorities of law vested in me pursuant to Reorganization Plan No. 1 of 1958 (72 Stat. 1799), and also including the authority vested in me by the provisions of Section 301 of title 3 of the United States Code, it is hereby ordered as follows: PART I. SCOPE, SECTION 101. Resume of responsibilities. The Director of the Office of Emergency Planning (hereinafter referred to as the Director) shall:
(a) Advise and assist the President in the coordination of and in the determination of policy for the emergency plans and preparedness assignments of the Federal departments and agencies (hereinafter referred to as Federal agencies) designed to make possible at Federal, State and local levels the mobilization of the human, natural and industrial resources of the nation to meet all conditions of national emergency, including attack on the United States.
(b) Under the direction of the President, be responsible for the preparation of nonmilitary plans and preparedness programs with respect to organization and functioning of the Federal Government under emergency conditions and with respect to specific areas of Federal activity necessary in time of war which are neither performed in the normal operations of the regular departments and agencies nor assigned thereto by or under the authority of the President." (**White House**, John F. Kennedy, *EO 11051*, 27 Sep 1962)

Executive Order 11179: *Providing for the National Defense Executive Reserve*, 22 Sep 1964. (**National Archives**, *Federal Register, EO 11179*)

Executive Order 11490: *Assigning Emergency Preparedness Functions to Federal Departments and Agencies.* (Federal Register page and date: 34 FR 17567; October 30, 1969): "WHEREAS our national security is dependent upon our ability to assure continuity of government, at every level, in any national emergency type situation that might conceivably confront the nation; and
WHEREAS effective national preparedness planning to meet such an emergency, including a massive nuclear attack, is essential to our national survival; and
WHEREAS effective national preparedness planning requires the identification of functions that would have to be performed during such an emergency, the assignment of responsibility for developing plans for performing these functions, and the assignment of responsibility for developing
the capability to implement those plans; and
WHEREAS the Congress has directed the development of such national emergency preparedness plans and has provided funds for the accomplishment thereof; and

WHEREAS this national emergency preparedness planning activity has been an established program of the United States Government for more than twenty years:

NOW, THEREFORE, by virtue of the authority vested in me as President of the United States, and pursuant to Reorganization Plan No. 1 of 1958 (72 Stat. 1799), the National Security Act of 1947, as amended, the Defense Production Act of 1950, as amended, and the Federal Civil Defense Act, as amended, it is hereby ordered as follows….

SEC.1O2 Scope.

(a) This order is concerned with the emergency national planning and preparedness functions of the several departments and agencies of the Federal Government which complement the military readiness planning responsibilities of the Department of Defense; together, these measures provide the basic foundation for our overall national preparedness posture, and are fundamental to our ability to survive.

(b) The departments and agencies of the Federal Government are hereby severally charged with the duty of assuring the continuity of the Federal Government in any national emergency type situation that might confront the nation. To this end, each department and agency with essential functions, whether expressly identified in this order or not, shall develop such plans and take such actions, including but not limited to those specified in this order, as may be necessary to assure that it will be able to perform its essential functions, and continue as a viable part of the Federal Government, during any emergency that might conceivably occur. These include plans for maintaining the continuity of essential functions of the department or agency at the seat of government and elsewhere, through programs concerned with:

(1) succession to office;
(2) predelegation of emergency authority;
(3) safekeeping of essential records;
(4) emergency relocation sites supported by communications and required services;
(5) emergency action steps;
(6) alternate headquarters or command facilities; and
(7) protection of Government resources, facilities, and personnel. The continuity of Government activities undertaken by the departments and agencies shall be in accordance with guidance provided by, and subject to evaluation by, the Director of the Office of Emergency Preparedness.

(c) In addition to the activities indicated above, the heads of departments and agencies described in Parts 2 through 29 of this order shall:

(1) prepare national emergency plans, develop preparedness programs, and attain an appropriate state of readiness with respect to the functions assigned to them in this order for all conditions of national emergency;
(2) give appropriate consideration to emergency preparedness factors in the conduct of the regular functions of their agencies, particularly those functions considered essential in time of emergency, and
(3) be prepared to implement, in the event of an emergency, all appropriate plans developed under this order…." (**White House**, October 28, 1969)

[Note: Revoked and replaced by Executive Order 12656, November 18, 1988, *Assignment of Emergency Preparedness Responsibilities* (**White House** (President Ronald Reagan) 18Nov88).]

Executive Order 11495: *Providing for the Administration of the Disaster Relief Act of 1969*. November 18, 1969. [Revoked on December 31, 1970 by EO 11575.] (**National Archives**, *Federal Register, Executive Orders Disposition Table, Richard Nixon-1969*)

"Under the order, OEP was given the authority to allocate road repair and reconstruction money; to provide timber-removal grants to states; to provide assistance, including grants, to states to develop relief plans and programs; to appoint a federal coordinating officer for a major disaster area; to provide temporary housing for displaced persons; to provide assistance to individuals who had lost employment due to a major disaster; to make grants and loans to states for fire suppression; to make grants to states and localities for debris removal; and to prescribe rules and regulations as needed. The order delegated authority related to the distribution of food and food coupons to the Secretary of Agriculture." (**CRS**, *Federal Emergency Mgmt. and Homeland Security Organization: Historical Developments and Legislative Options*, 1June2006, pp. 11-12)

Executive Order 11725: *Transfer of Certain Functions of the Office of Emergency Preparedness*. (**National Archives**, *Federal Register, EO 11725* (President Nixon), June 27, 1973)

Reorganization Plan No. 1 of 1973 "…went into effect on July 1, 1973, [and] transferred certain functions out of the EOP [Executive Office of the President]. Among other provisions, the plan abolished OEP [Office of Emergency Planning], and nearly all functions previously vested in that office or its director were transferred to the President. The plan also abolished the Civil Defense Advisory Council, which had been established in 1950. In his message accompanying the plan, President Nixon stated his intent to delegate the transferred functions to the Department of Housing and Urban Development (HUD), the General Services Administration (GSA), and the Department of the Treasury, and he did so by executive order [EO 11725] at the time the plan went into effect. Functions delegated to HUD included those relating to preparedness for, and relief of, civil emergencies and disasters. The Federal Disaster Assistance Administration (FDAA) was established in HUD to administer disaster relief. GSA was given responsibilities related to continuity of government in the event of a military attack, to resource mobilization, and to management of national security stockpiles — duties assigned to the Office of Preparedness, later renamed the Federal Preparedness Agency, within GSA. The Treasury Department was given responsibility for investigations of imports that might threaten national security." (**CRS**, *Federal Emergency Mgmt. and Homeland Security Organization: Historical Developments and Legislative Options*, 1 June 2006, p. 12)

Executive Order 11988: Floodplain Management: "Executive Order 11988 requires federal agencies to avoid to the extent possible the long and short-term adverse impacts associated with the occupancy and modification of flood plains and to avoid direct and indirect support of floodplain development wherever there is a practicable alternative. In accomplishing this objective, "each agency shall provide leadership and shall take action to reduce the risk of flood loss, to minimize the impact of floods on human safety, health, and welfare, and to restore and preserve the natural and beneficial values served by flood plains in carrying out its responsibilities" for the following actions:

- acquiring, managing, and disposing of federal lands and facilities;
- providing federally-undertaken, financed, or assisted construction and improvements;

- conducting federal activities and programs affecting land use, including but not limited to water and related land resources planning, regulation, and licensing activities.

Summary of Requirements -- The guidelines address an eight-step process that agencies should carry out as part of their decision-making on projects that have potential impacts to or within the floodplain. The eight steps…reflect the decision-making process required in Section 2(a) of the Order.

- Determine if a proposed action is in the base floodplain (that area which has a one percent or greater chance of flooding in any given year).
- Conduct early public review, including public notice.
- Identify and evaluate practicable alternatives to locating in the base floodplain, including alterative sites outside of the floodplain.
- Identify impacts of the proposed action.
- If impacts cannot be avoided, develop measures to minimize the impacts and restore and preserve the floodplain, as appropriate.
- Reevaluate alternatives.
- Present the findings and a public explanation.
- Implement the action." (**FEMA**, "Executive Order 11988: Floodplain Management")

Executive Order 11988: "This EO requires the Corps to provide leadership and take action to: (1) avoid development in the base (100-year) flood plain unless it is the only practicable alternative; (2) reduce the hazards and risk associated with floods; (3) minimize the impact of floods on human safety, health and welfare; and (4) restore and preserve the natural and beneficial values of the base flood plain. In this regard, the policy of the Corps is to formulate projects which, to the extent possible, avoid or minimize adverse impacts associated with use of the base flood plain and avoid inducing development in the base flood plain unless there is no practicable alternative for the development. (**USACE**, *Water Resources Policies and Authorities…*, 1999, 13-1)

Executive Order 12127: *Federal Emergency Management Agency*.

"On March 31, 1979, President Carter issued an executive order putting Reorganization Plan No. 3 of 1978 into effect.[47] FEMA was established as an independent agency, as of April 1, and some transfers were completed at that time. The order transferred certain functions to FEMA from the Department of Commerce (fire prevention and control, certain Emergency Broadcast System functions); the Department of Housing and Urban Development (flood insurance); and the President (other Emergency Broadcast System functions)." (**CRS**, *Federal Emer. Mgmt. and Homeland Security Organization: Historical Developments and Legislative Options*, 1Jun06, 14)

Executive Order 12148: *Federal Emergency Management*, July 20, 1979, as amended. (**National Archives**, *Federal Register: Executive Order 12148* (President Carter))

"In July, the President issued a second executive order [EO 12127 was 1st] that transferred to FEMA additional functions from the Departments of Defense (civil defense) and Housing and Urban Development (federal disaster assistance), GSA (federal preparedness), and the Office of Science and Technology Policy (earthquake hazards reduction). The order also authorized

FEMA to coordinate "all civil defense and civil emergency planning, management, mitigation, and assistance functions," in addition to dam safety, "natural and nuclear disaster warning systems," and "preparedness and planning to reduce the consequences of major terrorist incidents." In addition, the order mandated establishment of the Federal Emergency Management Council, composed of FEMA and Office of Management and Budget Directors, and others as assigned by the President." (**CRS**, *Federal Emergency Management and Homeland Security Organization: Historical Developments and Legislative Options*, 1 June 2006, p. 14)

EO 12148 "…designates FEMA as the lead federal agency for coordination and direction of Federal disaster relief, emergency assistance, and emergency preparedness. The order also delegates to FEMA the President's relief and assistance authority under the Stafford Act, with the exception of the declaration of a major disaster or emergency." (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, p. 71)

[Note: "All functions vested in the President that have been delegated or assigned to the Defense Civil Preparedness Agency, Department of Defense, are transferred or reassigned to the Director of the Federal Emergency Management Agency." (E.O. Section 1-101)

Executive Order 12333: *United States Intelligence Activities*. (**WH**, Ronald Reagan, 4Dec1981)

Executive Order 12472. *Assignment of National Security and Emergency Preparedness Telecommunications Functions*, April 3, 1984.

Executive Order 12580: *Superfund Implementation.* White House, January 23, 1987.

Executive Order 12656: "Executive Order 12656, *Assignment of Emergency Preparedness Responsibilities*, November 18, 1988, as amended, assigns lead and support responsibilities to each of the Federal agencies for national security emergency preparedness. Amendment designates Department of Homeland Security as the lead agency for coordinating programs and plans among all Federal departments and agencies." (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, p. 71)

Executive Order 13231: *Critical Infrastructure Protection in the Information Age*, October 16, 2001. (**White House**) EO 13231 "established the President's Critical Infrastructure Protection Board and authorized a protection program to secure information systems for critical infrastructure, including emergency preparedness communications, and the physical assets that support such systems." (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. A-3)

Executive Order 13286: *Executive Order Amendment of Executive Orders, and Other Actions, in Connection with the Transfer of Certain Functions to the Secretary of Homeland Security*. February 28, 2003.

Executive Order 13295: *Revised List of Quarantinable Communicable Diseases*. April 4, 2003.

Executive Order 13311: *Homeland Security Information Sharing*. July 29, 2003.

Executive Order 13347: *Individuals with Disabilities in Emergency Preparedness*. 22July2004.

Executive Order 13356: *Strengthening the Sharing of Terrorism Information to Protect Americans*, August 27, 2004. (**White House**)

Executive Order 13390: *Establishment of a Coordinator of Federal Support for the Recovery and Rebuilding of the Gulf Coast Region*. (**White House**, November 1, 2005)

Executive Order 13407: *Public Alert and Warning System* (June 26, 2006).

Executive Order 13407 Policy (*Public Alert and Warning System*, June 26, 2006):
"It is the policy of the United States to have an effective, reliable, integrated, flexible, and comprehensive system to alert and warn the American people in situations of war, terrorist attack, natural disaster, or other hazards to public safety and well-being (public alert and warning system), taking appropriate account of the functions, capabilities, and needs of the private sector and of all levels of government in our Federal system, and to ensure that under all conditions the President can communicate with the American people." (**FEMA**, *IPAWS Update*, 2007, slide 6)

Executive Order 13407 Requirements (*Public Alert and Warning System*, June 26, 2006):

- Inventory, evaluate, and assess public alert and warning capabilities
- Adopt standards and operating procedures for public alert & warning
- Enable secure delivery of messages through many pathways
- Adapt distribution/content based on location, risks, or user preferences

- Alert those with disabilities and those without English proficiency
- Maintain/protect/restore public alert and warning system infrastructure
- Test, train, and exercise the public alert and warning system
- Conduct public education
- Coordinate with the private sector, local government, and first responders
- Administer the Emergency Alert System (EAS)
- Ensure that under all conditions the President can alert the public." (**FEMA**, *IPAWS Update*, 2007, slide 7)

Executive Order 13434: *National Security Professional Development*. (**White House**, 17May07)

Executive Order 13442: "Amending the Order of Succession in the Department of Homeland Security," issued by President George W. Bush on August 13, 2007. (**White House**)

Exercise: "A people focused activity designed to execute business continuity plans and evaluate the individual and/or organization performance against approved standards or objectives. Exercises can be announced or unannounced, and are performed for the purpose of training and conditioning team members, and validating the business continuity plan.
Exercise results identify plan gaps and limitations and are used to improve and revise the Business Continuity Plans.Types of exercises include: Table Top Exercise, Simulation Exercise, Operational Exercise, Mock Disaster, Desktop Exercise, Full Rehearsal." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 55)

Exercise: "An exercise is an instrument to train for, assess, practice, and improve performance in *prevention*, *protection*, *response*, and *recovery capabilities* in a risk-free environment. Exercises can be used for: testing and validating policies, plans, procedures, training, equipment, and interagency agreements; clarifying and training personnel in roles and responsibilities; improving interagency coordination and communications; identifying gaps in resources; improving individual performance; and identifying opportunities for improvement. (Note: an exercise is also an excellent way to demonstrate community resolve to prepare for disastrous events)." (**FEMA**, *HSEEP Glossary*, 2008)

Exercise: "A planned, staged implementation of the critical incident plan to evaluate processes that work and identify those needing improvement. Exercises may be classified as Orientation, Tabletop, Functional, or Full-scale and involve scenarios to respond to and resolve the assessed risks. See definitions of exercise types. (**Jones**, *Critical Incident* Protocol, 2000, 37)

Exercise Design: "Think of design as the framework of an exercise, and development as the building of that exercise. Exercise design includes:
- Assessing exercise needs.
- Defining the scope of the exercise.
- Writing a statement of purpose.
- Defining exercise objectives.
- Creating a scenario for the exercise." (**FEMA**, IS-120A, *Intro to Exercises*, 23Jan08, 30)

Exercise Design Process: "The exercise design process includes the following steps:
• Identify priority capabilities for improvement through exercises
• Select corresponding tasks for assessment
• Define exercise objectives based on capabilities, tasks, and jurisdiction needs
• Create a jurisdiction-specific scenario formulated specifically to meet exercise objectives."
(**DHS**, *Target Capabilities List*, 2007, p. 15)

Exercise Development: Includes:
- Creating exercise documentation.
- Arranging logistics, actors, and safety.
- Coordinating participants and media.
- Other supporting planning tasks (e.g., training controllers, evaluators, and exercise staff). (**FEMA**, IS-120A, *Intro to Exercises*, 23Jan08, 30)

Exercise Director: "The exercise director oversees all exercise functions during exercise conduct; oversees and remains in contact with *controllers* and *evaluators*; *debriefs* controllers and evaluators following the exercise; and oversees setup and cleanup of exercise and positioning of controllers and evaluators." (**FEMA**, *HSEEP Glossary*, 2008)

Exercise Evaluation Guides (EEGs): "Exercise Evaluation Guides (EEGs) help evaluators collect and interpret relevant exercise observations. EEGs provide evaluators with information on what tasks they should expect to see accomplished during an exercise, space to record observations, and questions to address after the exercise as a first step in the analysis process. In order to assist entities in exercise evaluation, standardized EEGs have been created that reflect capabilities-based planning tools, such as the Target Capabilities List (TCL) and the Universal Task List (UTL). The EEGs are not meant as report cards. Rather, they are intended to guide an evaluator's observations so that the evaluator focuses on capabilities and tasks relevant to exercise objectives to support development of the After Action Report/Improvement Plan (AAR/IP)." (**FEMA**, *About HSEEP*, 2008)

Exercise Evaluation Guides (EEGs): "Exercise Evaluation Guides (EEGs) provide evaluators with a checklist of critical tasks to be completed by participants during an exercise. EEGs contain the information to be discussed by participants, space to record evaluator observations, and questions to consider after the exercise." (**FEMA**, IS-120.A, *An Intro to Ex.*, 23Jan2008, 35)

Exercise Lead Planner/Director: "The Lead Exercise Planner (aka the Exercise Director) has complete management responsibility, assigning tasks to team members and ensuring the successful execution of the exercise." (**FEMA**, IS-120 A, *An Intro to Exercises*, 23Jan2008, 23)

Exercise Library Evaluation Guide: "An online reference library of exercise evaluation information including links to evaluator training programs, exercise evaluation documents such as the Homeland Security Exercise and Evaluation Program (HSEEP) After-Action Report/Improvement Plan (AAR/IP) Template, and other resources. An online Exercise Evaluation Guide (EEG) repository, where exercise planners, evaluators, and participants can access and download the latest versions of the HSEEP EEGs. An **EEG Builder tool**, allowing Lead Exercise Evaluators to create custom Homeland Security Exercise and Evaluation Program

(HSEEP)-compliant EEGs tailored to their specific exercise needs. (**DHS**, *Welcome to the Exercise Evaluation Guide Library*)

Exercise Mission Areas: "Most exercises focus on one of the following mission areas:

- Prevention
- Protection
- Response
- Recovery" (**FEMA**, IS-120 A, *An Introduction to Exercises*, 2008, p. 31)

Exercise Needs Assessment: "A comprehensive exercise program will already have evaluated its organization's capabilities. Referring to and updating that assessment is an important step whenever a new exercise is considered for development. The needs assessment will identify:

- Functions most requiring rehearsal.
- Potential exercise participants.
- Existing exercise requirements and capabilities.
- Plausible hazards and the priority levels of those hazards." (**FEMA**, IS-120 A, *Intro to Ex.*, 2008, p. 31)

Exercise Plan (ExPlan): "The Exercise Plan (ExPlan), typically used for operations-based exercises, provides a synopsis of the exercise and is published and distributed to players and observers prior to the start of the exercise. The ExPlan includes the exercise objectives and scope, safety procedures, and logistical considerations such as an exercise schedule. The ExPlan does not contain detailed scenario information." (**FEMA**, *About HSEEP*, 2008)

Exercise Plan (ExPlan): "ExPlans are general information documents that help *operations-based* exercises run smoothly. They are published and distributed prior to the start of exercise and provide a synopsis of the exercise. In addition to addressing exercise *objectives* and *scope*, ExPlans assign activities and responsibilities for successful exercise execution. They enable *participants* to understand their roles and responsibilities in *exercise planning*, execution, and *evaluation*. The ExPlan is intended for use by exercise *players* and *observers*—therefore, it does not contain detailed *scenario* information that may reduce the realism of the *tasks* to be performed. Players and observers should review all elements of the ExPlan prior to exercise participation." (**FEMA**, *HSEEP Glossary*, 2008)

Exercise Planning Conferences: "Planning Conferences are the official meetings held by the planning team to develop and coordinate an exercise. The conferences provide an opportunity for the team to:

- Define the exercise purpose and objectives.
- Develop the scenario.
- Coordinate logistics.
- Track design and development progress.
- Troubleshoot design or development problems.

The scope, type, size, and complexity of the exercise determine the type and number of conferences the planning team decides to conduct." (**FEMA**, IS-120 A, *Intro to Ex.*, 2008, p. 25)

Exercise Planning Team: "The exercise planning team is responsible for all aspects of an exercise, including *exercise planning*, conduct, and *evaluation*. The planning team determines exercise *capabilities*, *tasks* and *objectives*; tailors the scenario to jurisdictional needs; and develops documents used in exercise simulation, control, and evaluation. The exercise planning team should be comprised of representatives from each major participating jurisdiction and agency, but be kept to a manageable size. While jurisdictions may find it advantageous to include team members with previous exercise planning experience, membership can be modified to fit the type or *scope* of an exercise. Planning team members are ideal selections for *controller* and *evaluator* positions during the exercise because advanced scenario knowledge renders them ineligible to participate as players. A *lead exercise planner* manages the exercise planning team, which can be structured using the principles of the Incident Command System (ICS), with the following sections:

- The **Command Staff** is responsible for coordinating all exercise planning activities. Within this group is the lead exercise planner, who assigns exercise activities and responsibilities, provides guidance, establishes timelines, and monitors the development process. The safety controller and the liaison coordinator report directly to the lead exercise planner.
- The **Planning Section** is responsible for compiling and developing all exercise documentation. To accomplish this effectively, the Planning Section also collects and reviews policies, plans, and procedures that will be tested in the exercise. During the exercise, the Planning Section may be responsible for developing simulated actions by agencies not participating in the exercise and setting up a *SimCell* for exercises that necessitate one (such as *FEs*).

- The **Logistics Section** provides the supplies, materials, facilities, and services that enable the exercise to function smoothly without outside interference or disruption. This group consists of two subsections: service and support. The service section provides transportation, barricading, signage, food and drinks, real-life medical capability, and exercise-site perimeter security. The support section provides communications, purchasing, general supplies, very important personnel (VIP) / *observer* processing, and recruitment/management of *actors*.

- The **Administration/Finance Section** provides grant management and administrative support throughout exercise development. This group is also responsible for the registration process and coordinates schedules for the exercise planning team, the lead exercise planner, participating agencies, and the host community or communities.

- The **Operations Section** provides most of the technical or functional expertise for the participating agencies or jurisdictions. This group develops *scenarios*, selects evaluation tools, and has personnel with the expertise necessary to serve as evaluators." (**FEMA**, *HSEEP Glossary*, 2008)

Exercise Planning Team: Every exercise requires an Exercise Planning Team – the core group responsible for the design, development, conduct, and evaluation of an exercise. A team consists of a Lead Planner and planning team members. The Exercise Planning Team:

- Determines exercise objectives.
- Creates the scenario.
- Develops exercise documentation.
- Conducts pre-exercise briefing and training sessions.

Because of their high level of involvement, planning team members are ideal selections for exercise controller and evaluator positions. As a general rule, however, they do not participate as players." (**FEMA**, IS-120 A, *An Introduction to Exercises*, 23 Jan 2008, p. 23)

"The Exercise Planning Team should be assembled from key participating agencies, organizations and jurisdictions. The scope and type of exercise or scenario should also help determine the team's membership." (Ibid, 24)

Exercise Play Area: "The exercise play area is the site or facility where the bulk of tactical player activities and *tasks* are demonstrated during an *operations-based* exercise." (**FEMA**, *HSEEP Glossary*, 2008)

Exercise Play Rules: "Exercise play rules are the parameters that exercise participants follow during the exercise. Exercise play rules describe appropriate exercise behavior, particularly in the case of real-world emergencies." (**FEMA**, *HSEEP Glossary*, 2008)

Exercise Program Management: "Exercise program management consists of the functions required for a jurisdiction or entity to sustain a variety of exercises targeted toward preparedness priorities, on an ongoing basis. It includes project management, budgeting, grant management, staff hiring, funding allocation, and expenditure tracking. Program management functions cyclically. First, a *Multi-Year Training and Exercise Plan* is developed in consideration of a jurisdiction's preparedness priorities. Next, specific exercises are carried out according to the multi-year plan's timelines and milestones. Finally, IP [Improvement Plan] corrective actions identified in the exercises are taken into account when developing priorities for the next multi-year plan. Responsibilities for these *tasks* are complementary and require that all relevant parties collaborate to successfully administer exercises." (**FEMA**, *HSEEP Glossary*, 2008)

Exercise Program Manager: "The exercise program manager develops a self-sustaining *HSEEP* through program budget management oversight, exercise conduct, and improvement tracking monitoring and reporting." (**FEMA**, *Homeland Security Exercise and Evaluation Program Glossary*, 2008)

Exercise Project Management: "Exercise project management is the next step after program management. In this step, project managers are responsible for the design, development, and execution of a specific exercise, followed by evaluation and improvement planning. Good project management involves:

- Developing a project management timeline.
- Establishing project milestones.
- Identifying the exercise planning team.
- Scheduling planning conferences." (**FEMA**, IS-120 A, *An Intro. to Ex.*, 23 Jan 2008, p. 22)

Exercise Scenario: "Scenario – A sequential, narrative account of a hypothetical incident or accident. The scenario provides the catalyst for the exercise and is intended to introduce situations that will stimulate player response(s)." (**DHS**, *Cyber Storm Exercise Report*, 2006, p. 4, footnote 5)

Exercise Scenario: "A scenario is the storyline that drives an exercise…. Scenarios should be:
- Threat-based and performance-based.
- Realistic.
- Challenging—but not so demanding that participants become overwhelmed.

A scenario should involve the participants, the threat, and the area identified in the scope." (**FEMA**, IS-120 A, *An Introduction to Exercises*, 23 Jan 2008, p. 33)

Exercise Scenario Narrative: "Scenario narratives should be designed to engage exercise participants in a way that approximates real-world responses to emergencies.
At a minimum, the narrative should address these questions:
- Where does the initiating event take place?
- How dangerous and persistent is the emergency?
- What is the impact of the incident?
- What time of day does the event take place?
- What is the sequence of events?
- What other factors would influence emergency procedures?" (**FEMA**, IS-120 A, *An Introduction to Exercises*, 23 Jan 2008, p. 34)

Exercise Scope: "Most often, scope defines the kind, rather than number, of exercise participants (i.e., levels of government/ private sector). Other interpretations include:
- Geographic size (local, national, regional).
- Number of participants.
- Responder functions.
- Hazard Type.

Exercise planners must be careful to make their scope manageable (neither too large nor too complex), selecting only those participants or actions best suited for the exercise program, type, budget, and objectives." (**FEMA**, IS-120 A, *An Introduction to Exercises*, 23 Jan 2008, p. 31)

Exercise Series: "This cycle includes exercises held at increasing levels of complexity and annual reviews of program objectives to ensure objectives are met. Multiple exercises are designed in sequence using the *building-block approach*, aimed at achieving a greater capability (e.g., a seminar that leads to a *TTX* [Tabletop Exercise], which leads to a *FE* [Full-Scale Exercise])." (**FEMA**, *Homeland Security Exercise and Evaluation Program Glossary*, 2008)

Exercise Setup: "Exercise setup involves the pre-staging and dispersal of exercise materials. It includes registration materials, documentation, signage, and other equipment, as appropriate." (**FEMA**, *Homeland Security Exercise and Evaluation Program Glossary*, 2008)

Exercise Timeline: "Exercise project managers build timelines to include:
- A schedule of key conferences and milestones.
- A Master Task List.

• Planning team task assignments." (**FEMA**, IS-120 A, *An Intro to Exercises*, 23Jan08, 23)

Exercise Types:
Discussion-Based Exercises: "Discussion-based exercises familiarize participants with current plans, policies, agreements, and procedures. These exercises may also be used to develop new plans, policies, agreements, and procedures. Types of discussion-based exercises include the following:

- *Seminar.* A seminar is an informal discussion, designed to orient participants to new or updated plans, policies, or procedures (e.g., a seminar to review a new Evacuation Standard Operating Procedure).
- *Workshop.* A workshop resembles a seminar, but is employed to build specific products, such as a draft plan or policy (e.g., a Training and Exercise Plan Workshop is used to develop a Multi-year Training and Exercise Plan).
- *Tabletop Exercise (TTX).* A tabletop exercise involves key personnel discussing simulated scenarios in an informal setting. TTXs can be used to assess plans, policies, and procedures.
- *Game.* A game is a simulation of operations that often involves two or more teams, usually in a competitive environment, using rules, data, and procedure designed to depict an actual or assumed real-life situation." (**DHS**, *FCD 1*, Nov. 2007, p. K-2)

Exercise Types:
"*Drill*: A coordinated, supervised activity usually used to test a single specific operation or function in a single agency. Drills are commonly used to provide training on new equipment, develop or test new policies or procedures, or practice and maintain current skills. Typical attributes include the following: A narrow focus, measured against established standards; Instant feedback; Performance in isolation; Realistic environment.

Full Scale Exercise (FSE): A multi-agency, multi-jurisdictional, multi-organizational activity that tests many facets of preparedness. They focus on implementing and analyzing the plans, policies, procedures, and cooperative agreements developed in discussion-based exercises and honed in previous, smaller, operations-based exercises. In FSEs, the reality of operations in multiple functional areas presents complex and realistic problems that require critical thinking, rapid problem solving, and effective responses by trained personnel. During FSEs, events are projected through a scripted exercise scenario with built-in flexibility to allow updates to drive activity. FSEs are conducted in a real-time, stressful environment that closely mirrors real events.

Functional Exercise (FE): An activity designed to test and evaluate individual capabilities, multiple functions, activities within a function, or interdependent groups of functions. Events are projected through an exercise scenario with event updates that drive activity at the management level. An FE simulates the reality of operations in a functional area by presenting complex and realistic problems that require rapid and effective responses by trained personnel in a highly stressful environment.

Tabletop Exercise (TTX): An activity that involves key personnel discussing simulated scenarios in an informal setting. This type of exercise can be used to assess plans, policies, and procedures or to assess the systems needed to guide the prevention of, response to, and recovery from a

defined incident. TTXs typically are aimed at facilitating understanding of concepts, identifying strengths and shortfalls, and achieving changes in attitude. Participants are encouraged to discuss issues in depth and develop decisions through slow-paced problem solving, rather than the rapid, spontaneous decision making that occurs under actual or simulated emergency conditions." (**FEMA**, *NIMS Compliance Metrics Terms of Reference* (For FY 2007), Oct.23, 2006, pp. 3-4)

[Note: See, also, "Emergency Operations Simulation," and "Total Systems Exercises".]

Exercise Types: "There are seven types of exercises in the building block approach. Each exercise type falls into one of two categories. The two categories of exercises are Discussion-based exercises and Operations-based exercises… Discussion-based exercises, as the name suggests, center on participant discussion… Operations-based exercises focus on action-oriented activities such as deployment of resources and personnel." (**FEMA**, IS-120.A, *An Introduction to Exercises*, 23 Jan 2008, p. 7)

- Discussion-Based
  - Seminars
  - Workshops
  - Tabletop
  - Games
- Operations Based
  - Drills
  - Functional Exercises
  - Full-Scale." (Ibid, 8-11)

Exercise Types: "…discussion-based and operations-based exercises differ in their complexity and in their planning processes. There are key differences in how the two types of exercises are conducted as well. Conduct characteristics differ principally in:

- Time.
- Venue.
- Equipment.
- Number of participants and participant activities.
- Number of planning team members and their activities.

Operations-based exercises usually require additional logistical considerations such as providing blankets for victim actors in case they have to lie on the ground for a long time, or ensuring that roads will be closed to normal traffic at the exercise venue." (**FEMA**, IS-120.A, *An Introduction to Exercises*, 23 Jan 2008, p. 39)

Exercises: "Exercises provide opportunities to test plans and improve proficiency in a risk-free environment. Exercises assess and validate proficiency levels. They also clarify and familiarize personnel with roles and responsibilities. Well-designed exercises improve interagency coordination and communications, highlight capability gaps, and identify opportunities for improvement. Exercises should:

- Include multidisciplinary, multijurisdictional incidents.
- Include participation of private-sector and nongovernmental organizations.
- Cover aspects of preparedness plans, particularly the processes and procedures for activating local, intrastate, or interstate mutual aid and assistance agreements.

• Contain a mechanism for incorporating corrective actions." (**DHS**, *NRF*, Jan 2008, 31)

Exercises: "Exercises provide opportunities to practice and test…capabilities and to improve and maintain proficiency in a controlled environment. Exercises assess and validate policies, plans, and procedures, and clarify and familiarize personnel with roles and responsibilities. Exercises improve interagency coordination and communication, highlight gaps, and identify opportunities for improvement." (**FEMA**, *Basic Guidance for PIOs*, Nov 2007, p. 5)

Exercises, Evaluations, and Corrective Actions Capability Elements (TCL): "Exercises, self-assessments, peer-assessments, outside review, compliance monitoring, and actual major events that provide opportunities to demonstrate, evaluate, and improve the combined capability and interoperability of the other elements to perform assigned missions and tasks to standards necessary to achieve successful outcomes." (**DHS**, *TCL*, 2007, p. 9)

Excess-of-loss (XOL) Catastrophe Reinsurance Contracts: "…contracts…proposed by the Clinton Administration [which] would provide per-occurrence excess-of-loss reinsurance coverage to private insurers and reinsurers, where both the coverage layer and the fixed payout of the contract are based on insurance industry losses, not company losses. In financial terms, the Federal government would be selling earthquake and hurricane catastrophe call options to the insurance industry to cover catastrophic losses in a loss layer above that currently available in the private reinsurance market. The contracts would be sold annually at auction, with a reservation price designed to avoid a government subsidy and ensure that the program would be self supporting in expected value. If a loss were to occur that resulted in payouts in excess of the premiums collected under the policies, the Federal government would use its ability to borrow at the risk-free rate to fund the losses. During periods when the accumulated premiums paid into the program exceed the losses paid, the buyers of the contracts implicitly would be lending money to the Treasury, reducing the costs of government debt. The expected interest on these "loans" offsets the expected financing (borrowing) costs of the program as long as the contracts are priced appropriately. By accessing the Federal government's superior ability to diversify risk inter-temporally, the contracts could be sold at a rate lower than would be required in conventional reinsurance markets, which would potentially require a high cost of capital due to the possibility that a major catastrophe could bankrupt some reinsurers. By pricing the contacts at least to break even, the program would provide for eventual private-market "crowding out" through catastrophe derivatives and other innovative catastrophic risk financing mechanisms." (**Cummins**, *Pricing Excess-of-loss Reinsurance Contracts Against…,* 1998, 1)

Exigent Circumstances: "Circumstances that may include the existence of a threat to public health or public safety or other unique circumstances that warrant immediate action." (**DHS**, *Chemical-terrorism Vulnerability Information Glossary*, November 2007, p. 2)

Expanded Regional Collaboration, National Preparedness Guidelines Priority # 1: "Major events, especially terrorism, will invariably have cross-geographic consequences and impact. The expanded regional collaboration priority highlights the need for embracing partnership across multiple jurisdictions, regions, and States in building capabilities cooperatively. Successful regional collaboration allows for a multijurisdictional and multi-disciplinary approach to building capabilities for all four mission areas [prevent, protect,

respond, recover], spreading costs, and sharing risk across geographic areas. This approach increases opportunities to create efficiency and leverage capabilities across the country. Regional collaboration focuses on expanding mutual aid and assistance compacts among contiguous State, local, and tribal entities, and their private and non-governmental partners, and extending the scope of those compacts to include pre-incident preparedness activities (i.e., planning, training, exercising). The intent is to locate capabilities strategically to maximize coverage of the U.S. population and the Nation's high priority critical infrastructure and key resources. The Goal does not mandate that State and local governments adopt a regional governmental structure, but it does require that all levels of government embrace a *regional approach to building capabilities.*" (**DHS/ODP**, *State and Urban Area Homeland Security Strategy: Guidelines on Aligning Strategies with the NPG*, 2005, pp. 8-9)

Expanded Regional Collaboration, National Preparedness Guidelines Priority # 1:
"Expanded Regional Collaboration is identified as the first priority in the National Preparedness Guidelines in recognition that large scale events may require a shared response across jurisdictions, levels of government, and the public/private sectors depending on the scale of the event. States are encouraged to define geographic areas or regions, in consultation with local and tribal governments that share risk and responsibility for a major event. The expanded region facilitates the strengthening of relationships among participants, regional preparedness planning and operations support, and joint implementation of a capabilities-based approach. Regions may be intra- or inter-State geographic areas, as appropriate, based on shared risk and the need for joint planning and operations. Standardization of geographic regions will enable the States, working with local and tribal government and other partners, to coordinate preparedness activities more effectively, spread costs, pool resources, share risk, and thereby increase the overall return on investment." (**DHS**, *TCL*, 2007, p. 11)

Experiential Learning: "Experiential learning occurs when a learning activity having a behavioral-based hierarchy allows the student to experience and practice job-related tasks and functions during a training session. Any learning based on experiencing, doing, exploring, and even living can be termed experiential." (**DHS**, *DHS Training Glossary*, 2006, p. 24)

Experiential Learning: "Experiential learning has come to mean two different types of learning:
1. learning by yourself and
2. experiential education [experiential learning through programs structured by others][43]

1. *Experiential learning by yourself:*
Learning from experience by yourself might be called "nature's way of learning". It is "education that occurs as a direct participation in the events of life" (Houle, 1980, p. 221, quoted in Smith, 2003). It includes learning that comes about through reflection on everyday experiences. Experiential learning by yourself is also known as "informal education" and includes learning that is organised by learners themselves. Related terms: Auto-didacticism, Self-teaching.

[43] Smith, M. K. (2001). David A. Kolb on experiential learning. the encyclopedia of informal education, http://www.infed.org/b-explrn.htm

2. *Experiential education:*
(Experiential learning through programs & activities structured by others). Principles of experiential learning are used to design of *experiential education* programs. Emphasis is placed on the nature of participants' subjective experiences. An experiential educator's role is to organize and facilitate *direct experiences of phenomenon* under the assumption that this will lead to genuine (meaningful and long-lasting) learning. This often also requires preparatory and reflective exercises. Experiential education is often contrasted with *didactic education*, in which the teacher's role is to "give" information/knowledge to student and to prescribe study/learning exercises which have "information/knowledge transmission" as the main goal." (**Neill**, What is Experiential Learning?," January 31, 2005)

Expert: "An expert is a person who is specially qualified by education and experience to perform difficult and challenging tasks in a particular field beyond the usual range of achievement of competent persons in that field. An expert is regarded by other persons in the field as an authority or practitioner of unusual competence and skill in a professional, scientific, technical or other activity. [5 CFR 304.102] [HRO Part 1, Chapter 7, Employment of Experts and Consultants]" (**DHS**, *DHS Training Glossary*, 2006, p. 24)

EXPLAN: Exercise Plan. (**FEMA**, IS 120.A, *An Introduction to Exercises*, 2 Feb 2008, p. 34)

Explosivity Index: "Percentage of pyroclastic ejecta among the total product of a volcanic eruption." (**UNDHA**, *DM Glossary*, 1992, 37)

Exposure: "The number, types, qualities, and monetary values of various types of property or infrastructure and life that may be subject to an undesirable or injurious hazard event." (**American Planning Association**, *Planning For A Disaster-Resistant Community*, 2005, p. 81)

Exposure: "`Exposure' is another component of disaster risk, and refers to that which is affected by natural disasters, such as people and property." (**Asian Disaster Reduction Center**, *Total Disaster Risk Management – Good Practices*, 2005, p. 1)

Exposure (and Vulnerability): "In Order to contract infectious disease, you need to be exposed to the microbe that causes the disease. However, some people are exposed and never become ill, while others may die from the same exposure. If we call the person who is exposed a 'host', the host may have certain vulnerabilities or strengths that alter the outcome of the exposure. The host may have inherited genetic traits that limit his or her vulnerability to a certain class of microbes, or may have previous experience with the specific microbe, and thus have an immune-response system that is poised and ready to fight off the microbial invader." (**Bissell** 2005)

Exposure: An example of lessening one's exposure is acquiring insurance to cover some or all of one's losses. One's exposure is lowered but nothing has been done to address hazard or vulnerability. One is just as vulnerable to, say, flooding, but less "exposed" to personal financial loss. One still is vulnerable to material loss. (**Blanchard**)

Exposure: "Exposure describes the number of people, and the value of structures and activities that will experience…hazards and may be adversely impacted by them." (**Darlington and Lambert** 2001, 135)

Exposure: "Exposure means the number, types, qualities, and monetary values of various types of property of infrastructure and life that may be subject to an undesirable or injurious hazard event." (**FEMA**, *Multi Hazard Identification and Risk Assessment*, 1997, p. xxv)

Exposure: "People, property, systems, or functions at risk of loss exposed to hazards." (**Multihazard Mitigation Council**, 2002, 30)

Exposure: "The process by which people, animals, the environment, and equipment are subjected to or come in contact with a hazardous material. The magnitude of exposure is dependent primarily upon the duration of exposure and the concentration of the hazardous material. This term is also used to describe a person, animal, the environment, or a piece of equipment." (**NFPA 471**, 1997, p. 9)

Exposure: "The condition of being susceptible to loss due to a threat." (**Risky Thinking**, *A Glossary of Risk Related Terms*, 2007)

Exposure Assessment: "The process of estimating or measuring the intensity, frequency, and duration of exposure to an agent. Ideally, it describes the sources, pathways, routes, magnitude, duration, and patters of exposure; the characteristics of the population exposed; and the uncertainties in the assessment." (**European Environment Agency**, *EEA Multilingual Environmental Glossary*, 2007; cites *The International Programme on Chemical Safety, Glossary on Key Exposure Assessment Terms*, 2001)

Exposure Time: "The time period of interest for seismic risk calculations, seismic hazard calculations, or design of structures. For structures, the exposure time is often chosen to be equal to the design lifetime of the structure." (**UNDHA**, *DM Glossary*, 1992, 37)

EXSUMS: Executive Summaries. (*DHS*, *Statement of Frank DiFalco, NOC Director*, 20Jun07)

Extinction Level Event (ELE): "An extinction level event is a catastrophic occurrence which has the potential to terminate entire species of animals and plants: i.e., to cause a mass extinction. Such events are decidedly rare, but geological evidence shows that they have happened on many occasions since multicellular life became abundant on the planet almost a billion years ago." (**BBC**, *Extinction Level Events*, 1999)

Extreme Events: Extreme events are not only [rare and] severe, but also outside the normal range of experience of the system in question." (**Bier**, et al, 1999, 84)

Extreme Events: An extreme event in the context of the natural world is an act of nature, "such as a lightning stroke or a flood [that] may be a productive resource and a hazard at the same time. Lightning may kill an animal but also start a fire essential to the preservation of a forest ecosystem. A flood may destroy a farmstead while fertilizing the fields" (**Burton** et al. 1993, 34).

Extreme Heat: "Heat kills by pushing the human body beyond its limits. In extreme heat and high humidity, evaporation is slowed and the body must work extra hard to maintain a normal temperature. Most heat disorders occur because the victim has been overexposed to heat or has over-exercised for his or her age and physical condition. Older adults, young children, and those who are sick or overweight are more likely to succumb to extreme heat. Conditions that can induce heat-related illnesses include stagnant atmospheric conditions and poor air quality. Consequently, people living in urban areas may be at greater risk from the effects of a prolonged heat wave than those living in rural areas. Also, asphalt and concrete store heat longer and gradually release heat at night, which can produce higher nighttime temperatures known as the 'urban heat island effect'." (**FEMA**, "Fact Sheet – Extreme Heat," June 2007, p. 1)

Extreme Weather: The U.S. National Oceanic and Atmospheric Administration (NOAA) uses a definition of extreme weather based on an event's climatologically-expected distribution. An event is called extreme if occurs, for example, only five per cent or less of the time. NOAA notes, however, that the exact choice of cut-off of the climatologically probability value used in the definition is somewhat arbitrary. A simple example of extreme weather is therefore when the temperature drops to a level which occurs less than five per cent of the time, say below -20 C. Extreme events, by definition, are rare. (Zhu and Toth. *Extreme Weather Events and Their Probabilistic Prediction by the NCEP Ensemble Forecase System*)

Extremely Hazardous Substances (EHS): "Chemicals with high acute lethality have the potential for causing death in unprotected populations after relatively short exposure periods at low doses. On the basis of toxicity criteria…EPA identified a list of chemicals with high acute toxicity…from the more than 60,000 chemicals in commerce. This is the list of EHSs required by Title Ill of SARA. Because airborne releases of acutely lethal substances, while infrequent, can be catastrophic, Title Ill requires consideration of these EHSs in emergency plans." (**EPA**, *Technical Guidance for Hazards Analysis*, 1987, p. 2-2)

Eye (of the storm): "The calm center of a tropical cyclone." (**UNDHA**, *DM Glossary*, 1992, 37)

FAAT List: *FEMA Acronyms, Abbreviations and Terms.*

Facilitated Discussion: "A facilitated discussion is the focused discussion of specific issues through a *facilitator* with functional area or subject matter expertise. Facilitated group discussions occur at individual tables organized by discipline or agency/organization. Facilitated discussions take place before moderated discussions." (**FEMA**, *Homeland Security Exercise and Evaluation Program Glossary*, 2008)

Facilitator: "During a *discussion-based* exercise, the facilitator is responsible for keeping *participant* discussions on track with the exercise design *objectives* and making sure all issues and objectives are explored as thoroughly as possible within time constraints." (**FEMA**, *Homeland Security Exercise and Evaluation Program Glossary*, 2008)

Facilities: "Locations where an organization's leadership and staff operate. Leadership and staff may be co-located in one facility or dispersed across many locations and connected by

communications systems. Facilities must be able to provide staff with survivable protection and must enable continued and endurable operations." (**DHS**, *FCD 1*, Nov 2007, P-5)

Facilities Unit (ICS): "A unit within the Support Branch of the Logistics Unit that provides fixed facilities for an incident. These facilities may include eating areas, sleeping areas, Incident Base, etc." (**Capital Health Region**, Edmonton Canada, *ICS Training SM*, 2007, 53)

Facility Response Plan (FRP): "Describes how the facility will respond to, contain, and clean up a spill." (**GAO**, *Maritime Security*, December 2007, p. 57)

Failure Modes and Effects Analysis (FMEA): "An analytical technique, which explores the effects of failures or malfunctions of individual components in a system - i.e. "If this part fails, in this manner, what will be the result?" The level of risk is determined by: Risk = probability of failure x severity category. An FMEA can be used for a single point failure but can be extended to cover parallel failures and is valuable for future reviews and as a basis for other risk assessment techniques. The limitations to the technique are that it can be a costly and time-consuming process." (**UN DAP**, *Techniques Used in Risk Assessment*, 2008)

Fallout: "The process or phenomenon of the descent to the earth's surface of particles contaminated with radioactive material from the radioactive cloud. The term is also applied in a collective sense to the contaminated particulate matter itself. The early (or local fallout is defined, somewhat arbitrarily, as those particles which reach the earth within 24 hours after a nuclear explosion. The delayed (or worldwide) fallout consists of the smaller particles which ascend into the upper troposphere and into the stratosphere and are carried by winds to all parts of the earth. The delayed fallout is brought to earth, mainly by rain and snow, over extended periods ranging from months to years." (**Glasstone**, *Effects of Nuclear Weapons*, 1977, p. 633)

Fallout: "The deposition of radioactive particles from the atmosphere arising from:
1) natural causes
2) nuclear bomb explosions and
3) induced radioactivity and atomic reactor accidents." (**UNDHA**, *DM Glossary*, 1992, 37)

Fallout Shelter Licensing: "A Fallout Shelter License or Privilege form authorizes the marking of public fallout shelters and temporary access by the public to specific fallout shelter space in emergencies. It also authorizes storage of shelter provisions in the facility, and inspection by government officials." (**DCPA**, *Foresight, DCPA Annual Report FY73*, 1974, p. 17)

Fallout Shelter Supplies Program: Discontinued by DCPA in fiscal year 1972, "except for radiological monitoring kits… emphasis now is on the maintenance, care, and inspection of supplies at local level. Guidance has been issued to assist in this effort to preserve supplies now in place, and for disposal of deteriorating supplies as deemed necessary by local governments. The Defense Supply Agency in its final accounting for the general supply items procured under the Federal Shelter Stocking Program showed that 105,873 shelter facilities had been provided with Federal supplies sufficient to take care of approximately 107.6 million persons for 8 days, or nearly 65.5 million for 14 days." (**DCPA**, *Foresight, Annual Report FY73*, 1974, 17-18)

Family Action Program (FCDA): "The Family Action Program was developed by FCDA during 1953 to carry the civil defensee story to the homes of the Nation. It is a program of home protection exercises giving each citizen the opportunity to participate directly in civil defense, and encourages every citizen to cooperate with the neighborhood civil defense groups.

"As part of this individual- and family-action plan, a package of informational and educational materials has been prepared for club and organiation use. It includes a kit containing sample press releases, radio-TV spot announcemnts and scripts, speeches, and ideas for promoting community activities that tie in with the program. In addition there are twelve lesson plans and film strips for wardens.

"A booklet of self-protection home exercises was developed and placed in the kit to help Americans meet the common problems arising from disaster. These seven family-action exercised are: (1) Preparing Your Shelter, (2) What To Do When the Alert Sounds, (3) Home Fire Protection, (4) Home Fire Fighting, (5) Emergency Action to Save Lives, (6) What To Do If Someone Is Trapped, and (7) Safe Food and Water in Emergencies." (**FCDA**, *1953 Annual Report*, p. 77)

Family Assistance Center: "Is established to facilitate the exchange of information between disaster responders and the family members and friends of decedents, those injured, and those missing/unidentified. Family Assistance Center personnel address the immediate emotional needs of the victim's families and friends and provide accurate and timely information in an appropriate setting and compassionate manner. The Family Assistance Center must also address the basic physical needs of these family members and friends of victims, including food, shelter transportation, internet access, telephone, child care, language translation, disaster mental health services, and emergency medical services, if necessary." (**FEMA**, *IIFOG Ver 3 Draft*, 2008, 35)

Family Disaster Plan:

- Discuss with your family the hazards that could impact your local area, the potential for community evacuation or sheltering, and your community's warning systems and what to do if they are used.
- Determine where to meet in the event of an emergency. Designate one location right outside your home in case of a sudden emergency, like a fire, and another location outside your neighborhood in case you can't return home.
- Ask an out-of-town friend or relative to be your emergency contact. Following a disaster, family members should call this person and tell them where they are.
- Make a communication plan where all family members know how to contact each other. A form for recording this information can be found at www.ready.gov - or at www.redcross.org/contactcard.
- Include provisions for your pets in your family disaster plan.
- Practice the plan. (**FEMA & ARC**, *Helping Children Cope with Disaster*, 2005)

Family Disaster Preparedness: "You can cope with disaster by preparing in advance and by working with your family as a team. Follow the steps listed in this booklet to be prepared.
1. Get informed
2. Make a plan

3. Assemble a kit
4. Maintain your plan and kit.

Knowing what to do is your best protection and your responsibility." (**FEMA & ARC**, *Preparing for Disaster*, 2005)

Family Disaster Supplies Kit: "Every household should assemble a disaster supplies kit and keep in up to date. A disaster supplies kit can help your family stay safe and be more comfortable during and after a disaster. Though local officials and relief workers will be on the scene after a disaster, they cannot reach everyone immediately. Also, if you need to evacuate at a moment's notice you probably will not have the opportunity to shop or search for the supplies you and your family will need.

- Pack disaster supplies in an easy-to-carry container, such as a duffel bag or backpack and label the container clearly.
- Ask your children to think of items that they would like to include in the kit, such as books, games or nonperishable snack food items.
- Include such items as:
- Three-day supply of non-perishable food and manual can opener.
- Three-day supply of water (one gallon of water per person per day).
- Portable, battery-powered radio or television and extra batteries.
- Flashlights and extra batteries.
- First aid kit and first aid manual.
- Photocopies of credit cards and identification cards.
- Sanitation and hygiene items (hand sanitizer, moist towelettes and toilet paper).
- Matches in a waterproof container.
- Whistle.
- Clothing, blankets, kitchen accessories and cooking utensils.
- Special needs items, such as prescription medications, spare eye-glasses, hearing aid batteries.
- Items for infants, such as formula, diapers, bottles and pacifiers.
- Tools, pet supplies, a map of the local area, and other items to meet your unique family needs.
- Ask your children to help you remember to keep your kit updated by marking dates on a calendar to regularly review and update your kit.
- Consider having emergency supplies in each vehicle and at your place of employment." (**FEMA & ARC**, *Helping Children Cope with Disaster*, 2005)

Family Emergency Food Supplies: "Even though it is unlikely that an emergency would cut off your food supply for two weeks, consider maintaining a supply that will last that long…. As you stock food, take into account your family's unique needs and tastes. Familiar foods are important. They lift morale and give a feeling of security in times of stress. Try to include foods that they will enjoy and that are also high in calories and nutrition. Foods that require no refrigeration, water, special preparation, or cooking are best. Individuals with special diets and allergies will need particular attention, as will babies, toddlers, and the elderly. Nursing mothers may need liquid formula, in case they are unable to nurse. Canned dietetic foods, juices, and soups may be helpful for ill or elderly people. Make sure you have a manual can opener and disposable utensils.

Don't forget nonperishable foods for your pets." (**FEMA & ARC**, *Food and Water in an Emergency* (FEMA 477), 2004, pp. 2-3)

Family Emergency Water Supplies: "Having an ample supply of clean water is a top priority in an emergency. A normally active person needs to drink at least two quarts (half gallon) of water each day. People in hot environments, children, nursing mothers, and ill people will require even more. You will also need water for food preparation and hygiene. Store at least one gallon per person, per day. Consider storing at least a two-week supply of water for each member of your family. If you are unable to store this quantity, store as much as you can. If supplies run low, never ration water. Drink the amount you need today, and try to find more for tomorrow. You can minimize the amount of water your body needs by reducing activity and staying cool." (**FEMA & ARC**, *Food and Water in an Emergency* (FEMA 477), 2004, p. 7)

Famine: "A catastrophic food shortage affecting large numbers of people due to climatic, environmental and socio-economic reasons." (**UNDHA**, *DM Glossary*, 1992, 38)

Fantasy Documents: "These are catastrophic response plans whose purpose is to convince or reassure rather than to guide acutal activities…. Large-scale evacuations are in many instances the principal means of preserving life, yet in very large events rely on fragmfented and poorly-understood capabilities and hopeful assumptions that may not be supported by actual resources. Evacuation, as a strategy, then takes on characteristics similar to Clarke's (1999) concept of 'fantasy documents'…. Fantasy documents are created by organizations under circumstances where problems are complex and ambiguous, yet it is necessary to exert some type of control over the situation. Fantasy documents are not naked lies; rather they can be characterized as generous and unrealistic assumptions of how organizations will perform in a crisis (Perrow, 1999)." (**Kendra**, "Evacuating Large Urban Areas," 2008)

FAQs: Frequently Asked Questions.

FAOC: FEMA Alternate Operations Center. (**FEMA**, *Devolution of Ops. Plan Template*, 2006)

FAsT: Field Assessment Team. (**USACE**, *Response Planning Guide*, 1995, p. B-2)

Fatality Management: "Complete documentation and recovery of human remains and items of evidence (except in cases where the health risks posed to personnel outweigh the benefits of recovery of remains). Remains receive surface decontamination (if indicated) and, unless catastrophic circumstances dictate otherwise, are examined, identified, and released to the next-of-kin's funeral home with a complete certified death certificate. Reports of missing persons and ante mortem data are efficiently collected. Victims' family members receive updated information prior to the media release. All hazardous material regulations are reviewed and any restrictions on the transportation and disposition of remains are made clear by those with the authority and responsibility to establish the standards. Law enforcement agencies are given all information needed to investigate and prosecute the case successfully. Families are provided incident-specific support services." (**DHS**, *National Preparedness Guidelines*, 2007, p. 8)

Fatality Management: "Fatality Management is the capability to effectively perform scene documentation; the complete collection and recovery of the dead, victim's personal effects, and items of evidence; decontamination of remains and personal effects (if required); transportation, storage, documentation, and recovery of forensic and physical evidence; determination of the nature and extent of injury; identification of the fatalities using scientific means; certification of the cause and manner of death; processing and returning of human remains and personal effects of the victims to the legally authorized person(s) (if possible); and interaction with and provision of legal, customary, compassionate, and culturally competent required services to the families of deceased within the context of the family assistance center. All activities should be sufficiently documented for admissibility in criminal and/or civil courts. Fatality management activities also need to be incorporated in the surveillance and intelligence sharing networks, to identify sentinel cases of bioterrorism and other public health threats." (**DHS**, *TCL*, 2007, p. 519)

Fault: "A planar or gently curved fracture in the earth's upper layers across which displacement occurs." (**UNDHA**, *DM Glossary*, 1992, 38)

Fault: "A fracture or crack along which two blocks of rock slide past one another. This movement may occur rapidly, in the form of an earthquake, or slowly, in the form of creep." (**USGS**, *Putting Down Roots in Earthquake Country*, 2007, Glossary)

Fault-Tree Analysis (FTA): "This is a graphical technique that provides a description of the combinations of possible occurrences in a system, which can result in an undesirable outcome. The most serious outcome is selected and called the Top Event. The analysis proceeds by determining how these top events can be caused by individual or combined lower level failures or events. The benefits of the approach are the identification of the basic causes of failures, and the investigation of the reliability and safety of complex and large systems. The limitations of the approach are that it does not measure probability, therefore counter measures identified by the process may not be those with the greatest potential for reducing risk." (**UN DAP**, *Techniques Used in Risk Assessment*, 2008)

FBCO: Faith-Based and Community Organizations. (**Carafano**, *Grassroots Disaster*…, 2007)

FBI: Federal Bureau of Investigation, United States Department of Justice.

FBI Hazardous Materials Response Unit: "provides technical response capabilities including management of WMD crime scene activities and collection of evidence in hazardous environments." (**FEMA**, *Statement of Glenn Cannon*, November 15, 2007, 2007, p. 12)

FBIIC: Financial and Banking Information Infrastructure Committee. (**Treasury**, *B&F CIP*, 2006)

FBO: Faith Based Organization. (**CDC/HHS**, *Locating and Reaching At-Risk Populations*, 2007)

FCD: Federal Continuity Directive. (**DHS**, *FCD 1*, November 2007, p. i)

FCD 1: *Federal Continuity Directive 1*, superseding Federal Preparedness Circular 65, *Federal Executive Branch Continuity of Operations*, dated June 15, 2004. (**DHS**, *FCD 1*, Nov 2007, 1)

FCD 2: *Federal Continuity Directive 2, Federal Executive Branch Mission Essential Functions and Primary Mission Essential Function Identification and Submissions Process*, November 2007.

FCDA: Federal Civil Defense Administration, 1951-1958.

FCDA Regulation 1707 of 1952: Established the United States Civil Defense Corps. The Corps consisted of 11 civil defense services:

- Communications
- Engineering
- Fire
- Health
- Police
- Rescue
- Staff
- Supply
- Transportation
- Warden
- Welfare [Mass Care] (**FCDA**, *Annual Report for 1952*, pp. 73-74)

FCDG: Federal Civil Defense Guide. (**OCD**, *Abbreviations and Definitions*, 1971, 2) [Defunct]

FCIP: Federal Crop Insurance Program.

FCO: Federal Coordinating Officer, FEMA.

FDAA: Federal Disaster Assistance Administration. (Functions incorporated into FEMA in 1979)

FE: Functional Exercise(s). **(DHS**, *HSEEP*, Vol. V, 2005, p. 41)

FEA: Federal Executive Association(s). (**DHS**, *Federal Continuity Directive 1*, Nov 2007, P-5)

FEB: Federal Executive Board. (**DHS**, *Federal Continuity Directive 1*, Nov 2007, O-1)

FEBA: Forward Edge of the Battle Area. (**DA**, *WMD-CST Operations*, Dec 2007, Glossary-2)

FECC: Federal Emergency Communications Coordinator. (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 52)

Federal Agency: "Any department, independent establishment, government corporation, or other agency of the executive branch of the Federal government, including the U.S. Postal Service, but not including the ARC." (FEMA, Mission Assignment SOPs Draft, 2007, p. 51)

Federal Agency Civil Defense Delegations Program: "Progress was made during 1955 in integrating the civil defense program into the Federal Government. Two delegations were approved by President Eisenhower in 1954. By the end of 1955, 2 more delegations had been

made, assigning a total of 33 specific responsibilities to 7 Federal agencies. Under these delegatins, the Executive agencies have assumed responsibility fo specific civil defense activity directly related to their day-to-day wrok.

The goal is organization of civil defense leadership with standby plans in all Federal agencies. In case of enemy attack or natural disaster, full facilities of the Government could then be quickly shifted to emergency operations for support to States. Delegations policy and review, and coordination of emergency action, are provided by FCDA….

Delegations 1 and 2 were made in 1954, the first to the Department of Health, Education, and Welfare, and the second to the Departments of Agriculture, Commerce, Justice, and Labor, and the Housing and Home Finance Agency. In 1955 delegations 3 and 4 set forth responsibilities for the Department of Interior. Also, delegation 3 assigned additional responsibilities to the Department of Commerce." (**FCDA**, *1955 Annual Report*, p. 46)

Federal Approving Official (FAO): "The FAO is a function as opposed to a position within one of the operational organizations. The FAO is a FEMA employee who is delegated the authority to approve and obligate funds for the mission assignment. The RRCC [Regional Response Coordination Center] Director and NRRC [National Response Coordination Center] Manager are delegated FAO signature authority as well as the Operations Section Chiefs at each location active in the response." (**FEMA**, *Mission Assignment SOPs Operating Draft*, 2007, 8)

Federal Assistance: "Federal disaster assistance is often thought of as synonymous with Presidential declarations and the Stafford Act. The fact is that Federal assistance can be provided to State, tribal and local jurisdictions, and to other Federal departments and agencies, in a number of different ways through various mechanisms and authorities. The majority of Federal assistance does not require coordination by the Department of Homeland Security (DHS) and can be provided without a Presidential major disaster or emergency declaration. Federal assistance for incidents that do not require DHS coordination may be led by other Federal departments and agencies consistent with their authorities. The Secretary of Homeland Security may monitor such incidents and may activate *Framework* mechanisms to support departments and agencies without assuming overall leadership for the Federal response to the incident." (**DHS,** *Overview [NRF] ESFs*, September 2007, p. 4)

Federal Civil Defense Act of 1950 (Public Law 81-920): "Sec. 2. **Declaration of Policy**: It is the policy and intent of Congress to provide a plan of civil defense for the protection of life and property in the United States from attack. It is further declared to be the policy and intent of Congress that this responsibility for civil defense shall be vested primarily in the several States and their political subdivisions. The Federal Government shall provide necessary coordination and guidance; shall be responsible for the operations of the Federal Civil Defense Administration as set forth in this Act; and shall provide necessary assistance as hereinafter authorized." (**FCDA of 1950**, January 12, 1951; reproduced in FCDA Annual Report 1951 (Appendix 5) pp. 89-105). [Note: Abolished by Public Law 103-337: National Defense Authorization Act for Fiscal Year 1995, (Title XXXIV – Civil Defense – Sec. 3411. "Restatement of Federal Civil Defense Authorities in the Robert T. Stafford Disaster Relief and Emergency Assistance Act," which incorporated selected provisions into the Stafford Act.]

Federal Civil Defense Administration (FCDA): "On September 1, 1954 the national Federal Civil Defense Office moved to Battle Creek, Michigan. This has increased the chances that the FCDA national headquarters will be operational in event of enemy attack." (**FCDA**, *1954 Annual Report*, p. 1)

Federal Civil Defense Administration (FCDA), Office of Emergency Management, Executive Office of the President (EOP), 1950-1951. (National Archives, *Records of the Defense Civil Preparedness Agency (DCPA)*. President Truman created the FCDA by Executive Order. This move was communicated to the Congress with the transmittal of the Hopley Report "United States Civil Defense," wherein Truman noted concern with "the potential damage of devastating modern weapons." (**Truman**, *Public Papers of the Presidents of the US,*18Sep1950)

Federal Civil Defense Administration (FCDA), 1951-1958. Signed into law on January 12, 1951 by President Harry S Truman. First Director was former Florida Governor, Millard Caldwell. (**FCDA**, *Annual Report 1951*, 1952, p. 106) From the President's Message Transmitting Bill for Civil Defense: "The federal Government can and will provide the necessary coordination and guidance for the civil defense program….It is the expressed policy and intent of Congress, however, that the responsibility for civil defense should be vested primarily in the states and their political subdivisions." (**NYT**, January 13, 1951, p.7)

Federal Civil Defense Administration General Order 232, Establishing Natural Disaster Office: On February 16, 1956, FCDA Administrator Val Peterson approves FGeneral Order 232 "establishing a natural disaster office at the National Headquarters of the Federal Civil Defense Administration, Battle Creek, Mich. The order also outlined the functions of the office in fulfilling the responsibility of FCDA for direction, coordination, and control of Federal assistance to State and local governments in areas of major natural disasters….After the northeast and west coast floods in the fall of 1955 and early 1956, it was recognized that additional staff was necessary. A separate disaster office therefore was established by the Administrator of FCDA." (**FCDA**, *1956 Annual Report*, 1957, p. 33)

Federal Civil Defense Staff College, Olney, MD: Opened on April 30, 1951. (**FCDA**, *Annual Report 1951*, 1952, p. 21)

"The Federal Civil Defense Staff College at Olney, Md., has given 25 courses to State and local administrative personnel since its opening April 30, 1951. A total of 1,016 students have attended its six-day courses. They have come from all 48 States, the District of Columbia, Alaska, Hawaii, Puerto Rico, and the Virgin Islands. The vast majority of the students have been State and local administrators of civil defense. Many have come from industry, labor, and national organizations. Fourteen have been from the Red Cross, 12 from the Atomic Energy Commission, 94 from the three branches of the Department of Defense, and 58 from various other Federal agencies, such as Department of Agriculture, General Services Administration, Federal Security Agency, Department of Justice, and Department of the Treasury. In addition, 17 civil defense officials have attended from Canada and 4 from England.

Among topic covered in discussions, demonstrations, and exercises were the following: Organization of Civil Defense; Vulnerability Analysis; The System of Web Defense; Zoning and

Zone Control for Civil Defense; Mutual Aid and Mobile Support; Attack Warning and Communications; Civil Defense Operational Services; Postattack Estimates.

Training officials visited 35 States in 1951, to advise and assist State and local civil defense officials. Training officers are already assignede to six of the nine regional offices….

The major accomplishment of FCDA in Training and Education during 1951 was the establishment of a national civil defense training system, including setting up a national staff college [Olney, MD] and three training schools [the Central Training school, Stillwater, OK, which opened July 30, 1951; the Western Training School, St. Mary's CA, which opened October 8, 1951 [closed Sep 1953][44]; and the Eastern Training School, which opened at Abington, PA on February 4, 1952]." This leadership is designed to provide help to the States in speeding up their own training programs so as to give adequate instruction to the millions of volunteers who are needed to establish the United States Civil Defense Corps." (**FCDA**, *1952 Annual Report*, pp. 22, 23-24)

Federal Continuity Categories within the Executive Branch: "To support its continuity requirements the Federal executive branch prioritizes the following three categories of essential functions:

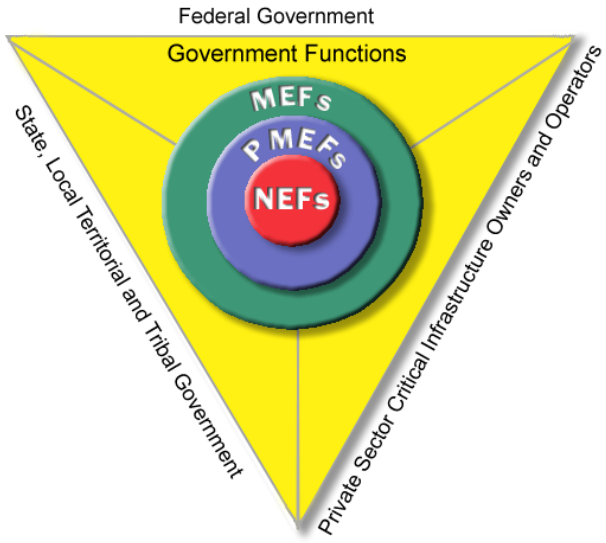
- MEFs [Mission Essential Functions]: The limited set of agency-level government functions that must be continued after a disruption of normal activities
- PMEFs [Primary Mission Essential Functions]: A subset of agency MEFs that directly support the NEFs
- NEFs [National Essential Functions]: The eight functions the President and national leadership will focus on to lead and sustain the Nation during a catastrophic emergency." (**DHS**, *FCD 1*, November 2007, p. D-1)

Federal Continuity Directive (FCD): "A document developed and promulgated by DHS, in coordination with the CAG [Continuity Advisory Group] and in consultation with the Continuity PCC [Policy Coordination Committee], which directs executive branch departments and agencies to carry out identified continuity planning requirements and assessment criteria." (**HSC**, *National Continuity Policy Implementation Plan*, 2007, p. 62; **DHS**, *FCD 1*, 2007, P-5)

Federal Continuity Directive (FCD) 1: "The purpose of this FCD is to provide direction for the development of continuity plans and programs for the Federal executive branch. Effective continuity planning and programs facilitate the performance of essential functions during all-hazards emergencies or other situations that may disrupt normal operations. The primary goal of continuity in the executive branch is the continuation of essential functions." (**DHS**, *FCD-1*, DHS Secretary Michael Chertoff Statement, p. ii)

[Note: See Figure 13, p. D-6, FCD 1]

[44] Due to budget cuts all the FCDA training schools were closed in 1953, leaving only the National CD Staff College and National Rescue Instructor Training Center near Olney, MD. FCDA, 1953 Annual Report, p. 40.

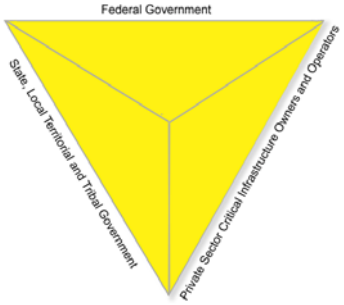


Federal Continuity Directive 2: *Federal Executive Branch Mission Essential Function and Primary Mission Essential Function Identification and Submission Process* (Nov 2007).
Purpose: This Federal Continuity Directive (FCD) provides guidance and direction to Federal executive branch departments and agencies for identification of their Mission Essential Functions (MEFs) and potential Primary Mission Essential Functions (PMEFs). It includes guidance and checklists to assist departments and agencies in assessing their essential functions through a risk management process and in identifying potential PMEFs that support the National Essential Functions (NEFs) – the most critical functions necessary to lead and sustain the nation during a catastrophic emergency. The FCD provides direction on the formalized process for submission of a department's or agency's potential PMEFs that are supportive of the NEFs. It also includes guidance on the processes for conducting a Business Process Analysis (BPA) and Business Impact Analysis (BIA) for each of the potential PMEFs that assist in identifying essential function relationships and interdependencies, time sensitivities, threat and vulnerability analyses, and mitigation strategies that impact and support the PMEFs." (**DHS**, *FCD 2*, 2007, 1)

Federal Continuity of Operations and Government Policy: "It is the policy of the United States to maintain a comprehensive and effective continuity capability composed of Continuity of Operations (COOP) and Continuity of Government (COG) programs to ensure the preservation of our form of Government under the Constitution and the continuing performance of NEFs under all conditions (National Security Presidential Directive (NSPD)-51/Homeland Security Presidential Directive (HSPD)-20, *National Continuity Policy*). Continuity requirements must be incorporated into the daily operations of all agencies to ensure seamless and immediate continuation of Primary Mission Essential Function (PMEF) capabilities to ensure critical government functions and services remain available to the Nation's citizens. Continuity planning will occur simultaneously with the development and execution of Federal agency programs. This means that organizations must incorporate redundancy and resiliency as a means and an end. In support of this policy, the Federal executive branch has developed and implemented a continuity of operations program which is composed of efforts within individual agencies to ensure that their Mission Essential Functions (MEFs) continue to be performed during a wide range of emergencies including localized acts of nature, accidents, and

technological or attack-related emergencies. These efforts include plans and procedures, under all readiness levels, that delineate essential functions, specify succession to office and emergency delegations of authority, provide for the safekeeping of vital records, identify a range of continuity facilities and locations, provide for interoperable communications, provide for human capital planning, validate these capabilities through tests, training, and exercises (TT&E), specify a devolution of control and direction, and provide for reconstitution. All agencies, regardless of their size or location, shall have in place a viable continuity capability to ensure continued performance of those agencies' essential functions under all conditions." (**DHS**, *FCD 1*, 2007, 2)

Federal Continuity Partners: "Continuity cannot occur without the commitment and dedication of many others who play integral roles in ensuring homeland security and provide critical functions and services to the Nation's citizens.



Those partners include the following (see Figure 1):

- Federal Government: legislative branch, executive branch (including all departments and agencies), and judicial branch;
- State, local, territorial, and tribal governments; and
- Private Sector Critical Infrastructure Owners and Operators." (**DHS**, *FCD-2*, Nov 2007, p A-1)

Figure 1

Federal Coordinating Officer (FCO): "The FCO manages Federal resource support activities related to Stafford Act disasters and emergencies. The FCO supports the PFO, when one is appointed, and assists the Unified Command. The FCO is responsible for directing and coordinating the timely delivery of Federal disaster assistance resources and programs to the affected State, and local governments, individual victims, and the private sector. The FCO works closely with the PFO, Senior Federal Law Enforcement Official (SFLEO), and other Senior Federal Officials (SFOs) representing other Federal agencies engaged in the incident management effort. In non-terrorist situations where a PFO has not been assigned, the FCO leads the Federal components of the Joint Field Office (JFO) and works in partnership with the State Coordinating Officer (SCO). (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, pp. 19-20)

Federal Coordinating Officer (FCO). "For Stafford Act events, upon the recommendation of the FEMA Administrator and the Secretary of Homeland Security, the President appoints an FCO. *The FCO is a senior FEMA official trained, certified and well experienced in emergency management, and specifically appointed to coordinate Federal support in the response to and recovery from emergencies and major disasters.* The FCO executes Stafford Act authorities, including commitment of FEMA resources and the mission assignment of other Federal departments or agencies. If a major disaster or emergency declaration covers a geographic area that spans all or parts of more than one State, the President may decide to appoint a single FCO for the entire incident, with other individuals as needed serving as Deputy FCOs.

In all cases, the FCO represents the FEMA Administrator in the field to discharge all FEMA responsibilities for the response and recovery efforts underway. For Stafford Act events – and if the Secretary has *not* appointed a PFO – the FCO is the primary Federal representative with

whom State and local officials interface to determine the most urgent needs and set objectives for an effective response in collaboration with the Unified Coordination Group.

In such events, the FCO is the focal point of coordination within the Unified Coordination Group, ensuring overall integration of Federal emergency management, resource allocation and seamless integration of Federal activities in support of, and in coordination with, State, tribal and local requirements. When a PFO is not assigned to a Stafford Act response, the FCO serves locally as a primary, although not exclusive, point of contact for Federal interfaces with the media and the private sector.

Some FCO-certified FEMA executives are given additional, specialized training regarding unusually complex incidents. For example, one may be further trained for catastrophic earthquake response, whereas another might cultivate unique skills for response related to weapons of mass destruction or pandemic influenza." (**DHS**, *NRF Comment Draft*, September 2007, pp. 64-65)

Federal Coordinating Officer (FCO): "Under the provisions of the Stafford Act, the FCO is the overall coordinator of the disaster relief effort on behalf of the President. The FCO provides the overall operational priorities to the JFO ERT and the Section Chiefs to develop and implement actions to meet the FCO direction. Although the FCO may direct the issuance of specific mission assignments, generally the Operations Section Chief translates direction from the FCO or requests for Federal assistance from the State into the mission assignments." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 5)

"The person appointed by FEMA following a declaration of a major disaster, or declaration of an emergency by the President, to coordinate Federal assistance. The FCO initiates action immediately to assure that Federal assistance is provided in accordance with the declaration, applicable laws, regulations and the FEMA/State agreement." (Ibid, pp. 51-52)

Federal Coordinating Officer (FCO): "(a) Appointment of Federal coordinating officer - Immediately upon his declaration of a major disaster or emergency, the President shall appoint a Federal coordinating officer to operate in the affected area.
(b) Functions of Federal coordinating officer - In order to effectuate the purposes of this Act, the Federal coordinating officer, within the affected area, shall

(1) make an initial appraisal of the types of relief most urgently needed;
(2) establish such field offices as he deems necessary and as are authorized by the President;
(3) coordinate the administration of relief, including activities of the State and local governments, the American National Red Cross, the Salvation Army, the Mennonite Disaster Service, and other relief or disaster assistance organizations, which agree to operate under his advice or direction, except that nothing contained in this Act shall limit or in any way affect the responsibilities of the American National Red Cross under the Act of January 5, 1905, as amended (33 Stat. 599) and
(4) take such other action, consistent with authority delegated to him by the President, and consistent with the provisions of this Act, as he may deem necessary to assist local citizens and public officials in promptly obtaining assistance to which they are entitled.

(c) State Coordinating officer - When the President determines assistance under this Act is necessary, he shall request that the Governor of the affected State designate a State coordinating officer for the purpose of coordinating State and local disaster assistance efforts with those of the Federal Government.
(d) Where the area affected by a major disaster or emergency includes parts of more than 1 State, the President, at the discretion of the President, may appoint a single Federal coordinating officer for the entire affected area, and may appoint such deputy Federal coordinating officers to assist the Federal coordinating officer as the President determines appropriate." (**Stafford Act**, June 2007 (FEMA 592), pp. 22-23)

Federal Coordinating Officer (FCO): "The Federal officer who is appointed to manage Federal resource support activities related to Stafford Act disasters and emergencies. The FCO is responsible for coordinating the timely delivery of Federal disaster assistance resources and programs to the affected State and local governments, individual victims, and the private sector." (**USCG**, *IM Handbook*, 2006, Glossary 25-8)

Federal Coordinating Officer (FCO): "(1) The person appointed by the FEMA Director or in his/her absence, the FEMA Deputy Director, or alternatively the FEMA Associate Director for Response and Recovery, following a declaration of a major disaster or of an emergency by the President, to coordinate Federal assistance. The FCO initiates action immediately to assure that Federal Assistance is provided in accordance with the declaration, applicable laws, regulations, and the FEMA-State agreement. (2) The FCO is the senior Federal official appointed in accordance with the provisions of Public Law 93-288, as amended (the Stafford Act), to coordinate the overall consequence management response and recovery activities. The FCO represents the President as provided by Section 303 of the Stafford Act for the purpose of coordinating the administration of Federal relief activities in the designated area. Additionally, the FCO is delegated responsibilities and performs those for the FEMA Director as outlined in Executive Order 12148 and those responsibilities delegated to the FEMA Regional Director in the Code of Federal Regulations, Title 44, Part 205." (**USG**, *USG Interagency Domestic Terrorism CONPLAN*, 2001, Appendix B: Definitions)

Federal Crop Insurance Corporation (FCIC): The FCIC "currently insures crops for losses from multiple perils…" (**GAO**, *Natural Disasters: Public Policy Options*, Nov. 2007, 5)

"A 1937 study by the Executive Committee on Crop Insurance, which noted that commercial attempts to insure against crop losses had been unsuccessful, provided the impetus for creating FCIC in 1938. Initially, the program was experimental and suffered heavy losses. The Federal Crop Insurance Act of 1980 expanded the program to replace free disaster coverage (in the form of compensation to farmers who were unable to plant crops and who suffer yield losses) with insurance." (**GAO**, *Natural Disasters: Public Policy Options*, Nov. 2007, 18)

Federal Disaster Act of 1950 (Public Law 875): "Public Law 875, the Federal Disaster Act of 1950, gives the President broad authority to make use of Federal departments and agencies and their personnel and resources to assist State and local governments in disaster of major proportions. Assistance authorized under the law covers emergency repair or temporary

replacement of public facilities. The disasters are specifically defined as fires, floods, droughts, hurricanes, earthquakes, and storms.

Executive Order 10427 delegates the responsibility for administering Federal disaster assistance, other than that for which statutory authority is given other agencies, to the Federal Civil Defense Administrator. The provisions of the Disaster Act can be invoked only when the President declares the occurrence a 'major disaster.' The Governor of the State involved must request assistance of the President and give assurance that the situation cannot be handled by the State or local government.

In passing this Act, Congress recognized that relief from disaster situations is the responsibility of the State and local governments but that in critical cases Federal assistance is needed.

Aid under Public Law 875 might consist of: surplus Federal equipment and supplies, either loaned or donated to State governments for redistribution; use of Federal equipment, facilities, supplies, and personnel; credit facilities of the Federal Government; and grant assistance.

In 1953, assistance was given under the Act in 24 States and the Territories of Alaska and Hawaii in 30 major disasters…. In all of these cases, FCDA administered the Act, evaluating and making its recommendations to the President, and, when declaration of a major disaster was made, coordinated the Federal assistance given to the State or locality involved." (**FCDA**, *1953 Annual Report,* p. 18. Note: Appendix D of this report contains a copy of the Act.)

Federal Disaster Assistance and Insurance Programs, Organizational History:

- Federal Civil Defense Administration, 1953.
- Office of Defense Mobilization (ODM, Executive Office of the President, 1953-1958)
- Office of Defense and Civilian Mobilization(ODCM, EOP, 1958)
- Office of Civil and Defense Mobilization (OCDM, EOP, 1958-1961)
- Office of Emergency Planning (OEP, Executive Office of the President, 1961-1968)
- Office of Emergency Preparedness (OEP, 1968-1973)
- Federal Disaster Assistance Administration (FDAA, HUD, 1973-1979)
- Federal Insurance Administration (FIA, HUD, 1968-1979)
- Federal Emergency Management Agency (FEMA, 1979-Currently (2007))

(**National Archives**, *Guide to Federal Records*, Records of FEMA, Record Group 311, p. 2)

Federal Disaster Assistance and Relief: "Since the issuance of Executive Order 10427 on January 16, 1953, a total of $25,525,000 has been allocated to the States, Territories, and Federal agencies for relief in 48 major disasters." (**FCDA**, *1955 Annual Report*, p. 39)

Federal Disaster Assistance and Relief: Executive Order 104273, 1953: *Administration of Disaster Relief*, January 16, 1953 [Revoked EO 10221 of 2Mar1951; was revoked by EO 11575, 31Dec1970.] (National Archives, Federal Register, Harry S. Truman – 1953)

"At the Federal level, Executive Order 10427 issued on January 16, 1953, gave FCDA [Federal Civil Defense Administration] responsibility for providing assistance to localities stricken by

major disasters. This responsibility involved investigating and evaluating natural disasters in the States and recommending to the President whether or not the disaster was of sufficient magnitude to warrant Federal aid. The order named FCDA the coordinating agency for all Federal assistance, when authorized, to stricken areas." (**FCDA**, *1953 Annual Report*, p. 15)

[See, also, Interagency Centers.]

Federal Emergency Communications Coordinator (FECC): "That person, assigned by GSA, who functions as the principal Federal manager for emergency telecommunications requirements in major disasters, emergencies, and extraordinary situations, when requested by the FCO or FRC." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 52)

Federal Emergency Management Agency: See "FEMA"

Federal Evacuation Planning Assumptions: "Federal evacuation measures will be taken:

- When State, tribal, or local governments indicate that their resources may or have become overwhelmed and the Governor(s) or tribal official(s) request Federal assistance; or
- In catastrophic incidents when State and local governments are incapacitated, and the President directs that Federal mass evacuation support is required." (**FEMA**, *Mass Evacuation Incident Annex* (National Response Framework), June 2008, p. 2)

Federal Executive Associations (FEAs): "A forum, modeled after but independent of the Federal Executive Boards, for communication and collaboration among Federal agencies outside of Washington, DC, utilized to help coordinate the field activities of Federal departments and agencies primarily in localized sections of the Nation." (**HSC**, *NCPIP*, August 2007, p. 62; **DHS**, *FCD 1*, Nov 2007, P-5)

Federal Incident Response Support Team (FIRST): "Per the National Response Plan, a quick and readily deployable Emergency Response Team providing on-scene support to the local incident command. The FIRST is a forward extension of the Emergency Response Team-Advanced (ERT-A) providing the ERT-A Team Leader and, after a Stafford Act Declaration, the Federal Coordinating Officer (FCO). FIRST has an Incident Command System (ICS) structure and each team has five permanent team members including a Team Leader, Operations Section Chief, Planning Section Chief, Logistics Section Chief, and a Communications Unit Leader. A State may chose to assign a person(s) to respond with the FIRST. Other Federal expertise may be assigned to augment the FIRST on an as-needed basis. The FIRST is considered a National Asset but is stationed in a FEMA Region and on a day-to-day basis reports to the Regional Response and Recovery (R&R) Division Director." (**DHS**, *TCL*, 2007, p. 205)

Federal Incident Response Support Team (FIRST): "FIRSTs are emergency response teams consisting of approximately five individuals who can be immediately deployed to a significant incident or disaster. FEMA's two FIRSTs are located in Region IV in Atlanta, Georgia, and in Region V in Chicago, Illinois. They serve as the forward component of the ERT-A and provide the core preliminary on-scene Federal management in support of the local incident commander to ensure an integrated, inter-jurisdictional response. Federal incident response support provided

by these teams includes a command vehicle and multiple communications capabilities." (**FEMA**, *Statement of Glenn Cannon*, November 15, 2007, p. 7)

Federal Incident Response Support Team (FIRST): "A forward component of the ERT-A [Emergency Response Team] that provides on-scene support to the local Incident Command or Area Command structure." (**USCG**, *IM Handbook* 2006, Glossary 25-8)

Federal Information Processing Standard (FIPS) 201 (FPIS): "…approved by the National Institute of Standards and Technology. This non-proprietary standard, issued in response to Homeland Security Presidential Directive 12, establishes a common process and technology for sharing secure personnel identification and achieving interoperability across multiple jurisdictions. (**FEMA**, *Statement of Marko* Bourne, 15Nov07, p. 2)

Federal Insurance Administration: "The Federal Insurance Administration (FIA) administers the National Flood Insurance Program, available nationwide. These programs provide insurance coverage for events that are not covered by traditional homeowner's policies. By partnering with private insurance companies, FIA makes insurance available to many people who would otherwise be unprotected." (**FEMA**, *About FEMA: Federal Insurance Administration*, 2007)

Federal Law Enforcement Assistance: "State and local governments may request Federal law enforcement assistance under the Emergency Federal Law Enforcement Assistance Act without a Presidential major disaster or emergency declaration. In addition, Federal agencies may request public safety and security or general law enforcement support from another Federal agency during a large-scale incident. The ESF #13 Annex [NRF] provides further guidance on the integration of public safety and security resources to support the full range of incident management functions." (**DHS**, *Overview: ESF and Support Annexes Coordinating Federal Assistance In Support of the National Framework* (Draft), September 10, 2007, p. 6)

Federal Levees: "Flood Control Works (Levees/Flood Protection Projects) built by and maintained by the Corps of Engineers. (**USACE**, *Fact Sheet: National Levee Safety Program*. February 1, 2007, 2)

Federal Medical Station (FMS): "FMSs are designed to provide surge medical capacity (equipment, material, pharmaceuticals) to communities overwhelmed by mass casualties. They can provide rapidly deployable health and medical care to those patients who have nonacute medical, mental health, or other health-related needs that cannot be accommodated or provided for in a general shelter population. They also provide health and medical care for patients with needs such as:

- Conditions that require observation, assessment, or maintenance.
- Chronic conditions which require assistance with the activities of daily living but do not require hospitalization.
- Medications and vital sign monitoring, particularly for patients who are unable to do so at home." (**AHRQ/HHS**, *Mass Medical Care*…, 2007, p. 81)

Federal On-Scene Commander (FOSC): "The Federal official designated upon JOC activation to ensure appropriate coordination of the overall United States government response with Federal, State and local authorities." (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, p. 75 (Glossary))

Federal On-Scene Coordinator (FOSC): "The Federal official pre-designated by the EPA or the USCG to coordinate responses under subpart D of the NCP [National Contingency Plan] (40 CFR 300) or the government official designated to coordinate and direct removal actions under subpart E of the NCP. A FOSC can also be designated as the Incident Commander." (**USCG**, *IM Handbook*, 2006, Glossary 25-8)

Federal Operational Staging Areas (FOSAs): "Temporary facilities at which commodities, equipment and personnel are received and pre-positioned for deployment within one designated state as required; commodities under the control of the Operations Section of the Joint Field Office (JFO) or Regional Response Coordination Center (RRCC); commodities usually supplied from MOB Centers, Logistics Centers or direct shipped from vendor; generally projected to hold 1 - 2 days of commodities." (**FEMA**, *Logistics Supply Chain*, 2006)

Federal Operations Support (FOS) (Object Class 2501): A type of Mission Assignment "defined as one Federal agency providing direct technical, operational, or logistical support to FEMA or another responding Federal agency. FOS is 100-percent federally funded and may be provided prior to a Presidential declaration of a major disaster or emergency.

Example: A mission assignment issued to U.S. Forest Service (USFS) to establish and operate a base camp to provide housing for Federal disaster workers. (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 10; see also p. 52)

Federal Plan for Disaster Response, 1954: "In conformance with Executive Order 10427, the FCDA has developed a predisaster plan with various Federal agencies which will facilitate Federal assistance in a disaster situation. Every agency of the Federal Government, with major disaster assistance capabilities, is included in this plan which, in most cases, is represented by formal agreement in 'Memoranda of Understanding'." (**FCDA**, *1954 Annual Report*, p. 52)

"FCDA in cooperation with the Defense Air Transportation Administration has prepared plans for the nationwide mobilization and emergency operation of all types of civil aircraft. There are more than 96,000 of these…. Statements of understanding of the role of civil aircraft in the national plan are in edevelopment." (**FCDA**, *1954 Annual Report*, p. 71)

"The 1953 agreement between FCDA and the U.S. Coast Guard established a pilot model organization to provide guidance in plannning for the emergency utilization of small craft. The plan is now in use as a pattern for establishing similar activities in all port areas where emergency mobilization of small craft may be necessary." (**FCDA**, *1954 Annual Report*, 72)

Federal Plan for Response to a Catastrophic Earthquake, FEMA. 1988

Federal Planning Structure: "The Federal planning structure consists of multiple elements:

- the *National Preparedness Guidelines…*
- the *15 National Planning Scenarios* and core capabilities;
- the *National Incident Management System*;
- the *National Response Framework*;
- the *National Infrastructure Protection Plan* and the 17 sector-specific plans;
- a *DHS strategic plan* and overall Federal concept of operations for each of the National Planning Scenarios;
- a *National Exercise Schedule* that incorporates Federal, State and local activity; and
- an *incident management Playbook* that allows the Secretary of Homeland Security, as the principal Federal official for domestic incident management, to ensure effective management of the high-consequence threat scenarios." (**DHS**, *NRF Comment Draft*, 2007, p. 70)

Federal Planning Structure: "The Federal planning structure supports the *Framework* and the State, tribal, and local planning structure through the *National Preparedness Guidelines*, including the National Planning Scenarios and core capabilities; the *NIMS*; the *NIPP* and sector-specific plans; Federal strategic and concept plans for each set of National Planning Scenarios, supported by department and agency operations plans; **National Continuity policies and directives**; and a National Exercise Schedule that incorporates Federal, State, tribal, and local exercises." (**DHS**, *NRF*, 2008, 73; emphasis added for added component)

Federal Preparedness Circulars (FPCs): FPCs detail a series of government policies specific to COOP planning and national security emergency preparedness.

Federal Preparedness Circular (FPC) 65: *Federal Executive Branch Continuity of Operations (COOP)*, June 2004.

Federal Preparedness Coordinators (FPCs): "The conferees are concerned with the concept of creating a Federal Preparedness Coordinator (FPC) for placement in each Federal Emergency Management Agency (FEMA) Regional Office. The conferees agree that an official overseeing preparedness by region is appropriate. However, the conferees are not convinced that creating a senior executive position in the Preparedness Directorate, who reports through a chain of command that does not include response and recovery personnel in FEMA, will further the nation's readiness. Separating preparedness and response functions is detrimental during a disaster and, as demonstrated in past disasters, leads to a lack of communication and a lack of situational awareness, with dire consequences. During emergencies, state emergency managers need clear communications and missions, not confusion and redundancy. The conferees direct the Under Secretary to focus NPIP funding on plan modernization and resolving interoperability issues, as outlined by the Under Secretary, and discourage the use of funds to hire FPCs." (**Congressional Record – House**, "Conference Report on H.R. 5441, Department of Homeland Security Appropriations Act, 2007," September 28, 2007, Pp. H7825)

Federal Preparedness Coordinators (FPCs): "The FEMA Regions are the vehicles for implementing the National Preparedness System across the federal, state, tribal, and local jurisdictional levels, non-governmental organizations, the private sector, and citizen partners. This effort is led in each Region by the FPC, who have three primary roles, each contributing elements to achieve the objectives of the NPG:

- Meeting Regional and National Needs….
- Preparedness Program Management – Building Capabilities…
- Building a Regional Network….” (**FEMA**, *Regional-National Preparedness CONOPS*, 8Feb08, 4)

Federal Preparedness Coordinators (FPCs): “As the Nation’s Preeminent Emergency Management Agency, we will promote the integration and synchronization of preparedness across jurisdictions and all levels of governments by establishing a network of Federal Preparedness Coordinators. Strengthening preparedness requires a dedicated, locally-based DHS senior executive to support the networks of Federal, State, local, tribal, and private-sector partners to plan, train and exercise in preparation for coordinated contingency missions, as well as to share information on a routine basis. Therefore, FPCs will play a vital role in building regional preparedness across jurisdictions through focused planning, information sharing and partnership building. They will strengthen preparedness within their assigned Regions to prevent and respond to threatened or actual domestic terrorist attacks, major disasters, and other emergencies by establishing a Regional domestic all-hazards preparedness goal, integrating mechanisms for improved delivery of Federal preparedness assistance to State and local governments and outlining actions to strengthen preparedness capabilities. Their efforts will lead the integration of DHS’ Regional preparedness efforts, including measurable readiness priorities and targets goals that appropriately balance the potential threat and magnitude of terrorist attacks, major disasters, and other emergencies with the resources required to prevent, respond to, and recover from them.” (**FEMA**, *Vision for New FEMA*, December 12, 2006, p. 24)

Federal Radiological Emergency Response Plan (FRERP): “The plan used by Federal agencies to respond to a radiological emergency, with or without a Stafford Act declaration. Without a Stafford Act declaration, Federal agencies respond to radiological emergencies using the FRERP, each agency in accordance with existing statutory authorities and funding resources. The Lead Federal Agency has responsibility for coordination of the overall Federal response to the emergency. FEMA is responsible for coordinating non-radiological support using the structure of the Federal Response Plan. When a major disaster or emergency is declared under the Stafford Act and an associated radiological emergency exists, the functions and responsibilities of the FRERP remain the same. The Lead Federal Agency coordinates the management of the radiological response with the Federal Coordinating Officer. Although the direction of the radiological response remains the same with the Lead Federal Agency, the FCO has the overall responsibility for coordination of Federal assistance in support of State and local governments using the Federal Response Plan.” (**FEMA**, *FRERP***,** 1996)

Federal Radiological Monitoring and Assessment Center (FRMAC): The FRMAC “gathers radiological information such as plume and deposition predictions, air and ground concentrations, exposure rates and dose projections, assurance of data quality, and current meteorological conditions and weather forecasts. FRMAC provides the results of the data collection, sample analysis, evaluations, assessments, and interpretations to the key decision makers in the affected areas of the emergency. Monitoring continues until all of the surrounding areas where radioactivity was released are fully evaluated.

The FRMAC is one of the emergency response resources, or assets, administered by the National Nuclear Security Administration (NNSA) Nevada Site Office. The Federal government maintains an extensive response capability for radiological monitoring and assessment. In the unlikely event of a major radiological incident, the full resources of the U.S. government will be coordinated to support state, local and Tribal governments. The efforts of 17 Federal agencies are coordinated under the Federal Radiological Emergency Response Plan (FRERP) to integrate the Federal response to a radiological emergency." (**DOE**, *The Federal Radiological Monitoring and Assessment Center (FRMAC)*, October 4, 2007 update)

Federal Resource Coordinator (FRC): "In non-Stafford Act situations, when a Federal department or agency acting under its own authority has requested the assistance of the Secretary of Homeland Security to obtain support from other Federal departments and agencies, DHS may designate an FRC. In these situations, the FRC coordinates support through interagency agreements and memorandums of understanding. Relying on the same skill set, DHS may select the FRC from the FCO cadre or other personnel with equivalent knowledge, skills and abilities. The FRC is responsible for coordinating timely delivery of resources to the requesting agency." (**DHS**, *NRF Comment Draft*, September 2007, p. 66; see, also, **DHS**, *NRF*, 2008, 68))

Federal Resource Coordinator (FRC): "The Federal official appointed to manage Federal resource support activities related to non-Stafford Act incidents. The FRC is responsible for coordinating support from other Federal departments and agencies using interagency agreements and MOU's." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 52; **USCG**, *IM Handbook*, 2006, Glossary 25-8)

Federal Response Plan (FRP): 1) The plan designed to address the consequences of any disaster or emergency situation in which there is a need for Federal assistance under the authorities of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 et seq. 2) The FRP is the Federal government's plan of action for assisting affected States and local jurisdictions in the event of a major disaster or emergency. As the implementing document for the Stafford Act, the FRP organizes the Federal response by grouping potential response requirements into 12 functional categories, called Emergency Support Functions. The FRP was completed in April 1992, and 29 Federal departments and agencies are signatories to the plan. (**FRERP**)

Federal Response Plan (FRP). "The plan designed to address the consequences of any disaster or emergency situation in which there is a need for Federal assistance under the authorities of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U. S.C. 5 121 et seq." (**USG**, *USG Interagency Domestic Terrorism CONPLAN*, 2001, Appendix B: Definitions; See also, **DHS**, *NRP* (Draft #1), February 25, 2004, p. 75) [Note: The FRP has been replaced by the National Response Plan.]

Federal Response Plan for a Catastrophic Earthquake. (FEMA, Nov 1978)

Federal Response Operations Coordination: "The **Secretary of Homeland Security** is the principal Federal official responsible for domestic incident management. This includes coordinating **Federal operations** and resource deployments within the United States to prepare

for, respond to, and recover from terrorist attacks, major disasters, or other emergencies.[45] All Federal departments and agencies may play significant roles in incident management and response activities, depending on the nature and size of an event. The policies, operational structures, and capabilities to support an integrated Federal response have grown swiftly since the 9/11 attacks, and continue to evolve. Many of these arrangements are defined in the Emergency Support Functions, coordinated through pre-scripted mission assignments, and formalized in interagency agreements." (**DHS**, *NRF,* 2008, 54; emphasis in original)

Federal Response Policy Development: "The President leads the Nation in responding effectively and ensuring the necessary coordinating structure, leadership, and resources are applied quickly and efficiently to large-scale incidents. The Homeland Security Council (HSC) and National Security Council (NSC) advise the President on national strategic and policy during large-scale incidents. The HSC and NSC ensure coordination for all homeland and national security-related activities among executive departments and agencies and promote effective development and implementation of related policy. The HSC and NSC ensure unified leadership across the Federal Government. The Assistant to the President for Homeland Security and Counterterrorism and the Assistant to the President for National Security Affairs coordinate interagency policy for domestic and international incident management, respectively, and convene interagency meetings to coordinate policy issues. Both Councils use well-established policy development structures to identify issues that require interagency coordination. To support domestic interagency policy coordination on a routine basis, HSC and NSC deputies and principals convene to resolve significant policy issues. They are supported by the following two Policy Coordination Committees at the assistant secretary level:

- Domestic Readiness Group (DRG)…
- Counterterrorism Security Group (CSG). (**DHS**, *NRF,* 2008, pp. 53-54)

Federal Risk Assessment Working Group (FRAWG): "The National Strategy for Homeland Security challenges agencies "to develop interconnected and complementary systems that are reinforcing rather than duplicative and that ensure essential requirements are met." In an effort to be consistent with and support implementation of the National Strategy, a group of Federal agency assessment practitioners created the Federal Risk Assessment Working Group (FRAWG) to promote inter-agency coordination and information sharing. Representatives from participating Federal agencies meet once a month to encourage and ensure information sharing regarding risk assessments and other related homeland security issues." (**DHS**, *FRAWG*, 2006, p.1)

Federal Standards: "Common rules, conditions, guidelines or characteristics, established by the Federal Government." (**FEMA**, *FY 2007 NIMS Compliance Metrics Terms of Reference*, October 23, 2006, p. 2)

Federal Supply Chain Collaboration Strategy: "At least annually, logistics representatives from DHS/FEMA Headquarters, DHS/FEMA regions, and national resources will meet with their primary partners from the ESFs to review requirements and determine the best sources for

[45] Per HSPD-5, paragraph 8, the Secretary of Homeland Security's operational coordination role excludes law enforcement coordination activities assigned to the Attorney General and generally delegated to the Director of the FBI.

filling them. DHS/FEMA Logistics will employ collaborative supply chain best practices within the ESF structure that include: collaborative planning, forecasting and replenishment, customer relationship management, and supplier relationship management." (**DHS**, *NRF Logistics Management Support Annex,* September 2007 Draft, p. 7)

Federalism: "…the nation's federalist form of government lies at the root of many of the challenges that make providing homeland security so difficult, as the federal government lacks authority over state governors or even locally elected mayors. The U.S. Constitution grants the states and territories a wide range of sovereign rights and responsibilities, which are taken very seriously by elected officials at the state and local levels. For all the clamor in the wake of Hurricane Katrina for someone, anyone, to be in charge, it is not possible to achieve "unity of command" in the military sense of the term during a domestic catastrophe unless the American public agrees to rewrite the Constitution. No governor or city mayor—elected by constituents and entrusted with the responsibility of developing a plan at the state or local level to handle an emergency—will stand idly by and let a federal official impose, from outside, a plan created in Washington. Preventing, protecting against, preparing for, and responding to catastrophes inside the United States requires a *national* approach based fundamentally on coordination and cooperation horizontally between different types of organizations such as governments, the private sector, nonprofit organizations, and individuals and vertically between the federal, state, and local levels of government." (**Wormuth**, *Managing the Next Catastrophe*, 2008, 6)

Federally Built and Locally Maintained Levees: "Federal projects built by the Corps or congressionally authorized into the Corps program and turned over to a local sponsor to maintain. These projects are included in the Inspection of Completed Works (ICW) program, and are automatically incorporated into the Rehabilitation and Inspection Program (RIP). These projects, if properly maintained and operated by the community, may stay in the program. (**USACE**, *Fact Sheet: National Levee Safety Program*. February 1, 2007, 2)

Federated Planning: "Federated Planning. The Federal framework of the United States assigns, by law, unique responsibilities and authorities to each member of the homeland security community. It also imposes, by law and practice, a requirement to share responsibilities and authorities to provide for common defense and security. The planning doctrine that best accounts for the separate and shared security responsibilities of Federal, State, municipal and Tribal authorities can be labeled "federated planning."

a. Federated planning is a 'multi-direction' doctrine — it flows bottom-up, top-down, left-right, and right-left. It recognizes that planning begins with strategic direction from senior executives at each level of government. This strategic direction is converted to concept plans (CONPLANS), which are, in turn, converted to operations plans (OPLANS). This planning process takes place throughout the planning community, with planners at each level interacting with each other and often with planners at other levels to acquire and integrate support.

b. Government leaders at every level generate strategic goals and requirements that must be converted to executable action plans. The majority of strategic requirements are determined and levied by local leaders. Local officials deploy and employ the majority of

homeland security assets to prevent, protect against, respond to, and recover from major disaster, terrorist attacks, and other emergencies.

c. Municipal leaders make strategic assessments and formulate the strategic guidance necessary to acquire, train, maintain, and employ the assets and personnel needed to protect lives and property. The scope of their strategic planning and decision-making varies widely, depending on the size and location of their municipality.

d. Like their municipal counterparts, State leaders have unique, legally mandated responsibilities to provide security within their jurisdictional boundaries. Much of their responsibility is reinforcing local officials with resources and authorities not available to them in normal circumstances. State officials strategically plan to acquire, position, and allocate: funding, State police forces, State militia, National Guard elements, communications, hospitals, and other critical elements. They also identify requirements and opportunities to make security related compacts with other jurisdictions. In addition to supporting municipalities, State leaders conduct the strategic, operational, and tactical planning necessary to secure State owned properties, installations, and other infrastructure.

e. Federal officials perform a role similar to State officials but on a larger, broader scale. Like their State and regional counterparts, they reinforce local officials, private enterprise, and nongovernmental organizations with funding, training, equipment, authorities, and security forces. They establish the national level structures needed to ensure that the Nation's security elements operate in a coherent, mutually reinforcing manner. Federal authorities have primary responsibility for organizing and synchronizing the national effort. They accomplish this by guiding national investments in preparedness, facilitating standardized planning processes, and facilitating the robust training and exercise programs required to ensure national integrated preparedness.

f. Many Federal officials have 'localized' responsibility for securing Federal properties, installations, and assets under their control. In executing this responsibility, Federal authorities often require significant community support, including that provided by State and municipal officials, private entities, and other Federal agencies. In planning to secure specific sites and assets, Federal authorities mirror the actions of municipal leaders; they determine what must be done, identify the resources required (including authorities and permissions), and coordinate with other levels of government and the private sector to obtain them." (**FEMA**, *(Interim) Integrated Planning System (IPS) for Homeland Security (Draft Version 2.3)*, July 3, 2008 copy, p. 2-2 & 2-3)

FEMA: Federal Emergency Management Agency. "FEMA was formed in 1979[46] by executive order of the President,[47] combining Federal programs that deal with all phases of emergency

[46] Effective April 1, 1979 (White House, *Federal Emergency Management Agency Appointment of Gordon Vickery as Acting Director*, March 31, 1979).

[47] White House. *Executive Order 12127 – Federal Emergency Management Agency*. Washington, DC: The White House, March 31, 1979.

management, for disasters of all types, into a single agency." (**FEMA**, *A Nation Prepared*, 2002, p.1) John W. Macy, Jr. was the first FEMA Director.[48]

FEMA: "Several major objectives were to be accomplished when the Federal Emergency Management Agency was created in 1979. One objective was to establish a single point of contact for State and local governments to deal with all emergency management programs at the Federal level. Another objective was to broaden the application of emergency preparedness and response resources to all hazards, and to take advantage of the similarities that exist in planning and response functions for peacetime and attack emergencies." (**FEMA**, *IEMS Process Overview*, September 1983, p. 3)

FEMA: Moved into FEMA were:

- Defense Civil Preparedness Agency (Department of Defense)
- Federal Preparedness Agency (General Services Administration)
- Federal Disaster Assistance Administration (Depart. Housing and Urban Development)
- Federal Insurance Administration (Department of Housing and Urban Development)
- National Fire Prevention and Control Administration (Department of Commerce)
- Office of Earthquake Hazard Reduction (Office of Science and Technology Policy, Executive Office of the President)
- Emergency Broadcast System and Warning Oversight, Executive Office of the President
- Response to Consequences of Terrorism
- Weather Community Preparedness Program (National Weather Service, Department of Commerce)
- Dam Safety Coordination (Office of Science and Technology Policy, Executive Office of the President)

(**President's Reorganization Project**, 1978; **National Archives**, FEMA Record Group 311)

FEMA: Reorganization Plan Number 3 of 1978 created FEMA as an independent Agency within the Executive Branch, to be headed by a Director appointed by the President (by and with the advice and consent of the Senate).[49] (**President's Reorganization Project**, 1978, p. 1) Ten regional directors "appointed by the Director" were authorized. (**President's Reorganization Project**, 1978, p. 2)

FEMA: From President Jimmy Carter's Press Release upon the transmittal to Congress of Reorganization Plan No. 3 of 1978, creating FEMA:

"Today I am transmitting Reorganization Plan No. 3 of 1978. The Plan improves Federal emergency management and assistance. By consolidating emergency preparedness, mitigation

---

[48] White House. *Federal Emergency Management Agency Nomination of John W. Macy, Jr., To Be Director*. Washington, DC: The White House, May 3, 1979.

[49] Reorganization Plan Number 3 of 1978: "Prepared by the President and transmitted to the Senate and the House of Representatives in Congress assembled, June 19, 1978, pursuant to the provisions of Chapter 9 of Title 5 of the United States Code." (President's Reorganization Project, 1979, p.1)

and response activities, it cuts duplicative administrative costs and strengthens our ability to deal effectively with emergencies.

For the first time, key emergency management and assistance functions would be unified and made directly accountable to the President and Congress….

The present situation has severely hampered Federal support of State and local emergency organizations and resources, which bear the primary responsibility for preserving life and property in times of calamity. This reorganization has been developed in close cooperation with State and local governments….

This reorganization rests on several fundamental principles. First, Federal authorities to anticipate, prepare for, and respond to major civil emergencies should be supervised by one official responsible to the President and given attention by other officials at the highest levels….

Second, an effective civil defense system requires the most efficient use of all available emergency resources. At the same time, civil defense systems, organization, and resources must be prepared to cope with any disasters which threaten our people….Consolidation of civil defense functions in the new Agency will assure that attack readiness programs are effectively integrated into the preparedness organizations and programs of State and local government, private industry, and volunteer organizations.

While serving an important 'all-hazards' readiness and response role, civil defense must continue to be fully compatible with and be ready to play an important role in our Nation's overall strategic policy. Accordingly, to maintain a link between our strategic nuclear planning and our nuclear attack preparedness planning, I will make the Secretary of Defense and the National Security Council responsible for oversight of civil defense related programs and policies of the new Agency….

Third, whenever possible, emergency responsibilities should be extensions of the regular missions of Federal agencies. The primary task of the Federal Emergency Management Agency will be to coordinate and plan for emergency deployment of resources that have other routine uses. There is no need to develop a separate set of Federal skills and capabilities for those rare occasions when catastrophe occurs.

Fourth, Federal hazard mitigation activities should be closely linked with emergency preparedness and response functions….

Most State and local governments have consolidated emergency planning, preparedness and response functions on an 'all hazard' basis to take advantage of the similarities in preparing for and responding to the full range of potential emergencies. The Federal Government can and should follow this lead." (**White House**, *FEMA and the President's Reorganization Plan No. 3 of 1978*, June 19, 1978)

FEMA Administrator: "At DHS, the FEMA Administrator is the Secretary's principal advisor for matters relating to emergency management." (**DHS**, *NRF Comment Draft*, 2007, p. 52)

FEMA Administrator: "The Federal Emergency Management Agency (FEMA) Administrator is the principal advisor to the President, the Homeland Security Council (HSC) and the Secretary for all matters relating to emergency management in the United States. The Administrator partners with State, tribal and local governments and emergency responders, with Federal agencies, with the private sector and with nongovernmental sectors to utilize all the nation's resources to respond to natural disasters, acts of terrorism and other manmade disasters, including catastrophic incidents." (**DHS**, *National Response Framework -- Federal Partner Guide* (Comment Draft), September 10, 2007, pp. 2-3)

[Note: Compare the statement immediately above to the following from the Jan 2008 DHS NRP: "**The President leads the Federal Government response effort** to ensure that the necessary coordinating structures, leadership, and resources are applied quickly and efficiently to large-scale and catastrophic incidents. The President's **Homeland Security Council** and **National Security Council**, which bring together Cabinet officers and other department or agency heads as necessary, provide national strategic and policy advice to the President during large-scale incidents that affect the Nation." (p. 24; emphasis in the original.)

FEMA Administrator: "The **FEMA Administrator** is the principal advisor to the President, the Secretary of Homeland Security, and the Homeland Security Council regarding emergency management. The FEMA Administrator's duties include operation of the National Response Coordination Center, the effective support of all Emergency Support Functions, and, more generally, preparation for, protection against, response to, and recovery from all-hazards incidents. Reporting to the Secretary of Homeland Security, the Administrator also is responsible for management of the core DHS grant programs supporting homeland security." (**DHS,** *NRF*, 2008, 55)

FEMA Cabinet Status: "CABINET STATUS…The President may designate the Administrator [FEMA] to serve as a member of the Cabinet in the event of natural disasters, acts of terrorism, or other man-made disasters." (**FEMA 592**, 2007, p. 96; passage from Title V (National Emergency Management) Sec. 503. Federal Emergency Management Agency (6 U.S.C. 313), Department of Homeland Security Appropriations Act, 2007 (Pub. L. No. 109-295) amending the Homeland Security Act of 2002)

FEMA Catastrophic Disaster Housing Strategy: "In 2004, FEMA completed an initial Catastrophic Disaster Housing Strategy, which proposed several initiatives to increase FEMA's capability to provide assistance to individuals and households following an extraordinary or catastrophic disaster. The strategy provided the principles and recommended strategies that establish the framework for the catastrophic disaster housing recovery planning being done today. Key needs identified at that time included the following: an expandable disaster registration intake and applicant assistance process; the ability to provide immediate benefits payments; a plan for assisting applicants to temporarily relocate to outside the disaster area; and a strategy and prepared public messages to provide victims with information about assistance." (**FEMA**, *Statement of R. David Paulison, House Cmt. on Oversight & Gov Reform*, July 07, 16)

FEMA Community Family Preparedness Program: "Preparedness is everyone's job. Not just government agencies but all sectors of society -- service providers, businesses, civic and volunteer groups, industry associations and neighborhood associations, as well as every individual citizen -- should plan ahead for disaster. During the first few hours or days following a disaster, essential services may not be available. People must be ready to act on their own. The Community and Family Preparedness Program educates the general public about disaster awareness and preparedness. FEMA provides opportunities, information and tools to help other organizations and agencies educate the public on disaster preparedness." (**FEMA**, *About FEMA: Community and Family Preparedness Program*, 2007)

FEMA Community Preparedness Division: "The Community Preparedness Division (CPD) was successful in 2007 in its efforts to build preparedness at the community level by coordinating and encouraging citizen participation in preparedness activities. Working through the Citizen Corps program, in 2008, CPD will continue to bring community and government leaders together to increase all-hazards emergency preparedness, planning, mitigation, response and recovery efforts across this nation." (**FEMA**, *National Preparedness Directorate Draft Fact Sheet*, February 1, 2008)

FEMA Core Competencies (2007/2008:

- Service to Disaster Victims
- Operational Planning
- Incident Management
- Disaster Logistics
- Hazard Mitigation
- Emergency Communications
- Public Disaster Communications
- Integrated Preparedness
- Continuity Programs
- Business Approach to Achieving Desired Results
- Shape the Workforce

(**FEMA** *Strategic Plan*, Nov 2007 draft, p.6; **FEMA** *Strategic Plan FY 2008-2013*, Jan 2008, 3)

"The core competencies represent key operational areas in which we must excel to accomplish our mission while the supporting strategies provide the foundation that underpins operational success. The cross-cutting goals and objectives in this Strategic Plan show how we must work together to strengthen our core competencies and the organization as a whole to achieve the vision." (**FEMA**, *Strategic Plan*, November 2007, p. 7)

FEMA Core Values (1997): "FEMA has eight core values that its employees strive to exemplify:

Quality Work:	Dedication to doing the best job possible.
Customer Service:	We value our internal and external customers, and strive to meet their expressed needs.

Creativity and Innovation:	New ideas and creativity are fundamental to continued growth, improvement and problem solving.
Teamwork:	Every employee has something of value to contribute. By working cooperatively together, we can better achieve the Agency's mission and goals.
Continuous Improvement:	Continuous development of personal/professional skills and program delivery is key to better serving our customers.
Public Stewardship:	Commitment to prudent management of the taxpayers' money and dedication to providing the public with the highest quality service.
Diversity:	FEMA's employees are its most valuable resource. The diversity of their backgrounds, experiences, and skills adds to their value.
Partnership:	Reaching out and engaging FEMA's partners collaboratively is essential to our success." (**FEMA**, *Strategic Plan,*1997, p. 11)

FEMA Core Values (2002): "FEMA has ten core values that guide both the Agency as a whole and every individual within the Agency:

Accountability:	Being responsible for decisions and results while acknowledging mistakes and working to correct them.
Integrity:	Following the highest ethical standards and always being truthful with customers and colleagues.
Customer Focus:	Making customers and their needs the first priority.
Innovation:	Seeking creative new ways to better deliver our services and meet whatever challenges may arise.
Public Stewardship:	Managing resources prudently and providing the highest quality of service.
Partnership:	Working collaboratively with external partners and with each other to achieve our common goals.
Respect:	Listening to and treating customers and co-workers with dignity.
Diversity:	Enriching our work environment and our ability to perform through diversity in backgrounds, experiences, skills, and respect fore those differences.
Trust:	Relying on each other and our external partners to act in the best interest

of our customers, and earning that trust through our behavior.

Compassion: Showing concern to customers and to each other in time of need." (**FEMA**, *A Nation Prepared (Strategic Plan),* 2002, pp. iii., and 35 (Appendix B))

FEMA/DHS Preparedness Directorate Transition, April 1, 2007: The Post-Katrina Emergency Reform Act of 2006 ("the Act") amended the Homeland Security Act and the President's Katrina Lessons Learned Report and directed changes to FEMA and DHS' organizational structure and included the realigning of several functions into FEMA. These changes became effective April 1, 2007.

- Major Preparedness functions and programs to include the Office of Grants and Training, the United States Fire Administration, National Capital Region Coordination, Chemical Stockpile Emergency Preparedness and the Radiological Emergency Preparedness Program transferred to FEMA.
- The FEMA Director, R. David Paulison, became the FEMA Administrator, a new title provided under the Act. He reports directly to the Secretary of Homeland Security and can be called upon by the President to serve as a member of the Cabinet in the event of natural disasters, acts of terrorism or other man-made disasters.
- The Act also includes provisions relating to FEMA's regional structure and provides a renewed focus on the Regions as the backbone for FEMA's relationship with state and local partners-an essential element for successful emergency management. FEMA's 10 Regional Directors become Regional Administrators.
- Also, a new, permanent position is being added to FEMA's senior leadership team -- Law Enforcement Advisor to the Administrator. This person will play a critical role, participating in planning meetings and being on-hand during times of crisis. The office will ensure that law enforcement has a seat at the table and FEMA gains additional perspective on the issues of prevention and protection when making and executing plans." (**FEMA**, *Fact Sheet: FEMA/Preparedness Transition*, April 2, 2007.

FEMA Director of Management and Chief Acquisition Officer: "…responsibilities include the direct oversight and management of four of FEMA's lines of business: the Offices of Human Resources, Information Technology, Chief Procurement Officer and Facilities Management and Services." (FEMA, *Deidre Lee, Director of Management and Chief Acquisition Officer*, 1Apr07)

FEMA Director's Intent (2007): "Federal efforts will alleviate human suffering, ensure the continuity of critical government functions and services, minimize severe property damage, mitigate the impact of the incident, and create an operational environment conducive to long-term community recovery and future hazard mitigation." (**FEMA**, *DHS/FEMA Federal Interagency Hurricane Contingency Plan,* October 31, 2007 Draft (V.13), p. 2)

FEMA Disability Coordinator: "The Disability Coordinator, who reports directly to the Administrator, is charged with assessing the coordination of emergency management policies and practices with the needs of individuals with disabilities, including training, accessibility of entry, transportation, media outreach, and general coordination and dissemination of model best practices, including evacuation planning. The Disability Coordinator will work closely with the

DHS Office of Civil Rights and Civil Liberties." (**FEMA**, *Statement of R. David Paulison, FEMA/DHS, House Cmt. on Oversight & Gov. Reform,* July 31 2007, p. 4)

FEMA Disaster Assistance Directorate (DAD): "Disaster Assistance Directorate (DAD), formerly the Recovery Program, works to ensure that individuals and communities affected by disasters of all sizes, including catastrophic and terrorist events, are able to return to normal with minimal suffering and disruption of services. Program activities focus on improving efficiency and expediting delivery of disaster assistance to eligible individuals, to state, local, and tribal governments, and to eligible private nonprofit organizations, through a commitment to streamline procedures to improve program policy, to minimize error, and to modernize service delivery technology. Key programs include, but are not limited to: the Individual and Households Program, the Public Assistance Program, Other Needs Assistance, the Crisis Counseling Assistance and Training Program, Disaster Unemployment Assistance, Disaster Legal Services, Emergency Housing, and voluntary agency coordination. DAD is FEMA's agent in the implementation of provisions of the National Disaster Recovery Strategy and the elements of the National Disaster Housing Strategy." (**DHS**, *FEMA OMA FY09*, 2008, 5; see also, 24-25)

FEMA Disaster Assistance Directorate (DAD) Program Elements:

- Individuals and Households Program (IAP)
- Public Assistance Program (PA)
- Fire Management Assistance Grant Program (FMAGP) (**DHS**, *FEMA OMA FY09*, 25)

FEMA Disaster Operations: "FEMA's ability to marshal an effective response to disasters must be based on a professional, national network of emergency managers skilled in incident management, operational planning, and emergency communications. At all levels of government, emergency management personnel must be trained and certified experts who operate well together across the full spectrum of emergency management planning and operations. FEMA must be more than a facilitator and standard bearer for the profession of emergency management. FEMA must be a leader and model of effective implementation of disaster operations." (**DHS**, *FEMA OMA FY 2009 Budget Justification*, 2008, 61)

FEMA Disaster Operations Directorate: "Disaster Operations Directorate provides core federal response capabilities to save lives and to protect property in communities throughout the Nation that have been overwhelmed by the impact of a major disaster or an emergency, regardless of cause. The Disaster Operations Directorate executes its mission through three primary program areas: Operational Direction, Command, and Control; Operational Teams; and Operational Planning. Disaster Operations houses several activities that were formerly part of FEMA's Response Program, such as sustained situational awareness; a command, communication and coordination system comprised of a national and regional command and coordination centers; national and regional rapid support and response teams; and a collection of competency-based and technically-oriented operational teams. Disaster Operations is also home to the Incident Management Assistance Teams mandated by PKEMRA." (**DHS**, *FEMA OMA*, Jan 2008, pp. 4-5)

FEMA Disaster Operations Program: "FEMA's Disaster Operations Program provides core federal operational capabilities needed to save lives, minimize suffering, and protect property in

a timely and effective manner in communities overwhelmed by acts of terrorism, natural disaster, or other emergencies. Disaster Operations (formerly FEMA's Response Program, absent the Logistics element) encompasses the following program activities and elements.

- Operational Direction, Command, and Control
  - Operations Centers
    - National Response Coordination Center (NRCC)
    - Regional Response Coordination Centers (RRCC)
    - FEMA Operations Center (FOC)
    - Disaster Workforce Management
    - Disaster Emergency Communications
- Operational Teams
  - Incident Management Assist Teams (IMAT)
  - Urban Search and Rescue (USAR) Task Forces
  - Incident Support Teams (IST)
  - Mobile Emergency Response System (MERS)
  - Hurricane Liaison Team
  - National Emergency Response Teams (ERT-N)
  - Emergency Response Teams-Advance (ERT-A)
- Specialized Federal Teams
  - The Nuclear Incident Response Teams (NIRT)
  - The Domestic Emergency Support Team (DEST)
- Operational Planning
  - Provide national and regional operational planning guidance and coordination.
  - Coordinate at the operational level the execution of all hazard contingency plans.
  - Provide forecasting and analysis of potential events.
  - Assist FEMA Regions in operational planning at the regional level.
  - Lead the development of DHS and FEMA hazard-specific contingency plans.
- Catastrophic Disaster Response Planning
- Special Events Operations
- Exercise Support (**DHS**, *FEMA OMA FY 2009 OMB Budget Justification*, 2008, 18-22)

FEMA Doctrine (1985) – Build Local Capabilities:

"Saving lives and protecting property – that's what our business is all about.

"Every year, untold lives are lost and millions of dollars in property are damaged as a result of floods, hazardous materials incidents, tornadoes, and the like.

"We need to do a better job at all levels of government to limit the impact of these potential occurrences. There are many mitigation, preparedness, and planning activities that could be undertaken but so few resources available. A key question becomes – Where to start?

"The Federal Emergency Management Agency (FEMA) has developed the Hazard Identification, Capability Assessment, and Multi-Year Development Plan as a tool for sorting out where we are today and where we should be going tomorrow and beyond – What significant

hazards should we be worrying about? What are our capabilities? Where should we be focusing our energies to get the biggest return on the dollar?

"This common-sense approach to taking stock of the situation will provide grassroots information for identifying real needs and preparing FEMA budget requests more responsive to these needs.

If we are to reduce the number of lives lost and the amount of property damaged, we must all make some hard decisions concerning the most effective use of limited resources. While national priorities will remain an important factor at the Federal level, these decisions must reflect local problems, needs, and plans for the future." (**FEMA**, *Hazard Identification, Capability Assessment, and Multi-Year Development Plan*, Foreword, 1985)

FEMA Emergency Management Higher Education Program: A program created in 1994 and managed out of FEMA's Emergency Management Institute in Emmitsburg, MD to encourage and support the dissemination of hazard, disaster, and emergency management-related information in colleges and universities across the United States. (**FEMA**, 2008)

FEMA Emergency Management Higher Education Program Vision (Short Version):

National disaster loss reduction led by highly educated and professional emergency managers.

FEMA Emergency Management Higher Education Program Vision (Long Version):

We foresee a future wherein more and more emergency managers in government as well as in business and industry will come to the job with college education that includes a degree in emergency management.

We believe that an emergency management educational experience and foundation will not only lead to a more highly educated emergency management cadre but a cadre which will be more

- Knowledge and theory-based
- Executive-level
- Strategic-thinking
- Highly skilled
- Technologically sophisticated
- Customer-service directed
- Diverse.

We believe that a better understanding of the hazards, disasters and emergency management body of knowledge, implicit in an emergency management higher education experience, will also provide the philosophical foundation upon which future technical training and professional development, as well as the lessons of real-world experience, will better take root so that the emergency managers of the future can better achieve their tasks and missions – for the betterment of their customers, the American people.

We envision a future wherein this development will significantly contribute to

- Transformational and sustained professional capability and competence
- Disaster loss reduction led by emergency managers who work to develop cultures of disaster reduction, mitigation, prevention and preparedness – out of an awareness that the best operational disaster response capability in the world does little to address the escalating trend of future disaster losses.
- The development of more disaster resistant and resilient communities through leadership provided by the emergency management professional and higher education communities.
- Creation of a more professional, capable, networked, customer-service-driven national emergency management system.
- Putting to an end the doubling-to-tripling of disaster losses per decade which has been the recent past, the current condition, and, without successful intervention, the certain future of the United States.

FEMA Emergency Management Higher Education Program Mission:

- Serve as the Nation's leading focal-point for emergency management higher education.

FEMA Emergency Management Higher Education Program Customers:

- Collegiate faculty, administrators, and students (traditional and practitioner).
- All levels of public and private sector "emergency management" & related practitioners.
- Emergency management and related professional organizations.

FEMA Emergency Management Higher Education Program Goals:

- Provide federal-level leadership for progressive growth of the EM Hi-Ed community.
- Support FEMA Vision, Mission, New FEMA Transformation, and Policy Goals.
- Development of future cadre of emergency management and related professionals grounded in emergency management, social and natural science knowledge, administrative and managerial skills and technical and personal competencies.
- Contribute to growth/refinement of the academic discipline of emergency management
- Service the needs of the emergency management higher education community.
- Support the development and refinement of a Theory of Emergency Management.
- Advance the state of knowledge of emergency management and the full range of hazards which confront communities and the nation, whether natural, technological, or intentional
- Grow and expand knowledge of the emergency management body of knowledge, with specific emphasis on the basic principles and concepts of emergency management.
- Support translation of emergency management doctrine into educational materials.
- Actively engage with the emergency management academic and practitioner communities to better define and build the curriculums at the Associate, Bachelors, Masters and Doctoral levels which will lay the foundation for successful entry into the emergency management community as well as the professional development of practitioners.

FEMA Emergency Management Higher Education Program Objectives:

- Encourage and support the increase in the number of EM collegiate programs in the US.

- Support the continued growth of existing emergency management collegiate programs.
- Nurture the sense of an Emergency Management Higher Education Community.
- Support the continuing transformational professionalization of emergency management through formal education, training material access, and experiential learning within the formal education environment.
- Strengthen core emergency management capabilities, competencies, and capacities through emergency management higher education.
- Facilitate a national public-private effort to promulgate best practices and methodologies that promote emergency management professionalism and refinement of the academic discipline of emergency management.
- Provide a full-service emergency management higher education focal point for the wide range of collegiate emergency management higher education community
    - Doctoral programs
    - Masters programs
    - Bachelors programs
    - Associate programs (community, technical and junior colleges)
- Within this range we particularly support programs which stress
    - The philosophical orientation of disaster reduction, mitigation and prevention as holding pride-of-place in the emergency management disaster cycle – recognizing that within emergency management an ounce of prevention is worth more than a pound of cure (response operations).
    - Development of executive-level leadership skills
    - Development of analytical, theoretical, and strategic thinking
    - Development of problem solving, networking and communication skills
    - Use of solid academic social science hazards, disasters and emergency management research literature
    - Literacy in research methodologies, techniques and literature
    - Mastery of Concepts and Principles of Emergency Management
    - Risk-Based emergency management (Risk Assessment and Risk Management)
    - Methodologies to identify community and social hazards vulnerabilities and the design and implementation of vulnerability reduction and resilience enhancement programs.
    - A multi-disciplinary perspective (academic and practitioner disciplines)
    - Experiential learning opportunities and applied emergency management combined with a rigorous and challenging academic curriculum.
    - Distinctions between customer service and public service.
    - Distinctions between the pre-doctrinal nature of higher education versus the doctrinal nature of training – the role of higher education is not to indoctrinate but to educate, while the role of training of more properly the province of indoctrination into missions, tasks and objectives – doctrine.

FEMA Emergency Management Higher Education Program Tasks:

- Develop, acquire and make freely-available educational college-level courses, books and other materials in support of the emergency management higher education and professional communities.
- Assist in the development and refinement of emergency management collegiate curricula.

- Grow the clearinghouse list-serve communications channel to the EM Hi-Ed Community.
    - Share research and survey results
    - Share educational resources
    - Share best practices in collegiate emergency management program growth
    - Share best practices in collegiate emergency management experiential learning
    - Share governmental emergency management and related materials
    - Support the EMI goal of enhancing mission success by adopting results orientated business approach through the use of GovDelivery. GovDelivery operates in conjunction with EMI internet website and supports the dissemination of EM Hi-Ed Reports to all subscribers.
- Maintain the Guide to Emergency Management Terms, Definitions, and Programs.
- Maintain the Bibliography of Emergency Management and Related References.
- Host a unique annual Emergency Management Higher Education Conference which serves the needs of the emergency management higher education and emergency management professional communities.
- Support, collect, publicize and work toward a more consensual sense of the composition of the Emergency Management Body of Knowledge.
- Maintain a body of knowledge depository of emergency management materials.
- Maintain The College List of all U.S. institutions of higher education with EM programs.
- Support efforts to regularize distinctions between emergency management curricula at the Associate, Bachelors, and graduate Masters and Doctoral levels.
- Solicit and maintain case studies of Experiential Learning in Emergency Management.
- Serve as a clearinghouse for the transfer of Emergency Management Institute vocational-level training courses to the EM Hi-Ed Community.
- Support the collection of and publicize data on the status of EM Higher Education.
- Support the Emergency Management Roundtable
- Sponsor production of annual reports on the state of the Emer. Mgmt. Hi-Ed community.
- Facilitate a national public-private effort to promulgate best practices and methodologies that promote emergency management professionalism and refinement of the academic discipline of emergency management through such tools as the collection of best practices through maintenance and expansion of such tools as the "Practitioners Corner," the "Syllabi Compilation," the "Growing Your EM Program," and the "Articles, Papers and Presentations," on the FEWMA EM-Hi-Ed Program Website.

FEMA Emergency Management Institute (EMI), Emmitsburg MD: "EMI…provides training to federal, state, local, tribal, public and private sector officials to strengthen emergency management core competencies, including incident management, operational planning, disaster logistics, emergency communications, disaster assistance, continuity programs, public disaster communications, integrated preparedness, and hazard mitigation. EMI directly supports the implementation of NIMS, the NRF, and the National Preparedness Guidelines (NPG) by conveying necessary knowledge and skills to practitioners. EMI uses a diverse training delivery system that includes residential onsite training; offsite delivery in partnership with emergency management training systems, colleges, and universities; and technology-based mediums to conduct individual training courses for emergency response personnel across the Nation." (**DHS**, *FEMA OMA FY 2009*, 2008, 10)

FEMA Emergency Management Institute Goals: "Improve the abilities of FEMA and other DHS employees. Improve the abilities of U.S. state, local, and tribal officials by:
Directly training state, local, and tribal employees in selected subjects; Enabling state, local, and tribal officials to develop and deliver training for their own constituents; Enhance the preparedness of U.S. individuals, families, and special audiences through training." (**FEMA**, *Emergency Management Institute Performance Measures* October 3, 2007, slide 7)

FEMA Emergency Management Institute Mission: "To support FEMA and the Department of Homeland Security's goals by improving the skills of U.S. officials at all levels of government to prevent, prepare for, respond to, recover from, and mitigate the potential effects of all types of disasters and emergencies." (FEMA, *Emergency Management Institute Performance Measures* October 3, 2007, slide 6)

FEMA Environmental Planning and Historic Preservation (EHP) Program: "*EHP Policy*:
It is FEMA's policy to act with care to ensure that its disaster response and recovery, mitigation and preparedness responsibilities are carried out in a manner that is consistent with all Federal environmental and historic preservation policies and laws. FEMA uses all practical means and measures to protect, restore and enhance the quality of the environment, to avoid or minimize adverse impacts to the environment, and to attain the objectives of:

- Achieving use of the environment without degradation or undesirable and unintended consequences;
- Preserving historic, cultural and natural aspects of national heritage and maintaining, wherever possible, an environment that supports diversity and variety of individual choice;
- Achieving a balance between resource use and development within the sustained carrying capacity of the ecosystem involved; and
- Enhancing the quality of renewable resources and working toward the maximum attainable recycling of depletable resources.

EHP Program:
The Environmental Planning and Historic Preservation (EHP) program integrates the protection and enhancement of environmental, historic, and cultural resources into FEMA's mission, programs and activities; ensures that FEMA's activities and programs related to disaster response and recovery, hazard mitigation, and emergency preparedness comply with federal environmental and historic preservation laws and executive orders; and provides environmental and historic preservation technical assistance to FEMA staff, local, State and Federal partners, and grantees and subgrantees." (**FEMA**, *FEMA EHP*, January 31, 2008 modification)

FEMA Executive Management System EMS): In FY 2007 FEMA "Developed the requirements for, and implemented, an Executive Management System to improve how FEMA manages information, saving significant staff time in searching, organizing and formatting information." In FY 2008 the EMS will "manage a concurrence clearance process, collecting feedback in a central location for thousands of documents. EMS will also become a data repository for FEMA documents and information, with built-in search functions and the ability to report on the status of documents." (**DHS**, *FEMA OMA FY2009 Budget Justification*, 2008, 33)
[Note: EMS management resides within the Office of Policy and Programs Analysis.]

FEMA Fire Management Assistance Grant Program: "Fire Management Assistance is available to States, local and tribal governments, for the mitigation, management, and control of fires on publicly or privately owned forests or grasslands, which threaten such destruction as would constitute a major disaster. The Fire Management Assistance declaration process is initiated when a State submits a request for assistance to the FEMA Regional Director at the time a "threat of major disaster" exists. The entire process is accomplished on an expedited basis and a FEMA decision is rendered in a matter of hours. "The Fire Management Assistance Grant Program (FMAGP) provides a 75 percent Federal cost share and the State pays the remaining 25 percent for actual costs. Before a grant can be awarded, a State must demonstrate that total eligible costs for the declared fire meet or exceed either the individual fire cost threshold - which is applies to single fires, or the cumulative fire cost threshold, which recognizes numerous smaller fires burning throughout a State. Eligible firefighting costs may include expenses for field camps; equipment use, repair and replacement; tools, materials and supplies; and mobilization and demobilization activities." (**FEMA,** *FMAGP*, December 2006)

FEMA Gap Analysis Program: "FEMA is organizing to work with our partners to determine what your needs are and how we can best support you. Sometimes the answer is not money, it is knowledge. Our new Gap Analysis program is a prime example. This year…we initiated vulnerability assessments in the coastal States most prone to hurricanes….The result: FEMA and the states knew which Federal resources would be most necessary to support any given State during a hurricane. With this initial analysis in place, we put plans in place on a state-by-state basis… it was a good start, and we intend to refine and extend the process next year…. The GAP analysis reveals how we are planning for our future. When we know what is needed, we can develop and implement improved mitigation activities, plan our disaster operations and logistical needs, and be ready with the right type and amount of resources to assist in the recovery following an event. (**FEMA**, *David Paulison IAEM Presentation, Reno, NV*, 12 Nov 2007. p. 5)

FEMA Goal (2007): "It is FEMA's goal to reduce the loss of life and property and protect the United States from all hazards by leading and supporting the country in a risk-based, comprehensive emergency management system of protection, response, recovery, mitigation, and now, more than ever, preparedness." (**FEMA** *"Looking Toward the NFIP's Future,"* 2007**)**

FEMA Goals (2002: (**FEMA**, *A Nation Prepared (Strategic Plan)*, 2002**,** p. iii.)

1. Reduce loss of life and property.
2. Minimize suffering and disruption caused by disasters.
3. Prepare the Nation to address the consequences of terrorism.
4. Serve as the Nation's portal for emergency management information and expertise.
5. Create a motivating and challenging work environment for employees.
6. Make FEMA a world-class enterprise.

FEMA Goals (2006): (**FEMA**, *Vision for New FEMA*, December 12, **2**006**,** p.3)

- "**Strengthen core capabilities, competencies and capacities.** Fostering a national emergency management system and implementing a cohesive national preparedness system must begin by strengthening the foundational building blocks of a weakened but venerable agency. The Nation needs a strong FEMA; but that cannot be achieved without purposeful new investments.

- **Build strong Regions.** The Region is the essential field echelon of FEMA that engages most directly with State partners and disaster victims to deliver frontline services. It is the Region that can build and nurture State and local capabilities across the spectrum of preparedness, response, recovery and mitigation. And it is the Region that will lead the Federal response to incidents across the spectrum of all-hazards events. A strong FEMA will rely on strong Regions to regain the trust and confidence of Governors, mayors, leaders in the private sector and the citizens of our homeland.
- **Strengthen our partnership with States.** Response to disasters and emergencies is primarily a State and local effort. To build and support an effective National system of emergency management, FEMA must have effective partnerships with State and local governments.
- **Professionalize the national emergency management system.** The Nation's ability to marshal an effective response to disasters requires the right people with the right skills. We will work with our partners to build a nationwide system of trained and certified experts skilled in all hazards emergency management – starting right here in FEMA."

FEMA Goals (2007): (**FEMA** *Strategic Plan* (Catastrophe Planning Initiative Dft), 10Oct07, 1): "The catastrophic planning initiative supports the overall goals of FEMA to:

- Save and sustain lives
- Protect and minimize damage to property
- Stabilize critical infrastructures and key resources
- Create an environment conducive to reentry, repopulation, long-term community recovery, and future hazard mitigation."

FEMA Goals (2008):
Goal 1: Lead an integrated approach that strengthens the Nation's ability to address disasters, emergencies and terrorist events…. (p. 8)
Goal 2: Deliver easily accessible and coordinated assistance for all programs…. (p. 18)
Goal 3: Provide reliable information at the right time for all users…. (p. 22)
Goal 4: FEMA invests in people and people invest in FEMA to ensure mission success….
Goal 5: Build public trust and confidence through performance and stewardship…." (**FEMA**, *FEMA Strategic Plan, Fiscal Years 2008*-2013, January 2008)

FEMA Grant Programs Directorate (GPD): "Established in FY 2007, GPD houses a centralized suite of grant management functions including: full-life cycle grants management operations; compliance monitoring; audit resolution; and data analysis. GPD serves as the executive agent for development of grant guidance for the annual Homeland Security grant programs; provides programmatic oversight and technical assistance for grant administration, monitoring, and reporting; and is a principal liaison for interagency programmatic collaboration and coordination." (**DHS**, *FEMA OMA FY 2009 OMB Budget Justification*, 2008, 4)

FEMA Gulf Coast Recovery Office Good Stewardship Council: Formed in Fall of 2007 "to provide effective oversight of resources while achieving the recovery mission." The Good Stewardship Council will monitor resources for the Gulf Coast Recovery Office and for FEMA's Transitional Recovery Offices in the Gulf Coast states of Alabama, Louisiana, Mississippi and Texas. The council will oversee budgeting and the continued implementation of internal controls

for the recovery process. Simply put, internal control means things that should happen "do" and things that should not happen "don't." (**FEMA**, *Good Stewardship Council formed for Gulf Coast Recovery*, 20 Sep 2007)

FEMA Incident Management Systems (IMS) Division, National Integration Center (NIC): "IMS is the Executive Agent for the National Response Framework (NRF). IMS coordinates and brokers agency and interagency planning initiatives in support of operational response and recovery objectives for the NRF and the National Incident Management System (NIMS). The IMS plays a critical role in coordinating the various components of the NRF to ensure that the NRF remains linked to and based upon the NIMS." (**DHS**, *FEMA OMA FY 2009,* 2008, 10)

FEMA Individuals and Households Program (IHP): "IHP includes several program elements offering various types of support for families and individual disaster victims. These include assistance for housing needs, other non-housing needs, crisis counseling and training, unemployment assistance, and legal services." (**DHS**, *FEMA OMA FY 2009,* 2008, 25)

FEMA Joint Housing Solutions Group (JHSG): "…a dedicated unit to research and document alternatives to traditional temporary housing." (**FEMA**, *Statement of Paulison*, 31 July 2007, 17)

FEMA Key Building Blocks to Achieve FEMA Mission (2008)

- Strengthening core competencies
- Building strong regions
- Enhancing current partnerships and creating new ones
- Investing in its people
- Developing a business approach to achieving desired results
- Professionalizing the national emergency management system. (**FEMA**, *Strategic Plan, Fiscal Years 2008-2013*, January 2008, p. iii)

FEMA Law Enforcement Advisor: A position within the FEMA Administrator's Office created in 2007 pursuant to the Post-Katrina Emergency Reform Act of 2006. The Law Enforcement Advisor "will provide FEMA with a law enforcement perspective on agency plans and policies….[and] will also be the senior advisor to FEMA on law enforcement programs and will support FEMA's growing interaction with law enforcement associations, fusion centers and terrorism task forces and will provide expert support to preparedness, protection, response, and recovery programs." (**FEMA**, *Dinse Appointed As FEMA's Law Enforcement Advisor*, 18Oct07)

FEMA Logistics Centers: "FEMA Logistics Centers - permanent facilities that receive, store, ship, and recover disaster commodities and equipment

- 4 CONUS (Continental United States) containing general commodities
- 3 OCONUS containing general commodities
- 2 CONUS containing special products; computers, office electronic equipment, medical and pharmaceutical caches" (**FEMA**, *Logistics Supply Chain*, June 19, 2006)

FEMA Logistics Distribution Management: "…consists of warehouse facilities and systems used to store, maintain, transport, and track supplies, services, material and equipment in emergencies and disasters. FEMA will also develop a plan that outlines a national logistics

strategy that streamlines duplicative disaster response assets, warehouses, operating procedures, and associated management structures." (**DHS**, FEMA OMA FY 2009, 2008, 17)

FEMA Logistics Management Directorate (LMD): "In April 2007, as part of the Department of Homeland Security's (DHS) Federal Emergency Management Agency (FEMA) reorganization, Logistics was elevated from a branch to a directorate. The Logistics Management Directorate (LMD) is the agency's major program office responsible for policy, guidance, standards, execution and governance of logistics support, services and operations. The mission is to effectively plan, manage and sustain the national logistics response and recovery operations in support of domestic emergencies and special events - to act as the National Logistics Coordinator." (**FEMA**, *Logistics Management Directorate*, 31 January 2008 modification)

FEMA Logistics Management Directorate (LMD): "LMD is organized around four core competencies:

- Logistics Operations;
- Logistics Plans and Exercises;
- Distribution Management; and
- Property Management.

(DHS, *Statement for the Record, Matt Jadacki, Deputy Inspector General, DHS, Before House Subcommittee on Appropriations,* March 13, 2008, p. 5)

FEMA Logistics Management Directorate: "Logistics Management Directorate provides the structure to manage and execute Disaster Logistics and moves the agency beyond simply providing commodities (i.e. ice, water, tarps, and MREs) toward a holistic management approach. FEMA's Logistics Management capabilities are based on the Department of Defense's well-recognized logistics (J4) system and organization, including management of the all-source range of assets, teams, equipment, and supplies that may be needed in response to an all-hazards event. The Logistics Management program involves coordination across all federal departments and agencies, state partners, and those in the private sector who plan for and respond to all-hazard disaster events."

FEMA Management & Administration Activities: "Management and Administration Activities incorporates the Office of the Administrator and the Administrative Management Staff who coordinate between Headquarters and Regional Offices all policy and strategic planning, managerial, resource, and administrative actions; maintains programs to address public information issues; and builds partnerships with and among state and local governments, nongovernmental organizations, business, and industry. Management and Administration Activities also provide the corporate infrastructure (IT, finance, HR, procurement, facilities) which is essential in FEMA's pursuit of an enhanced business approach to achieving results and providing support capabilities designed and scaled to enhance FEMA's mission success. FEMA will continue to integrate management and administration missions that transferred to FEMA in FY 2008 and aligned all activities with the "Vision for a New FEMA." The following FEMA offices define Management and Administration:

- Office of the Administrator, which includes:

    - Law Enforcement Advisor
    - Disability Coordinator
- Office of Policy and Program Analysis
- Office of the Executive Secretariat
- Office of the Associate Deputy Administrator, which includes:
    - Regional Offices
    - Office of Regional Operations
- Office of the Chief Financial Officer
- Office of Management, which includes:
    - Information Technology
    - Human Capital
    - Acquisition
    - Facilities Management
    - Security
- Office of External Affairs, which includes:
    - Legislative Affairs
    - Public Affairs
    - International Affairs
- Office of Equal Rights
- Office of Chief Counsel" (**DHS**, *FEMA OMA FY 2009 OMB Budget.…*, 2008, 5)

FEMA Mission (1997, June): "Reduce the loss of life and property and protect our institutions from all hazards by leading and supporting the Nation in a comprehensive, risk-based emergency management program of mitigation, preparedness, response, and recovery." (**FEMA**, *Strategic Plan, FY 1998-2002*, p. 9)

"FEMA has three mission-related strategies to accomplish the strategic goals and objectives – mitigation, preparedness are response/recovery. In addition, two implementation strategies are employed in the pursuit of the mission-related strategies – customer service and cost-efficiency." (**FEMA**, *Strategic Plan, FY 1998-2002*, p. 20)

FEMA Mission (1997, October): "To provide leadership and support to reduce the loss of life and property and protect our nation's institutions from all types of hazards through a comprehensive, risk-based, all-hazards emergency management program of mitigation, preparedness, response and recovery." (**FEMA**, *FEMA's Mission*, October 1997).

FEMA Mission (1999): "FEMA's mission is 'to reduce the loss of life and property and protect our institutions from all hazards by leading and supporting the nation in a comprehensive risk-based emergency management program of mitigation, preparedness, response and recovery.' To successfully fulfill this mission, the business community must become a full partner in our nation's emergency management system." (**Witt**, "Building A Public/Private Partnership in EM," 1999)

FEMA Mission (2000): "Recovery from natural disasters (FEMA's primary mission)…" (**FEMA**, *Rebuilding For A More Sustainable Future.…*, November 2000, p. 1-4)

FEMA Mission (2001): "The Federal Emergency Management Agency (FEMA) is an independent agency, its mission "to reduce loss of life and property and protect our nation's critical infrastructure from all types of hazards through a comprehensive, risk-based, emergency management program of mitigation, preparedness, response and recovery." (**CRS**, *FEMA's Mission: Policy Directives for the Federal Emergency Management Agency*, March 13, 2002, p. 4; CRS sites FEMA website, "About FEMA, Helping People Before, During, & After Disasters," visited Jan. 8, 2001.)

FEMA Mission (2002): "Lead America to prepare for, prevent, respond to, and recover from disasters." (**FEMA**, *A Nation Prepared – FEMA Strategic Plan – FY 2003-2008*, 2002, p. iii.)

FEMA Mission (2003): "The primary mission of the Federal Emergency Management Agency is to reduce the loss of life and property and protect the Nation from all hazards, including natural disasters, acts of terrorism, and other man-made disasters, by leading and supporting the Nation in a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation." (**FEMA**, *About FEMA*, March 2003)

FEMA Mission (2004): "FEMA's Mission Statement: Lead America to prepare for, prevent, respond to, and recover from disasters." (**FEMA**, *Coordinating Environmental and Historic Preservation Compliance* IS-253, Module 2, Lesson 1, National Environmental Policy Act, January 2004, p. 1)

FEMA Mission (2004): "FEMA's mission continues to be the reduction of the loss of life and of damage to property and to protect our residents from all hazards, natural and man-made. We accomplish this mission by providing the Nation with comprehensive, risk-based emergency management programs, including mitigation, preparedness, response, and recovery. Our integration into the new Department of Homeland Security has increased our opportunities to perform this mission. We continue to work closely with many other Federal Departments and agencies, and with States, Tribal Nations, local governments, volunteer organizations, and private industry." (**FEMA**, "Testimony of Craig Conklin…" April 1, 2004.)

FEMA Mission (2005): "Our panels today separate witnesses from a federal agency, FEMA, from those of its parent organization, DHS. The separation is deliberate. It reflects in part the differing perspectives on Katrina that we have heard consistently from officials of the two entities. It also reflects tension between the two that pre-dates the storm, tension over resources, roles, and responsibilities within the Department. This tension is clear in Mr. Brown's [FEMA Director Michael Brown] response when Committee investigators asked him why FEMA was not prepared for Katrina. Mr. Brown responded, "Its mission had been marginalized; its response capability had been diminished. . . . There's the whole clash of cultures between DHS' mission to prevent terrorism and FEMA's mission to respond to and to prepare for responding to disasters of whatever nature." (**Collins**, "Opening Statement…'Hurricane Katrina: The Roles of DHS and FEMA Leadership'," February 10, 2006)

FEMA Mission (2006, October 4)[50]: "The primary mission of the Agency [FEMA] is to reduce the loss of life and property and protect the Nation from all hazards, including natural disasters, acts of terrorism, and other man-made disasters, by leading and supporting the Nation in a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation…

SPECIFIC ACTIVITIES— In support of the primary mission of the Agency, the Administrator shall—
(A) lead the Nation's efforts to prepare for, protect against, respond to, recover from, and mitigate against the risk of natural disasters, acts of terrorism, and other man-made disasters, including catastrophic incidents;
(B) partner with State, local, and tribal governments and emergency response providers, with other Federal agencies, with the private sector, and with nongovernmental organizations to build a national system of emergency management that can effectively and efficiently utilize the full measure of the Nation's resources to respond to natural disasters, acts of terrorism, and other man-made disasters, including catastrophic incidents;
(C) develop a Federal response capability that, when necessary and appropriate, can act effectively and rapidly to deliver assistance essential to saving lives or protecting or preserving property or public health and safety in a natural disaster, act of terrorism, or other man-made disaster;
(D) integrate the Agency's emergency preparedness, protection, response, recovery, and mitigation responsibilities to confront effectively the challenges of a natural disaster, act of terrorism, or other man-made disaster;
(E) develop and maintain robust Regional Offices that will work with State, local, and tribal governments, emergency response providers, and other appropriate entities to identify and address regional priorities;
(F) under the leadership of the Secretary, coordinate with the Commandant of the Coast Guard, the Director of Customs and Border Protection, the Director of Immigration and Customs Enforcement, the National Operations Center, and other agencies and offices in the Department to take full advantage of the substantial range of resources in the Department;
(G) provide funding, training, exercises, technical assistance, planning, and other assistance to build tribal, local, State, regional, and national capabilities (including communications capabilities), necessary to respond to a natural disaster, act of terrorism, or other man-made disaster; and
(H) develop and coordinate the implementation of a risk-based, all-hazards strategy for preparedness that builds those common capabilities necessary to respond to natural disasters, acts of terrorism, and other man-made disasters while also building the unique capabilities necessary to respond to specific types of incidents that pose the greatest risk to our Nation." (FEMA 592, June 2007, pp. 94-95; passage from Title V (National Emergency Management) Sec. 503. Federal Emergency Management Agency (6 U.S.C. 313), **Department of Homeland Security Appropriations Act, 2007** (Pub. L. No. 109-295) amending the Homeland Security Act of 2002; pp. 1396-1397 of DHS Appropriations Act.)

[50] President Bush signed the "DHS Appropriations Act, 2007" on October 4, 2006; See **White House**, "President Bush Signs…)

FEMA Mission (2006): "…the mission of the Agency to reduce the loss of life and property and protect the Nation from all hazards by leading and supporting the Nation in a risk-based, comprehensive emergency management system of (A) mitigation, by taking sustained actions to reduce or eliminate long-term risks to people and property from hazards and their effects; (B) preparedness, by planning, training, and building the emergency management profession to prepare effectively for, mitigate against, respond to, and recover from any hazard; (C) response, by conducting emergency operations to save lives and property through positioning emergency equipment, personnel, and supplies, through evacuating potential victims, through providing food, water, shelter, and medical care to those in need, and through restoring critical public services; and (D) recovery, by rebuilding communities so individuals, businesses, and governments can function on their own, return to normal life, and protect against future hazards…" (**Post-Katrina Emergency Management Reform Act of 2006**, Title VI-National Emergency Management (Sec. 503., Federal Emergency Management Agency, para. (c) Administrator, (9) carrying out …), pp. 1398-1399 of DHS Appropriations Act, 2007)

FEMA Mission (2007, June): Prepare for and lead the Federal Government's response to emergencies and major disasters, natural and man–made, including acts of terrorism — "all-hazards." (**FEMA**, *California Statewide Emergency Planning Committee*, June 6, 2007, p. 4)

FEMA Mission (2007, October): "The mission of the Federal Emergency Management Agency (FEMA) is to provide leadership to prepare, protect, respond, recover, and mitigate the effects of emergencies and major disasters, both natural and man-made. Emergencies include acts of terrorism, hurricanes and severe storms." (**FEMA**, *Strategic Plan* (Catastrophe Initiative), October 10, 2007, p.1)

FEMA Mission/Mandate (2007, November): "The Post-Katrina Emergency Management Reform Act, passed by Congress and signed by the President in October 2006, sets forth a new expanded mission for FEMA. Our mandate is to reduce the loss of life and property and protect the Nation from all hazards, including natural disasters, acts of terrorism, and other man-made disasters, by leading and supporting the Nation in a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation. Our challenge -- and commitment -- is to achieve our vision and fully execute this mission to create a safer and more secure America." (**FEMA**, *Strategic Plan*, November 2007, p. 5)

FEMA Mission (2008): "The Federal Emergency Management Agency's (FEMA) mission is to reduce the loss of life and property and protect our institutions from natural and technological hazards by leading and supporting the Nation in comprehensive, risk-based emergency and consequence management programs of mitigation, preparedness, response and recovery." (**FEMA**, *FEMA Region III Annual Report FY 2007*, 2008, p. 5)

FEMA Mission (2008): "Reduce the loss of life and property and protect the Nation from all hazards, including natural disasters, acts of terrorism, and other man-made disasters, by leading and supporting the Nation in a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation." (**FEMA**, *FEMA Strategic Plan, Fiscal Years 2008-2013* (FEMA P-422), January 2008, p. iii)

FEMA Mitigation Directorate: "The mission of the Mitigation Directorate is to protect lives and prevent property loss from natural hazard events. Activities are designed to further sound risk management decisions by individuals, private and public sector entities, state, local and tribal governments, and federal agencies. The Mitigation Directorate's objectives are accomplished through three categories of core activities: risk identification and assessment, risk reduction, and insurance against flood risk." Among the Mitigation programs…are:

- Mitigation Disaster Operations and Management
  - Maintain operational disaster response capability
  - Act as coordination point for Mitigation disaster operations and activities
  - Develop and integrate disaster operations policies, procedures, training…
  - Manage the Mitigation Disaster Workforce
  - Develop training and job aides to promote workforce capability to use disaster recovery as an opportunity to build communities stronger and safer.
- Environmental and Historic Preservation
- National Dam Safety
- National Earthquake Hazards Reduction
- National Hurricane Program. (**DHS**, *FEMA OMA FY 2009 OMB Budget,* 2008, 5, 27-28)

FEMA Mobile Registration Intake Centers (MRICs) Pilot: "Recognizing many disaster victims may be stranded or located in congregate shelters without communications, and unable to register for assistance, FEMA has established a new registration pilot program that pushes registration capabilities directly into the field. For the 2007 hurricane season, FEMA will have the ability to deploy Mobile Registrations Intake Centers immediately to congregate shelters and provide an on-site capability to quickly register for FEMA assistance." (**FEMA**, *Statement of Paulison*, July 31, 2007, p. 18)

FEMA National Advisory Council: "The National Advisory Council (NAC) shall advise the Administrator of the Federal Emergency Management Agency (FEMA) on all aspects of emergency management. The National Advisory Council shall incorporate State, local and tribal government and private sector input in the development and revision of the national preparedness goal, the national preparedness system, the National Incident Management System, the National Response Plan and other related plans and strategies." (FEMA, *National Advisory Council*. October 12, 2007)

FEMA National Advisory Council Membership: "Thirty individuals have been selected for appointment to the National Advisory Council (NAC) from a geographic and substantive cross-section of officials, emergency managers and emergency response providers from Tribal, State and local governments, the private sector and nongovernmental organizations. These members will represent influential, high-level senior leaders of their organizations, stakeholder groups and the private sector or members of the public." (**FEMA**, "NAC Members Named," July 18, 2007)

FEMA National Advisory Council Mission: "The mission of the National Advisory Council is to ensure effective and ongoing coordination of national Preparedness, protection, response, recovery and mitigation for natural disasters, acts of terrorism and other man-made disasters by: Incorporation input from Tribal, State and local governments, and the public and private sectors;

Providing an avenue for feedback, suggestions and constructive criticisms from the diverse government, private sector and nonprofit partners involved in any disaster activities; and Providing a venue for input during the development and revision of the National Preparedness Goal; national preparedness system, National Incident Management System (NIMS), National Response Plan (NRP) and other related plans and strategies." (**FEMA**, "National Advisory Council Members Named." July 18, 2007 News Release)

FEMA National Advisory Council Mission: "…mission—'to ensure effective and ongoing coordination of national preparedness, protection, response, recovery, and mitigation for natural disasters, acts of terrorism, and other man-made disasters.'" (**FEMA**, *Homeland Security* Today, October 29, 2007) "Specifically, the Council will focus attention on the development and revision of the national preparedness goal, the national preparedness system, the National Incident Management System, the National Response Plan, and other related plans and strategies…. The development of the National Advisory Council was set into motion by the Post-Katrina Emergency Management Reform Act of 2006. The Federal Register notice posted on February 7, 2007, establishes the Council and requests applications for membership." (**FEMA**, "FEMA Seeks Applicants For the National Advisory Council," February 14, 2007)

FEMA National Continuity Programs Directorate (NCP): "National Continuity Programs provides Executive leadership for Federal Government Continuity and National Contingency Programs that support enduring Constitutional government. National Continuity administers several activities to ensure and improve emergency communications with the public, including development and implementation of the Integrated Public Alert Warning System." (**DHS**, *FEMA OMA*, 2008, 5)

FEMA National Continuity Programs Directorate (NCP) Mission: "The mission of FEMA's National Continuity Programs Directorate (NCP) is to serve the public by protecting our Nation's constitutional form of government." (**FEMA**, *NCPD*, February 1, 2008)

FEMA National Continuity Programs Directorate: The National Continuity Programs directorate formulates guidance and establishes common standards for agencies to use in developing viable, executable COOP and COG plans; facilitates interagency coordination; and oversees and assesses the status of COOP and COG capabilities of federal executive branch agencies." (**FEMA**, *Martha Rainville, Assistant Administrator, NCP*, October 31, 2007)

FEMA National Earthquake Hazard Reduction Program Mission-Area: "FEMA translates research and lessons learned from earthquakes into guidance, training, support for states and multi-state consortia, and other program implementation activities. FEMA works with national model codes and standards groups; promotes better building code practices; assists states in developing mitigation, preparedness, and response plans; aids in the development of multi-state groups; and supports comprehensive earthquake education and awareness. FEMA also develops and disseminates earthquake-resistant design guidance for new and existing buildings and lifelines and aids in the development of performance-based design guidelines and methods. FEMA applies earthquake hazards reduction measures, where applicable, to other natural and man-made hazards; provides preparedness, response, and mitigation recommendations to communities; and establishes demonstration projects on earthquake hazard mitigation to link

earthquake research and mitigation with emergency management programs." (**NEHRP**. *Strategic Plan for the National Earthquake Hazards Reduction Program Fiscal Years 2008-2012* (Draft), April 2008, p. 3, citing FEMA, *Expanding and Using Knowledge to Reduce Earthquake Losses--NEHRP, Strategic Plan 2001–2005*, FEMA 383, 2003)

FEMA National Preparedness Directorate (NPD):

- Dennis Schrader, Deputy Administrator
- Corey Gruber, Assistant Deputy Administrator
- Rob Schweitzer, Executive Officer (**FEMA**, *NPD*, 2008, slide 1 of 22)

FEMA National Preparedness Directorate (NPD): "The National Preparedness Directorate works to ensure that the Nation is prepared for disasters of all kinds. The organization's activities reflect FEMA's expanded role in preparedness established by PKEMRA (2006). NPD houses management and administrative support functions associated with training and national exercise programs funded through the State and Local Programs account. It also implements Homeland Security Presidential Directive #8 (HSPD-8) by establishing policies that strengthen national preparedness for terrorist attacks, major disasters, and other emergencies. NPD coordinates and brokers agency and interagency planning initiatives in support of operational response and recovery objectives for the National Response Framework (NRF) and for the National Incident Management System (NIMS). The organization includes the National Integration Center, which is the Executive Agent for the NRF. Planning and systems aspects of NPD are complemented by its Emergency Management Institute, which provides direct training to federal, state, local, tribal, public and private sector officials to strengthen core emergency management competencies." (**DHS**, *FEMA OMA FY 2009 OMB Budget Justification*, 2008, 4)

FEMA National Preparedness Directorate (NPD): "The National Preparedness Directorate (NPD) was established on April 1, 2007, as a result of the Post-Katrina Emergency Management Reform Act of 2006 to oversee coordination and development strategies necessary to prepare for all-hazards. As part of this mission, NPD provides policy and planning guidance that builds prevention, protection, response, and recovery capabilities. NPD programs leverage training courses, policy development, exercises, and technical assistance to build emergency capabilities. Additionally, NPD is developing methods to assess levels of emergency preparedness within individual jurisdictions and throughout the nation." (**FEMA**, *National Preparedness Directorate Draft Fact Sheet*. Washington, DC: FEMA, 1 Feb 2008)

FEMA National Preparedness Directorate (NPD): "The Deputy Administrator for National Preparedness will head a new directorate within FEMA, consolidating FEMA strategic preparedness assets. It will include both existing FEMA programs and certain legacy Preparedness Directorate programs. It will incorporate functions related to preparedness doctrine, policy and contingency planning. It will further contain the Department's exercise coordination and evaluation program, emergency management training, along with the Chemical Stockpile Emergency Preparedness Program and the Radiological Emergency Preparedness program. The Deputy Administrator for National Preparedness will oversee two major functional responsibilities: (1) Readiness, Prevention and Planning; and (2) the National Integration Center." (**FEMA**, *Statement for the Record R. David Paulison*, February 28, 2007, p. 3)

FEMA National Preparedness Directorate (NPD) Community Preparedness Division (NPD-CPD) Key Programs and Functions, Brock Bierman, Director:

- Citizen Corps Program
- Non-Governmental Organizations Integration and Coordination
- CERT Program Management
- National Citizen Corps Council and Affiliates
- Special Needs Coordination
- VOAD Support/Coordination (**FEMA**, *NPD*, 2008, slide 1 of 22)

FEMA National Preparedness Directorate (NPD) Major Components:

- National Integration Center
- Emergency Management Institute
- Center for Domestic Preparedness
- Training and Exercise Integration
- Incident Management Systems Integration
- National Exercise Division
- Technical Hazards Division
- Community Preparedness Division (**FEMA**, *NPD Draft Fact Sheet*, February 1, 2008)

FEMA National Preparedness Directorate (NPD) Mission: "NPD seeks to build a Nation prepared through an integrated and adaptable approach to the development of critical capabilities to prevent, protect against, respond to, and recover from all manner and magnitude of threats and hazards." (**FEMA**, *NPD*, 2008, slide 1)

FEMA National Preparedness Directorate (NPD) National Integration Center (NIC): "Homeland Security Presidential Directive-5 (HSPD-5) required the Secretary of Homeland Security to establish a mechanism for ensuring the ongoing management and maintenance of NIMS including regular consultation with other Federal departments and agencies, State, tribal, and local stakeholders, and with the private sector and NGOs. The NIC provides strategic direction, oversight, and coordination of NIMS and supports both routine maintenance and the continuous refinement of NIMS and its components. The NIC oversees and coordinates all aspects of NIMS, including the development of compliance criteria and implementation activities at Federal, State, tribal, and local levels. It provides guidance and support to jurisdictions and emergency management/response personnel and their affiliated organizations as they adopt or, consistent with their status, are encouraged to adopt the system. The NIC also oversees and coordinates the publication of NIMS and its related products. This oversight includes the review and certification of training courses and exercise information." (**FEMA**, *NIMS* (FEMA 501/Draft), 2007, p. 8)

FEMA National Preparedness Directorate (NPD) National Integration Center (NIC) Key Programs and Fnctions:

- NRF
- NIMS
- Training & Exercise Guidance
- Training Development

- Training & Exercise Policy Development
- Lessons Learned
- Exercise Coordination
- Corrective Action Program/RAMP
- Course Evaluation
- Instructor Certification (**FEMA**, *NPD*, 2008, slide 1 of 22)

FEMA National Preparedness Directorate (NPD) Office of Prepredness Planning and Analysis: "The Office of Preparedness Policy, Planning, and Analysis (PPPA) strengthens national preparedness by leading special initiatives, directing preparedness policy planning efforts, and analyzing policy and program results within the scope of the National Preparedness Directorate (NPD)'s mission." (**FEMA**, *The Office of PPPA*, June 26, 2008)

FEMA National Preparedness Directorate (NPD) Office of Prepredness Planning and Analysis Key Programs and Functions:

- Establish and support the entire life-cycle of policy-making within NPD
- TCL and NPG
- Prevention policy development and monitoring
- Development of national planning system
- Support to FEMA Planning Council
- Technical Assistance program management
- Capability assessments
- Preparedness research, and analysis, and reporting
- Performance management and contract oversight
- Analysis of policy and program results (**FEMA**, *NPD*, 2008, slide 1 of 22)

FEMA National Preparedness Directorate (NPD) Office of Prepredness Planning and Analysis Key Programs and Functions (PPPA): "PPPA carries out its mission and responsibilities through the three following branches:

- **Policy** is responsible for establishing and supporting the entire life-cycle of NPD policymaking and creating an NPD strategic plan. The Policy Branch:
    - Establishes a maintenance process for the Target Capabilities List and National Preparedness Guidelines
    - Supports grant policy and programs
    - Conducts Net Assessments
    - Supports and maintains National Planning Scenarios and Universal Adversary Program
    - Develops and monitors prevention policy
    - Conducts prevention preparedness programs, activities, and services

- **Planning** establishes and supports national planning system and supports FEMA Planning Council, as well as other entities' planning efforts that may impact NPD's mission. Planning additionally:
    - Manages Technical Assistance Program
    - Supports Federal Preparedness Coordinators and regional preparedness mission

- Supports development of grant policy, priorities, and programs for planning
- Manages Urban Area Security Initiative Catastrophic Planning Initiative and other related Technical Assistance programs
- Manages and develops Technical Assistance programs in support of fusion centers and processes

- **Assessment** develops methodologies to comprehensively analyze preparedness data, as well as methodologies and measures to assess capabilities. Assessment additionally:
  - Develops and tests a nationally integrated capability assessment system
  - Conducts analysis for annual preparedness reports
  - Develops capability based financial models
  - Prepares Federal and State Preparedness Reports
  - Informs preparedness and grant program development
  - Collects relevant preparedness data
  - Implements a nationally integrated capability assessment process
  - Manages and updates the Target Capabilities List
  - Develops cooperative agreements to integrate Target Capabilities List implementation policy between FEMA Regional Offices and stakeholders." (**FEMA, NPD**, *The Office of PPPA*, June 26, 2008)

FEMA National Preparedness Directorate (NPD) Organization:
- Preparedness Policy, Planning & Analysis (NPD-PPPA), Jim Mullikin, Acting Director
- Technological Hazards Division (NPD-THD), Jim Kish, Director
- National Integration Center (NPD-NIC), John Bridges, Assistant Administrator
- Community Preparedness Divison (NPD-CPD), Borck Bierman, Director
- Preparedness Coordination Division (NPD-PCD), Andy Mitchell, Director (**FEMA**, *NPD*, 2008, Slide 1 of 22)

FEMA National Preparedness Directorate (NPD) Preparedness Coordination Division (PCD), Key Programs and Functions, (Andy Mitchell, Director):
- Provides State and local Council Support
- Regional Preparedness Coordination
- Strategic Consulting (**FEMA**, *NPD*, 2008, Slide 1 of 22)

FEMA National Preparedness Directorate (NPD) Technological Hazards Division (NPD-THD), Key Programs and Functions (Jim Kish, Director**):**
- Radiological Emergency Preparedness Program (REP)
- Chemical Stockpile Emergency Preparedness Program (CSEPP)
- Alert Notification and Warning Coordination
- Protective Action Guides for RDD/IND
- HAZMAT Response
- CERCLA/ Superfund (**FEMA**, *NPD*, 2008, Slide 1 of 22)

FEMA National Radio System (FNARS): "…provides the President and other federal officials with resilient and assured voice + data networks with connectivity to FEMA Regions, State

Emergency Operations Centers (EOCs), key IPAWS facilities, and other locations to help meet information sharing requirements at any time, across the full threat spectrum." (**DHS**, *FEMA OMA FY 2009*, 2008, 15)

FEMA – New FEMA Initiative (2007): "Last fall, Congress passed and the President signed into law the FY 2007 Homeland Security Appropriations Act (P.L. 109-295), which included PKEMRA. The legislation reorganizes DHS and reconfigures FEMA to include consolidated emergency management functions, including national preparedness functions. Significantly, and consistent with the lessons learned, the new FEMA has not simply tacked on new programs and responsibilities to an existing structure. Rather, we conducted a thorough assessment of the internal FEMA structure, including new and existing competencies and responsibilities within FEMA. On April 1 of this year, this new and expanded FEMA was formally established. This new organization reflects the expanded scope of FEMA's responsibilities—and the core competencies that we are seeking to establish and enhance. It supports a more nimble, flexible use of resources. It strengthens coordination among FEMA elements and with other DHS components. It enables FEMA to better coordinate with agencies and departments outside of DHS. It also delivers enhanced capabilities to our partners at the State, local and tribal governments and emergency management and preparedness organizations at all levels, and engages the capabilities and strengths that reside in the private sector." (**FEMA**, Statement of R. David Paulison, FEMA/DHS, House Cmt. on Oversight & Gov. Reform, July 31 2007)

FEMA NIMS Integration Center: "The NIMS Integration Center is charged with administering and implementing a consistent nationwide model to enable federal, state, local and tribal governments and private-sector and nongovernmental organizations to work together to prepare for, prevent, respond to and recover from domestic disaster incidents." (**FEMA**, *Albert H. Fluman, Director – NIMS Integration Center Training*, December 27, 2006)

FEMA Office of Chief Counsel (OCC): "The Office of Chief Counsel (OCC) provides professional legal services to the Administrator, FEMA senior leadership, and the DHS General Counsel on all legal and policy matters before the agency and its organizational elements to support and facilitate the mission and reducing obstacles to the achievement of DHS and FEMA goals. The OCC provides legal assistance to the agency's diverse mission elements, including services related to acquisition, grants, and property management; alternative dispute resolution; budgetary and fiscal law; ethics and contractor integrity; human capital management, labor relations, and equal opportunity; information, intellectual property and privacy matters; legislation and regulations; litigation and claims; and policy coordination. OCC also provides legal assistance through Field Attorneys, who are located across the United States." (**DHS**, *FEMA FY09 OMA*, 2008, 42)

FEMA Office of Equal Rights: "The Office of Equal Rights (OER) serves the agency and the Nation by promoting affirmative employment, and a discrimination-free workplace, and equal access to FEMA programs and benefits. OER encompasses the following activities and elements:

- Civil Rights Program
- Equal Employment Opportunity (EEO) Program." (**DHS**, *FEMA FY09 OMA*, 2008, 41)

FEMA Office of External Affairs: "The Office of External Affairs provides operational services and leadership oversight to FEMA's mission for Legislative Affairs, Public Affairs, Intergovernmental Affairs and International Affairs." (**DHS**, *FEMA FY 2009 OMA*, 2008, 40)

FEMA Office of Management: "The Office of Management (OM) provides operational services and leadership oversight to FEMA's mission for Human Capital Planning, Acquisition Management, Records and Document Management, Facilities Management, Security Services and Information Technology Services." (**DHS**, *FEMA FY 2009 OMA Budget*, 2008, 36)

FEMA Office of Policy and Program Analysis: "Formed in October 2006, the Office of Policy and Program Analysis is responsible for providing leadership, analysis, coordination and decision-making support on agency policies, plans, programs and key initiatives. Office of Policy and Program Analysis encompasses the following activities and elements:
• *Defense Production Act (DPA) Program* provides guidance and coordination for the use of DPA authorities by Federal and State governments and the private sector on the use of DPA authorities to expedite the procurement of critical supplies for national defense and homeland security purposes.
• *Policy* provides guidance and coordination for the agency's policy system and represents the agency on department-level policy matters.
• *Program Analysis & Evaluation* (PA&E) provides the agency's leadership with objective, comprehensive analyses of current and proposed FEMA programs and provides recommendations concerning program operations and alignment of objectives and resources with strategic priorities.
• *Strategic Planning* provides guidance and coordination in order to help the agency make innovative and informed decisions about FEMA's long term direction, and to facilitate integrated strategic planning and decision-making.
• *Transformation Management* provides centralized organizational change management across the agency by providing the expertise and structure to execute agency-level projects and the continuity to ensure that change efforts lead to cumulative agency improvements that make FEMA better, stronger, and faster." (**DHS**, *FEMA OMA FY2009 Budget Justification*, 2008, 32)

During FY 2008 the Office of Policy and Program Analysis will:
• "Employ a business approach to the way we do business by establishing program analysis that provides a basis for institutionalizing a results oriented, return-on-investment management culture. This will help improve FEMA's ability to connect program budgets to strategy and policy, providing the FEMA Administrator with sound program analyses to help determine priorities among FEMA's many competing resource needs.
• Establish a standardized policy system that helps identify potential conflicts across policies and that allows quick and easy retrieval of FEMA policies for all users, internal and external.
• Fully implement the Executive Management System (EMS) to manage a concurrence clearance process, collecting feedback in a central location for thousands of documents. EMS will also become a data repository for FEMA documents and information, with built-in search functions and the ability to report on the status of documents." (**DHS**, *FEMA OMA FY2009 Budget Justification*, 2008, 33)

FEMA Office of Strategy and Innovation: "In 2006, FEMA created an Office of Strategy and Innovation to assist the Agency in guiding the process of long-term change and transformation of FEMA, and appointed Ms.[Patricia] Stahlschmidt as Director. The office leads FEMA's strategic analysis and planning efforts, and provides project management support to achieve the Agency's strategic objectives." (FEMA, *Pat. Stahlschmidt, Director of Strategy and Innovation*, 1Apr07)

FEMA Office of the Executive Secretariat (OES): "…serves as the primary point of contact for FEMA and the Office of the Administrator for coordinating and providing information on departmental taskings, briefing materials and official correspondence to and from FEMA." (FEMA, *Elizabeth Edge, Executive Secretary, Office of the Executive Secretariat*, 2007)

FEMA Operational Core Competencies: (**FEMA**, *Vision for New FEMA*, Dec. 12, 2006, p. 4)

- Incident Management
- Operational Planning
- Disaster Logistics
- Emergency Communications
- Service to Disaster Victims
- Continuity Programs
- Public Disaster Communications
- Integrated Preparedness
- Hazard Mitigation (See, as well, "FEMA Core Competencies," 2007)

FEMA Operational Guidance Levels (2000): "FEMA has developed four levels of operational guidance for use by emergency teams and other personnel involved in conducting or supporting disaster operations….

- Level 1, Overview: A brief concept summary of a disaster-related function, team, or capability.
- Level 2, SOP or Operations Manual: A complete reference document, detailing the
- procedures for performing a single function (Standard Operating Procedure), or a number of interdependent functions (Ops Manual).
- Level 3, Field Operations Guide (FOG) or Handbook: A durable pocket or desk guide, containing essential nuts-and-bolts information needed to perform specific assignments or functions.
- Level 4 Job, Aid: A checklist or other aid for job performance or job training." (**FEMA**, *Urban Search and Rescue (US&R) Incident Support Team (IST) In Federal Disaster Operations* (Draft Operations Manual, 9356.2-PR), January 2000, 2 of 242)

FEMA Operational Planning Unit: "In depth operational planning, led by Disaster Operation's [Directorate] current Operational Planning Unit, is a core competency of the agency. This planning includes detailed and critical disaster response operational analyses, preparation of operational plans, and crisis action planning to ensure that the agency can lead and improve national all-hazard disaster responses. More specifically, the Operational Planning Unit will:

o Provide national and regional operational planning guidance and coordination.
o Coordinate at the operational level the execution of all hazard contingency plans.

- o Provide forecasting and analysis of potential events.
- o Assist FEMA Regions in operational planning at the regional level.
- o Lead the development of DHS and FEMA hazard-specific contingency plans.

"Operational response planning efforts are closely coordinated with FEMA's National Preparedness Program, Disaster Assistance Directorate, Mitigation Directorate, and DHS components, including the DHS Incident Management Planning Team (IMPT). FEMA will lead the coordinated planning for the Federal Government consistent with the intent of PKEMRA." (**DHS**, *FEMA OMA FY 09 Budget Justification*, 2008, 21)

FEMA Operations Center (FOC), Mt Weather, VA: "The function that serves as the official notification point of an impending or actual disaster or emergency. This facility maintains a 24-hour capability to monitor all sources of warning/disaster information." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 52)

FEMA Operations Center (FOC), Mt Weather, VA: "The FEMA Operations Center (FOC) supports the NRCC with a 24-hour watch. The FOC implements notifications to the Departments and Agencies that support the NRCC as well as activating emergency management staff. The FOC receives, analyzes, and disseminates all-hazards information within FEMA and DHS and to Departments, Agencies, and disaster response team members. The FOC, in coordination with the NOC, facilitates distribution of warnings, alerts, and bulletins to the emergency management community using a variety of communications systems such the National Alert and Warning System, the Washington Area Warning System, and the National-level Emergency Alert System." (**FEMA**, *Statement (Prepared) of Glenn Cannon*, November 15, 2007, p. 6)

FEMA Operations Center (FOC), Mt. Weather, VA: "A continuously operating entity of the Department of Homeland Security responsible for monitoring emergency operations and promulgating notification of changes to the COGCON status." (**HSC**, *NCPIP*, August 2007, p. 62; **DHS**, *FCD 1*, Nov 2007, P-5)

FEMA Operations, Management and Administration (OMA) Account Mission Statement: "The FEMA Operations, Management and Administration (OMA) appropriation provides core mission funding for the development and maintenance of an integrated, nationwide capability to prepare for, mitigate against, respond to, and recover from the consequences of major disasters and emergencies, regardless of cause, in partnership with other federal agencies, state, local and tribal governments, volunteer organizations, and the private sector. The account supports core operations for all FEMA organizations, providing resources for mission activities and administrative support. OMA resources are directed to both regional and headquarters operations." (**DHS**, *FEMA OMA FY 2009 OMB Budget Justification*, Jan 2008, 3)

FEMA Public Assistance Program (PA): "The PA Grant Program provides assistance to states, local governments, and certain nonprofit organizations to alleviate suffering and hardship resulting from major disasters or emergencies declared by the President. It provides supplemental federal disaster grant assistance for the repair, replacement, or restoration of disaster-damaged, publicly owned facilities and the facilities of certain private non-profit organizations." (**DHS**, *FEMA OMA FY 2009 OMB Budget Justification*, Jan 2008, 25)

FEMA Readiness, Prevention and Planning Division: "…within the FEMA National Preparedness Directorate, the Readiness, Prevention and Planning division will be the central division within FEMA responsible for preparedness policy and planning functions. This expanded division will likely include FEMA's catastrophic planning activities and the following offices: (1) Exercise & Evaluation; (2) Contingency Preparedness; (3) Preparedness Doctrine & Policy; (4) Citizen Corps; and (5) the Chemical Stockpile Emergency Preparedness Program and the Radiological Emergency Preparedness program. The Readiness, Prevention and Planning division will be responsible, among other functions, for coordinating HSPD-8 (National Preparedness) implementation, the National Assessment and Reporting System, Nationwide Plan Review, the Federal Preparedness Coordinator program, and coordinating with the approximately 2,100 Citizen Corps Councils in all of the States and territories and the numerous governmental and non-governmental Citizen Corps partners." (**FEMA**, *Statement for the Record R. David* Paulison, February 28, 2007, p. 4)

FEMA Re-Engineering: "Speaking on the side of the federal government, one of the first things we have to do is to re-engineer FEMA so that this agency can maximize its role supporting response and recovery efforts and providing the necessary assistance to state and local communities when those communities call on FEMA for support. Well, what does that re-engineering mean? It means developing a more effective distribution and delivery system for supplies, more efficient business processing and disaster registration systems, and enhanced communication capabilities.

"The reality is that FEMA is a 20th century organization and we are now in the 21st century. And there are processes and tools that we do see working around us in the private sector and in other areas of the government that we must adapt and apply to FEMA.

"The fact of the matter is, we want to have FEMA's distribution and logistics system -- the ability to move people and goods in support of emergency responders -- emulate the best of private sector models so that we can get vital supplies and assistance to communities in a reasonable amount of time and replenish our stocks in a timely manner. But I also have to say something else. This is, after all, a shared responsibility, and that means state and local government also has to do some significant preparedness planning to make sure, particularly in those immediate hours and first few days in the aftermath of a catastrophe, particularly an unexpected catastrophe, there are available on the state and local scene those supplies that are necessary to deal with the immediate crisis after an emergency. This has to be a joint effort. It cannot be an effort that the federal government carries by itself, nor it is an effort that the states would want the federal government to carry by itself, because I think you rightly regard yourselves as leaders of state and local communities as wanting to have a major say in the way we respond to crises in your own communities. So that's why partnership is so very, very important here." (DHS, *Remarks by Homeland Security Secretary Michael Chertoff at the American Legislative Exchange Council's 2005 States and National Policy Summit*, Dec 9, 2005)

FEMA Regional Investment Officers: Prior to 2008, "Preparedness Officers." In 2008 renamed RIOs who were to "assume increased responsibilities for grant-related consulting, monitoring preparedness investments, assessing improvements in capabilities, and ensuring

project compliance with national, State, and local strategies for grant management functions, [while] Headquarters retains responsibility for the management of grant programs that have not yet migrated to the field." (**FEMA**, *Regional-National Preparedness CONOPS*, 8Feb2008, 6)

FEMA Regional Offices. "FEMA has ten regional offices, each headed by a Regional Administrator. The regional field structures are FEMA's permanent presence for communities and States across America. The staff at these offices support development of all-hazards operational plans and generally help States and communities achieve higher levels of readiness. These regional offices mobilize FEMA assets and evaluation teams to the site of emergencies or disasters." (**DHS**, *NRF Comment Draft*, September 2007, 58) The locations are:

FEMA Region I:	Boston
FEMA Region II:	New York City
FEMA Region III:	Philadelphia
FEMA Region IV:	Atlanta
FEMA Region V:	Chicago
FEMA Region VI:	Denton, TX
FEMA Region VII:	Kansas City
FEMA Region VIII:	Denver
FEMA Region IX:	Oakland
FEMA Region X:	Seattle

FEMA Regional Preparedness and Analysis and Planning Officers: "…serve as the critical link between the operational planning and administrative activities at the Regional Office with the preparedness initiatives at the National Preparedness Directorate." (**FEMA**, *Regional-National Preparedness CONOPS*, 8Feb2008, 15)

FEMA Response & Recovery Grant Programs: "The second major category of grants [Prevention & Protection being the 1st] is the Response & Recovery Programs which includes two additional grant programs which provide resources to support preparedness projects that build state and local capabilities to support the Response and Recovery mission area as outlined in the National Preparedness Guidelines, the Target Capabilities List, and National Strategy for Homeland Security of 2007. In FY 2009, FEMA requests $215 million for Homeland Security Response and Recovery Programs, which includes Emergency Management Performance Grants (EMPG) [received $300m FY 2008], and the Citizen Corps Program (CCP). The EMPG Program provides funds to support emergency management initiatives at the state and local level, and improve mitigation, preparedness, response, and recovery capabilities for all hazards. The Citizen Corps Grant Program (CCP) is the Department's grass-roots initiative to actively involve all citizens in hometown preparedness through personal readiness, training, and volunteer service." (**FEMA**, *Statement of R. David Paulison, Administrator, on the Fiscal Year 2009 President's Budget Before the Committee on Appropriations Subcommittee on Homeland Security, U.S. House of Representatives*, March 11, 2008)

FEMA Responsibilities: "FEMA manages and coordinates the federal response to and recovery from major domestic disasters and emergencies of all types in accordance with the *Robert T. Stafford Disaster Relief and Emergency Assistance Act*. It ensures the effectiveness of

emergency response providers at all levels of government in responding to terrorist attacks, major disasters, and other emergencies. Through the Disaster Relief Fund, FEMA provides individual and public assistance to help families and communities impacted by disasters rebuild and recover. FEMA also administers hazard mitigation programs to prevent or to reduce the risk to life and property from floods and other hazards. In addition to administering the National Incident Management System (NIMS), in FY 2007, FEMA's role as the lead federal agency for incident management, preparedness, and response was expanded to include the administration of the Department of Homeland Security's grant programs and the United States Fire Administration. The inclusion of these programs within FEMA reinforces the Department's focus to provide the Nation with unified, coordinated, and robust all-hazards preparedness and response capability at all levels of government including federal, state, tribal, and local government personnel, agencies, and regional authorities." (**DHS**, *Budget-in-Brief Fiscal Year 2008*, 2007. pp. 61-62)

FEMA Retooling (2005): "As we complete our after action reports[Hurricane Katrina], in the short term, there are several immediate steps we can take to begin strengthening the system. I'd like to briefly mention a few here. First, we must re-tool FEMA and enhance this vital agency's capabilities so that it can fulfill its historic and critical mission supporting response and recovery.

"What does that re-tooling mean? It means a more effective distribution and delivery system for supplies, more efficient business processing and disaster registration systems, and enhanced communications capabilities….

"Another step we are taking to combat the lack of dependable information coming from the ground is to develop emergency reconnaissance teams that can go into a disaster area and feed back reliable, real-time information to be used at all levels of government. These teams will consist of not only FEMA disaster assistance specialists, but also Coast Guard personnel, CBP, Secret Service, and other DHS law enforcement officers and assets.

"Finally, we must move forward with the creation of a preparedness directorate as outlined under the Second Stage Review plan we released in July. Many of you are familiar with this piece of the equation as you were instrumental with advice and recommendations throughout the 2SR process. To ensure that our preparedness efforts have focused direction, we intend to integrate the Department's existing preparedness efforts -- including planning, training, exercising, and funding -- into a single directorate for Preparedness. A process that is already moving forward. The FY 06 budget contains $4 billion for this initiative, and recently, the President nominated George Foresman to be Under Secretary for Preparedness and oversee this new directorate.

"Of course, preparedness is not just about response and recovery – rather it must draw on the full spectrum – from prevention through protection to response. Our preparedness directorate will rely on the expertise of FEMA, but it will also integrate the experience and capabilities of our other operational assets including the U.S. Fire Administration, Coast Guard, ICE, Secret Service, as well as our training assets such as the Emergency Management Institute and the National Fire Academy.

"Going forward, FEMA will become a direct report to the Secretary, allowing it to focus on response and recovery while partnering with the new preparedness directorate to increase our overall capabilities in both of these important areas.

"In light of Hurricane Katrina and at the direction of the President, we are also working with federal, state and local officials to review the emergency operations plans of every major American urban area and ensure that those plans are clear, detailed, and up-to-date. This includes specifically a hard, realistic look at evacuation planning ranging from earthquakes to subway bombings. These steps are just the beginning and in the weeks and months ahead, we will move forward to build our preparedness capability and ensure that the United States is ready to meet any type of threat or disaster with which we are faced." (DHS, *Remarks by Secretary Michael Chertoff, U.S. Department of Homeland Security at the International Association of Fire Chiefs Leadership Summit*, November 4, 2005)

FEMA Small State and Rural Advocate: "…ensures that the needs of rural communities are addressed in the disaster declaration process and assists small population states in preparing their requests for disaster declarations." (**FEMA**, *Small State and Rural Advocate*, Sep 11, 2007)

FEMA Special Events Operations Division: "This division [Disaster Operations Directorate] supports the readiness capabilities and planning for designated National Special Security Events to ensure an effective response to possible emergencies, to ensure public health and safety, and to protect property against threats or acts of terrorism. Support generally consists of activating operations centers and liaisons and is dependent upon the needs identified for each event." (**DHS**, *FEMA OMA FY 2009 OMB Budget Justification*, 2008, 22)

FEMA/State Agreement: "A formal legal document stating the understandings, commitments, and binding conditions for assistance applicable as a result of a major disaster or emergency declared by the President. The agreement imposes binding obligations on FEMA, States, their local governments and private non-profit organizations within States in the form of conditions for assistance, which are legally enforceable. No DFA will be authorized until the FEMA/State Agreement has been signed, except where it is deemed necessary to begin the provision of essential emergency services or temporary housing." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 52)

FEMA Strategic Goals (1997): "FEMA has adopted two mission-related goals and one organizational goal to guide its internal management and its leadership role in the national emergency management partnership. These goals are:

1. Protect lives and prevent the loss of property from all hazards.
2. Reduce human suffering and enhance the recovery of communities after disaster strikes.
3. Ensure that FEMA serves the public in a timely and cost-efficient manner." (**FEMA**, *Strategic Plan, FY 1998-2002*, 1997, p. 12)

FEMA Strategic Goals (2008):

- Strategic Goal 1: Extend and Enhance FEMA Operational Capability (p. 1)

- Strategic Goal 2: Build Capability and Readiness for Catastrophic Disasters (p. 15)
- Strategic Goal 3: Optimize Insurance and Mitigation Programs (p. 23)
- Strategic Goal 4: Transform FEMA's Culture to Maximize Mission Performance (p. 27) (**FEMA**, *FEMA Region III Annual Report FY 2007*, Feb. 2008)

FEMA Strategic Plan (2002): "Over the past many months, we conducted an in-depth analysis within the Agency and met with our partners and stakeholders from around the Nation to develop the Strategic Plan. Wherever we met, several themes emerged that helped inform our work:

- leadership;
- partnership;
- building capability at all levels;
- setting standards for performance; and
- bringing emergency managers and first responders together to train and exercise to those standards." (**FEMA**, *Strategic Plan*, 2002, Message from Director Joe M. Allbaugh, p. ii)

FEMA Strategic Plan (2007): "FEMA's Strategic Plan builds on the vision and a comprehensive and integrated mission statement to provide the agency with a defined and clear pathway for the future. This Plan differs from previous FEMA Strategic Plans in that it moves away from the focus on individual component missions to a much broader and integrated goal structure. This is intended to break down the organizational "stove-pipes" inherent in the former goal structure and send a message that FEMA components must combine their efforts and efficiently use resources toward a common strategic direction and integrated outcomes under the New FEMA. The overarching themes apply to each goal and objective within the Plan. These themes are key to FEMA's future success and highlight what the agency values, both from an individual and organizational standpoint in building *The Nation's Preeminent Emergency Management and Preparedness Agency*." (**FEMA**, *Strategic Plan*, 2007, p. 10)

FEMA Strategic Plan Goals (2007):

1. An integrated approach that strengthens the Nation's ability to address disasters, emergencies, and terrorist events
2. Easily accessible and coordinated assistance for all programs
3. Reliable information at the right time for all users
4. FEMA investment in people and people's investment in FEMA to ensure mission success
5. A business culture that rewards performance and stewardship and builds public trust and confidence (**FEMA**, *Strategic Plan*, 2007, p. 2)

FEMA Strategic Plan Goals (2008):

1. Lead an integrated approach that strengthens the Nation's ability to address disasters, emergencies, and terrorist events
2. Deliver easily accessible and coordinated assistance for all programs
3. Provide reliable information at the right time for all users
4. FEMA invests in people and people invest in FEMA to ensure mission success
5. Build public trust and confidence through performance and stewardship

(**FEMA**, *FEMA Strategic Plan, Fiscal Years 2008-2013* (FEMA P-422), January 2008, p. iii)

FEMA Strategic Plan Goals (2007/2008) – Goal #1: An integrated approach that strengthens the Nation's ability to address disasters, emergencies, and terrorist events:

"FEMA will actively engage all partners, public and private, in building a national emergency management system that strengthens the Nation's ability to protect its citizens and prepare for, mitigate against, respond to, and recover from disasters, emergencies, and terrorist events. Key to this effort is working with these partners to develop relationships, programs, processes, and agreements that build and better leverage existing resources in preparing the public and local entities to care for themselves. This will result in a Nation that is comprehensively prepared to reduce the loss of life and property that often results from natural disasters and man-made incidents." (**FEMA** *Strategic Plan*, 2007, p.12; (**FEMA** *Strategic Plan, FY 2008-2013*, 2008, iii)

FEMA Strategic Plan Objectives -- Goal 1 Sub-Objectives (2008):

- **Objective 1.1** Build a culture of preparedness across the Nation for all hazards.
- **Objective 1.2** Conduct, promote, and communicate the identification and analysis of risk and capabilities as the basis for action.
- **Objective 1.3** Promote physical and economic loss reduction measures.
- **Objective 1.4** Engage stakeholders in developing and communicating clear national doctrine and policy, both internally and externally.
- **Objective 1.5** Ensure the Nation's jurisdictions have adequate plans and programs to effectively address all hazards and minimize loss of life and property.
- **Objective 1.6** Professionalize the national emergency management system and the training that supports it.
- **Objective 1.7** Strengthen and validate national capabilities through education, exercises, training, and evaluation.
- **Objective 1.8** Maintain a high level of FEMA readiness to respond to disasters and emergencies. (**FEMA** *Strategic Plan, FY 2008-2013*, 2008, pp. 9-17)

FEMA Strategic Plan Objectives -- Goal # 2 Deliver easily accessible and coordinated assistance for all programs.

"When disasters do strike, FEMA will work closely with its public and private sector partners to improve the delivery of timely and appropriate assistance for all FEMA programs. The agency will examine and implement simple and effective delivery mechanisms, establish clear and measurable results, focus on improving customer service, and minimize opportunities for waste, fraud, and abuse."

FEMA Strategic Plan Objectives -- Goal 2 Sub-Objectives (2008):

- **Objective 2.1** Formulate and administer financial assistance programs that are aligned with strategic objectives and delivered through a simple and coordinated process.
- **Objective 2.2** Improve the delivery of disaster assistance while minimizing opportunities for waste, fraud, and abuse.

- **Objective 2.3** Effectively lay the foundation to meet the immediate needs of disaster victims and begin community recovery. (**FEMA** *Strategic Plan, FY 2008-2013*, 2008, 19-21)

FEMA Strategic Plan Objectives -- Goal # 3 Provide reliable information at the right time for all users.

"FEMA will serve as a primary source of the Nation's emergency management information before, during, and after disasters and emergencies, ensuring that the federal government speaks to the public with a single, coordinated voice both during non-disaster periods and during national emergencies." (**FEMA** *Strategic Plan, FY 2008-2013*, 2008, 22)

FEMA Strategic Plan Objectives -- Goal 3 Sub-Objectives (2008):

- Objective 3.1 Collect and share information on FEMA's policies, programs, and activities with employees, partners, and stakeholders on a consistent basis.
- Objective 3.2 Build a robust disaster communications program that provides "real time" reliable information before and during events.

(**FEMA** *Strategic Plan, FY 2008-2013*, 2008, PP. 23-)

FEMA Strategic Plan Overarching Themes (2007/2008):

- Clear and well communicated doctrine
- Customer-focused, field-based, and results-oriented mission delivery
- Compassionate program and service delivery to all populations
- Strong leadership, teamwork, and accountability at all levels
- Professional workforce of motivated employees that are empowered and equipped to act
- Strong partnerships that leverage capabilities and capitalize on public-private efficiencies
- Business approach to achieving desired results with a strong foundation in technology.

(**FEMA**, *Strategic Plan*, 2007, pp. 2, 8-10; **FEMA** *Strategic Plan, FYs 2008*-13, Jan 2008, 4-6)

FEMA Values: See "FEMA Core Values."

FEMA Vision (1987): "The vision for FEMA is expressed in the title of the Agency's strategic plan: *Partnership For A Safer Future*…. The vision of an effective 'Partnership for a Safer Future' for America is:

- An informed public protecting their families, homes, workplaces, communities, and livelihoods from the impacts of disasters;

- Communities built to withstand the natural hazards which threaten them;

- Governmental and private organizations with plans, necessary resources, and rigorous training and exercising for disaster response, and

- Community plans, prepared in advance, for recovery and reconstruction after a disaster." (**FEMA**, *Strategic Plan FY 1998 – FY 2002*, 1987, p. 10)

FEMA Vision (2007): "The Nation's Preeminent Emergency Management and Preparedness Agency." (**FEMA**, *Strategic Plan*, 2007, p. 2)

FEMA Vision (2007/2008): "FEMA's vision is to transform the agency into *The Nation's preeminent Emergency Management and Preparedness Agency* – the New FEMA." (**FEMA**, *Strategic Plan*, 2007, p. 2; **FEMA**, *Strategic Plan, Fiscal Years 2008-2013*, January 2008, p. iii)

FEMA Vision (2008): "To regain the trust and confidence of the American people, we will transform FEMA into the Nation's Preeminent Emergency Management Agency. To do this, we must…
Strengthen core capabilities, competencies and capacities -- Fostering a national emergency management system and implementing a cohesive national preparedness system must begin by strengthening the foundational building blocks of a weakened but venerable agency. The nation needs a strong FEMA; but that cannot be achieved without purposeful new investments.
Build Strong Regions....
Strengthen our partnerships with States….
Professionalize the national emergency management system....
Marshall an effective national response….
Deliver service of value to the public....
Reduce vulnerability to life and property….
Instill public confidence -- FEMA will demonstrate mission effectiveness and efficiency, in proper balance, to regain the trust, faith and confidence of the American public.
Organizationally, no asset should be more prized, or more dear when lost, than the confidence of the public we serve. We will work with our many partners to build an Agency the nation can once again look to with pride." (**FEMA**, *FEMA Region III Annual Report FY 2007*, 2008, 6-7)

FEMA Vision Building Blocks (2007): "In October 2006, Congress passed the Post-Katrina Emergency Management Reform Act, which included a more robust preparedness mission for FEMA. It was clear that a new strategic plan would be needed to help develop the core competencies required to address the all-hazard threats of the future and the expanded mission. Thus, in late 2006 and again in the summer of 2007, our leadership team met to craft the implementation of a new vision for the agency that would forge an innovative and dynamic FEMA – a New FEMA – that would regain the trust and confidence of the American people. Discussions with our partners and stakeholders led us to identify solid building blocks to achieve this vision:

- strengthening the agency's core competencies,
- building strong regions,
- enhancing current and creating new partnerships,
- investing in FEMA employees,
- developing a business approach to achieving desired results, and
- professionalizing the national emergency management system." (**FEMA**, *Strategic Plan*, 2007, p. 1 (Message from the Administrator, R. David Paulison); see, also p. 5)

FEMA Vision Initiatives (2007): "An increase of $100 million is requested [FY 08] for FEMA's **Vision Initiatives** that will enable the agency to intensify and speed the development of

core competencies that are central to achieving its disaster readiness, response and recovery mission. A combination of staffing increases, new technologies, and targeted investment in equipment and supplies, will increase FEMA's mission capacity in the areas of Incident Management, Operational Planning, Continuity Programs, Public Disaster Communications, Hazard Mitigation, Disaster Logistics, and Service to Disaster Victims." (**DHS**, *Goal 4: Build a Nimble*, 8 Feb 2007)

FEMA Vision Initiatives (2007/2008): "The budget requested [FY 08] reflects the first year of a three-year phased approach that will improve the core competencies necessary to meet FEMA's commitment to serve the public and be the Nation's Preeminent Emergency Management Agency. Included in the request is a $100 million increase for FEMA's Vision Initiatives, including staffing increases at Headquarters and in the Regions, new technologies, and targeted investment in equipment, supplies and the professional training and development of our people that will support emergency management efforts across preparedness, protection, mitigation, response, and recovery." (**FEMA Director David Paulison,** Feb 8, 2007 email to employees on FY 2008 Budget Request)

FEMA Vision Initiatives (2008): "Activities reflect the continuing implementation of FEMA Vision initiatives launched in FY 2007 and FY 2008, including a focus on developing core competencies and the integration of expanded preparedness functions….activities will continue to build on FY 2007 successes in the areas of:

- Creating "engaged partnerships" with state and local governments.
- Facilitating and supplying an effective unified command across all levels of government.
- Engaging hurricane-prone states to gain a better understanding of their vulnerabilities.
- Improving logistics and communications capabilities to improve response.
- Enhancing disaster assistance capabilities for recovery efforts." (**DHS**, *FEMA OMA FY 2009*, 2008, 9)

FERN: Food Emergency Response Network. (*NRF-Biological Incident Annex*, 2008, 4)

FF-90-129: Mission Assignment Form. (**FEMA**, *Mission Assignment SOPs…Draft*, 2007, 19)

FFIEC: Federal Financial Institutions Examination Council. (**FEMA**, *Call for…*, 2000, xxiii)

FFRDC: Federally Funded Research and Development Center.

FGC: Fire Ground Command System. (**FEMA**, *NIMS and ICS*, 2004)

FHCF: Florida Hurricane Catastrophe Fund.

FHWA: Federal Highway Administration, U.S. Department of Transportation.

Field Assessment Team (FAsT): "A Federal Team developed to perform rapid initial (field) assessment. This team is intended to be employed within the first hours after a disaster. These teams are small and self-sufficient. They will focus on time sensitive and emergency need

requirements." (**USACE**, *Response Planning Guide*, 1995, p. B-2; see also **FEMA**, *SLG 101*, 1996, p. 7-4))

Field Intelligence Support Teams (FIST), U.S. Coast Guard: "The U.S. Coast Guard operates Field Intelligence Support Teams (FIST) at each of its operating units, which collect and disseminate information through day-to-day patrol observations and outreach to port operators, harbor masters, fishing and commercial vessel operators, Federal and State fishery and environmental enforcement officers, and maritime industry representatives. These reports provide a constant flow of information updating local commanders of changing trends in maritime operations in the Nation's ports, waterways, and coastal and offshore waters. FIST members perform this responsibility as one part of their overall patrol responsibilities and not as specialized "intelligence" officers. Sensitive information can be classified and disseminated through designated intelligence channels for analysis by the Coast Guard's intelligence officers. More frequently, however, the information is unclassified and used to build greater situational awareness of all patrolling boat, cutter, and air crews to help them understand their operating environment and be better prepared to detect anomalies indicative of illicit activity. It is also shared with other Federal and State agencies to improve their understanding of regional maritime activity…" (**DHS**, *Capstone Doctrine Pub 1 Version 2.1 Draft*, Ch. 8, Info. Ops., 2008, p. 8-3)

Field Operations Guide (FOG): "A pocket-sized manual of instructions on the application of the Incident Command System (ICS)." (**FEMA**, *Mission Assignment SOPs Draft*, July 2007, 52)

Final Planning Conference (FPC), HSEEP: "The FPC is the final forum for the *exercise planning team* to review the process and procedures for exercise conduct, final drafts of all exercise materials, and all logistical requirements. There should be no major changes made to either the design or the *scope* of the exercise, nor to any supporting documentation, at the FPC. The FPC ensures all logistical requirements have been arranged, all outstanding issues have been identified and resolved, and all exercise products are ready for printing." (**FEMA**, *Homeland Security Exercise and Evaluation Program Glossary*, 2008)

Finance/Administration Section (ICS): "The section that provides accounting, procurement, administrative and cost analysis services. Monitors costs associated with the incident. (**Capital Health Region**, Edmonton Canada, *ICS Training SM*, 2007, 53)

Financial Services Sector Coordinating Council for Critical Infrastructure Protection and Homeland Security (FSSCC): "…a group of more than 30 private-sector firms and financial trade associations that works to help reinforce the financial services sector's resilience against terrorist attacks and other threats to the nation's financial infrastructure. Formed in 2002, FSSCC works with the Department of Treasury, which has direct responsibility for infrastructure protection and homeland security efforts for the financial services sector, while also serving under the overall guidance of the Department for Homeland Security." (**FSSCC**, Jan 2008)

FIPNC: Federal Insurance Producers National Committee. (**FEMA**, *Call for Issues*, 2000, xxiii)

FIRA: Flood Insurance Reform Act of 2005. (**FEMA**, *Region III Annual Report FY 2007*, 26)

Fire: "Each year, more than 4,000 Americans die and more than 25,000 are injured in fires, many of which could be prevented. Direct property loss due to fires is estimated at $8.6 billion annually. Fire spreads quickly; there is no time to gather valuables or make a phone call. In just two minutes, a fire can become life-threatening; in five minutes, a residence can be engulfed in flames." (**FEMA**, "Fact Sheet – Fires," February 2007, p. 1)

Fire Corp: "…launched last December [2004] with 13 local fire departments – today, there are more than 370 departments actively involved in 45 states and Guam…. Last December, you [IAFC] partnered with us to launch the Fire Corps initiative – a component of Citizen Corps designed to serve two strategic purposes. One by tapping citizens to provide administrative support, firefighters are free to focus on the specialized training and duties of your life-saving work. And two it engages citizens in the work of emergency preparedness, motivating them to address the safety of their homes and communities and spreading the message of shared responsibility to neighbors and friends." (**DHS**, *Remarks by Secretary Michael Chertoff, U.S. Department of Homeland Security at the International Association of Fire Chiefs Leadership Summit*, November 4, 2005)

Fire Ground Command System (FGC): "In the early 1970s, the Phoenix Fire Department developed the Fire Ground Command System (FGC). The concepts of FGC were similar to FIRESCOPE ICS but there were differences in terminology and in organizational structure. The FGC system was developed for structural firefighting and was designed for operations of 25 or fewer companies." (**FEMA**, *NIMS and ICS*, 2004)

Fire Management Assistance Grant Program (FMAGP): "Fire Management Assistance is available to States, local and tribal governments, for the mitigation, management, and control of fires on publicly or privately owned forests or grasslands, which threaten such destruction as would constitute a major disaster. The Fire Management Assistance declaration process is initiated when a State submits a request for assistance to the FEMA Regional Director at the time a "threat of major disaster" exists. The entire process is accomplished on an expedited basis and a FEMA decision is rendered in a matter of hours. The…FMAGP provides a 75 percent Federal cost share and the State pays the remaining 25 percent for actual costs. Before a grant can be awarded, a State must demonstrate that total eligible costs for the declared fire meet or exceed either the individual fire cost threshold - which is applies to single fires, or the cumulative fire cost threshold, which recognizes numerous smaller fires burning throughout a State. Eligible firefighting costs may include expenses for field camps; equipment use, repair and replacement; tools, materials and supplies; and mobilization and demobilization activities." (**FEMA**, *FMAGP*)

Fire Management Assistance Grants: "Fire Management Assistance Grants…provide support to States experiencing severe wildfires – are performed by Federal departments or agencies under their own authorities and do not require Presidential approval." (**DHS**, *NRF*, 2008, 42)

Firefighters and Organizations: "America's 1.1 million firefighters are spread across 30,300 fire departments…" (**DHS,** Chapter 2, *Capstone Doctrine Pub Draft*, Feb 2008, p. 2)

Fire Service (FS): "Individuals who, on a full-time, part-time, or voluntary basis, provide life-safety services, including fire suppression, rescue, arson investigation, public education, and prevention." (**FEMA**, *TIE/TO Course Catalog*, 2008, p. 2)

FIRESAT/IHIS: FIRESAT (previously called the Integrated Hazard Information System) was transferred from the National Oceanic and Atmospheric Administration (NOAA) to DHS, and its name was changed to 'FIRESAT' [in 2002]. IHIS, originally named the "Hazards Support System (HSS), was a classified information system developed by the Department of Defense (DOD) in 1997 to compile data obtained from various satellites and sensors, such as those used to detect ballistic missiles and others which continuously monitor weather conditions in the United States. The Raytheon Company built HSS at a cost of nearly $27 million. In late 2000, after DOD tested the system, HSS was turned over to the U.S. Geological Survey (USGS) in the Department of the Interior and renamed IHIS, where it would be used to detect wildfires and volcanic eruptions around the world. However, Congress directed USGS to cease expenditures on IHIS, apparently because of concerns about unauthorized reprogramming of those funds. Since then, no funding has been authorized for IHIS. The agreement by Congress and the Administration to move IHIS to DHS included "the transfer of workstations, software, documentation, and its communications component." (**CRS**, *EPR Directorate of DHS*, 20034)

FIRESCOPE: *Fi*refighting *Res*ources of *C*alifornia *O*rganized for *P*otential *E*mergencies. (See ICS History)

Firewall: "Walls which are intended to be fire barriers." (**UNDHA**, *DM Glossary*, 1992, 38)

FIRM: Flood Insurance Rate Map. (**FEMA**, *Base Flood*, 2007)

FIRST: Federal Incident Response Support Team.

First Aid: "The immediate but temporary care given on site to the victims of an accident or sudden illness in order to avert complications, lessen suffering, and sustain life until competent services or a physician can be obtained." (**UNDHA**, *DM Glossary*, 1992, 38)

First Receivers: "Healthcare workers at a hospital receiving contaminated victims for treatment may be termed *first receivers*[51] (Koenig, 2003). This group is a subset of *first responders* (e.g., firefighters, law enforcement, HAZMAT teams, and ambulance service personnel). However, most first responders typically act at the site of an incident (i.e., the location at which the primary release occurred). In contrast, inherent to the definition of *first receivers*, is an assumption that the hospital is not itself the primary incident site, but rather is remote from the location where the hazardous substance release occurred. Thus, the possible exposure of first receivers is limited to the quantity of substance arriving at the hospital as a contaminant on victims and their clothing or personal effects (Horton et al., 2003). First receivers typically include personnel in the following roles: clinicians and other hospital staff who have a role in receiving and treating contaminated victims (e.g., triage, decontamination, medical treatment, and security) and those

[51] Referenced is Koenig K. 2003. Strip and shower: the duck and cover for the 21st Century. Annals of Emergency Medicine. 42(3): 391-394. September.

whose roles support these functions (e.g., set up and patient tracking)." (**OSHA**, *OSHA Best Practices for Hospital-Based First Receivers of Victims from Mass Casualty Incidents…,* 2005)

First Responder: "In 95% of all emergencies, bystanders or victims themselves are the first to provide emergency assistance or to perform a rescue." (**Citizen Corps**. *Citizen Corps Uniting Communities, Preparing the Nation*, DHS, slide presentation, slide 3; cites LA Fire Department)

First Responder: "Definition: designation for a person who, in the course of their professional duties of responding to emergencies, and in the early stages of an incident, is responsible for the protection and preservation of life, property, evidence, the environment, and for meeting basic human needs. Extended definition: may be a member of a Federal, State or local emergency public safety, emergency response, emergency medical, law enforcement, fire and rescue, military, or other recognized agency and authority, including a volunteer or private organization, as well as other skilled support personnel (such as equipment operators, administrators, security personnel, etc.) who provide immediate support services during, response and protection operations." (**DHS**, *Lexicon: Terms and Definitions*, October 23, 2007, pp. 10-11)

First Responder: "A first responder is any emergency personnel who first arrives on the scene of an incident and takes action to save lives, protect property, and meet basic human needs. In most incidents, these responders are local police, fire, and emergency medical personnel." (**DHS,** *LLIS.gov Glossary*)

First Responder: "Local and non-governmental police, fire, and emergency personnel who in the early stages of an incident are responsible for the protection and preservation of life, property, evidence, and the environment, including emergency response providers as defined in section 2 of the Homeland Security Act of 2002 (6 U.S.C. 101), as well as emergency management, public health, clinical care, public works, and other skilled support personnel (such as equipment operators) who provide immediate support services during prevention, response, and recovery operations. First responders may include personnel from Federal, State, local, tribal, or nongovernmental organizations. (**DHS**, *NPG*, December 2005 Draft, p. A-1; cites **DHS**, *NRP*, December 2004)

First Responder: "Local police, fire, and emergency medical personnel who first arrive on the scene of an incident and take action to save lives, protect property, and meet basic human needs. First responders may include Federal, State, or local responders." (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, P. 75 (glossary)) [Note: See 2001 USG definition below.]

First Responder: "Those individuals who in the early stages of an incident are responsible for the protection and preservation of life, property, evidence, and the environment, including emergency response providers as defined in section 2 of the Homeland Security Act of 2002 (6 U.S.C. 11), as well as emergency management, public health, clinical care, public works, and other skilled support personnel (such as equipment operators) that provide immediate support services during prevention, response, and recovery operations." (**DHS**, *UTL 2.1*, 2005, p. B-1)

First Responder: "The term "first responder" refers to those individuals who, in the early stages of an incident, are responsible for the protection and preservation of life, property,

evidence, and the environment, including emergency response providers as defined in section 2 of the Homeland Security Act of 2002 (6 U.S.C. 101), as well as emergency management, public health, clinical care, public works, and other skilled support personnel (such as equipment operators) who provide immediate support services during prevention, response, and recovery operations." (**FEMA**, *TEI/TO Course Catalog*, 2008, 2)

First Responder: "Refers to individuals who in the early stages of an incident are responsible for the protection and preservation of life, property, evidence, and the environment, including emergency response providers as defined in Section 2 of the Homeland Security Act of 2002 (6 U.S.C. 101). It includes emergency management, public health, clinical care, public works, and other skilled support personnel (e.g., equipment operators) that provide immediate support services during prevention, response, and recovery operations." (**HHS**, *Medical Surge Capacity and Capability Handbook*, August 2004, p. D-4, Glossary)

First Responder: "The term 'first responder' shall have the same meaning as the term 'emergency response provider'." (**US Congress**, *Implementing the 9/11 Commission Recommendations Act of 2007*, August 7, 2007, p. 9)

First Responder: "Local police, fire, and emergency medical personnel who first arrive on the scene of an incident and take action to save lives, protect property, and meet basic human needs." (**USG**, *USG Interagency Domestic Terrorism CONPLAN*, 2001, Appendix B: Definitions)

First Responder: "The term "first responder" refers to those individuals who in the early stages of an incident are responsible for the protection and preservation of life, property, evidence, and the environment, including emergency response providers as defined in section 2 of the Homeland Security Act of 2002 (6 U.S.C. 101), as well as emergency management, public health, clinical care, public works, and other skilled support personnel (such as equipment operators) that provide immediate support services during prevention, response, and recovery operations." (**White House**, *HSPD 8 National Preparedness*, December 17, 2003)

First Responder Partnership Initiative (FRPI): "The First Responder Partnership Initiative (FRPI) is designed as a model…to enhance cooperation and efficiency between state and local first responders and their federal counterparts…. The architecture of the card, which uses the FIPS 201 and 14443 contact list standards, will identify first responders and their qualification(s) at the site of an incident, so they may move rapidly into, out of, and within an area in a trusted and secure manner. The card will be recognized across all NCR [National Capital Region] federal, state, and local multi-jurisdictions. The smart card technology is standards-based and can serve as a platform for:

- physical access into buildings
- logical access to networks
- human resource asset accountability
- incident command and control
- property/firearms accountability
- National Incident Management System (NIMS) integration." (**DHS**, *New Smart Card System to Coordinate First Responders in the NCR*, August 25, 2005)

First Responders: "Federal, State, and local emergency public safety, law enforcement, emergency response, emergency medical (including hospital emergency facilities), and related personnel, agencies, and authorities." (**Homeland Security Act of 2002**, Public Law No. 107-296, section 2, 116.)

First Responders: "…our first responder community…law enforcement; the fire service; the emergency medical service; public officials responsible for emergency planning and response; the public health sector; transit authorities including rail and ports; and non-governmental organizations." (**Mayer** 2005, 8)

First Responders: "Emergency services organizations are often referred to as "first responders." They are responsible for detection, assessment, alerting and dispatch of specialized life support and life safety assets. All first responders have specialized training from one or more of the five aforementioned disciplines [fire, hazardous material (HazMat), search and rescue (SAR), emergency medical services (EMS), law enforcement (LE), public health, public works]."

First Responders: "…individuals who in the early stages of an incident are responsible for the protection and preservation of life, property, evidence, and the environment, including emergency response providers as defined in section 2 of the Homeland Security Act of 2002 (6 U.S.C. 101), as well as emergency management, public health, clinical care, public works, and other skilled support personnel (such as equipment operators) that provide immediate support services during prevention, response, and recovery operations." (**White House**, *HSPD 8*, 2003**)**

FIS: Flood Insurance Study/Studies (**FEMA**, 1993)

FISA: Foreign Intelligence Surveillance Act. (**FEMA**, *IIFOG Ver 3 Draft*, 2008, p. 35)

FISCAM: Federal Information System Controls Audit Manual.

FIST: Field Intelligence Support Teams, U.S. Coast Guard.

Five-Hundred Year Floodplain (or 0.2 percent chance floodplain): That area which includes the base floodplain which is subject to inundation from a flood having a 0.2 percent chance of being equaled or exceeded in any given year.

Fixed Nuclear Facility Incident Planning: "On January 24, 1973, the Office of Emergency Preparedness issued a notice in the Federal Register assigning Federal agency responsibility for fixed nuclear facility incident planning. The U.S. Atomic Energy Commission was made the leading operating agency, and DCPA was made responsible for:

(1) Assistance to State and local authorities in planning the general emergency preparedness actions required in response to nuclear accidents, consistent with AEC guidance.
(2) Recommendations and guidance on the use of the civil defense radiological monitoring system." (**DCPA**, *Foresight, DCPA Annual Report FY73*, 1974, p. 11)

Flash Burn: "A burn caused by excessive exposure (of bare skin) to thermal radiation." (**Glasstone**, *The Effects of Nuclear Weapons*, 1977, Glossary, p. 633)

Flash Flood: A flood that crests in a short period of time and is often characterized by high velocity flow—often the result of heavy rainfall in a localized area.

Flash Flood: "Flood of short duration with a relatively high peak discharge. Causes inundation, and because of its nature is difficult to forecast." (**UNDHA**, *DM Glossary*, 1992, 39)

FLCP: Florida Catastrophic Disaster Planning. (**FEMA**, *Catastrophic Disaster Planning IAEM Presentation,* Nov.12, 2007, slide 7)

FLETC: Federal Law Enforcement Training Center, DHS.

Flexibility: "A principle of the NIMS that provides a consistent, flexible, and adjustable national framework within which government and private entities at all levels can work together to manage domestic incidents, regardless of their cause, size, location, or complexity. This flexibility applies across all phases of incident management: prevention, preparedness, response, recovery, and mitigation." (**DHS**, *National Incident Management System*, March 2004, p. 2.)

Flexible (Core Principle of Emergency Management): "Flexible: emergency managers use creative and innovative approaches in solving disaster challenges." (**EM Roundtable**, 2007, p.4)

FLHUG: Florida HAZUS User Group. "…formally organized in January 2006, when the group met to elect officers, create committees, and adopt a charter…. Membership in the FLHUG allows first responders, emergency managers, and decision makers from public and private organizations to build and strengthen a cohesive, informed emergency management community that can continually create stronger and more accurate mitigation plans. People interested in disaster mitigation have learned that, as members of FLHUG, they benefit not only from the scenarios generated by HAZUS-MH, but also by the lasting working relationships they develop with colleagues in different fields. Spanning public and private domains, GIS professionals, emergency managers, researchers, medical personnel, legislative contacts, local planners, technical experts, American Red Cross workers, facility managers, and government officials can all use the FLHUG to communicate with and learn from each other—sharing resources and supporting each other's work to mitigate the risks of natural disasters. In addition to user networks, strong support from the Florida Division of Emergency Management (DEM) and FEMA Region IV has been critical to the success of Florida's coordinated statewide program." (FEMA, The Florida HAZUS User Group (FLHUG), January 1, 2008)

Flood: "An unusual accumulation of water above the ground caused by high tide, heavy rain, melting snow or rapid runoff from paved areas." (**EEA**, *EEA Environmental Glossary*, 2007)

Flood Alarm Level: "Water level which is considered to be dangerous and at which warnings should commence." (**UNDHA**, *DM Glossary*, 1992, 39)

Flood-Bypass Channel, also **Floodway:** "Channel built to divert flood flows from a point upstream of a region to a point downstream." (**UNDHA**, *DM Glossary*, 1992, 39)

Flood Control: "The management of water resources through construction of dams, reservoirs, embankments, etc. to avoid floods." (**UNDHA**, *DM Glossary*, 1992, 39; **EEA**, *EEA Environmental Glossary*, 2007)

Flood Control and Coastal Emergencies Act (33 U.S.C. § 701n (2005), commonly referred to as Public Law 84-99): The Flood Control Act "authorizes an emergency fund for preparation for emergency response to, among other things, natural disasters, flood fighting and rescue operations, repair or restoration of flood control and hurricane protection structures, temporary restoration of essential public facilities and services, and provision of emergency supplies of water." (**DHS**, *National Response Framework List of Authorities and References* (Draft), September 10, 2007, p. 4)

Flood Control Project and Plan, Federal: "The Federal flood control project is comprised of two obvious elements: the physical aspects of improvement recommended and the associated requirements of local cooperation. The intended flood control plan (i.e., the outputs from the Federal project) may, however, be dependent upon other elements as well. The assumptions made about how the Federal project improvements will function may depend upon other assumptions about the continued effectiveness of already existing non-Federal developments that shape or control flows (whether specifically intended for flood control, or not). They may reflect the assumed existence of other non-Federal developments planned but not yet in place. It is critical that the non-Federal sponsor, responsible for operation and maintenance (O&M) of the Federal project, understand the importance of all the elements that go together to make the plan function. A complete description of a plan includes all structural, nonstructural, legal, and institutional features, both proposed and existing, that contribute to the intended flood control outputs. The outputs of the plan, and of individual elements if they have separable outputs, should be quantified in understandable physical, economic and environmental terms. The operating requirements should be developed for each element requiring operation (e.g., statement of the trigger that will say it is time to close a gate and the amount of time it will take to close it). Finally, there should be explication of the overall resources required to operate and maintain the plan, i.e., manpower, equipment, cost. The requirement for definition of the plan in these terms begins in the preauthorization feasibility phase and ends with preparation of the O&M manual furnished to the non-Federal sponsor when the project is turned over…" (**USACE**, *Water Resources Policies and Authorities - Digest of Water* Resources..., 1999, 13-5)

Flood Forecasting: "Procedure for estimation of stage, its discharge values, time of occurrence, and duration of a flood, especially of its peak discharge." (**UNDHA**, *DM Glossary*, 1992, 40)

Flood Fringe: Areas outside the regulatory floodway but still inundated by the designated one percent annual chance flood (often referred to as the floodway fringe).

Flood Hazards of Special Concern, NFIP/FEMA: "The mapping and regulatory standards of the NFIP are general standards and do not address every flood problem in the United States. Certain floodplains and flood-related hazards are less common, more destructive and harder to map than riverine, coastal, alluvial fan, and shallow flooding. Special hazards include coastal

erosion, tsunamis, closed basin lakes, uncertain flow paths, dam breaks, ice jams, and mudflows." (**FEMA**, *Flood Hazards of Special Concern*, 2007)

Flood Insurance: "A report was prepared during the fiscal year by the Natural Disaster Office for use by FCDA Administer Val Peterson in support of proposed Federal legislation to provide flood insurance. The 84th Congress later enacted Public Law 1016, known as the Federal Flood Insurance Act of 1956. Besides providing from flood loss, the law requires a study and report on insurance needs against other natural disaster perils." (**FCDA**, *1956 Annual Report*, 1957, pp. 55, 57)

Flood Insurance Rate Maps (FIRMs): "As part of its administration of the National Flood Insurance Program (NFIP), the Federal Emergency Management Agency (FEMA) publishes flood hazard maps, called Flood Insurance Rate Maps, or FIRMs. The purpose of a FIRM is to show the areas in a community that are subject to flooding and the risk associated with these flood hazards." (**FEMA**, "Letter of Map Amendment (LOMA)…," October 17, 2007)

Flood Insurance Reform Act of 2004 (FIRA): "On June 30, 2004, President George W. Bush signed into law the Flood Insurance Reform Act of 2004 (FIRA). The FIRA has two main purposes: 1) to reauthorize the National Flood Insurance Program (NFIP or Program) through September 30, 2008; and 2) to establish a pilot program aimed at mitigating the damage and costs associated with repairing properties with severe repetitive flood losses…. the FIRA requires the Director of FEMA to develop minimum education requirements for agents and brokers who write flood insurance policies, as well as forms, handbooks, rules and regulations governing the information given to policyholders regarding flood insurance, and processing claims… The FIRA developed a new, five-year pilot program to assist with mitigating damage and loss to severe repetitive loss properties. Residential one to four unit severe repetitive loss properties are ones that: 1) have been the subject of four or more separate claims valued at more than $5,000 each and collectively valued at more than $20,000; or 2) properties with two or more claims the total value of which exceeds the value of the property. Multifamily properties with five or more units also are covered by the mitigation program and will be designated according to a definition of "severe repetitive loss" for multifamily property established by FEMA through regulations. The pilot program provides money to state and local governments to fund mitigation activities. The mitigation offers may include elevation, relocation, demolition, rebuilding, flood-proofing and purchasing the property. The FIRA establishes a formula for distribution of federal mitigation funds to state and local governments, provided that state or local governments match 25% of the federal funding granted. The state and local government matching funds requirement can be reduced to 10% at the discretion of FEMA if the state has an approved mitigation plan and the Director of FEMA determines that the state has taken action to reduce the number of severe repetitive loss properties.

"The FIRA provides that if the property owner of a severe repetitive loss property refuses a reasonable offer of mitigation, the property owner's flood insurance premium will be increased to 150% of the chargeable rate for the property at the time the offer of mitigation was made. In addition, if the property suffers a flood loss greater than $1,500 following a refusal of an offer of mitigation, the premium will again increase to 150% of the chargeable rate for the property at the time of the flood loss. The chargeable premium rate cannot be increased to "an amount

exceeding the applicable estimated risk premium rate for the area." (**Independent Insurance Agents & Brokers of America, Inc**., *Impact of Flood Insurance Reform Act of* 200, 2004, 1-4)

Flood Level of Protection: "Level of Protection represents the ability of a structure or a system to contain a flood of a given size with a high degree of assurance. It can be defined by three different methods:

- As the average return period in years (e.g. 100-year, 500- year, etc.) of the largest flood that can be expected to occur at that average frequency;
- As the maximum derived discharge expected from a flood developed from a set of specific hydrological conditions (e.g. as the Standard Project Flood); or
- As the discharge of a significant historical event." (**Galloway**, *A CA Challenge*, 2007, 14)

Flood Map: "At a minimum, flood maps show flood risk zones and their boundaries, and may also show floodways and Base Flood Elevations (BFEs)." (**FEMA**, *Flood Map: NFIP Policy Index*, 2007)

Flood Mitigation Assistance (FMA) Program: "The FMA program was created as part of the National Flood Insurance Reform Act (NFIRA) of 1994 (42 U.S.C. 4101) with the goal of reducing or eliminating claims under the National Flood Insurance Program (NFIP). FEMA provides FMA funds to assist States and communities implement measures that reduce or eliminate the long-term risk of flood damage to buildings, manufactured homes, and other structures insurable under the National Flood Insurance Program…. Three types of FMA grants are available to States and communities:

- **Planning Grants** to prepare Flood Mitigation Plans. Only NFIP-participating communities with approved Flood Mitigation Plans can apply for FMA Project grants
- **Project Grants** to implement measures to reduce flood losses, such as elevation, acquisition, or relocation of NFIP-insured structures. States are encouraged to prioritize FMA funds for applications that include repetitive loss properties; these include structures with 2 or more losses each with a claim of at least $1,000 within any ten-year period since 1978.
- **Technical Assistance Grants** for the State to help administer the FMA program and activities. Up to ten percent (10%) of Project grants may be awarded to States for Technical Assistance Grants." (**FEMA**, *Flood Mitigation Assistance (FMA) Program*, 12 Sep, 2007)

Flood of Record: The highest flood historically recorded in a given location. [The U.S. Army Corps of Engineers typically uses the flood of record to determine risk when constructing dams, dikes and levees, etc.]

Flood Protection: "Precautionary measures, equipment or structures implemented to guard or defend people, property and lands from an unusual accumulation of water above the ground." (**European Environmental Agency**, *EEA Environmental Glossary*, 2007)

Flood Return Periods: "Return periods are based on statistical analysis of information gathered about previous floods in the region. Most experts agree that for a flood record length of 100 years, the flood estimates extrapolated from the data should not exceed 200 years. The confidence in the accuracy of a larger-than-200-year flood elevation that is based on a short 100-

year record of weather and storm data is lower than it is for estimates of 200-year or less. It should be noted that the period of record is often less than 100 years in the U.S." (**Galloway**, *A California Challenge*…, 2007, 14)

Flood Risk Management: "Generally, there are three basic approaches to flood risk management:
1. Avoid using the floodplain for activities other than those compatible with periodic flooding.
2. Minimize damages from floods to the maximum feasible extent by building and maintaining levees, flood walls, dikes, reservoirs, channelization of streams, bypasses, and the like; instituting floodplain development requirements such as land-use controls which minimize new unsafe development in high-risk areas and by retrofitting existing structures; and having robust and effective evacuation plans and warning systems to get the people out of harm's way should the need arise.
3. Mitigate losses to those who are subject to flooding through self-help, by providing indemnification through government payments (direct or as a result of litigation), or through forms of public and private insurance." (**Galloway**, *A California Challenge*, 2007, 13)

Flood Warning: "Flooding is already occurring or will occur soon. Take precautions at once. Be prepared to go to higher ground. If advised, evacuate immediately." (**FEMA**, *EM Guide for Business and Industry*, 1993, p. 55)

Flood Watch: "Flooding is possible. Stay tuned to NOAA radio. Be prepared to evacuate. Tune to local radio and television stations for additional information." (**FEMA**, *EM Guide for Business and Industry*, 1993, p. 55)

Flood Wave: "Rise in stream flow to a crest to such a magnitude that it causes flooding, and its subsequent recession." (**UNDHA**, *Disaster Management Glossary*, p. 41)

Flood Zones, FEMA/NFIP: "Flood hazard areas identified on the Flood Insurance Rate Map are identified as a Special Flood Hazard Area (SFHA). SFHA are defined as the area that will be inundated by the flood event having a 1-percent chance of being equaled or exceeded in any given year. The 1-percent annual chance flood is also referred to as the base flood or 100-year flood. SFHAs are labeled as Zone A, Zone AO, Zone AH, Zones A1-A30, Zone AE, Zone A99, Zone AR, Zone AR/AE, Zone AR/AO, Zone AR/A1-A30, Zone AR/A, Zone V, Zone VE, and Zones V1-V30. Moderate flood hazard areas, labeled Zone B or Zone X (shaded) are also shown on the FIRM, and are the areas between the limits of the base flood and the 0.2-percent-annual-chance (or 500-year) flood. The areas of minimal flood hazard, which are the areas outside the SFHA and higher than the elevation of the 0.2-percent-annual-chance flood, are labeled Zone C or Zone X (unshaded)." (**FEMA**, *Flood Zones*, 2007)

Flooding: "A general and temporary condition of partial or complete inundation of normally dry land areas from the overflow of inland and/or tidal waters, and/or the unusual and rapid accumulation or runoff of surface waters from any source. A great flow along a watercourse or a flow causing inundation of lands not normally covered by water." (**EEA**, *Environmental Glossary*, 2007)

Flooding: "Flooding is the most costly natural hazard in the nation…between 1994 and 2005, annual losses had grown to approximately $6 billion."[52] (**Galloway**, *A CA Challenge*, 2007, 20)

Floodplain: Low lands adjoining the channel of a river, stream, or watercourse, or ocean, lake or other body of water, which have been or may be inundated by floodwater, and those other areas subject to flooding.

Floodplain: "Any normally dry land area that is susceptible to being inundated by water from any natural source. This area is usually low land adjacent to a stream or lake." (**EEA**, *Environmental Glossary*, 2007)

Floodplain: "Floodplain is used in a general sense to mean the area most prone to flooding, mapped or not. The floodplain for a localized flood problem may not be mapped as Special Flood Hazard Area on the Flood Insurance Rate Map." (**FEMA**, *Reducing Damage from Localized Flooding – A Guide for Communities*, 2005, viii)

Floodplain: "An area adjacent to a river, formed by the repeated overflow of the natural channel bed." (**UNDHA**, *DM Glossary*, 1992, 40; cites OFDA)

Floodplain, Deep: "The Panel defines deep floodplains as floodplains where the level of flooding is three feet or higher. In deep floodplains, the ability to evacuate is limited or non-existent, creating significant life-safety threats and the damage to property is extensive." (**Galloway**, *A California Challenge*, 2007, iv)

Floodplain Management: The operation of an overall program of corrective and preventive measures for reducing flood damage, including but not limited to emergency preparedness plans, flood control works and floodplain management regulations. (**CFR** 2004)

Floodplain Management: "Floodplain management is the operation of a community program of corrective and preventative measures for reducing flood damage. These measures take a variety of forms and generally include requirements for zoning, subdivision or building, and special-purpose floodplain ordinances." (**FEMA**, *The National Flood Insurance Program*, 2007)

Floodplain Management (FPM): "Flood plain management (FPM) is a continuing process, involving both Federal and non-Federal action, that seeks a balance between use and environmental quality in the management of the inland and coastal flood plains as components of the larger human communities. The flood damage reduction aspects of flood plain management involve modifying floods and modifying the susceptibility of property to flood damages. The former embraces the physical measures commonly called "flood control;" the latter includes regulatory and other measures intended to reduce damages by means other than modifying flood waters. By guiding flood plain land use and development, flood plain regulations seek to reduce future susceptibility to flood hazards and damages consistent with the risk involved and serve in many cases to preserve and protect natural flood plain values." (USACE, *Water Resources Policies and Authorities - Digest of Water Resources Policies and Authorities*, 1999, 13-1)

---

[52] Cited: Interagency Floodplain Management Review Committee, *Sharing the Challenge: Floodplain Management into the 21st Century,* U.S. Government Printing Office, Washington, DC, 1994.

Floodplain Zoning: "A plan that defines the main zones of a potential flood area, usually accompanied by housing restrictions or other recommendations to prevent flood damages." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 40)

Floodproofing: "Any combination of structural and non-structural additions, changes, or adjustments to structures which reduce or eliminate flood damage to real estate or improved real property, water and sanitary facilities, structures and…contents." (**FEMA**, *Floodproofing*, 2007)

Floods: "Flood effects can be local, impacting a neighborhood or community, or very large, affecting entire river basins and multiple states. Some floods develop slowly, sometimes over a period of days. Flash floods can develop quickly, sometimes in just a few minutes or without any visible signs of rain. According to the National Hurricane Center, inland flooding has been responsible for more than half the deaths associated with tropical cyclones in the United States in the last 30 years. Be aware of flood hazards no matter where you live, but especially if you live in a low-lying area, near water or downstream from a dam. Every state is at risk from this hazard." (**FEMA**, "Fact Sheet – Floods," February 2007, p. 1)

Floodway: The channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without causing any cumulative increase in the water surface elevation. The floodway is intended to carry the dangerous and fast-moving water.

Floodway: "A 'Regulatory Floodway' means the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than a designated height. Communities must regulate development in these floodways to ensure that there are no increases in upstream flood elevations. For streams and other watercourses where FEMA has provided Base Flood Elevations (BFEs), but no floodway has been designated, the community must review floodplain development on a case-by-case basis to ensure that increases in water surface elevations do not occur, or identify the need to adopt a floodway if adequate information is available." (**FEMA**, *Floodway*, 2007)

Florida Citizens Property Insurance Corporation: "Florida Citizens is a nonprofit tax-exempt entity that provides residential and commercial property insurance coverage when private insurance is not available. Florida Citizens was established in 2002 after two separate insurance pools—the Florida Windstorm Underwriting Association (FWUA) and the Florida Residential Property and Casualty Joint Underwriting Association (JUA)—were combined." (**GAO**, *Natural Disasters: Public Policy Options*…, Nov 2007, 18; pp. 60-63)

Florida Hurricane Catastrophe Fund (FHCF): "…the Florida Hurricane Catastrophe Fund (FHCF) provides an alternative to traditional hurricane reinsurance, reducing the cost of coverage significantly below that of private reinsurance and lowering the cost of insurance to homeowners. The FHCF was established in 1993 in response to Hurricane Andrew, which resulted in a severe shortage of catastrophe property reinsurance capacity, stricter policy terms and conditions, and sharp increases in property catastrophe reinsurance rates in the year following the storm." (**GAO**, *Natural Disasters: Public Policy*…, Nov 2007, 19; also 74-78)

Focus (Earthquake): "The point beneath the earth's surface where an earthquake rupture starts and from which waves radiate." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 41)

FOG: Field Operations Guide. (**FEMA**, *Mission Assignment SOPs Draft*, 2007, pp. 43, 52)

Food and Agriculture Safety and Defense Capability Definition: "Food and Agriculture Safety and Defense is the capability to prevent, protect against, respond to, and recover from chemical, biological and radiological contaminants, and other hazards that affect the safety of food and agricultural products. This includes the timely eradication of outbreaks of crop diseases/pests, assessments of the integrity of the food producing industry, the removal and disposal of potentially compromised materials from the U.S. food supply, and decontamination of affected food manufacturing facilities or retail points of purchase or service. This also

includes appropriate laboratory surveillance to detect human foodborne illness or food product contamination. It is accomplished concurrent to protecting public health and maintaining domestic and international confidence in the U.S. commercial food supply. Additionally, the public is provided with accurate and timely notification and instructions related to an event and appropriate steps to follow with regard to disposal of affected food or agricultural products and appropriate decontamination procedures." (**DHS**, *TCL*, 2007, p. 141)

Food and Nutrition Service (FNS) Disaster Task Force: "The Food Security Act of 1985 (Public Law 99-198) requires the Secretary of Agriculture to establish a Disaster Task Force to assist States in implementing and operating various disaster food programs. The FNS Disaster Task Force coordinates the overall FNS response to disasters and emergencies. It operates under the general direction of the Administrator of FNS." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, 52)

Food Emergency Response Network (FERN): "The Food Emergency Response Network (FERN) integrates the nation's food-testing laboratories at the local, state, and federal levels into a network that is able to respond to emergencies involving biological, chemical, or radiological contamination of food. The FERN structure is organized to ensure federal and state inter-agency participation and cooperation in the formation, development, and operation of the network. The FERN plays a number of critical roles related to food security and food defense. These include:

1. Prevention. FERN provides a national surveillance program that will offer early means of detecting threat agents in the American food supply;
2. Preparedness. FERN prepares the nation's laboratories to be able to respond to food-related emergencies;
3. Response. FERN offers significant surge capacity that will strengthen the nation's response towards widespread complex emergencies, intentional or inadvertent related to agents in food; and
4. Recovery. The FERN network of laboratories enhances the ability of the country to restore confidence in the food supply following a threat or an actual emergency targeting the nation's food supply." (**FERN** Website, 2008)

Food Unit (ICS): "The unit within the Service Branch of the Logistics Section responsible for providing meals for incident personnel." (**Capital Health Region**, Edmonton Canada, *ICS Training SM*, 2007, 54)

For Official Use Only (FOUO): "FOUO is the term used within DHS to identify unclassified information of a sensitive nature, not otherwise categorized by statute or regulation, the unauthorized disclosure of which could adversely impact a person's privacy or welfare, the conduct of Federal programs, or other programs or operations essential to the national interest. Information impacting the National Security of the United States and classified Confidential, Secret, or Top Secret under Executive Order 12958, "Classified National Security Information," as amended, or its predecessor or successor orders, is not to be considered FOUO. FOUO is not to be considered classified information." (**FEMA**, *HSEEP Glossary*, 2008)

Force Protection: "Protecting responders from security hazards involving one or more persons, devices, objects, animals, conditions or situations (e.g., hostile person; sniper; hostage taker; barricaded person; fugitive; emotionally disturbed person; non-hostile unauthorized person; explosive device or substance; CBRNE/HazMat source, dissemination device or release; person conducting intelligence collection, surveillance or reconnaissance activities/operations; firearm; aggressive animal; dangerous device, weapon or object)." (**FEMA**, *IIFOG Ver 3 Dft*, 2008, 35)

Forecast: Statement or statistical estimate of the occurrence of a future event. This term is used with different meanings in different disciplines, as well as "prediction". (**UNDHA,** *DM Glossary* 1992, 41)

Forensics: "The use of science and technology to investigate and establish facts in criminal or civil courts of law." (**FEMA**, *IIFOG Version 3 Draft*, February 2008, p. 35)

Foreshock: "An earthquake that precedes the largest quake ("mainshock") of an earthquake sequence. Foreshocks may occur seconds to weeks before the mainshock." (**USGS**, *Putting Down Roots in Earthquake Country*, 2007, Glossary)

Forest/Grassland Fire: "Fires in forest or brush grasslands that cover extensive areas and usually do extensive damage. They may start by natural causes such as volcanic eruptions or lighting, or they may be caused by arsonists or careless smokers, by those burning wood or by clearing a forest area." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 42)

FORSCOM: U.S. Army Forces Command. (**DA**, *WMD-CST Ops*, Dec 2007, Glossary-3)

Forward Challenge 04: "Forward Challenge 04, a Federal government-wide Continuity of Government exercise…. '"This is the first time that the Federal government has conducted a government wide test of its continuity of operations plans. This exercise provides a unique opportunity for the federal government to evaluate and refine its operational readiness to ensure that officials in federal departments and agencies can function away from their normal headquarters and make response decisions in the event of an emergency incident' [DHS Secretary Tom Ridge]. The exercise tested organization plans and procedures to alert senior management and to deploy quickly to alternate operating locations outside of the National Capital Region. Also tested were interagency communications, the ability of Departments and agencies to respond to requests for assistance and information from these alternate locations, and explore issues of Delegations of Authority and Orders of Succession." (**NWS**, *NWS Participates in Government-Wide Emergency Drill*, 2004)

Forward Challenge 06: "Over the course of FY 2006, FEMA's Office of National Security Coordination (ONSC) conducted "Forward Challenge 06," the largest full-scale interagency COOP exercise in history, which involved over 50 departments and agencies deploying to alternate sites for a 30-hour period." (**DHS**, *Budget-in-Brief, Fiscal Year 2008*, 2007, p. 63) Was conducted in conjunction with TOPOFF4 Command Post Exercise. (**DHS**, *US DHS Announces Completion of TOPOFF 4 CPE to Address Counterterrorism*…, June 22, 2006/

Forward Coordinating Team (FCT): "The FCT is a full-time DHS team immediately deployable to an incident or potential incident (particularly for a response to a catastrophic event). The FCT supports State and local operations by integrating with the Incident Command Post on scene and facilitating resource issues. Team members are trained and prepared to assess the situation, identify critical and unmet needs, provide recommendations for protective actions, establish incident support facilities and identify, direct and coordinate acquisition and delivery of required assets and/or resources." (**DHS**, *National Response Plan* (Draft #1), Feb25, 2004, 36)

FOS: Federal Operations Support. (**FEMA**, *Mission Assignment SOPs Draft*, July 2007, p. 43)

FOSA: Federal Operational Staging Area. (**FEMA**, *Logistics Supply Chain*, 2006)

FOSC: Federal On-Scene Coordinator. (**SONS Website**, *SONS FAQs*, 2007; also FEMA *Mission Assignment SOPs*, July 2007, p. 52)

FOUO: For Official Use Only. (**FEMA**, *IIFOG Version 3 Draft*, Feb 2008, Acronym List, 33)

Foundation (HSEEP): "Foundation is the first stage in the exercise process, preceding *Design and Development*. The Foundation stage focuses on developing a project management timeline, establishing milestones, identifying an *exercise planning team*, and scheduling planning conferences." (**FEMA**, *Homeland Security Exercise & Evaluation Program Glossary*, 2008)

Four Critical Elements, National Preparedness Guidelines: "The *National Preparedness Guidelines* package…is comprised of four critical elements:

> • The ***National Preparedness Vision***, which provides a concise statement of the core preparedness goal for the nation.
>
> • The ***15 National Planning Scenarios***, which collectively depict a diverse set of high-consequence threat scenarios regarding both potential terrorist attacks and natural disasters. Collectively, these scenarios are designed to focus contingency planning for homeland security preparedness work at all levels of government and with the private sector. The 15 scenarios form the basis for coordinated Federal planning, training and exercises.
>
> • The ***Universal Task List***, which is a menu of some 1,600 unique tasks that can facilitate efforts to prevent, protect against, respond to and recover from the major events that are represented by the National Planning Scenarios. It presents a common vocabulary and identifies key tasks that support development of essential capabilities among organizations at all levels. Of course, no entity will perform every task. Instead, this task list was used to assist in creating the Target Capabilities List. It is included in the *Guidelines* package as a reference for interested jurisdictions.
>
> • The ***Target Capabilities List***, which defines 37 specific capabilities that communities, the private sector and all levels of government should possess in order to respond effectively to disasters." (**DHS**, *NRF Comment Draft*, 2007, p. 68)

Four Mission Areas, Framework for National Preparedness: "The Goal [NPG] provides a common framework for a systems-based approach to build, sustain and improve national preparedness for a broad range of threats and hazards. The Goal and other source documents define the mission areas of this framework as follows:

> **Prevent:** Actions to avoid an incident or to intervene or stop an incident from occurring. Prevention involves actions taken to protect lives and property. It involves applying intelligence and other information to a range of activities that may include such countermeasures as deterrence operations; heightened inspections; improved surveillance and security operations; investigations to determine the full nature and source of the threat; public health and agricultural surveillance and testing processes; immunizations, isolation, or quarantine; and, as appropriate, specific law enforcement operations aimed at deterring, preempting, interdicting, or disrupting illegal activity and apprehending potential perpetrators and bringing them to justice (Source—NIMS, March 2004).
>
> **Protect:** Actions to reduce the vulnerability of critical infrastructure or key resources in order to deter, mitigate, or neutralize terrorist attacks, major disasters, and other emergencies (Source—HSPD 7, December 2003). It requires coordinated action on the part of federal, state, and local governments; the private sector; and concerned citizens across the country. Protection also includes: continuity of government and operations planning; awareness elevation and understanding of threats and vulnerabilities to their critical facilities, systems, and functions; identification and promotion of effective sector-specific protection practices and methodologies; and expansion of voluntary security-related information sharing among private entities within the sector, as well as between government and private entities. (Source – The National Strategy For The Physical Protection of Critical Infrastructures and Key Assets, February 2003)
>
> **Respond:** Activities that address the short-term, direct effects of an incident. Response includes immediate actions to save lives, protect property, and meet basic human needs. Response also includes the execution of emergency operations plans and of mitigation activities designed to limit the loss of life, personal injury, property damage, and other unfavorable outcomes. As indicated by the situation, response activities include applying intelligence and other information to lessen the effects or consequences of an incident; increased security operations; continuing investigations into nature and source of the threat; ongoing public health and agricultural surveillance and testing processes; immunizations, isolation, or quarantine; and specific law enforcement operations aimed at preempting, interdicting, or disrupting illegal activity, and apprehending actual perpetrators and bringing them to justice (Source—NIMS, March 2004).
>
> **Recover:** Activities that include the development, coordination, and execution of service- and site-restoration plans; the reconstitution of government operations and services; individual, private- sector, nongovernmental, and public-assistance

programs to provide housing and to promote restoration; long-term care and treatment of affected persons; additional measures for social, political, environmental, and economic restoration; evaluation of the incident to identify lessons learned; post-incident reporting; and development of initiatives to mitigate the effects of future incidents (Source—NIMS, March 2004)." (**DHS/ODP**, *State and Urban Area Homeland Security Strategy: Guidelines on Aligning Strategies with the NPG*, 2005, pp. 3-4)

Four Phases of Emergency Management – See, also, "Phases of Emergency Management."

Four Phases of Emergency Management (1993):

- Preparedness
- Mitigation
- Response
- Recovery. (**FEMA**, *Survivable Crisis Mgmt.: Plan Development Guide*, April 1993)

Four Phases of Emergency Management (1978):

- Mitigation
- Preparedness
- Response
- Recovery. (**NGA**, *CEM*, 1978)

Four Phases of School Emergency Management (2007)

- Prevention-Mitigation
- Preparedness
- Response
- Recovery (**DoEd**, "Families as Partners in School Emergency Management." *Helpful Hints*, Vol. 2, Issue 7, 2007, p. 1)

FPC: Federal Preparedness Circular.

FPC: Federal Preparedness Coordinator. (**FEMA**, *Regional-National Prep, CONOPS*, 8Feb08)

FPC: Final Planning Conference, HSEEP. (**FEMA**, *About HSEEP*, 2008)

FPCON: Force Protection Condition. (**DA**, *WMD CST Operations*, 2007, pp. 2-1, 2-2)

FPCs: Federal Preparedness Coordinators. (**FEMA**, *Vision for New FEMA:* Dec. 2006, p. 24)

FPF: Federal Policy Fee. (**FEMA/NFIP**, *Call For Issues Status Report*, 2000, xxiii)

FPIS: Federal Information Processing Standard (FIPS) 201**.** (**FEMA**, *Statement of Marko* Bourne, 15Nov07, p. 2)

FPM: Floodplain Management. (**USACE**, *Water Resources Policies and* Authorities..., 1999)

FPR: Federal Preparedness Report. (**FEMA**, *90 Day Update to Congress on National Preparedness*, Dennis Schrader, Deputy Administrator NPD, Apr 2008, slide 12)

FRAGOs: Fragmentary Orders. (**Dept. of the Army**, *WMD-CST Operations*, Dec. 2007, 4-5)

Framework: "A conceptual structure that supports or contains set of systems and/or practices." (**DHS**, *National Incident Management System*, March 2004, p. 4)

FRC: Federal Resource Coordinator. (**DHS**, *NRF*, 2008, 81)

FRC: Federal Regional Center. (**OCD**, *Abbreviations and Definitions*, 1971, p. 2)

Freeboard: "…an additional amount of height above the base flood elevation used as a factor of
safety (e.g., 2 feet above the base flood) in determining the level at which a structure's lowest floor must be elevated or floodproofed." (ASFPM, *National Flood Programs and Polices in Review—2007*, p. 89)

Freely Associated States: "U.S. possessions and insular areas, as well as the Federated States of Micronesia and the Republic of the Marshall Islands. The U.S. Government does not provide disaster assistance to the Republic of Palau, in accordance with the Compact of Free Association. Insular areas include Guam, the Commonwealth of the Northern Mariana Islands, American Samoa, and the U.S. Virgin Islands." (**DHS**, *NRF*, Jan 2008, p. 6, footnote 5.) "Stafford Act assistance is available to States and to Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands, which are included in the definition of "State" in the Stafford Act." (Ibid, 6)

Friendly Force: "In prevention exercises, all State and local law enforcement, and other non-*red-team* designated organizations and agencies (e.g., security forces assigned to key targets) are considered *friendly forces* or *blue team*." (**FEMA**, *Homeland Security Exercise & Evaluation Program Glossary*, 2008)

FRMAC: Federal Radiological Monitoring and Assessment Center.

FRP: Facility Response Plan. (**GAO**, *Maritime Security*, December 2007, p. 57)

FRP: Federal Response Plan. [Defunct]

FRPI: First Responder Partnership Initiative, National Capital Region. FEMA.

Front (Atmospheric): "1.The interface or transition zone between air masses of different physical properties (temperature, humidity).
2. Line of intersection of the surface separating two air masses usually with the ground." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 42)

FS: Fire Service. (**FEMA**, *TEI/TO Course Catalog*, 2008, p. 3)

FSE: Full-Scale Exercise. (**DHS**, *FCD 1*, Nov. 2007, p. K-2)

FSR: Financial Services Roundtable.

FSSCC: Financial Services Sector Coordinating Council for Critical Infrastructure Protection and Homeland Security. (**Financial Services Roundtable**, *Nation Unprepared*, May 2007)

FTA: Fault-Tree Analysis. (**UN DAP**, *Techniques Used in Risk Assessment*, 2008)

FTX: Field-Training Exercise. (**Dept. of the Army**, *WMD-CST Operations*, Dec 2007, p. 9-3)

Fujita-Pearson Scale (FPP Scale): A 3-digit scale for tornadoes devised by Fujita (F scale) and Pearson (PP scale) to indicate the tornado intensity (0-5), path length (0-5), and path width (0-7) (**UNDHA**, *Disaster Management Glossary*, 1992, p. 43; **WMO** 1992)

Fujita Tornado Scale: A scale for expressing the relative intensity of tornadoes, consisting of six levels corresponding to increasing levels of damage - light, moderate, considerable, severe, devastating, incredible. (**Notification Manual**)

Full Scale Exercise (FSE): "Full-scale emergency operations simulation exercises requiring full staff participation involving local government, industry, and private sector interaction and cooperation." (**DCPA**, *Foresight*, 1974, p. 13) [See "Exercise Types"]

Full-Scale Exercise (FSE): "An FSE is a multi-agency, multi-jurisdictional activity involving actual deployment of resources in a coordinated response as if a real incident had occurred. An FSE tests many components of one or more capabilities within emergency response and recovery, and is typically used to assess plans and procedures under crisis conditions, and assess coordinated response under crisis conditions. Characteristics of a FSE include mobilized units, personnel, and equipment; stressful, a realistic environment, and scripted exercise scenarios." (**FEMA**, *Homeland Security Exercise & Evaluation Program Glossary*, 2008)

Full-Scale Exercise (FSE): "A full-scale exercise is a multi-agency, multi-jurisdictional, multi-discipline exercise involving functional (e.g., joint field office, emergency operation centers) and "boots on the ground" response (e.g., continuity staff relocating to their alternate sites to conduct scenario driven essential functions)." (**DHS**, *Federal Continuity Directive 1*, Nov 2007, P-5)

Full Scale Exercise (FSE): "A multi-agency, multi-jurisdictional, multi-organizational activity that tests many facets of preparedness. They focus on implementing and analyzing the plans, policies, procedures, and cooperative agreements developed in discussion-based exercises and honed in previous, smaller, operations-based exercises. In FSEs, the reality of operations in multiple functional areas presents complex and realistic problems that require critical thinking, rapid problem solving, and effective responses by trained personnel. During FSEs, events are projected through a scripted exercise scenario with built-in flexibility to allow updates to drive activity. FSEs are conducted in a real-time, stressful environment that closely mirrors real events.

(**FEMA**, *NIMS Compliance Metrics Terms of Reference* (For FY 2007), Oct.23, 2006, pp. 3-4) [See "Exercise Types"]

Full Spectrum Integrated Vulnerability Assessment Program (FSIVA): The "Department of Defense (DoD) program developed to ensure the consistent, comprehensive assessment of the vulnerabilities of DoD-identified critical assets." (**DoD**, *DCIP, FSIVA*, 2004, p. ES-1)

Function: "In the Incident Command System, refers to the five major activities (i.e., Command, Operations, Plans/Information, Logistics, and Finance/Administration). The term function is also used when describing the activity involved (e.g., the planning function)." (**HHS**, *Medical Surge Capacity and Capability* Handbook, August 2004, p. D-6, Glossary)

Function: "An operation performed by multiple professional skill sets to accomplish a common objective." (**Homeland Security Institute**, *HS Strategic Planning MAA*, March 28, 2007, p. 63)

Functional Approach (Planning): "While the causes of emergencies vary greatly, the potential effects of emergencies do not. This means that jurisdictions can plan to deal with effects common to several hazards, rather than develop separate plans for each hazard. For example, earthquakes, floods, and hurricanes all can force people from their homes. The jurisdiction can develop a plan and an organization around the task, or *function*, of finding shelter and food for the displaced--with minor adjustments for the probable rapidity, duration, location, and intensity of different hazards if desired. It can do the same for other common tasks… In fact, a critical aspect of planning for the response to emergency situations is to identify all of these common tasks, or *functions*, that must be performed, assign responsibility for accomplishing each function, and ensure that tasked organizations have prepared SOPs that detail how they will carry out critical tasks associated with the larger function. However, the plans for performing each function should not be created in isolation. Since the jurisdiction's goal is a coordinated response, task-based plans should follow from a Basic Plan that outlines the jurisdiction's overall emergency organization and its policies…" (**FEMA**, *Guide for All-Hazard Planning*, 1996, 3-1)

"The following list of functional annexes addresses core functions that warrant attention and may require that specific actions be taken during emergency response operations:

Direction and Control
Communications
Warning
Emergency Public Information
Evacuation
Mass Care
Health and Medical Services
Resource Management" (**FEMA**, *Guide for All-Hazard Planning*, 1996, 5-1)

Functional Approach (Planning): "A functional planning approach identifies a list of common tasks an organization must perform during an incident, an emergency, a specific event/activity or a directed requirement. They are created at all operational levels and formatted in accordance with the standards of the parent organization. They may be developed in response to HSPD/NSPD requirements, at the organization's senior leadership initiative, or in response to

either national policy or a guidance document requirement." (**FEMA**, *Interim IPS* (Draft 2.3), July 3, 2008 copy, p. 2-11)

Functional Exercise (FE): "A functional exercise examines and/or validates the coordination, command, and control between various multi-agency coordination centers (e.g., emergency operation center, joint field office). A functional exercise does not involve any "boots on the ground" (i.e., first responders or emergency officials responding to an incident in real time)." (**DHS**, *Federal Continuity Directive 1*, Nov 2007, P-5)

Functional Exercise (FE): "A *functional exercise* is a *fully simulated interactive exercise that tests the capability of an organization to respond to a simulated event*. The exercise tests multiple functions of the organization's operational plan. It is a coordinated response to a situation in a time-pressured, realistic simulation." (**FEMA**, *Exercise Design* (IS 139), March 2003, p. 2-12)

Functional Exercise (FE): "An FE is a single or multi-agency activity designed to evaluate capabilities and multiple functions using a simulated response. An FE is typically used to: evaluate the management of Emergency Operations Centers (EOCs), command posts, and headquarters; and assess the adequacy of response plans and resources. Characteristics of an FE include simulated deployment of resources and personnel, rapid problem solving, and a highly stressful environment." (**FEMA**, *Homeland Security Exercise & Eval. Pgm. Glossary*, 2008)

Functional Exercise (FE): "An activity designed to test and evaluate individual capabilities, multiple functions, activities within a function, or interdependent groups of functions. Events are projected through an exercise scenario with event updates that drive activity at the management level. An FE simulates the reality of operations in a functional area by presenting complex and realistic problems that require rapid and effective responses by trained personnel in a highly stressful environment." (**FEMA**, *NIMS Compliance Metrics Terms of Reference* (For FY 2007), Oct.23, 2006, pp. 3-4) [See "Exercise Types"]

Functional Exercise (FE) Characteristics: This is an *interactive* exercise—similar to a full-scale exercise without the equipment. It simulates an incident in the most *realistic* manner possible short of moving resources to an actual site. A functional exercise is:

- *Geared for policy, coordination, and operations personnel*—the "players" in the exercise—who practice responding in a realistic way to carefully planned and sequenced messages given to them by "simulators." The messages reflect ongoing events and problems that might actually occur in a real emergency.

- A *stressful* exercise because players respond in real time, with on-the-spot decisions and actions. All of the participants' decisions and actions generate real responses and consequences from other players.

- *Complex*—Messages must be carefully scripted to cause participants to make decisions and act on them. This complexity makes the functional exercise difficult to design." (**FEMA**, *Exercise Design* (IS 139), March 2003, p. 2-13)

Fusion Center: "The value proposition for fusion centers is that by integrating various streams of information and intelligence, including that flowing from the federal government, state, local, and tribal governments, as well as the private sector, a more accurate picture of risks to people, economic infrastructure, and communities can be developed and translated into protective action. The ultimate goal of fusion is to prevent manmade (terrorist) attacks and to respond to natural disasters and manmade threats quickly and efficiently should they occur. As recipients of federal government-provided national intelligence, another goal of fusion centers is to model how events inimical to U.S. interests overseas may be manifested in their communities, and align protective resources accordingly. There are several risks to the fusion center concept — including potential privacy and civil liberties violations, and the possible inability of fusion centers to demonstrate utility in the absence of future terrorist attacks, particularly during periods of relative state fiscal austerity." (**CRS**, *Fusion Centers: Issues and Options for Congress*, January 18, 2008, page 2)

Fusion Center: "Definition: a physical or logical facility, encompassing all necessary infrastructure required to facilitate nationwide information-sharing between one or more Federal, State, and/or local law enforcement entities, dedicated to the integration of multiple diverse data sources within a defined functional domain. Extended definition: a collaborative effort of two or more agencies or program offices who provide resources, expertise, and/or information to the center with the goal of maximizing the ability to detect, prevent, apprehend, and respond to criminal and terrorism related activity by applying the concepts of fusion, and to provide a means of intelligence dissemination. Annotation: A fusion center is also a conduit staffed with analyst, special agents, intelligence research specialist, etc., for sharing information and results of analysis in accordance with the National Criminal Intelligence Sharing Plan (NCISP). (USDOJ, "Fusion Center Guidelines," Global Justice Information Sharing Initiative, Aug 2006)." (**DHS**, *Lexicon: Terms and Definitions*, October 23, **2007**, p. 11)

Fusion Center: "Fusion Centers: provide critical sources of unique law enforcement and threat information; facilitate sharing information across jurisdictions and function; provide a conduit between men and women on the ground protecting their local communities and state and federal agencies." (**DHS**, *State and Local Fusion Centers*, September 14, **2006**.

Fusion Center: "Fusion Center – an organized structure to coalesce data and information for the purpose of analyzing, linking and disseminating intelligence. A model process is likely to include:

- Extract unstructured data
- Extract structured data
- Fuse structured data

Fused data are then analyzed to generate intelligence products and summaries for tactical, operational, and strategic commanders. Types of analysis typically conducted in a fusion center include:

- Association Charting
- Temporal Charting
- Spatial Charting
- Link Analysis
- Financial Analysis

- Content Analysis
- Correlation Analysis (**DHS**, *The ODP Guidelines*…, 2003, Glossary, p. 2 (29).

Fusion Center: "State and major urban area fusion centers are vital assets critical to sharing information related to terrorism. They will serve as the primary focal points within the State and local environment for the receipt and sharing of terrorism-related information." (**White House**, *National Strategy for Information Sharing*, October 2007, p. 20)

Future Years Homeland Security Program (FYHSP): "The official DHS document summarizing DHS programs and associated resources (investments, construction, human capital, IT, and other support and operating expenses) for the budget year plus four years in support of strategic goals, objectives, and planning priorities. The Secretary of Homeland Security approves the FYHSP. (**DHS** Management Directives System MD Number: 1330; Issue Date: 02/14/2005; Planning, Programming, Budgeting, and Execution)

FWUA: Florida Windstorm Underwriting Association.

FY: Fiscal Year.

FYHSP: Future Years Homeland Security Program. (**DHS**, *Performance Budget Overview, Fiscal Year 2008 Congressional Budget Justification*, March 2007, p. 2)

FZD: Flood Zone Determination (company). (**FEMA,** *Call For Issues Report*, 2000, xxiii)

GA: Governmental Administrative. (**FEMA**, *TEI/TO Course Catalog*, 2008, p. 3)

GA: Tabun. (**Dept. of the Army**, *WMD-CST Operations*, December 2007, Glossary-3)

GAINS: Global Avian Influenza Network for Surveillance (**GAINS**, *About GAINS*)

Gale: Wind with a speed between 34 and 40 knots. (**UNDHA,** *DM Glossary*, 1992, p. 43))

Gale Warning: "A warning of 1-minute sustained surface winds in the range 34 kt (39 mph or 63 km/hr) to 47 kt (54 mph or 87 km/hr) inclusive, either predicted or occurring and not directly associated with tropical cyclones." (**NHC**, *Glossary of NHC Terms*, 2007)

Game (HSEEP): "A game is a simulation of operations using rules, data, and procedures designed to depict an actual or assumed real-life situation. A game is typically used to: explore the processes and consequences of decision-making; conduct "what-if" analyses of existing plans; and develop new plans. In general, games use rules, data, and procedures; are designed to depict an actual or assumed real-life situation; often involve two or more teams usually in a competitive environment; and increasingly include models and simulations. Games do not involve the use of actual resources. Games are *discussion-based* exercises." (**FEMA**, *Homeland Security Exercise & Evaluation Program Glossary*, 2008)

Games. "A game is a simulation of operations that often involves two or more teams, usually in a competitive environment, using rules, data, and procedure designed to depict an actual or assumed real-life situation." (**FEMA**, *About HSEEP*, 2008)

GAO: Government Accountability Office.

GAP: Generally Accepted Practices. (**DRC & DRII**, *GAP for BC Practitioners*, 2007)

Gap Analysis: "A survey whose aim is to identify the differences between BCM/Crisis Management requirements (what the business says it needs at time of an event and what is in place and/or available." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 56)

Gap Analysis: "An analysis which identifies the differences between what an organization has previously identified as its needs or requirements during an emergency or incident, and what will actually be available." (**Risky Thinking**, *A Glossary of Risk Related Terms*, 2007)

GAR: Governor's Authorized Representative.

Garden Plot: U.S. Department of Army, Department of Defense Civil Disturbance Plan (Garden Plot), ann. C, app. 1 (15 February 1991). (**Center For Law and Military Operations and HQ Marine Corps**, *ROE v. RUF*, 2006)

GB: Sarin. (**Dept. of the Army**, *WMD-CST Operations*, December 2007, Glossary-3)

GCC: Government Coordinating Council. (**DHS**, *NIPP*, 2006, p. 4)

GCOA: Gross Consequences of Attack. (**DHS**, *Progress in Developing NAB*, 2006, p. i)

GCRO: Gulf Coast Recovery Office.

GCSC: Government Cross-Sector Council. (**DHS**, *NIPP*, 2006, p. 5)

GD: Soman. (**Dept. of the Army**, *WMD-CST Operations*, December 2007, Glossary-3)

GENADMIN: General Administrative (message). (**DA**, *WMD-CST Ops*, Dec 2007, Glossary-3)

General Services Administration (GSA): "GSA serves as the primary support agency to DHS/FEMA for resource support during disaster relief and CM operations. GSA provides emergency supplies, space, office equipment, office supplies, telecommunications, contracting services, transportation services, and security services." (**JCS/DoD**, *Homeland Security*, 2005, II-21)

General Staff: Under the Incident Command System, "The General Staff normally consists of an Operations Section Chief, Planning Section Chief, Logistics Section Chief and Finance/ Administration Section Chief. An Intelligence/ Investigations section may be established, if required, to meet incident response needs." (**DHS**, *NRF Comment Draft*, Sep. 2007, p. 48)

Generic ICS: "Refers to the description of ICS that is generally applicable to any kind of incident or event." (**CA OES**, *SEMS Guidelines*, 2006, Glossary, p. 10)

Geographic Information System (GIS): A computerized database for the capture, storage, analysis and display of locationally defined information. Commonly, a GIS portrays a portion of the earth's surface in the form of a map on which this information is overlaid. (**EM Australia** 1995)

Geographic Information System (GIS): "A GIS is an electronic information system, which provides a geo-referenced database to support management decision-making." (**USGS**, *IM Handbook*, 2006, Glossary 25-9)

Geographic Information System (GIS) Mapping: "The use of a geographic information system, a computer-based tool, for risk or hazard mapping. GIS technology integrates database operations with the geographic analysis benefits offered by maps. The benefits of the technique are the increase in productivity of hazard-mapping technicians, it can give higher quality results than can be obtained manually and it can facilitate decision-making and improve coordination among agencies when efficiency is at a premium. The limitations of the technique include the lack of trained personnel; difficulties in exchanging data between different systems; difficulties in including social, economic and environmental variables; variability in access to computers and the quality and detail of the data required by GIS analysis." (**UN DAP**, *Techniques Used*, 2008)

Georgia Underwriting Association: "The Georgia Underwriting Association (GUA) was created by insurance companies licensed to write property insurance in Georgia to administer the state FAIR Plan. The plan insures homeowners throughout the state who have not been able to find certain types of insurance coverage in the voluntary market, and also coverage against windstorm and hail damage in coastal counties and off-shore islands." (GAO, Natural Disasters: Public Policy Options…, Nov 2007, p. 71)

Geospatial Analysis: "Analysis of risk information by distance, area, volume or any other spatial characteristic within geographic boundaries through GIS and hazard mapping techniques. The benefits of the technique are the identification of hazards and dangerous locations at varying scales from local (less than 100,000 km2), through regional (100,000 to 10 million km2) to continental (10 to 100 million km2) and a view of risk not only from a singular hazard point of view, but also from an orientation to the relative levels of exposure. The limitations of the technique are the same as those for GIS techniques with the added requirement for well-defined geographic boundaries (e.g., counties, municipalities, and health districts)." (**UN DAP**, *Techniques Used in Disaster Risk Assessment*, 2008)

Geo-Targeted Alerting System (GTAS): "The GTAS pilot is a joint public alert and warning project with the National Oceanic and Atmospheric Administration (NOAA). This pilot is testing new technologies to give emergency managers the ability to predict hazard zones in near-real-time, to collaborate on which areas to alert and what the message should be, and then to deliver these alerts and warnings to residents in a specific geographic area based on risks and recommended protective measures." (**FEMA**, *IPAWS Systems Enhancements*, Sep 12, 2007)

Global Avian Influenza Network for Surveillance (GAINS): "The aim of the Wild Bird Global Avian Influenza Network for Surveillance (GAINS) program is to expand operational field capabilities, improve the understanding of viral strains and transmission of influenza viruses in wild birds, and to disseminate information to all levels of governments, international organizations, the private sector and the general public. GAINS is a global surveillance network of wild birds for avian influenza. Our strategies are: improving the collection, coordination, and laboratory evaluation of samples from wild birds in order to identify locations of avian influenza viral strains; identifying genetic changes in virus isolates; enhancing links with wild bird distribution and migration information, and providing an early warning system for global spread of highly pathogenic avian influenza (HPAI) that threatens domestic poultry and human health as well as biodiversity (particularly avian)." (**Global Avian Influenza Network for Surveillance**, *About GAINS*. Accessed March 20, 2008 at: http://www.gains.org/

Global Emerging Infections Surveillance and Response System (DoD-GEIS): "The DoD Global Emerging Infections Surveillance and Response System (DoD-GEIS) is designed to strengthen the prevention of, surveillance of and response to infectious diseases that:

- Are a threat to military personnel and families
- Reduce medical readiness or
- Present a risk to U.S. national security.

The DOD-GEIS is to:

- Increase DoD's emphasis on prevention of infectious diseases
- Strengthen and coordinate its surveillance and response efforts, and
- Create a centralized coordination and communication hub to help organize DoD resources and link with U.S. and international efforts.

The DoD-GEIS was established in response to Presidential Decision Directive NSTC-7, June 1996. The President stated that the mission of the DoD will be expanded to include support of global surveillance, training, research, and response to emerging infectious disease threats. He

called on DoD to strengthen its global disease reduction efforts through: centralized coordination; improved preventive health programs and epidemiological capabilities; and enhanced involvement with military treatment facilities and United States and overseas laboratories.

Organization and Management: DOD-GEIS has been established by the Assistant Secretary of Defense (Health Affairs) in coordination with the Military Departments and is overseen by a flag level Board of Directors made up of representatives of Health Affairs, the Military Services, the Joint Staff, the CINCs, and the Director of Defense Research and Engineering. The organization of DOD-GEIS follows the model of the Armed Force Institute of Pathology. The Executive Agent function is carried out by the Department of the Army. DOD-GEIS is headed by a Director who directs the Tri-Service staff of the central hub which a) helps coordinate prevention, surveillance and response efforts of DoD internally and externally, b) encourages and assists education, training and research efforts in DoD, and c) facilitates communication and information flow across DoD.

DoD-GEIS Partners: The DoD-GEIS central hub leverages the surveillance and response assets of a network of DoD service hubs and overseas medical research units. In addition to these facilities, the DoD-GEIS consortium in the US includes the US Army Center for Health Promotion and Preventive Medicine, Aberdeen Proving Ground, Maryland; the US Army Medical Research Institute of Infectious Diseases, Fort Detrick, Maryland; and the Naval Environmental Health Center, Norfolk, Virginia. DoD-GEIS has established strong working relationships with the US CDC and international health agencies." (**DoD**, *Welcome to the DoD-GEIS Central Hub*)

Global Fiducials Library (GFL): "A long-term archive of classified remotely sensed data for more than 500 environmentally sensitive sites worldwide to support global change research (**USGS**, *National Civil Applications Program*, 2002)

Global Nuclear Detection Architecture: "NSPD-43/HSPD-14 requires DNDO [Domestic Nuclear Detection Office, DHS] to develop an "enhanced global nuclear detection architecture." The Global Nuclear Detection Architecture is a multilayered system of detection technologies, programs, and guidelines designed to enhance the nation's ability to detect and prevent a radiological or nuclear attack. DNDO is the primary office within the federal government responsible for furthering the development of the Global Nuclear Detection Architecture…. The Global Nuclear Detection Architecture is intended to integrate federal, state, and local governments' nuclear detection and notification systems. DNDO is responsible for implementing the domestic portion of the Global Nuclear Detection Architecture, and works with other federal agencies to integrate their detection programs into the architecture." (**DHS/OIG**, *DNDO Progress*…, Dec 2007, p. 5)

Global Nuclear Detection Architecture Multi-Layered International System:

- Border Protection
- Coast Guard Inspection
- At-Sea Interdiction

- Second Line of Defense
- Materials Protection, Control & Accountability
- Port of Departure Screening (**DHS/DNDO**, *DNDO Overview*, April 20, 2006, slide 10)

Global Observing System (GOS): "The coordinated system of methods, techniques and facilities for making observations on a world-wide scale within the framework of the World Weather Watch." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 43)

Global Outbreak Alert and Response Network (GOARN): "The Global Outbreak Alert and Response Network (GOARN) is a technical collaboration of existing institutions and networks who pool human and technical resources for the rapid identification, confirmation and response to outbreaks of international importance. The Network provides an operational framework to link this expertise and skill to keep the international community constantly alert to the threat of outbreaks and ready to respond…. Since April 2000, the Global Outbreak Alert and Response Network has been bringing agreed standards to international epidemic response through the development of Guiding Principles for International Outbreak Alert and Response and operational protocols to standardize epidemiological, laboratory, clinical management, research, communications, logistics support, security, evacuation and communications systems…. The Global Outbreak Alert and Response Network contributes towards global health security by:

- combating the international spread of outbreaks
- ensuring that appropriate technical assistance reaches affected states rapidly
- contributing to long-term epidemic preparedness and capacity building." (**UN WHO**, *Epidemic Pandemic and Response*, 2007)

Global Risk Identification Programme (GRIP): "The goal of GRIP is reduced natural hazard-related losses in high risk areas to promote sustainable development." (**GRIP**, *About GRIP*, 2007)

Global Terrorism: "Definition: terrorism activities conducted in, or encompassing international communities. Extended definition: A. involves violent acts or acts dangerous to human life that are a violation of the criminal laws of the United States or of any State, or that would be a criminal violation if committed within the jurisdiction of the United States or any State; B. appears to be intended—

a. to intimidate or coerce a civilian population
b. to influence the policy or a government by intimidation or coercions; or
c. to affect the conduct of a government by mass destruction, assassination, or kidnapping; and

C. occurs primarily outside the territorial jurisdiction of the United States, or transcend national boundaries in terms of the means by which they are accomplished, the persons they appear intended to intimidate or coerce, or the locale in which their perpetrators operate or seek asylum." (**DHS**, *Lexicon: Terms and Definitions*, October 23, 2007, p. 11)

Global Warming: "Changes in the surface-air temperature, referred to as the global temperature, brought about by the greenhouse effect which is induced by emission of greenhouse gases into the air." (**EEA**, *EEA Environmental Glossary*; cites **ETC/CDS**, *General Environmental Multilingual Thesaurus*, 2000)

GMS: Grants Management Specialists. (**FEMA**, *Regional-National Prep. CONOPS*, 2008, 17)

GMS: Grants Management System. (**DHS**, *FY 2005 Homeland Security Grant Program: Introduction to Program Guidance*, 8 Dec 2004, slide 4)

GMT: Grants Management System. (**OIG/DHS**, *IT Management Letter FY 2005*, p. 13)

GMT: Greenwich Mean Time. (**OCD**, *Abbreviations and Definitions*, 1971, p. 2)

Goals: "Goals are general guidelines that explain what you want to achieve. They are usually broad policy-type statements, long term, and represent global visions, such as:

- The economic vitality of the community will not be threatened by future flood events.
- Minimize wildfire losses in the urban wildfire interface area.
- The continuity of local government operations will not be significantly disrupted by disasters." (**FEMA**, *Developing the Mitigation Plan* (FEMA 386-3), 2003, p. 1-1)

GOALS: Government On-line Accounting Link System. (**FEMA**, *Mis. Assign. SOPs, 2007*, 52)

GOARN: Global Outbreak Alert and Response Network. (**UNWHO**, *Epidemic Pandemic* 2007)

Golden Guardian: "California's Golden Guardian program is the State's primary training and exercise program for large-scale emergencies.79 The training exercise is funded and managed through the [CA] Office of Homeland Security. During Golden Guardian 2005, OHS deputy director for training and exercises…told the Commission that many agencies complain that they are not benefiting from Golden Guardian. He commented that agencies must invest their staff and time for training and exercises to be relevant. But several departments told the Commission that OHS has consistently denied their requests to expand the exercise away from terrorist attacks toward more probable events – including earthquakes.

"In planning Golden Guardian 2005, it was suggested that state operated shelters be opened to test the shelter and care plan. OHS reportedly turned down the proposal. And local officials reported that Golden Guardian requires them to unfurl their fire hoses and turn out their police and sheriff's forces, but does little to provide realistic and challenging tests of their personnel and equipment. And as the State prepares for Golden Guardian 2006 in November, state and local officials have sought support for an exercise that tests California's ability to respond to a large-scale earthquake in the Bay Area. Experts predict a massive seismic event will hit the region in the next 30 years. But OHS has reportedly insisted that the Golden Guardian exercise must concentrate on response to a terrorist attack." (**Little Hoover Com**., *Safeguarding the Golden State*, 2006, 20)

Good Samaritan Laws: "These statutes…enacted by many state legislatures…. generally hold that when a passer-by renders emergency aid to a person in distress, the helper is immune from suit for any reasonable actions s/he takes in good faith that might have inadvertently resulted in further harm to the victim." (**Burton**, "The Constitutional Roots of All-Hazards Policy, Management, and Law," 2008, p. 11)

GOS: Global Observing System. (**UNDHA**, *Disaster Management Glossary*, 1992, p. 43)

Government Coordinating Council: "The government counterpart to the SCC for each sector established to enable interagency coordination. The GCC is comprised of representatives across various levels of government (Federal, State, Territorial, local, and tribal) as appropriate to the security and operational landscape of each individual sector." (**DHS**, *NIPP*, 2006, p. 103)

Government Functions: "`Government Functions' means the collective functions of the heads of executive departments and agencies as defined by statute, regulation, presidential direction, or other legal authority, and the functions of the legislative and judicial branches." (**HSPD-20; DHS,** *FCD 1*, Nov 2007, P-5)

Government Functions: "Government Functions…are the collective functions of agencies, as defined by the Constitution, statute, regulation, presidential direction or other legal authorities, and the functions of the legislative and judicial branches." (**DHS**, *FCD 2*, Nov. 2007, p. A-4)

Government Functions Criticality Scale:

- 10-Critically High Exceptionally grave impact preventing mission performance and the ability to implement corrective actions
- 9-Extremely High Grave impact requiring corrective action and negative effect results in delays to mission for an extended period of time
- 8-Very High Serious impact requiring corrective action and negative effect results in delays to mission for a limited period of time
- 7-High Serious impact requiring corrective action, where the negative effect will result in minor mission delays
- 6-Medium High Moderate to serious impact requiring corrective action, where the negative effect will result in slight mission delays
- 5-Medium Moderate impact requiring corrective action, where the negative effect will not impact mission completion
- 4-Medium Low Minimal impact requiring corrective action, where negative effect will not impact mission completion
- 3-Low Minimal impact or consequence without long term negative effects
- 2-Very Low Negligible consequences or impact with minimal long term negative effect
- 1-Extremely Low Negligible consequences or impact with no long term negative effect. (**DHS**, *FCD 2*, Nov. 2007, p. A-8)

Governmental Administrative (GA): "Elected and appointed officials responsible for public administration of community health and welfare during an incident." (**FEMA**, *TEI/TO Course Catalog*, 2008, p. 3)

Governmental Jurisdictions in the US: "Our structure of overlapping federal, state, and local governance…has more than 87,000 different jurisdictions." (**White House**, *National Strategy For Homeland Security*, 2002, p. vii.)

Governmental Responsibilities for "Emergency Management": ""The purpose of this title is to provide a system of emergency preparedness for the protection of life and property in the United States from hazards and to vest responsibility for emergency preparedness *jointly* in the Federal Government and the States and their political subdivisions. (**Robert T. Stafford Act**, Title VI -- Emergency Preparedness Sec. 601. Declaration of policy (42 U.S.C. 5195)) [Emphasis added. Prior to an amendment to the Civil Defense Act of 1950, "civil defense" was by Congressional intent, *primarily* the responsibility of State and local governments.]

Governments (and Districts) Within the United States (About 40,000):

- 19,429 municipalities
- 16,504 towns or townships
- 3,142 counties
- 50 State governments
- 6 territorial governments
- 1 Federal government
- Total of more than 39,000 jurisdictions (**DHS**, *Target Capabilities List*, 2007, p. 219)

In addition to the above there are many types of regional, State and local organizations and **districts** such as:

- 13, 506 School districts
- 35,052 special districts

(**GAO**. *State and Local Governments: Growing Fiscal Challenges Will Emerge…*, Jan 2008, 6)

Governor's Authorized Representative. "As the complexity of the response dictates, the *Framework* [National Response Framework] contemplates that the Governor may empower a Governor's Authorized Representative to:

> Execute all necessary documents for disaster assistance on behalf of the State, including certification of applications for public assistance.
>
> Represent the Governor of the impacted State in the Unified Coordination Group, when required.
>
> Coordinate and supervise the State disaster assistance program to include serving as its grant administrator.
>
> Identify, in coordination with the SCO, the State's critical information needs for incorporation into a list of Essential Elements of Information (critical items of specific information required to plan and execute an operation and to support timely, logical decisions)." (**DHS,** *National Response Framework Comment Draft*, Sep. 2007, p. 50)

Governor's Authorized Representative (GAR): "The GAR is the State equivalent to the Disaster Recovery Manager (DRM). The GAR is the State person authorized to approve financial commitments on behalf of the State. The SCO [State Coordinating Officer] and GAR may be the same person." (**FEMA**, *Mission Assignment SOPs Draft*, July 2007, pp. 5, 53)

Governors Homeland Security Advisors Council: "The National Governors Association Center for Best Practices formed the Governors Homeland Security Advisors Council in June 2006 to provide an organizational structure in which the homeland security directors from each state and territory can discuss homeland security issues, share information and expertise, and keep governors informed of the issues affecting implementation of homeland security policies in the states.

"*Mission*: The Council brings together the top state homeland security officials from each state and territory to: 1) inform the work of the NGA Center for Best Practices (NGA Center) by sharing ideas and best practices, identifying emerging issues, and reviewing and analyzing the impacts of Federal homeland security activities on the states; and 2) inform the governors of the impacts of Federal homeland security legislation, regulations, and policies on the states.

"*Objectives***:** Using the Council as a forum, the state homeland security directors share information and expertise and discuss priority setting and action planning to combat domestic threats at all levels of government. Their objectives include:

- Improving interstate and regional communication.
- Facilitating communication between state and federal agencies.
- Developing a unified state and territorial voice to inform governors of the impacts of federal homeland security legislation, regulations and policies on the states.
- Identifying and setting priorities. (**NGA**, *Governors HS Advisors Council*, June 1, 2006)

Governors Homeland Security Advisors Council 2007 Survey Top Five Priorities: "For the 2007 survey, the NGA Center polled the 56 state and territorial homeland security advisors who, collectively, comprise the Governors Homeland Security Advisors Council. The survey results reflect the participation of roughly 80 percent of those officials…This year's survey shows that the top five priorities for states in 2007 were, in order:

• Developing interoperable communications;
• Coordinating state and local efforts;
• Protecting critical infrastructure;
• Developing state fusion centers; and
• Strengthening citizen preparedness." (**NGA**, *Issue Brief: 2007 State Homeland Security Directors* Survey, December 18, 2007)

GPD: Grant Programs Directorate, FEMA Headquarters.

GPD: Grant Programs Division, FEMA Regional Offices. (**FEMA**, *CONOPS* 8Feb08, p. 5)

GraDER: Graduated Rad/Nuc Detector Evaluation and Reporting program.

Grand Strategy: "…the capacity of the nation's leaders to bring together all of the elements, both military and nonmilitary, for the preservation and enhancement of the nation's long term (that is, in wartime and peacetime) best interests." (**Kennedy**, *Grand Strategy*…, 1991)

Grandfather Rules, Flood Insurance, FEMA/FIMA: The Federal Insurance and Mitigation Administration recognizes policyholders who have maintained continuous coverage or have built in compliance with the Flood Insurance Rate Maps (FIRMs) - or who have done both - with grandfather rules that lower flood insurance rates. It works like this:

"If a policy was obtained prior to the effective date of a community's initial FIRM or before a flood map change, the policy holder is eligible to have a flood insurance policy rated using the prior zone and base flood elevation, as long as continuous coverage is maintained. Proof of coverage must be submitted to the insurance company. The flood insurance policy can be assigned to a new owner at the option of the policyholder when the structure is sold.

"If a building was constructed in compliance with a specific FIRM, the owner is always eligible to obtain a policy using the zone and base flood elevation from that FIRM, provided that proof is submitted to the insurance company. Proof of compliance includes documentation that the lowest floor level hasn't changed since it was built, and the building hasn't been substantially improved." (**FEMA**, *Grandfather Rules*, Jan 23, 2008)

Grant Assistance: "When the President authorizes 100% Federal funding for emergency work under sections 403 and 407 of the Stafford Act for a limited period in the initial days of the disaster, the Federal share for Grant Assistance will be as follows:

- **Debris Clearance and/or Removal:** FEMA will reimburse applicants 100% of the costs for the debris removal work accomplished during the designated period. This includes all clearance, pick up, hauling, processing and disposal activities, but only during the designated period. For work accomplished after the end of the designated period, assistance will be provided at the prevailing Federal cost share rate for the particular disaster.

- **Food, Water, Ice, and Other Consumable Commodities:** FEMA will reimburse applicants 100% of the costs of eligible work for reasonable purchase orders approved and finalized pursuant to state and local law during the designated period, regardless of the work or project completion date. This includes expenses to *distribute* commodities, but does not include installation or set-up. For purchase orders approved and placed after the end of the designated period, assistance will be provided at the prevailing Federal cost share rate for the particular disaster.

- **Other Emergency Protective Measures:** FEMA will reimburse applicants 100% of the costs of eligible work accomplished during the designated period. Examples of these measures include: installation of generators, installation of large plastic sheet roofing, and shoring or demolition of unsafe structures. For work accomplished after the designated period, assistance will be provided at the prevailing Federal cost share rate for the particular disaster." (**FEMA**, *100% Funding for Direct Federal Assistance and Grant Assistance, Recovery Policy 9523.0*, June 9, 2006)

Great Natural Catastophe: "…a natural catastrophe being defined by Munich Re as 'great' if the ability of the region to help itself is distinctly overtaxed, making interregional or international

assistance necessary." (**WWF**, *Natural Security*, 2008, 16; cites Munich Re (2003); *topics: Annual Review: Natural Catastrophes 2002*, Germany)

Green Book: *Emergency Management: Principles and Practice for Local Government*, ICMA.

Greenhouse Effect: "Warming of the atmosphere due to the reduction in outgoing solar radiation resulting from concentrations of gases such as carbon dioxide." (**EEA**, *EEA Environmental Glossary*; cites **Ireland Environmental Protection Agency**, *Ireland's Environment*, 2000)

GRIP: Global Risk Identification Programme. (**UN**, *DRR Global Review* 2007, p. vii)

Gross Consequences of Attack Tool: **"**This tool is an automated process for evaluating large numbers of targets and attack modes to estimate, at a high level, the consequences of terrorist attacks." (**DHS**, *Progress in Developing the National Asset Database*, June 2006, p. 20)

Ground Motion: "Seismic vibration of the ground at a particular point, recorded by accelerograph or seismograph in order to determine the vibrational characteristics of an earthquake or explosion." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 43)

Ground Observer Corps: "The Federal Civil Defense Administration has participated in the Joint Public Education Program on Air Defense since the summer on 1952. This program, designed to build and maintain an awareness of the need for a strong air defense and assist State civil defense organizations with their ground oberver corps recruiting, moved into a completely new phase in 1955…. In July 1955 the Air Force announced the expansion of the GOC to include the entire United States. Previously, its activities had been confined to 36 States, Alaska, and the District of Columbia. Whereas earlier requiremens listed a need for 19,500 observatin posts and 49 filter centers, the expanded corps requires over 28,000 observation posts and 73 filter centers." (**FCDA**, *1955 Annual Report*, 1956, p. 61)

Ground Truth: "The Ground Truth, in general terms, is comprised of the detailed elements of a prevention exercise scenario that must remain consistent during exercise development and conduct to ensure that realism is maintained and objectives are met in the unscripted move-countermove exercise environment. The Ground Truth includes the scenario timeline, the local threat environment, and the UA [Universal Adversary] threat group, and individual adversary profiles and relationships. Once composed, the Ground Truth is used as the basis for MSEL development and Red Team operations planning, if applicable." (**DH**S, HSSEP *Volume V: Prevention Exercises* (Draft), Dec. 2005)

Ground Truth Advisor: "In *prevention* exercises, the ground truth advisor tracks how the moves and countermoves of the adversary (notional and *red team*) and players (e.g., law enforcement, intelligence analysts, private industry) change the fabric of the exercise environment, potentially creating additional elements of the Ground Truth, but never detracting from it." (**FEMA**, *Homeland Security Exercise & Evaluation Program Glossary*, 2008)

Group (NIMS): "Established to divide the incident management structure into functional areas of operation. Groups are composed of resources assembled to perform a special function not necessarily within a single geographic division. Groups, when activated, are located between branches and resources in the Operations Section." (**DHS**, *NIMS*, 2004, p. 130)

Group Flood Insurance Policy (GFIP): "A Group Flood Insurance Policy (GFIP) is a policy covering all individuals named by a State as recipients under Sec. 411 of the Stafford Act (42 U.S.C. 5178) of an Individual and Family Grant (IFG) program award for flood damage as a result of a major disaster declaration by the President.
(b) The premium for the GFIP, initially, is a flat fee of $200 per policyholder. Thereafter, the premium may be adjusted to reflect NFIP loss experience and any adjustment of benefits under the IFG program.
(c) The amount of coverage will equal the maximum grant amount established under Sec. 411 of the Stafford Act (42 U.S.C. 5178).
(d) The term of the GFIP will be 37 months and will begin 60 days from the date of the disaster declaration.
(e) Coverage for individual grantees begins on the thirtieth day after the NFIP receives the required data for individual grantees and their premium payments.
(f) A Certificate of Flood Insurance will be sent to each individual insured under the GFIP
(g) The GFIP is the Standard Flood Insurance Policy Dwelling Form (a copy of which is included in Appendix A(1) of this part), except that:
(1) The GFIP provides coverage for losses caused by land subsidence, sewer backup, or seepage of water without regard to the requirement in paragraph B.3. of Article 3 that the structure be insured to 80 percent of its replacement cost or the maximum amount of insurance available under the NFIP." (**FEMA**, *Group Flood Insurance Policy-Final Rule*, March 24, 2006)

Hart-Rudman Commission (United States Commission on National Security/21st Century (Hart-Rudman Commission). In February 2001 recommended that the federal create a single department responsible for planning, coordinating, and integrating various government activities involved in homeland security – the National Homeland Security Agency. See, *Road Map for National Security: Imperative for Change (The Phase III Report of the U.S. Commission on National Security/21st Century)* 15 Feb 2001.

Hazard: "A Hazard is a natural, technological or social phenomenon that poses a threat to people and their surroundings (in terms of both the natural and the built environment)." (**Alexander**, not dated, 1)

Hazard: Some, including not just a few emergency managers, view hazards such as earthquakes as "technical problems suitable for a combination of engineering, planning, and specialized managerial solutions, and people, if they are mentioned at all, are seen largely as impediments to carrying out the technocratic solutions, because they fail to see the risks they face (e.g. Mileti and Fitzpatrick 1993)….However, by concentrating on the physical risks, projected extreme events, and worst case scenarios, much is ignored" (**Bolin with Stanford** 1998, 20).

Hazard: "…natural and social systems interact to produce a hazard…" (**Burton** et al. 1993, 24).

> "Hazards always result from interaction of physical and human systems. To treat them as though they were wholly climatic or geologic or political or economic is to risk omission of components that must be taken into account if sound solutions for them are to be found" (**Burton** et al. 1993, 188).
>
> "…nature is neutral, and…the environment event becomes hazardous only when it intersects with man. The event leads to disaster when (1) it is extreme in magnitude, (2) the population is very great, or (3) the human-use system is particularly vulnerable" (**Burton** et al. 1993, 232).

Hazard: "is a source of risk and refers to a substance or action that can cause harm."(**Cohrssen & Covello** 1989)

Hazard: A broad concept "that incorporates the probability of the event happening, but also includes the impact or magnitude of the event on society and the environment, as well as the sociopolitical contexts within which these take place. Hazards are the threats to people and the things they value, whereas risks are measures of the threat of the hazards…" (**Cutter** 1993, 2).

Hazard: "A *hazard*, in the broadest term, is a threat to people and the things they value. Hazards have a potentiality to them (they could happen), but they also include the actual impact of an event

on people or places. Hazards arise from the interaction between social, technological, and natural systems." (**Cutter** 2001, 2)

Hazard: "Hazard refers to an extreme natural event that poses risks to human settlements" (**Deyle, French, Olshansky, and Paterson** 1998, 121).

Hazard: Dangerous natural or man made phenomenon that expose a vulnerable location to disastrous events. Vulnerability reduction aims at neutralizing the dangers posed by the hazard. (**D&E Reference Center** 1998)

Hazard: "Something that is potentially dangerous or harmful, often the root cause of an unwanted outcome." (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, p. 75 (Glossary); **DHS**, *NIPP*, 2006, p. 103)

Hazard: "A condition with the potential to cause injury, illness, or death of personnel; damage to or loss of equipment or property; or mission degradation." (**DoD**, *DOD Dictionary of Military and Related Terms*, 2007)

Hazard: A condition with the potential for harm to the community or environment. Many use the terms "hazard" and "disaster agent" interchangeably. Hence, they will refer to "the hurricane hazard" or even more broadly to "natural hazards" which includes hurricanes, tornadoes, earthquakes and other natural phenomena that have the potential for harm. The hazard is the ***potential***, the disaster is the actual event. (**Drabek** 1997)

Hazard: "A potential event or situation that presents a threat to life and property." (**FEMA**, *Hazards Analysis for Emergency Management (Interim Guidance)*, September **1983**, p. 5)

Hazard: "Hazard means an event or physical condition that has the potential to cause fatalities, injuries, property damage, infrastructure damage, agricultural loss, damage to the environment, interruption of business, or other types of harm or loss" (**FEMA**, *Multi Hazard Identification and Risk* Assessment, **1997**, p. xxi).

Hazard: "Relevant to emergency preparedness, a hazard is an emergency or disaster resulting from a natural disaster, or an accidental or man-caused event." (**FEMA**, *Disaster Dictionary*, **2001**, 58, citing Robert T. Stafford Act, 602)

Hazard: "The probability of the occurrence of a disaster caused by a natural phenomenon (earthquake, cyclone), by failure of manmade sources of energy (nuclear reactor, industrial explosion), or uncontrolled human activity (overgrazing, heavy traffic, conflicts) – UNDRO. Some authors use the term in a broader sense, including vulnerability, elements at risk, and the consequence of risk." (**Gunn** 1990, 374)

Hazard: Hazards "are threats to humans and what they value: life, well-being, material goods, and environment." (**Harriss** et al, 1978)

Hazard: "A force or agent with the ability to cause adverse human physical or psychological effects (injury, death) and/or significant economic damage." (**HHS**, *Medical Surge Capacity and Capability Handbook*, August 2004, p. D-6, Glossary)

Hazard: "…a potential source of harm." (**International Standards Organization** 1990)

Hazard: "Possible source of danger, or conditions physical or operational, that have a capacity to produce a particular type of adverse effects." (**ISO**, *Societal Security*…, 2007, p. 3)

Hazard: Hazard is the probability that in a given period in a given area, an extreme potentially damaging natural phenomena occurs that induces air, earth or water movements, which affect a given zone. The magnitude of the phenomenon, the probability of its occurrence and the extent of its magnitude can vary and, in some cases, be determined. (**Maskrey** 1989, 1)

Hazard: "A dangerous event or circumstance that has the potential to lead to an emergency or disaster. Any physical phenomenon that has the potential to produce harm or other undesirable consequences to some person or thing." (**May,** p. 5)

Hazard: "Hazard…reflects a potential threat to humans as well as the impact of an event on society and the environment….hazards are…in part socially constructed by people's perceptions and their experiences. Moreover, people contribute to, exacerbate, and modify hazards. Thus, hazards can vary by culture, gender, race, socioeconomic status, and political structure as well" (**Mitchell and Cutter** 1997, 9-10).

Hazard: "A natural or human-caused threat that may result in disaster occurring in a populated, commercial, or industrial area." **(National Science and Technology Council** 2005, 17)

Hazard/Hazardous: "Capable of posing an unreasonable risk to health, safety, or the environment; capable of causing harm." (**NFPA 471**, 1997, p. 9)

Hazard: "Hazards to be evaluated shall include the following: (1) Natural hazards (geological, meteorological, and biological) (2) Human-caused events (accidental and intentional) (3) Technological-caused events." (**NFPA 1600**, 2007. p. 8)

Hazard: "A hazard can be defined as: 'some aspect of the physical environment that threatens the well-being on individuals and their society.'" (**Nigg** 1996, 4

Hazard: "…we describe *hazard* as the forces, conditions, technologies that carry a potential for social, infrastructural, or environmental damage. A hazard can be a hurricane, earthquake, or avalanche; it can also be a nuclear facility or a socioeconomic practice, such as using pesticides. The issue of hazard further incorporates the way a society perceives the danger or dangers, either environmental and/or technological, that it faces and the ways it allows the danger to enter its calculation of risk." (**Oliver-Smith and Hoffman** 2002, 4)

Hazard: "In disaster management, a hazard refers to the potential for a disaster." (**Pearce** 2000, Chapter 2, 12)

Hazard: A rare or extreme event in the natural or man-made environment that adversely affects human life, property or activity to the extent of causing disaster. A hazard is a natural or man-made phenomenon which may cause physical damage, economic losses, or threaten human life and well-being if it occurs in an area of human settlement, agricultural, or industrial activity. Note, however, that in engineering, the term is used in a more specific, mathematical sense to mean the probability of the occurrence, within a specified period of time and a given area, of a particular, potentially damaging phenomenon of a given severity/intensity. (**Simeon Institute** 1998)

Hazard: *Hazard* is best viewed as a naturally occurring or human-induced process or event with the potential to create loss, i.e. a general source of danger. *Risk* is the actual exposure of something of human value to a hazard and is often regarded as the combination of probability and loss. Thus, we may define hazard (or cause) as 'a potential threat to humans and their welfare' and risk (or consequence) as 'the probability of a specific hazard occurrence'. The distinction was illustrated by Okrent (1980)[53] who considered two people crossing an ocean, one in a liner and the other in a rowing boat. The main hazard (deep water and large waves) is the same in both cases but the risk (probability of drowning) is very much greater for the person in the rowing boat. Thus while an earthquake hazard can exist in an uninhabited region, an earthquake risk can occur only in an area where people and their possessions exist. People, and what they value, are the essential point of reference for all risk assessment and for all disasters" (**Smith** 1996, 5).

Hazard: "For purposes of this title only: (1) Hazard - The term "hazard" means an emergency or disaster resulting from–(A) a natural disaster; or (B) an accidental or man-caused event." (**Stafford Act,** Title VI, Sec. 602. Definitions (42 U.S.C. 5195a), June 2007 (FEMA 592), p. 54)

Hazard: A threatening event, or the probability of occurrence of a potentially damaging phenomenon within a given time period and area. (**UNDHA**, *Internationally Agreed Glossary of Basic Terms Related to Disaster Management*, 1992, p. 4)

Hazard: "A potentially damaging physical event, phenomenon or human activity, which may cause the loss of life or injury, property damage, social and economic disruption or environmental degradation." (**UN/ISDR**, *Living With Risk*, 2002, p. 24)

Hazard: "A potentially damaging physical event, phenomenon or human activity that may cause the loss of life or injury, property damage, social and economic disruption or environmental degradation. *Hazards can include latent conditions that may represent future threats and can have different origins: natural (geological, hydrometeorological and biological) or induced by human processes (environmental degradation and technological hazards). Hazards can be single, sequential or combined in their origin and effects. Each hazard is characterised by its location, intensity, frequency and probability*." (**UN/ISDR**, *Terminology: Basic Terms of Disaster Risk Reduction*, March 31, 2004)

Hazard (Environmental): "…the threat potential posed to man or nature by events originating in, or transmitted by, the natural or built environment" (**Kates** 1978, 14).

---

[53] D. Okrent. "Comment on Societal Risk." *Science*, Vol. 208, 1980, pp. 372-375.

Keith Smith's (1997, 14-15) commentary on this definition:

> "This definition can include both long-term environmental deterioration (acidification of soils, build-up of atmospheric carbon dioxide) and all the social hazards, both involuntary and communal (crime, terrorism, warfare), as well as voluntary and personal hazards (drug abuse, mountain climbing). These hazards have such different origins and impacts that a more focused definition is required."

Hazard (Environmental): "events which directly threaten human life and property by means of acute physical or chemical trauma…Any manageable definition of environmental hazards will be both arbitrary and contentious. But, despite their diverse sources, most disasters have a number of common features:

1. The origin of the damaging process or event is clear and produces characteristic threats to human life or well-being, e.g. a flood causes death by drowning.
2. The warning time is normally short, i.e. the hazards are often known as rapid-onset events. This means that they can be unexpected even though they occur within a known hazard zone, such as the floodplain of a small river basin.
3. Most of the direct losses, whether to life or property, are suffered fairly shortly after the event, i.e., within days or weeks.
4. The exposure to hazard, or assumed risk, is largely involuntary, normally due to the location of people in a hazardous area, e.g. the unplanned expansion of some Third World cities onto unstable hillslopes.
5. The resulting disaster occurs with an intensity that justifies an emergency response, i.e. the provision of specialist aid to the victims. The scale of response can vary from local to international" (**Smith** 1996, 15-16).

Hazard (Environmental): "…extreme geophysical events, biological processes and major technological accidents, characterized by concentrated releases of energy or materials, which pose a largely unexpected threat to human life and can cause significant damage to goods and the environment" (**Smith** 1996, 16).

Hazard (Global): "…changes to regional ecosystems which in turn effect global systems, are termed 'global hazards'. Climate change, soil degradation, and deforestation are examples of global hazards that are directly and indirectly related to the manipulation of technology. Global hazards can be distinguished from the more traditional ones because of their diffused or dispersed effects at the planetary scale—they threaten the long-term survival of t he planet….They are not rare, discrete events but develop over a long period of time. Global hazards are cumulative in nature and are the end result of centuries or decades of human manipulation of technology to control nature and exploit its resources" (**Cutter** 1993, 5).

Hazard (Hazardous Materials): "HAZARD is the inherent characteristic of a material, condition, or activity that has the potential to cause harm to people, property, or the environment." (**DOT**, *Risk Management Definitions*, OHMS, 2005)

Hazard (Intentional): "Human actions with intent to cause harm to other humans and what they value are termed intentional hazards. Today, terrorism is the source of most of the intentional hazards." (**Dymon**, Ute. "Session 1, Introduction to and Evolution of Hazard Mapping and Modeling." *Hazard Mapping and Modeling* (Draft FEMA Emergency Management Higher Education Project College Course). Emmitsburg, MD: Emergency Management Institute, FEMA/DHS, 2004.)

Hazard (Natural): "…a naturally occurring or man-made geologic condition of phenomenon that presents a risk or is a potential danger to life or property" (**American Geological Institute** 1984). (Quoted in Tobin and Montz 1997, 9).

Hazard (Natural): "The concept of natural hazards is somewhat paradoxical; the elements of a natural geophysical event (e.g., wind and storm surge of a hurricane) are hazardous only when they prove detrimental to human activity systems" (**Baker** 1976, 1).

Hazard (Natural): "While some hazards, such as earthquakes and volcanoes, are the product of natural processes unmodified by human interventions, other ostensibly natural hazards are less and less 'natural'. The impacts of human activities on global climatic systems, with attendant changes in rainfall patters, storm frequency, and storm severity suggest that meteorological hazards themselves could be influenced by (unintended) human factors (e.g. Southwick 1996[54]; Flavin 1997[55]). Flavin (1997) cites evidence that both the frequency and severity of meteorological hazards may be increasing as a result of human-induced climatic change. Similarly human modifications of riverine systems, from deforesting and paving watersheds to elaborate levee systems, have taken the 'natural' out of many flood hazards (e.g. Smith 1996)" (**Bolin with Stanford** 1998, 25 fn. 3).

Hazard (Natural): "In reality, the environment is neither benign nor hostile. In is 'neutral' and it is only human location, actions and perceptions which identify resources and hazards within the range of natural events (**Burton** et al. 1993)" (Smith 1996, 12).

Hazard (Natural): "…those elements of the physical environment harmful to man and caused by forces extraneous to him" (Smith 1996, 9: quoting I. **Burton and R.W. Kates**. "The Perception of Natural Hazards in Resource Management." *Natural Resources Journal*, Vol.3, 1964, pp. 412-441).

Hazard (Natural): "Natural hazards exist with or without the presence of human populations and development" (**Schwab,** et al. 1998, 12).

Hazard (Natural): "A natural hazard represents the potential interaction between humans and extreme natural events…It represents the potential or likelihood of an event (it is not the event itself)" (**Tobin & Montz** 1997, 5).

---

[54] C. Southwick. *Global Ecology in Human Perspective*. NY: Oxford University Press, 1996.

[55] C. Flavin. "Climate Change and Storm Damage: The Insurance Costs Keep Rising." *World Watch*, Vol. 10, No. 1, 1997, pp. 10-11.

> "Natural hazards constitute a complex web of physical and environmental factors interacting with the social, economic, and political realities of society" (**Tobin and Montz** 1997, 11).

Hazard (Natural): Naturally caused events such as hurricanes, tornadoes, earthquakes, floods, volcanoes and forest fires. (**Unknown source**)

Hazard (Natural): "First, the misunderstanding of 'natural hazards' as events unrelated to or separate from human activity and human choice is no longer credible. The fundamental involvement of human organizations, cultural and institutional context, and political-economic structures cannot be overlooked or wished away. The creation, distribution, and mitigation of vulnerability to hazards of all kinds is a social interaction with either other social processes or geophysical processes or both. There is no purely 'natural' hazard in the full sense of a risk or danger for which affected persons have no defence or remedy." (**Weiner** 2001, 1)

Hazard (Technological): Typically man-related hazards such as nuclear power plant accidents, industrial plant explosions, aircraft crashes, dam breaks, mine cave-ins, pipeline explosions and hazardous material accidents. (Unknown source)

Hazard (Technological): "…the interaction between technology, society, and the environment" (**Cutter** 1993, 2).

> "Technological hazards arise from our individual and collective use of technology" (**Cutter** 1993, 1).
>
> "The elements of complexity, surprise, and interdependence are governing characteristics of technological hazards" (**Cutter** 1993, 2).

Hazard (Technological): "A Technological hazard arises from the potential of negative consequences resulting from the human use of technology." (**Dymon**, Ute. "Session 1, Introduction to and Evolution of Hazard Mapping and Modeling." *Hazard Mapping and Modeling* (Draft FEMA Emergency Management Higher Education Project College Course). Emmitsburg, MD: Emergency Management Institute, FEMA/DHS, 2004.

Hazard (Technological): A range of hazards emanating from the manufacture, transportation, and use of such substances as radioactive materials, chemicals, explosives, flammables, agricultural pesticides, herbicides, and disease agents; oil spills on land, coastal waters, or inland water systems; and debris from space. (**FEMA**, *FRP Appendix B*, 1992)

Hazard (Technological): Technological hazards are best seen as accidental failures of design or management affecting large-scale structures, transport systems or industrial activities which present life-threatening risks to the local community….the failure "trigger" which provokes a technological disaster is likely to arise for one of the following reasons: (1) defective design; (2) inadequate management; (3) sabotage or terrorism (**Smith** 1996, 316).

Hazard Amnesia: Complacency which can set in "just because it's been a while since the last emergency." (**FEMA**, *FEMA Warns*…, 2002; quote is from then FEMA Director Joe Allbaugh)

Hazard Analysis: *Hazard analysis* is the basis for development of the Emergency management Program. It evaluates what could happen, the likelihood of this event occurring and the magnitude of problems created because of a given event. By identifying potential events that could occur, efforts can be directed towards mitigation activities and developing needed response plans. Although this is not a complex task it does require a comprehensive review of the natural and technological (man-made) hazards of the region. Consideration must be given to the possibility of damage or failure of facilities, loss of basic utilities, and multiple casualty events, to name a few. The organization must also consider the effect of a loss of trust from the community as well as legal ramifications, if it fails to respond properly. Consulting with local emergency planners, public health, fire, police, public works, and utility company officials is essential to this process in identifying current hazards and historical events that have occurred in the region. Examples of this would be obtaining information on the region's 100-year flood plain record, hurricane or severe storm experience, earthquake potential, utility outage records and hazardous materials concerns in the area.

Hazard Analysis: "The starting point for local emergency planning (or for updating existing plans) is an analysis of specific hazards deemed likely to confront the jurisdiction….The hazards analysis thus specifies the threats for which the local plan will outline the who, what, where, and how of coordinated emergency operations. Accordingly, hazards should be described as specifically as possible. For example, the analysis for a coastal jurisdiction should specify the area that could be flooded by a storm surge caused by a hurricane, and the number of people who should therefore be evacuated during the warning period." (**DCPA**, *Standards For Local Civil Preparedness,* 1978, p. 15)

Hazard Analysis: "**HAZARD ANALYSIS** is the identification of material properties, system elements or events that lead to harm or loss. The term hazard analysis may also include evaluation of consequences from an event or incident. (**DOT**, *Risk Management Definitions*, Office of Hazardous Materials Safety, 2005)

Hazard Analysis: NRT-1 [National Response Team, Hazardous Materials Emergency Planning Guide, 1987] defines "hazards analysis" as a three step process: hazards identification, vulnerability analysis, and risk analysis…" (**EPA**, *Technical Guidance for Hazards Analysis*, 1987, p. i)

Hazard Analysis: "Hazards analysis is a process for determining the emergency management needs of a community. One aspect involves knowledge of the kinds of hazards to which the community is subject. This knowledge includes the probability of the event occurring at varying levels of intensity at varying locations throughout the community. Determinations of probability, intensity and location can be made on the basis of historical evidence, empirical research or community perception….

Another aspect of the hazard analysis is knowledge of the community. This involves an inventory of the areas and resources of the community susceptible to damage and an assessment of the loss that would result from the occurrence of an event at a given intensity or location. This knowledge of the community includes such things as the number of people and the value of

property that would be affected by an event, as well as the communications, transportation, food supply or other systems of society exposed to interruption or collapse.

When knowledge of hazards is combined with knowledge of their potential impacts on the community. Adequate information about the hazards will enable a community to know how frequently damage from an event could occur, s\what the extent of the damage would be, and which portions of the community would be damaged. When the data for each hazard are combined, a community can determine its relative vulnerability to each hazard. This will allow assignment of priorities for emergency management needs." (**FEMA**, *Hazards Analysis for Emergency Management (Interim Guidance),* September **1983,** pp. 1-2)

Hazard Analysis: "A review of the vulnerability of life, property, the environment, and social and economic activity to the actual or potential impact of hazards." (**FEMA**, *Hazards Analysis for Emergency Management (Interim Guidance),* September **1983,** p. 5)

Hazard Analysis: "Knowing what could happen, the likelihood of it happening, and having some idea of the magnitude of the problems that could arise, are essential ingredients for emergency planning. The first step, then, is for the jurisdiction to identify the potential hazards and to determine the probable impact each of those hazards could have on people and property. This task need not be complicated or highly sophisticated to provide useful results. What is important is that all hazards that pose a potential threat to the jurisdiction are identified and addressed in the jurisdiction's emergency response planning and mitigation efforts." (**FEMA**, *IEMS Process Overview*, **1983**, p. 7)

Hazard Analysis: Involves identifying all of the hazards that potentially threaten a jurisdiction and analyzing them in the context of the jurisdiction to determine the degree of threat that is posed by each. (**FEMA**, *Emergency Planning Workshop Instructor Guide*, **1997**)

Hazard Analysis: "Hazard analysis is the process by which hazards that threaten the community are identified, researched, and ranked according to the risks they pose and the areas and infrastructure that are vulnerable to damage from an event involving the hazards. The outcome of this step is a written hazard analysis that quantifies the overall risk to the community from each hazard." (**FEMA**, *Emergency Planning* IS-235, May 24, **2007** update)

Hazard Analysis: "A hazards analysis consists of two parts. The first involves knowledge of the kinds of hazards that might threaten the community. This knowledge includes the probability of the event occurring at varying levels of intensity and at varying locations throughout the community. Determinations of probability, intensity, and location can be made on the basis of historical evidence, empirical research, or community perception." (**McLoughlin** 1985, 168)

Hazard Analysis: "The identification and evaluation of all hazards that potentially threaten a jurisdiction to determine the degree of threat that is posed by each." (**Michigan DEM** 1998, 6)

Hazard Analysis: That part of the overall planning process which identifies and describes hazards and their effects upon the community. (**National Disasters Organization** 1992)

Hazard Analysis: "Hazard analysis involves identifying and investigating both the hazard location and its geographical extent. It further examines the identified hazard's strength (scale, magnitude, intensity) and probability of occurrence. The many methods and instruments available for hazard analysis operate on the basis of available scientific data." (**ProVention Consortium**, *CRA Toolkit: Glossary of Terms*, 2006)

Hazard Analysis: "Identification, studies and monitoring of any hazard to determine its potential, origin, characteristics and behaviour." (**UN/ISDR**, *Terminology: Basic Terms of Disaster Risk Reduction*, March 31, 2004)

Hazard Analysis, Preliminary:

1. "Prepare Form HA-1 [Hazard Analysis-1] using all available information concerning History of the various types of disaster emergencies in the jurisdiction analyzed….
2. Make a list of the potential disaster situations in order of severity, starting with the worst in terms of frequency of occurrence, amount of damage to persons and property, complexity of problems, etc…
3. ….Consider each hazard on the basis of the functions which would probably be necessary to meet the situation. Determine the resources now available to perform each function, and the agency which has primary responsibility to respond. List contact personnel, with appropriate information.
4. Make a list of disaster functions for which no adequate capability exists at this time. Assign priorities for remedial action or planning…
5. Report the results of your Hazard Analysis to your local government, the local emergency council, and other groups which have interest in adequate disaster operations planning.
6. Make plans for necessary action steps to find resources which will eliminate the uncovered parts of your Disaster Plan." (**DCPA**, *On-Site Assistance Appendices* (MP 63-1), 1974, p. A-2)

Hazard Analysis Problem Areas: "One of the most significant national efforts at multihazard vulnerability analysis occurred under the Disaster Relief Act of 1974 (P.L. 93-288). Through a development grant, States were able to prepare comprehensive emergency plans. A specified aspect of the plans was the preparation of a hazards analysis to identify specific major risks and probable consequences that might require special contingency plans. Although guidance for the preparation of a hazards analysis was issued in the form of criteria and checklists, the guidance was not prescriptive. Virtually no work at a national level has been done in developing guidance for communities to use in doing a comprehensive hazards analysis. Experiences learned by FEMA, which have since been confirmed by the NGA bulletin entitled *Hazards Analysis—Where Do We Go From Here?*, include the following:

- the majority of hazards analyses take one of two forms: indepth analysis of one type of hazard, or multihazard compilations that focus on individual hazard descriptions using historical accounts;
- only a few establish a method to rank or evaluate hazards;
- almost none suggest guidelines for settling priorities for organized emergency management activities;….

- often details are provided only for events which resulted in a Presidential declaration;
- in many cases the analysis is more fit for public information than for planning needs or for priority setting;
- many analyses are based on prevalent natural disaster hazards, and fail to include potential but unexperienced events;
- most agencies do not systematically research hazard agents or conditions; only ad hoc data are gathered for specific need;
- hazard data are scattered throughout various public and private agencies and vary greatly with regard to quality, utility and format;….
- no analysis or comparison is done of major events or hazard agents in order to pinpoint commonalities." (**FEMA**, *Hazards Analysis for Emergency Management*, 1983, p. 3)

Hazard Analysis Rating and Scoring System: "The rating and scoring system [for hazard analysis] is based on the use of four criteria:

- History
- Vulnerability
- Maximum Threat
- Probability" (**FEMA**, *Hazards Analysis for Emergency Management*, 1983, p. 11)

Hazard Analysis Steps: "A basis hazards analysis has several steps:

- Identification of hazards;
- Collection of information;
- Analysis of information; and
- The development and preparation of reports." (**FEMA**, *Hazards Analysis for Emergency*, 1983, p. 6)

Hazard and Vulnerability Analysis (HVA): "A study that identifies possible hazards and the susceptibility of an organization to the hazard impact. The HVA provides guidance for mitigation and preparedness plans in an emergency management program." (**HHS**, *Medical Surge Capacity and Capability Handbook*, August 2004, p. D-5, Glossary)

Hazard Assessment: Identification of hazards in given location. (**D&E Ref. Center** 1998)

Hazard Assessment: (Sometimes Hazard Analysis/Evaluation) The process of estimating, for defined areas, the probabilities of the occurrence of potentially-damaging phenomenon of given magnitudes within a specified period of time. Hazard assessment involves analysis of formal and informal historical records, and skilled interpretation of existing topographical graphical, geological geomorphological, hydrological, and land-use maps. (**Simeon Institute** 1998)

Hazard Assessment: "Process designed to determine factors contributing to the possible adverse effects of a substance to which a human population or an environmental compartment could be exposed. The process includes three steps: hazard identification, hazard characterisation, and hazard evaluation." (**European Environment Agency**, *EEA Environmental Glossary*, 2007; cites **International Union of Pure and Applied Chemistry**, "Risk Assessment Terminology," **Chemistry International**, Vol. 23, No. 2, March 2001, John H. Duffus)

Hazard Categories: See "Hazard Typologies."

Hazard Characterization: "The second step in the process of hazard assessment, consisting in the qualitative and, wherever possible, quantitative description of the nature of the hazard associated with a biological, chemical, or physical agent, based on one or more elements, such as mechanisms of action involved, biological extrapolation, dose-response and dose-effect relationships, and their respective attendant uncertainties." (**EEA**, *Environmental Glossary*; cites: **International Union of Pure and Applied Chemistry**, "Risk Assessment Terminology," **Chemistry International**, Vol. 23, No. 2, March 2001, John H. Duffus)

Hazard Evaluation: "The third step in the process of hazard assessment aiming at the determination of the qualitative and quantitative relationship between exposure to a hazard under certain conditions, including attendant uncertainties and the resultant adverse effect." (**EEA**, *Environmental Glossary*; cites: **International Union of Pure and Applied Chemistry**, "Risk Assessment Terminology," **Chemistry International**, Vol. 23, No. 2, March 2001, J. H. Duffus)

Hazard Identification: A structured approach for identifying those hazards judged by local officials to pose a significant threat to their jurisdiction.

Hazard Identification: …defines the magnitudes (intensities) and associated probabilities (likelihoods) of natural hazard that may pose threats to human interests in specific geographic areas. (**Deyle, French, Olshansky and Patterson** 1998, 121).

Hazard Identification: "The first stage in hazard assessment, consisting of the determination of substances of concern, the adverse effects they may have inherently on target systems under certain conditions of exposure, taking into account toxicity data." ." (**EEA**, *Environmental Glossary*; cites: **International Union of Pure and Applied Chemistry**, "Risk Assessment Terminology," **Chemistry International**, Vol. 23, No. 2, March 2001, John H. Duffus)

Hazard Identification: "The determination of possible hazards, their probability and intensity, and the impact area." (**FEMA**, *Hazards Analysis for Emergency Management*, 1983, p. 5)

Hazard Identification: "…a list of all hazards known to have occurred, or with a potential for occurrence, and the impacts of their occurrence." (**FEMA**, *Hazards Analysis for EM*, 1983, p. 6)

Hazard Identification: "…the process of defining and describing a hazard, including its physical characteristics, magnitude and severity, probability and frequency, causative factors, and locations/areas affected" (**FEMA**, *Multi Hazard Identification and Risk Assessment*, **1997**, p. xxi).

Hazard Identification: Hazard Identification locates hazardous areas, often estimates the probability of hazardous events of various magnitudes, and sometimes assesses the separate characteristics of the hazards (e.g., for hurricanes: wind, high water, and wave action). (**Godschalk, Kaiser, and Berke**, 1998, 98)

Hazard Identification: "…the identification of potential sources of harm." (**ISO** 1990)

Hazard Identification: The process of recognizing that a hazard exists and defining its characteristics (**Standards Australia/New Zealand**1995).

Hazard Identification and Risk Assessment (HIRA): "State, tribal, and local governments have responsibility to develop detailed, robust all-hazards plans and hazard- or incident-specific annexes with supporting procedures and protocols to address their locally identified hazards and risks. They use hazard identification and risk assessment (HIRA) to identify hazards and associated risk to persons, property, and structures and to improve protection from natural- and human-caused hazards. HIRA serves as a foundation for planning, resource management, capability development, public education, and training and exercises." (**DHS**, *NRF*, 2008, 74; also **NRF**, *Glossary and Acronyms*, 2008, 7)

Hazard Identification and Risk Assessment: "…Hazard Identification and Risk Assessment (HIRA) activities involve the identification of hazards and assessment of risks to persons, public and private property, and structures." (**Idaho Bureau of Disaster Services**, *Local Capability Assessment for Readiness (CAR) Version 2*. January 2000, p. 4)

Hazard Identification, Capability Assessment, and Multi-Year Development Plan (HICA/MYDP) Purpose: FEMA "has developed Hazard Identification, Capability Assessment, and Multi-Year Development Plan (HICA/MYDP) guidance to establish a nationwide data base for determining the status of emergency preparedness and the impact of FEMA funds on State and local emergency management operations. This guidance has also been designed for State and local benefit. As a planning tool, it can guide local jurisdictions through a logical sequence for identifying hazards, assessing capability, setting priorities, and scheduling activities to improve capability over time." (**FEMA**, *HICA/MYDP* (CPG 1-34), 1985, p. 1-1)

Hazard Management: "…utilizes individual and collective strategies to reduce and mitigate the impacts of hazards on people and places" (**Cutter** 1993, 2).

Hazard Management: "This subgroup of risk management deals with either of the elements of risk (probability or consequences) due to human or natural hazards. While the options for reducing the probability of a hazard are quite limited there are a wide variety of strategies for reducing the consequences of any hazardous event." (**Manitoba Emergency Measures Organization**, *Business Resumption Planning*, 1996, p. 8)

Hazard Mapping: "The process of mapping hazard information within a study area of varying scale, coverage, and detail. Mapping can be of a single hazard such as fault maps and flood plain maps or several hazard maps can be combined in a single map to give a composite picture of natural hazards. The benefit of the individual mapping technique is a visual form of information for decision makers and planners, which is easily understood. Multiple hazard maps provide the possibility of common mitigation technique recommendations; sub-areas requiring more information, additional assessments, or specific hazard-reduction techniques can be identified; and land-use decisions can be based on all hazard considerations simultaneously. The limitations of the technique are that the volume of information needed for natural hazards management, particularly in the context of integrated development planning, often exceeds the capacity of

manual methods and thus drives the use of computer assisted techniques." (**UN Disaster Assessment Portal**, *Techniques Used in Disaster Risk Assessment*, 2008)

Hazard Mitigation: Any measure that will reduce the potential for damage from a disaster event.

Hazard Mitigation: "Floods, earthquakes, hurricanes, wildfires, tornadoes, and technological disasters cause billions of dollars of damage annually throughout the United States. The loss of lives, injuries, and damages to homes, businesses, or workplaces cause incalculable hardship and emotional suffering, and tear at the very fabric of our lives and our communities. While we will never be able to completely prevent disasters from occurring, we know how to reduce their impacts. Hazard mitigation is the most proactive and successful method for reducing the physical, financial, and emotional losses caused by disasters. Utilizing mitigation activities such as land use planning, site design, engineering, and retrofitting of homes, structures, schools, public buildings and businesses, we are able to reduce future disaster losses. "Hazard mitigation" means actions that reduce or eliminate the long-term risk to people and property from the effects of hazards. FEMA's hazard mitigation efforts consist of three objectives: risk analysis, risk reduction and flood insurance. These objectives work in tandem in enabling the Nation's at-risk population to reap the rewards of good hazard mitigation practices:

- Creation of safer communities by reducing loss of life and property;
- Recovering more rapidly from floods and other disasters; and
- Reducing the financial impact on States, local and tribal communities, and the national treasury." (**FEMA**, *Vision for New FEMA*, December 12, 2006, p. 27)

Hazard Mitigation: Measures taken in advance of a disaster aimed at decreasing or eliminating its impact on society and environment (**UN** 1992, 41).

Hazard Mitigation: "The ability to control, collect, and contain a hazard; lesson its effects; and conduct environmental monitoring – mitigation efforts may be implemented before, during, or after an incident." (**Homeland Security Council**, *National Planning Scenarios*, 2006, p. vi)

Hazard Mitigation Grant Program (HMPG): "The Hazard Mitigation Grant Program (HMGP) provides grants to States and local governments to implement long-term hazard mitigation measures after a major disaster declaration. The purpose of the HMGP is to reduce the loss of life and property due to natural disasters and to enable mitigation measures to be implemented during the immediate recovery from a disaster. The HMGP is authorized under Section 404 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act." (**FEMA**. *Hazard Mitigation Grant Program*. September 12, 2007 update)

Hazard Mitigation Plan: "…the documentation of a state or local government's evaluation of natural hazards and the strategy to mitigate such hazards." (**FEMA**; cited by Tetra Tech EM, 2007)

Hazard Mitigation Plan: "The plan should include:

- Discussion of the planning process and partners involved;
- Discussion of the hazards and associated potential losses;
- Goals aimed at reducing or avoiding losses from the identified hazards;

- Mitigation actions that will help accomplish the established goals;
- Strategies that detail how the mitigation actions will be implemented and administered; and
- Description of how and when the plan will be updated." (**FEMA**, *Developing the Mitigation Plan* (FEMA 386-3), 2003, p. viii)

Hazard Mitigation Planning: "Hazard Mitigation Planning is the coordination of actions taken to reduce injuries, deaths, property damage, economic losses, and degradation of natural resources due to natural or human-caused hazard events. Hazard mitigation actions have long-term and cumulative benefits over time. An effective mitigation plan provides documentation of valuable local knowledge on the most efficient and effective ways to reduce losses from hazard events. The benefits of preparing a mitigation plan include:

- More direct access to a wide range of technical and financial resources for mitigation projects and initiatives. Not only will your jurisdiction have the benefit of a well-thought-out blueprint for executing projects efficiently, but several federal and state emergency management programs require hazard mitigation plans as prerequisites to awarding funds.
- The mitigation planning process promotes the development of an informed citizenry who are knowledgeable about their vulnerability to hazards and the options for reducing their losses–creating an advocacy group that will support plan implementation.
- Integration of mitigation strategies with other community needs and goals—the mitigation planning process encourages the mitigation strategy to be developed in light of economic, social, and political realities.
- Improved ability to recover after a disaster. Having a hazard mitigation plan in place when a disaster strikes will greatly improve the response and recovery process and ensure that long-term mitigation issues are addressed." (**FEMA**, *Developing the Mitigation Plan* FEMA 386-3), 2003, p. vii)

Hazard Mitigation Planning Process:

- Organize Resources
- Assess Risks
- Develop a Mitigation Plan
- Implement the Plan and Monitor Progress (**FEMA** 386-3, Developing…, 2003, Foreword)

Hazard Mitigation Planning Responsibilities, State, Tribal and Local: "To implement a comprehensive approach to mitigation planning, states, tribes, and communities must coordinate their policies and activities. States should play a lead role and establish guidelines, goals, and priorities that communities adhere to when preparing plans. To facilitate communities meeting these requirements, states should provide technical assistance, funding, and information that may not be readily available at the local level. This can include demographic, economic, and vulnerability assessment and loss estimation modeling data, as well as benefit-cost analysis guidance, depending on the needs of the community. Meanwhile, local government mitigation planning should be consistent with established state goals and policies. Plans should identify local priorities and projects to be considered when states set priorities and allocate limited

resources. Communities are required to have FEMA-approved mitigation plans to be eligible to receive federal grants from programs such as the post-disaster HMGP, Flood Mitigation Assistance (FMA) Program, and Pre-Disaster Mitigation Program. States must also have FEMA-approved plans to be eligible for HMGP funding, Fire Management Assistance Grants, and non-emergency Stafford Act assistance." (**FEMA**, *Developing the Mitigation Plan*, 2003, p. x)

Hazard Prediction and Assessment Capability (HPAC): "HPAC software predicts the effects of hazardous material releases into the atmosphere and its collateral effects on civilian and military populations. This counterproliferation/counterforce tool assists warfighters in destroying targets containing weapons of mass destruction and responding to hazardous agent releases. It employs integrated source terms, high resolution weather forecasts and particulate transport algorithms to rapidly model hazard areas and human collateral effects." (**DTRA/DOD**, *Assessment of Catastrophic Events Center Public Page*)

Hazard Probability: The estimated likelihood that a hazard will occur in a particular area.

Hazard Risk: The probability of experiencing disaster damage.

Hazard Taxonomies: See "Hazard Typologies."

Hazard Typologies (Categories or Taxonomies): (1950s/1960's Cold War Civil Defense Era)
- Attack
- Natural

Hazard Typologies (Categories or Taxonomies): (1970s)
- Attack
- Natural
- Technological

Hazard Typologies (Categories or Taxonomies): (1980s and 1990s)
- Natural
- Techonological
- Man/Human-Made (or Civil, Civil Emergency, Willful, Intentional, Deliberate, Purposeful)

Hazard Typologies (Categories or Taxonomies):
- Natural
- Accidental
- Intentional
    - Criminal (e.g., arson, illegal hazardous waste dumping)
    - Political (terrorist acts) (**Burton**, "The Constitutional Roots of All-Hazards Policy, Management, and Law." *Journal of HLS and EM*, V.5, Is.1, Art.35, 2008)

Hazard Typologies (Categories or Taxonomies):
- Weather
- Man-Made

- Transport and Communication
- Medical
- Major Disturbance
- Energy (**Carroll**, in Farazmand, *Handbook of Crisis and EM*, 2001, 466)

Hazard Typologies (Categories or Taxonomies):
- Natural
- Accidental
- Purposeful (**Duke Environmental Leadership Forum**, Nicholas School of the Environment and Earth Sciences, Duke University, North Carolina, November 20-21,2000. Conference on "Dealing With Disasters: Prediction, Prevention and Response.")

Hazard Typologies (Categories or Taxonomies):
- Natural
- Technological
- Civil
- Environmental (**Hoetmer**, "Introduction", 1991)

Hazard Typologies (Categories or Taxonomies):
- Natural
- Man-Made
- Hybrid (natural and man-made). (Keller, 1990)

Hazard Typologies (Categories or Taxonomies):
- Natural
- Environmenal
- Biological
- Technological
- Human-Induced/Civil (**McEntire**, *Disaster Response Operations and Mgmt*., 2005)

Hazard Typologies (Categories or Taxonomies):
- **Natural**
- **Technological**
- **Man-Made** (**Miller and Folkes**, "In Defense of 'Man-Made' Disaster." *Natural Hazards Observer*, Vol. 9, 1984, p. 11.

Hazard Typologies (Categories or Taxonomies): "The hazard identification should include the following types of potential hazards. This list is not all-inclusive but reflects the general categories that should be assessed in the hazard identification.

(1) Naturally occurring hazards that can occur without the influence of people and have potential direct or indirect impact on the entity (people, property, the environment), such as the following:

(a) Geological hazards (does not include asteroids, comets, meteors)

i. Earthquake

ii. Tsunami
iii. Volcano
iv. Landslide, mudslide, subsidence
v. Glacier, iceberg

(b) Meteorological hazards
i. Flood, flash flood, seiche, tidal surge
ii. Drought
iii. Fire (forest, range, urban, wildland, urban interface)
iv. Snow, ice, hail, sleet, avalanche
v. Windstorm, tropical cyclone, hurricane, tornado, water spout, dust/sand storm
vi. Extreme temperatures (heat, cold)
vii. Lightning strikes
viii. Famine
ix. Geomagnetic storm

(c) Biological hazards
i. Emerging diseases that impact humans or animals [plague, smallpox, anthrax, West Nile virus,
foot and mouth disease, SARS, pandemic disease, BSE (Mad Cow Disease)]
ii. Animal or insect infestation or damage

(2) Human-caused events such as the following:

(a) Accidental
i. Hazardous material (explosive, flammable liquid, flammable gas, flammable solid, oxidizer,
poison, radiological, corrosive) spill or release
ii. Explosion/fire
iii. Transportation accident
iv. Building/structure collapse
v. Energy/power/utility failure
vi. Fuel/resource shortage
vii. Air/water pollution, contamination
viii. Water control structure/dam/levee failure
ix. Financial issues, economic depression, inflation, financial system collapse
x. Communications systems interruptions
xi. Misinformation

(b) Intentional
i. Terrorism (explosive, chemical, biological, radiological, nuclear, cyber)
ii. Sabotage
iii. Civil disturbance, public unrest, mass hysteria, riot
iv. Enemy attack, war
v. Insurrection
vi. Strike or labor dispute
vii. Disinformation
viii. Criminal activity (vandalism, arson, theft, fraud, embezzlement, data theft)
ix. Electromagnetic pulse
x. Physical or information security breach
xi. Workplace violence

xii. Product defect or contamination
xiii. Harassment
xiv. Discrimination

(3) Technological-caused events that can be unrelated to natural or human-caused events, such as the following:

(a) Central computer, mainframe, software, or application (internal/external)
(b) Ancillary support equipment
(c) Telecommunications
(d) Energy/power/utility" (**NFPA 1600**, 2007, p. 14)

Hazard Typologies (Categories or Taxonomies):

- Natural
- Diseases, epidemics, and infestation
- Person-induced (**Pierce**, *An Integrated Approach For Community Hazard, Impact, Risk and Vulnerabilty Analysis: HIRV,* 2000)

Hazard Typologies (Categories or Taxonomies):

- Natural
- Technological (**Quarantelli**, *Organizational Behavior in Disasters and Implications for Disaster Planning*. 1984, 1)

Hazard Typologies (Categories or Taxonomies): ("Emergency" Taxonomy in the UK)

- Accidents
- Natural events (collectively knows as hazards)
- Malicioius Attacks (**UK Cabinet Office**, *Risk Registry*, 2008, 3)

Hazard Typologies (Categories or Taxonomies):

- Natural
- Technological
- Environmental Degradation (**UN ISDR**, 2004, 44)

Hazard Vulnerability: The susceptibility of life, property, or the environment to damage if a hazard occurs.

Hazard Vulnerability Analysis (HVA): "A hazard vulnerability analysis identifies the disasters most likely to strike an organization or facility, and estimates the potential impact of the disaster on the surrounding community. The goal of the analysis is to prioritize potential disasters that could affect a facility based on likelihood of occurrence and impact. The analysis can then be used as a starting point for emergency plans, enabling communities to use their resources most effectively." (**DHS**, *LLIS.gov Glossary*)

Hazard Vulnerability Analysis (HVA): "The JCAHO defines hazard vulnerability analysis as the identification of hazards and the direct and indirect effect these hazards may have on the hospital. The hazards that have occurred or could occur must be balanced against the population

that is at risk to determine the vulnerability to the given hazard." (**McLaughlin**, *Hazard Vulnerability Analysis*, February 2001, p. 5)

Hazard Vulnerability Analysis (HVA): "An HVA identifies potential threats, risks, and emergencies and the potential impact these emergencies may have on the community. It is a formal assessment of the risks that could potentially affect the community or an agency within the community and move it to implement its emergency management plan." (**The Joint Commission**, *Standing Together*, 2005, p. 15)

Hazardous Material: "Any substance or material in a quantity or form which may be harmful to humans, animals, crops, water systems, or other elements of the environment if accidentally released. Hazardous materials include: explosives, gases (compressed, liquefied, or dissolved), flammable and combustible liquids, flammable solids or substances, oxidizing substances, poisonous and infectious substances, radioactive materials, and corrosives." (**EPA**, *Technical Guidance for Hazards Analysis*, 1987, p. A-5)

Hazardous Material: "…this chapter will use the term "hazardous materials" in a broad sense to include: Explosive, flammable, combustible, corrosive, oxidizing, toxic, infectious, or radioactive materials that, when involved in an accident and released in sufficient quantities, put some portion of the general public in immediate danger from exposure, contact, inhalation, or ingestion." **FEMA**, *Guide For All-Hazard Emergency Operations Planning*, 1996, p. 6-C-1)

Hazardous Material (HAZMAT): Any material which is explosive, flammable, poisonous, corrosive, reactive, or radioactive (or any combination), and requires special care in handling because of the hazards posed to public health, safety, and/or the environment. (**Firescope** 1994)

Hazardous Material: "A substance (gas, liquid, or solid) capable of creating harm to people, the environment, and property." (**NFPA 471,**1997, p. 9)

Hazardous Material: "A substance or material which has been determined by an appropriate authority to be capable of posing an unreasonable risk to health, safety and property." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 44)

Hazardous Material: "For the purposes of ESF #1, hazardous material is a substance or material, including a hazardous substance, that has been determined by the Secretary of Transportation to be capable of posing an unreasonable risk to health, safety, and property when transported in commerce, and which has been so designated (see 49 CFR 171.8). For the purposes of ESF #10 and the Oil and Hazardous Materials Incident Annex, the term is intended to mean hazardous substances, pollutants, and contaminants as defined by the NCP." (**USCG**, *IM Handbook*, 2006, Glossary 25-10)

Hazardous Materials Incident (Stationary): "Any occurrence resulting in the uncontrolled release of materials from a fixed site capable of posing a risk to health, safety, and property as determined in EPA Resource Conservation and Recovery Act regulations. Generally, such materials are classed as explosives and blasting agents, flammable and noncombustible gases, combustible liquids, flammable liquids and solids, oxidizers, poisons, etiological agents,

radioactive materials, corrosive materials, and other materials including hazardous wastes." (**FEMA**, *Hazard Identification*… (CPG 1-34), 1985, p. A-3)

Hazardous Materials Personnel (HZ): "Individuals, who, on a full-time, part-time, or voluntary basis, identify, characterize, provide risk assessment, and mitigate/control the release of a hazardous substance or potentially hazardous substance." (**FEMA**, *TIE/TO Course Catalog*, 2008, p. 2)

Hazardous Materials Transportation Incident: "Any occurrence resulting in the uncontrolled release of materials during transport that are capable of posing a risk to health, safety, as determined in Department of Transportation Material Transport regulations. Generally such materials are classed as explosives and blasting agents, flammable and noncombustible gases, combustible liquids, flammable liquids and solids, oxidizers, poisons, etiological agents, radioactive materials, corrosive materials, and other materials including hazardous wastes. Over 18,000 materials are covered under the DOT regulations. The population likely to be seriously affected would be within the most densely-populated 5 mile circle around a major transportation route (i.e., highway, rail lines, pipeline, port, or river) along which hazardous materials move." (**FEMA**, *Hazard Identification*… (CPG 1-34), 1985, p. A-3)

Hazardous Substance: "Hazardous substance means substances or group of substances that are toxic, persistent and liable to bio-accumulate, and other substances or groups of substances which give rise to an equivalent level of concern." (**European Environment Agency**, *EEA Environmental Glossary*; cites: **Directive 2000/60/EC** establishing a framework for Community action in the field of water policy.)

Hazardous Substance: "As defined by the NCP, any substance designated pursuant to section 311(b)(2)(A) of the Clean Water Act; any element, compound, mixture, solution, or substance designated pursuant to section 102 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA); any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Act (but not including any waste the regulation of which under the Solid Waste Disposal Act (42 U.S.C. § 6901 et seq.) has been suspended by act of Congress); any toxic pollutant listed under section 307(a) of the Clean Water Act; any hazardous air pollutant listed under section 112 of the Clean Air Act (42 U.S.C. § 7521 et seq.); and any imminently hazardous chemical substance or mixture with respect to which the EPA Administrator has taken action pursuant to section 7 of the Toxic Substances Control Act (15 U.S.C. § 2601 et seq.)." (**USCG**, *IM Handbook*, 2006, Glossary 25-10)

Hazardous Waste: "A term applied to those wastes that because of their chemical reactivity, toxic, explosive, corrosive, radioactive or other characteristics, cause danger, or are likely to cause danger, to health or the environment." (**EEA**, *EEA Environmental Glossary*; cites: **European Commission**, *Integrating Environment Concerns Into Development and Economic Cooperation* (Draft version 1.0), 1999, Brussels)

Hazards: "Any circumstances, natural or manmade, that may adversely affect or attack the community's businesses or residences. (**Jones**, *Critical Incident* Protocol, 2000, 37)

Hazards Analysis: See "Hazard Analysis."

HAZMAT: Hazardous Material.

HAZMATCAD: Hazardous Materials Chemical Agent Detector.

HAZUS: Hazards US.

HAZUS MH (Hazards US Multi Hazard): "HAZUS-MH is a powerful risk assessment software program for analyzing potential losses from floods, hurricane winds and earthquakes. In HAZUS-MH, current scientific and engineering knowledge is coupled with the latest geographic information systems (GIS) technology to produce estimates of hazard-related damage before, or after a disaster occurs." (**FEMA**, *HAZUS – FEMA's Software Program for Estimating Potential Losses From Disaster*, September 10, 2007 update)

HAZWOPER: Hazardous Waste Operations and Emergency Response Standard. (**OSHA**, *FAQ*, 2007)

HBCU: Historically Black Colleges and Universities.

HC: Health Care. (**FEMA**, *TIE/TO Course Catalog*, 2008, p. 3)

HCC: Hospital Command Center. (**CA EMSA**, *Hospital ICS Guidebook*, 2006, p. 102)

HCFs: Healthcare Facilities.

HCP: Health Care Professional.

HD: A Sulfur Mustard Gas Blister Agent. (**DA**, *WMD-CST Operations*, Dec. 2007, Glossary-3)

HD: Homeland Defense.

HDER: Homeland Defense Equipment Reuse (DHS).

HE: High-Explosives. (**JCS/DOD**, *CBRNE Consequence Management* (JP 3-41), 2006, I-10)

Health Alert Network (HAN): "The HAN is a nationwide program that establishes the communications, information, distance learning, and organizational infrastructure for a new level of defense against health threats. The HAN will link local health departments to one another and to other organizations critical for preparedness and response. The Centers for Disease Control and Prevention (CDC) is leading HAN development, working in partnership with other health organizations. Currently, HAN is providing health information and the infrastructure to support the dissemination of that information at the State and local levels." (**AHRQ/HHS**, *Mass Medical Care…*, 2007, p. 83)

Health Alert Network (HAN): "This Project is intended to: Ensure that each community has rapid and timely access to emergent health information; a cadre of highly-trained professional personnel; and evidence-based practices and procedures for effective public health preparedness, response, and service on a 24/7 basis." (**CDC**, *Health Alert Network*, January 18, 2002)

Health Resources and Services Administration (HHS): "The Health Resources and Services Administration (HRSA), an agency of the U.S. Department of Health and Human Services, is the primary Federal agency for improving access to health care services for people who are uninsured, isolated or medically vulnerable." Goal 6 of HRSA's 7 goals is to: 'Enhance the Ability of the Health Care System to Respond to Public Health Emergencies'." (**HRSA**, *About HRSA*, accessed November 1, 2007)

Healthcare (HC): "Individuals who provide clinical, forensic, and administrative skills in hospitals, physician offices, clinics, and other facilities that offer medical care, including surveillance (passive and active), diagnosis, laboratory evaluation, treatment, mental health support, epidemiology investigation, and evidence collection, along with fatality management for humans and animals." (**FEMA**, *TIE/TO Course Catalog*, 2008, p. 3)

Heat Death: "The Cook County Medical Examiner's Office certifies a death as heat related if there was no history of trauma or evidence of fatal injury and the case met at least one of several criteria. First, the measured body temperture had to be 105 [degrees] F…or higher before or immediately after death. Second, there had to be evidence of high environmental temperature at the scene of death, usualy greater than 100 [degrees] F… Finally, the body had to be decomposed, and investigation had to disclose that the person was last seen alive during the heat wave period and that the environmental temperture at the time would have been high." (Whitman, et al., 1997)

Heat Wave: Marked warming of the air, or the invasion of very warm air, over a large area; it usually lasts from a few days to a few weeks. (**WMO** 1992, 294)

HEICS: Hospital Emergency Incident Command System. (**CA EMSA**, *Hospital Incident Command System Guidebook*, 2006, p. 102)

Heritage Emergency National Task Force: "…a partnership of 41 national service organizations and federal agencies created to protect cultural heritage from the damaging effects of natural disasters and other emergencies. The Task Force was founded in 1995 and is co-sponsored by Heritage Preservation and the Federal Emergency Management Agency. Its primary goals are to:

- Help cultural heritage institutions and sites be better prepared for emergencies and obtain needed resources when disaster strikes.
- Encourage the incorporation of cultural and historic assets into disaster planning and mitigation efforts at all levels of government.
- Facilitate a more effective and coordinated response to all kinds of emergencies, including catastrophic events.
- Assist the public in recovering treasured heirlooms damaged by disasters." (**Heritage Preservation**, *About the Task Force*, August 2007)

HES: Hurricane Evacuation Studies. (**NEMA Preparedness Com**. Position Paper Oct. 1, 2007)

HEU: Highly Enriched Uranium.

HF: High Frequency.

HFA: Hyogo Framework for Action.

HFPS: Home Fallout Protection Survey. (**OCD**, *Abbreviations and Definitions*, 1971, 2) [Defunct]

HF/SSB: High Frequency Single Side Band radios. (**USACE**, *Response Planning Guide*, 1995)

HHS: United States Department of Health and Human Services.

HICA/MYDP: Hazard Identification, Capability Assessment, and Multi-Year Development Plan. (**FEMA**, *HICA/MYDP* (CPG 1-34), 1985, p. 1-1)

HICS: Hospital Incident Command System**.** (CA EMSA, *Hospital ICS Guidebook*, 2006, p. 102)

High Explosives (HE): "Explosives is categorized as high-explosives (HE) or low-order explosives (LE). HE produces a defining supersonic overpressurization shock wave. Examples of HE include Trinitrotoluene, nitroglycerin, dynamite, and ammonium nitrate fuel oil. LE create a subsonic explosion and lack HE's overpressurization wave…. Manufactured (military) explosive weapons are exclusively HE-based. Terrorists will use whatever is available – illegally obtained manufactured weapons or improvised explosive devices (also known as "IEDs") that may be composed of HE, LE, or both. Manufactured and improvised bombs cause markedly different injuries… Conventional explosives can generate casualties in several ways depending on the type of explosion, secondary effects of the explosion (e.g., building collapse, fire), and the surrounding environment of the explosion (e.g., confined spaces, availability of debris or materials to generate an expanding area of potential injuries). TICs may also be used as a source of highyield explosives (e.g., ammonium nitrate when mixed with diesel fuel)." (**JCS/DOD**, *CBRNE CM*, 2006, I-10)

High Reliability Organizations (HRO): "…HROs can be defined as organizations which have fewer than normal accidents. This decrease in accidents occurs through change in culture. Technology has some influence but not in isolation, nor without a change in the organization's culture." (**High Reliability Organizations**)

High-Risk Area (Nuclear Attack): "The Federal Emergency Management Agency (FEMA) has analyzed the potential targets during a nuclear attack and has defined high-risk areas as those considered relatively more likely to experience direct weapons effect (blast, heat and immediate nuclear radiation). (FEMA Pub. TR-82.)" ((**USACE**, *Planning and Operations Guidelines, Annex V: Definitions and Common* Terms, 1985, p. V-2)

HIIB. Homeland Security Intelligence Integration Board. (**DHS**, *Statement of Allen*, 14Feb2008)

HIPAA: Health Insurance Portability and Accountability Act of 1996.

HIRA: Hazard Identification and Risk Assessment. (**DHS**, *NRF*, 2008, 74)

Historical Analysis: "The analysis of historical information to determine levels of risk based on past experiences. The benefits of this technique are the identification of dynamic aspects involved in vulnerability and providing the criteria to assign relative weights to different dimensions of vulnerability in risk assessment exercises. The limitations to the approach are the reliance on historical disaster databases and the requirement for refinement, maintenance and systematic feeding of disaster data sets. In addition, statistics on previous disasters' impact can be unreliable and rarely cover socio-economic aspects of the disaster; data on vulnerability is likely to be restricted to physical vulnerability, and reliance on historical assessment alone can create a false expectation of preparedness if hazards, which may not have previously occurred in the area of analysis have not been considered." (**UNDAP**, *Techniques Used in Risk Asmt*., 2008)

HITRAC: Homeland Infrastructure Threat and Risk Analysis Center. (**DHS,** *NIPP*, 2006, p. 101)

HL: Mustard Gas. (**DA**, *WMD-CST Operations*, December 2007, Glossary-3)

HLD: Homeland Defense. (**Robinson**, *Proceedings.…*, Dec 2007, 1)

HLT: Hurricane Liaison Team. (**NEMA**, *NEMA Committee Reports 2007 Annual Conf*., p. 7)

HMEP: Hazardous Materials Emergency Preparedness. (**FEMA**, *Guidelines for HazMat/WMD, Response, Planning and Prevention Training*, 2003)

HMPG: Hazard Mitigation Grant Program. (**FEMA**, *Call for Issues Status Report*, 2000, xxiii)

HMRU: Hazardous Materials Response Unit. (**FBI**, *USG Interag. Dom. Ter. CONPLAN*, 2001)

HMTA: Hazardous Materials Transportation Act.

HMTUSA: Hazardous Materials Uniform Safety Act (1990).

HN: Nitrogen Mustard. (**Dept. of the Army**, *WMD-CST Operations*, Dec 2007, Glossary-3)

Home Warning Devices (1955): "Several studies have indicated the need to supplement the outdoor siren system with some internal warning device to reach a maximum number of people. There are three methods by which this might be accomplished. The first would make use of sending a signal over a powerline either by a momentary change of voltage or by superimposing a signal over a telephone line and the third would make use of the CONELRAD system to transmit the signal by radio. In each instance the transmitted signal would trigger an alarm device within the home would be attached either to the powerline, telephone, or radio. Several

contracts have been let to initialing research and development work to produce a feasible and economical home warning device." (**FCDA**, *1955 Annual Report*, 1956, p. 19)

Homefront Preparedness: "Homefront Preparedness" is a term used by the Federal Civil Defense Administration to refer to the civil defense program of the early 1950s. See, for example, **FCDA**, *Annual Report for 1952*, pp. 3-4, 7, 115)

Homeland: "Definition: the physical region that includes the continental United States, Alaska, Hawaii, United States territories and possessions, and surrounding territorial waters and airspace." (**DHS**, *Lexicon: Terms and Definitions*, October 23, 2007, p. 11)

Homeland: "'American homeland' or 'homeland' means the United States, in a geographic sense." (**Homeland Security Act of 2002**, p. 3)

Homeland: "Fatherland: the country where you were born."[56] wordnet.princeton.edu/perl/webwn

Homeland, Earliest Reference This Writer Has Seen: Question to FCDA Director Val Peterson at ICAF presentation on "Civil Defense Today," on February 25, 1957: "We have studied in our course here requirements for mobilization, particularly support the the military. One of the big un-knowns has been what materials would be required to rehabilitate the homeland, the homefront. Could you tell us where we stand on the estimates of materials for tha purpose?" (**ICAF** Pub. L57-118, p. 21)

Homeland Defense: "Definition: the protection of United States sovereignty, territory, domestic population, and critical defense infrastructure against external threats and aggression or other threats as directed by the President of the United States. Extended definition: the Department of Defense is the lead Federal agency for homeland defense, including maritime interception, air patrols over U.S. airspace, land-based defense of critical infrastructure and key assets, and use of military forces to protect from attack when directed by the President or Secretary of Defense." (**DHS**, *Lexicon: Terms and Definitions*, October 23, 2007, p. 12)

Homeland Defense: "Homeland defense is the protection of US sovereignty, territory, domestic population, and critical defense infrastructure against external threats and aggression, or other threats as directed by the President. The Department of Defense is responsible for homeland defense." (**DOD**, *Strategy for Homeland Defense and Civil Support*. June 2005, p. 5; **DOD**, *Homeland Defense*, 2007, p. GL-8 (177))

Homeland Defense: "Protecting the territory of the United States and its citizens from "all enemies both foreign and domestic" is the principal task of government. The primary reason for the increased emphasis on homeland defense is the change, both in type and degree, in the threats to the United States. Besides the enduring need to deter a strategic nuclear attack, the United States must defend against terrorism, information warfare, weapons of mass destruction, ballistic

[56] As an aside, the earliest usage of the word "homeland" that this chronicler has found in relation to "emergency management" and related terms is in the 1965 report *Federal Civil Defense Organization: The Rationale of Its Development*, at p. 34: "Civil defense is simply viewed as an aspect of the common defense of the homeland."

and cruise missiles, and other transnational threats to the sovereign territory of the nation. In many of these mission areas, the military will necessarily play the leading role; however, many other threats exist which will require Defense to support local law enforcement agencies, as well as a host of other federal, state, and local entities." (National Defense Panel, DOD, *Transforming Defense: National Security in the 21st Century*, Dec 1997, p. 25)

[Note: This is the earliest usage of the term "Homeland Defense" we are aware of. It is probable that there are earlier usages.]

Homeland Defense: "**For HD missions, DOD is in the lead with other federal agencies in support."** (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. vii) [Bold emphasis in original.]

Homeland Infrastructure Threat and Risk Analysis Center (HITRAC), DHS: See DHS Organization section.

Homeland Security and Defense Education Consortium (HSDEC): "HSDEC is co-sponsored by North American Aerospace Defense Command, U.S. Northern Command (NORAD-USNORTHCOM (NNC)),and the Office of the Assistant Secretary of Defense for Homeland Defense for the purpose of facilitating the development of Homeland Security (HLS) and Homeland Defense (HLD) education in America's colleges and universities, and facilitating liaison between government and academia on government interests in the areas of HLS and HLD. The HSDEC program is administered under contract by the National Security Division of the Battelle Memorial Institute, Columbus, Ohio." (**Robinson**, *Proceedings…*, Nov. 7, 2006, 1)

Homeland Defense Current Trends Security Environment Strategic Guidance: "While no one can predict exactly how the future will unfold, current trends indicate a security environment with the following characteristics that are of particular interest to NORAD and USNORTHCOM:

- Some states will continue to pose challenges with increasingly capable traditional capabilities including aircraft, kinetic weapons, ballistic and cruise missiles
- Terrorism will remain a focus because it will continue to be unpredictable, yet credible, well organized, and well financed
- Current asymmetric threats will be accomplished by new asymmetric threats such as information attacks or kinetic and non-kinetic attacks on space systems
- Globalization will continue, creating opportunities for economic growth and providing an impetus for political freedoms, but also accelerating the spread of disease, weapons of mass destruction, extremist ideologies, and terrorism." (**Keating**, *CDRNORAD-CDRUSNORTHCOM Strategic Guidance*, November 1, 2006, p. 2)

Homeland Defense Operational Planning System (HOPS): "HOPS provides detailed vulnerability and engineering assessments of critical infrastructures and facilities associated with industry, agriculture, transportation, government/military installations, and important public structures." (**LLNL**, *Global Threats and Security*, 2006, p. 22)

Homeland Defense (HD) Purpose and Operational Framework: "The purpose of HD is to protect against and mitigate the impact of incursions or attacks on sovereign territory, the domestic population, and defense critical infrastructure (DCI). In order to accomplish this, DOD

HD objectives are to (1) identify the threat; (2) dissuade adversaries from undertaking programs or conducting actions that could pose a threat to the US homeland; (3) ensure defense of the homeland and deny an adversary's access to the nation's sovereign airspace, territory, and territorial seas; (4) ensure access to space and information; (5) protect DCI; (6) deter aggression and coercion by conducting global operations; (7) decisively defeat any adversary if deterrence fails; and (8) recover from any attack or incident." (**JCS**/**DOD**, *Homeland Defense*, 2007, p. I-6)

Homeland Defense Strategic Threat Environment:

- Diminished protection afforded by geographic distances
- Traditional threats remain
- Greater risk of a weapon of mass destruction attack
- Increased potential for miscalculation and surprise
- Increased potential for terrorist attacks
- Increased challenges from weak and failing states and non-state actors
- Increasing diversity in sources and unpredictability of the locations of conflict
- Threats to US vital interests overseas
- Increasing transnational threat challenging both the Department of Defense and law enforcement. (**JCS/DoD**, *Homeland Defense*, 2007, p. I-4)

Homeland Infrastructure Threat and Risk Analysis Center (HITRAC). See Department of Homeland Security, HITRAC.

Homeland Security: "A concerted national effort to prevent terrorist attacks within the United States, reduce America's vulnerability to terrorism, and minimize the damage and recover from attacks that do occur. The Department of Homeland Security is the lead Federal agency for homeland security." (**DOD**, OASD for Homeland Defense, *FAQ's: Homeland Defense*, 2006)

Homeland Security: "Homeland Security is a concerted national effort to prevent and disrupt terrorist attacks, protect against man-made and natural hazards, and respond to and recover from incidents that do occur." (**DHS**, *NRF Comment Draft*, September 2007, p. 6)

Homeland Security: "…homeland security is about the integration of a nation. It's about the integration of our national efforts, not one department or one organization, but everyone tasked with our nation's protection." (**DHS**, *Remarks by Secretary of Homeland Security Tom Ridge Before the House Select Committee on Homeland Security*, 14 Sep 2004)

Homeland Security: "The more than 170,000 future employees of the Department of Homeland Security will be doing the same job in the new Department that they are doing today: protecting our country from terrorist attack." (DHS, *The Nomination of The Honorable Tom Ridge to be Secretary of the Department of Homeland Security*, January 19, 2003)

Homeland Security: "Homeland security (HS) is the Nation's first priority, and it requires a national effort. The Department of Defense (DOD) has a key role in that effort. The National Strategy for Homeland Security (NSHS) complements the National Security Strategy of the United States by providing a comprehensive framework for organizing the efforts of federal, state, local, and private organizations whose primary functions are often unrelated to national

security. Critical to understanding the overall relationship is an understanding of the distinction between the role that DOD plays with respect to securing the Nation and HS, and the policy in the NSHS, which has the Department of Homeland Security (DHS) as the lead. **HS at the national level has a specific focus on terrorist threats. The DOD focus in supporting HS is broader."** (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. v) [Emphasis in the original.]

"DOD contributes to HS through HD [Homeland Defense] **and CS** [Civil Support]**."** (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. I-8) [Emphasis in the original.]

"…it is imperative to understand that DOD's role extends beyond the NSHS paradigm. Specific roles that are essential to DOD's efforts to secure the homeland include:

a. Ongoing missions abroad to reduce the threat of attacks against the US.
b. Protecting the sovereignty, territory, domestic population, and critical defense infrastructure of the United States.
c. Supporting civilian authorities for law enforcement, response to domestic emergencies, protection of NCI&KA [National Critical Infrastructure & Key Assets] , and other activities as directed.
d. Ensuring that EP [Emergency Preparedness] resources and procedures are in place in order to support other agencies that may require assistance." (**JCS/DoD**, *Homeland Security*, 2005, I-10)

Homeland Security: "Homeland security encompasses five distinct missions: domestic preparedness and civil support in case of attacks on civilians, continuity of government, continuity of military operations, border and coastal defense, and national missile defense. This report extensively details four of those mission areas (national missile defense having been covered in great detail elsewhere)." (**Larson & Peters**, 2000)

Homeland Security: "Homeland security is a coordinated national effort to ensure the domestic security of the United States against attack or natural disaster, to reduce national vulnerability to such events, and to minimize damage and speed recovery should they occur." (**McIntyre**, working definition for homeland security education programs, 2007)

Homeland Security: "Any area of inquiry whose improved understanding could make U.S. peoples safer from extreme, unanticipated threats." (**National Research Council**, 2005, p. 3)

Homeland Security: "Homeland security consists of all military activities aimed at preparing for, protecting against or managing the consequences of attacks on American soil, including the CONUS and US territories and possessions. It includes all actions to safeguard the populace and its property, critical infrastructure, the government and the military, its installations and deploying forces." (**Peters/RAND Corp.,** 2000, 1)

Homeland Security: "The U.S. government defines homeland security as the domestic effort (as opposed to the overseas war on terrorism) to defend America from terrorists. In practice, homeland security efforts have also come to comprise general preparedness under the all-hazards doctrine, which focuses on common efforts that help prepare for both terrorist attacks and other

natural or human-made catastrophes, such as hurricanes and accidental chemical spills." (**Sauter and Carafano** 2005, xiv)

Homeland Security: "Homeland security should not be viewed as exclusively or even primarily a military task. Securing the "domestic battlespace"-- a highly complex environment--requires Federal departments and agencies, state and local governments, the private sector, and individual citizens to perform many strategic, operational, and tactical level tasks in an integrated fashion. These actions must be synchronized with others that are being taken on the international front to prosecute the war against global terrorism." (**Tomisek** 2002, 1)

Homeland Security: "Homeland security is a concerted national effort to prevent terrorist attacks within the United States, reduce America's vulnerability to terrorism, and minimize the damage and recover from attacks that do occur." (**White House**, *National Strategy For Homeland Security*, Office of Homeland Security, July 2002, p. 2; and p.3, section 1, *National Strategy For Homeland Security*, **White House** Homeland Security Council, October 2007)

[2007 additional language relating to other than terrorism disasters: "This *Strategy*… recognizes that effective preparation for catastrophic natural disasters and man-made disasters, while not homeland security *per se*, can nevertheless increase the security of the Homeland." (**White House**, *National Strategy For Homeland Security*, 2007, p. 1:3)]

Homeland Security: "Homeland security or Homeland defense is a neologism referring to domestic governmental actions justified, or allegedly justified, by potential guerrilla attacks or terrorism. The term became prominent in the United States following the September 11, 2001 Terrorist Attack, although it was used less frequently before that incident." **Wikipedia**

Homeland Security Act of 2002: "Public Law 107-296, 6 U.S.C. 101 *et seq*., November 25, 2003, established the Department of Homeland Security (DHS) with the mandate and legal authority to protect the American people from the continuing threat of terrorism.

"In the Act, Congress assigned DHS the primary missions to:

- Prevent terrorist attacks within the United States,
- Reduce the vulnerability of the United States to terrorism at home,
- Minimize the damage and assist in the recovery from any attacks that may occur, and
- Act as the focal point regarding natural and manmade crises and emergency planning.

"The Homeland Security Act gives the Secretary of Homeland Security full authority and control over the Department and the duties and activities performed by its personnel, and it vests him with the broad authority necessary to fulfill the Department's statutory mission to protect the American homeland. This statutory authority, combined with the President's direction in Homeland Security Presidential Directive 5, supports the NRP's unified, effective approach to domestic prevention, preparedness, response, and recovery activities." (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, p. 66)

"Title V of the act transferred the functions, personnel, resources, and authorities of six existing

entities, the largest of which was FEMA, into EPR. Section 507 of the act specifically charged FEMA with "carrying out its mission to reduce the loss of life and property and protect the Nation from all hazards by leading and supporting the Nation in a comprehensive, risk-based emergency management program." Although all of FEMA was transferred into the new department, it was not defined as an autonomous or distinct entity within its parent organization. The act explicitly gave the President and Secretary significant discretion in reorganizing the department, including FEMA.

"FEMA functions were transferred to DHS on March 1, 2003.[57] The following January, Secretary Tom Ridge used his reorganization authority to consolidate organizational units and reallocate functions within DHS. Among other changes, "select grant award functions [then] exercised by the Under Secretary for Emergency Preparedness and Response," under Sections 502 and 503 of the Homeland Security Act, were consolidated within the Office of State and Local Government Coordination and Preparedness, an office that would report directly to the Secretary.[58] (**CRS**, *Federal Emer. Mgmt. and [HLS] Organization: Historical Developments…,* 1Jun06, p. 20)

Homeland Security Advanced Research Projects Agency (HSARPA): "…the mission of HSARPA is to engage the private sector in R&D in order to satisfy DHS operational requirements, conduct rapid prototyping and commercial adaptation, and conduct research and development of revolutionary options." (**DHS**, *HSSTAC Minutes*, February 23-24, 2005, Statement of Dr. Jane Alexander, HSARPA Deputy Director)

Homeland Security Advisory Council (HSAC): HSAC provides advice to the President through the Assistant to the President for Homeland Security. The Council is advised by four Senior Advisory Committees for Homeland Security. The advisory committees include members from state and local government, academia, policy research organizations, the private sector, emergency services, law enforcement, and the public health community. The Council provides advice on:
(1) The development, coordination and implementation of the national strategy to secure the US from terrorist threats or attacks.
(2) Recommendations to improve coordination, cooperation, and communications among federal, state, and local officials.
(3) The feasibility of implementing specific measures to detect, prepare for, prevent, protect against, respond to, and recover from terrorist threats or attacks.
(4) The effectiveness of the implementation of specific strategies to detect, prepare for, prevent, protect against, respond to, and recover from terrorist threats or attacks." (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. II-17 & 18)

Homeland Security Advisory System (HSAS): "A series of tools used by DHS that provide the public with guidance on the status of the Nation's homeland security. The system combines

[57] U.S. White House Office, "Department of Homeland Security Reorganization Plan," (Washington: Nov. 25, 2002), Washington, DC, available at [http://www.whitehouse.gov/news/releases/2002/11/reorganization_plan.pdf], accessed Feb. 23, 2006.
[58] Letter from Secretary of Homeland Security Tom Ridge to Sen. Joseph I. Lieberman, Jan. 26, 2004.

threat information with vulnerability assessments, and communicates this information to public safety officials and the public. The system includes [HS] Threat Advisories, Homeland Security Information bulletins, and the Threat Level System." (**DHS**, *FCD 1*, 2007, P-5)

Homeland Security Advisory System (HSAS): "The advisory system provides measures to remain vigilant, prepared, and ready to deter terrorist attacks. The following Threat Conditions each represent an increasing risk of terrorist attacks. Beneath each Threat Condition are suggested protective measures, recognizing that the heads of Federal departments and agencies are responsible for developing and implementing appropriate agency-specific protective measures:

> **Homeland Security Advisory System: Low Condition (Green)**. This condition is declared when there is a low risk of terrorist attacks. Federal departments and agencies should consider the following general measures in addition to the agency-specific Protective Measures they develop and implement: refining and exercising as appropriate preplanned Protective Measures; ensuring personnel receive proper training on the Homeland Security Advisory System and specific preplanned department or agency Protective Measures; and institutionalizing a process to assure that all facilities and regulated sectors are regularly assessed for vulnerabilities to terrorist attacks, and all reasonable measures are taken to mitigate these vulnerabilities.
>
> **Homeland Security Advisory System: Guarded Condition (Blue)**. This condition is declared when there is a general risk of terrorist attacks. In addition to the Protective Measures taken in the previous Threat Condition, Federal departments and agencies should consider the following general measures in addition to the agency-specific Protective Measures that they will develop and implement: checking communications with designated emergency response or command locations; reviewing and updating emergency response procedures; and providing the public with any information that would strengthen its ability to act appropriately.
>
> **Homeland Security Advisory System: Elevated Condition (Yellow)**. An Elevated Condition is declared when there is a significant risk of terrorist attacks. In addition to the Protective Measures taken in the previous Threat Conditions, Federal departments and agencies should consider the following general measures in addition to the Protective Measures that they will develop and implement: increasing surveillance of critical locations; coordinating emergency plans as appropriate with nearby jurisdictions; assessing whether the precise characteristics of the threat require the further refinement of preplanned Protective Measures; and implementing, as appropriate, contingency and emergency response plans.
>
> **Homeland Security Advisory System: High Condition (Orange)**. A High Condition is declared when there is a high risk of terrorist attacks. In addition to the Protective Measures taken in the previous Threat Conditions, Federal departments and agencies should consider the following general measures in addition to the agency-specific Protective Measures that they will develop and implement: coordinating necessary

security efforts with Federal, State, and local law enforcement agencies or any National Guard or other appropriate armed forces organizations; taking additional precautions at public events and possibly considering alternative venues or even cancellation; preparing to execute contingency procedures, such as moving to an alternate site or dispersing their workforce; and restricting threatened facility access to essential personnel only.

Homeland Security Advisory System: Severe Condition (Red). A Severe Condition reflects a severe risk of terrorist attacks. Under most circumstances, the Protective Measures for a Severe Condition are not intended to be sustained for substantial periods of time. In addition to the Protective Measures in the previous Threat Conditions, Federal departments and agencies also should consider the following general measures in addition to the agency-specific Protective Measures that they will develop and implement: increasing or redirecting personnel to address critical emergency needs; signing emergency response personnel and pre-positioning and mobilizing specially trained teams or resources; monitoring, redirecting, or constraining transportation systems; and closing public and government facilities." (**USArmy TRADOC**, 2007, 149)

Homeland Security and Defense Education Consortium (HSDEC): "The Homeland Security and Defense Education Consortium, or HSDEC, is a network of teaching and research institutions focused on promoting education, research, and cooperation related to and supporting the homeland security / defense mission. The consortium is committed to building and maintaining a community of higher education institutions supporting this mission and the overall homeland security effort through the sharing and advancement of knowledge.

HSDEC Tenets:

- Ensure the Department of Defense (NORAD and USNORTHCOM) role in, and perspective on, homeland security is adequately and accurately reflected in educational initiatives.
- Promote and facilitate homeland security related education program development.
- Focus and facilitate homeland security related research and development.
- Encourage cooperation between consortium institutions. (**NORTHCOM**, *HSDEC*)

Homeland Security and Emergency Management:

"Since becoming Secretary, I have set five major goals to focus our Department's efforts on a core set of objectives. These goals are as follows: 1) keeping dangerous people from entering our country; 2) keeping dangerous cargo out of our country; 3) protecting critical infrastructure; 4) boosting emergency preparedness and response; and 5) strengthening DHS integration and management. Because the focus of this hearing is threats to our homeland, my testimony will highlight only the first three goals: preventing dangerous people and dangerous cargo from entering our country, and protecting critical infrastructure. I will also discuss our efforts to share information and intelligence necessary to achieve these goals."

(DHS, *Testimony of Secretary Chertoff Before the Senate Committee on Homeland Security* [Hearing on] "*Confronting the Terrorist Threat to the Homeland: Six Years After 9/11).*": September 10, 2007)

Homeland Security Approaches, Top-Down versus Bottom-Up: "As a former Governor, I am keenly aware of the shared responsibility that exists between the federal, state, and local governments for homeland security. In fact, over the past year I have often said that "when our hometowns are secure, our homeland will be secure." That is not merely rhetoric, but a fundamental principle of the nation's homeland security effort." (DHS, *The Nomination of The Honorable Tom Ridge to be Secretary of the Department of Homeland Security*, 19 Jan 2003)

Homeland Security Center for Risk and Economic Analysis of Terrorism Events (CREATE): "…led by the University of Southern California, evaluates the risks, costs, and consequences of terrorism, and guides economically viable investments in countermeasures that will make our Nation safer and more secure." (**DHS**, *HLS Centers of Excellence*, 20March2007)

Homeland Security Center of Excellence for Behavioral and Social Research on Terrorism and Counter-Terrorism: "The research and development focus of this new Homeland Security Center of Excellence will span both international and domestic issues. Areas of work will include the sources of and responses to terrorism, the psychological impact of terrorism on society, and increasing the American public's preparedness, response, and resilience in the face of threats. Academic and policy experts will examine the motivation and intent of terrorists in order to develop strategies and tools to improve counteractions, such as understanding and forecasting the magnitude of the terrorist threat and formulating effective response strategies. The Center will also consider the impact of terrorism on the public, and will develop risk communications techniques and relevant educational programs…. The University of Maryland has assembled a team of experts from across the country and around the world. The major partners include the University of California at Los Angeles, the University of Colorado, Monterey Institute of International Studies, the University of Pennsylvania, and the University of South Carolina. Scholars and researchers from Israel, Italy, Kazakhstan, and other countries will also be involved in the research efforts." (**DHS**, *DHS Selects UMD to Lead*…, 1 Jan 2005)

Homeland Security Common Attributes: "Since the attacks of September 11, all levels of American government, as well as the private sector, have taken steps to join together and focus efforts toward achieving the homeland security imperative. This effort must be unified and united by a common set of attributes, which include:

- ***Vigilance*** in staying aware of the threat and committing the resources and the effort needed to address vulnerabilities and secure the Nation and its citizenry, environment, and infrastructure;
- ***The ability to rapidly mobilize*** the necessary components of the American government, the private sector and the non-profit community to respond to incidents, pursue those who would commit acts of terror and their sponsors, and organize to protect the homeland;
- ***The resilience*** to absorb and bounce back from the consequences of an incident and to allow for the continuity of the Nation's way of life and economy.

These attributes were crucial in the early days after September 11th, and they remain crucial as the Nation continues to engage in a global conflict with radical Islamic jihadists that embrace the use of terrorist techniques to threaten the security of the Nation. Those attributes are equally relevant in meeting the challenges presented by other potential terrorists as well as natural disasters, and manmade accidents (including pandemics) that threaten homeland security." (**DHS**, "The Homeland Security Challenge," Chapter 1, *DHS Pub 1*, Feb 2008 Draft, pp. 1-2)

Homeland Security Council (HSC): "The Homeland Security Council (HSC), the successor to the Office of Homeland Security, was created by Homeland Security Presidential Directive 1 (HSPD-1) on October 29, 2001. The HSC has a mission to 'ensure coordination of all homeland security-related activities among executive departments and agencies and promote the effective development and implementation of all homeland security policies' and is led by the Assistant to the President for Homeland Security and Counterterrorism. As with the National Security Council, the Homeland Security Council has a full-time staff and is made up of the Cabinet Secretaries and White House senior officials with homeland security responsibilities. Because of its policy coordination and advisory responsibilities, the HSC interacts frequently with the Department of Homeland Security. When it established the HSC, the White House also created a new homeland security branch within the Office of Management and Budget (OMB)." (**NAPA**, *Addressing the 2009 Presidential Transition at the…DHS*, May 2008 Agency Review Draft, p. 17)

Homeland Security Council (HSC): Established by Executive Order 13228, Establishing Office of Homeland Security and the Homeland Security Council, Section 5, October 8, 2001. "The Council shall serve as the mechanism for ensuring coordination of homeland security-related activities of executive departments and agencies and effective development and implementation of homeland security policies." (**White House**, *EO 13228*, October 8, 2001)

Homeland Security Council (HSC): "Securing Americans from terrorist threats or attacks is a critical national security function. It requires extensive coordination across a broad spectrum of Federal, State, and local agencies to reduce the potential for terrorist attacks and to mitigate damage should such an attack occur. The Homeland Security Council (HSC) shall ensure coordination of all homeland security-related activities among executive departments and agencies and promote the effective development and implementation of all homeland security policies." (**White House**, *HSPD-1***,** October 29, 2001)

Homeland Security Council (HSC) Deputies Committee (HSC/DC): "The HSC Deputies Committee (HSC/DC) shall serve as the senior sub-Cabinet interagency forum for consideration of policy issues affecting homeland security. The HSC/DC can task and review the work of the HSC interagency groups discussed below. The HSC/DC shall help ensure that issues brought before the HSC/PC or the HSC have been properly analyzed and prepared for action. The HSC/DC shall have the following as its regular members: the Deputy Secretary of the Treasury; the Deputy Secretary of Defense; the Deputy Attorney General; the Deputy Secretary of Health and Human Services; the Deputy Secretary of Transportation; the Deputy Director of the Office of Homeland Security (who serves as Chairman); the Deputy Director of Central Intelligence; the Deputy Director of the Federal Bureau of Investigation; the Deputy Director of the Federal Emergency Management Agency; the Deputy Director of the Office of Management and Budget;

and the Assistant to the President and Chief of Staff to the Vice President. The Assistant to the President and Deputy National Security Advisor shall be invited to attend all meetings of the HSC/DC. The following people shall be invited to attend when issues pertaining to their responsibilities and expertise are to be discussed: the Deputy Secretary of State; the Deputy Secretary of the Interior; the Deputy Secretary of Agriculture; the Deputy Secretary of Commerce; the Deputy Secretary of Labor; the Deputy Secretary of Energy; the Deputy Secretary of Veterans Affairs; the Deputy Administrator of the Environmental Protection Agency; the Deputy National Security Advisor for Combating Terrorism; and the Special Advisor to the President for Cyberspace Security. The Executive Secretary of the Office of Homeland Security shall serve as Executive Secretary of the HSC/DC. Other senior officials shall be invited, when appropriate." (**White House**, *HSPD-1***)**

Homeland Security Council (HSC) Policy Coordination Committees (HSC/PCCs): "HSC Policy Coordination Committees (HSC/PCCs) shall coordinate the development and implementation of homeland security policies by multiple departments and agencies throughout the Federal government, and shall coordinate those policies with State and local government. The HSC/PCCs shall be the main day-to-day fora for interagency coordination of homeland security policy. They shall provide policy analysis for consideration by the more senior committees of the HSC system and ensure timely responses to decisions made by the President. Each HSC/PCC shall include representatives from the executive departments, offices, and agencies represented in the HSC/DC. Eleven HSC/PCCs are hereby established for the following functional areas, each to be chaired by the designated Senior Director from the Office of Homeland Security:

1. Detection, Surveillance, and Intelligence (by the Senior Director, Intelligence and Detection);
2. Plans, Training, Exercises, and Evaluation (by the Senior Director, Policy and Plans);
3. Law Enforcement and Investigation (by the Senior Director, Intelligence and Detection);
4. Weapons of Mass Destruction (WMD) Consequence Management (by the Senior Director, Response and Recovery);
5. Key Asset, Border, Territorial Waters, and Airspace Security (by the Senior Director, Protection and Prevention);
6. Domestic Transportation Security (by the Senior Director, Protection and Prevention);
7. Research and Development (by the Senior Director, Research and Development);
8. Medical and Public Health Preparedness (by the Senior Director, Protection and Prevention);
9. Domestic Threat Response and Incident Management (by the Senior Director, Response and Recovery);
10. Economic Consequences (by the Senior Director, Response and Recovery); and
11. Public Affairs (by the Senior Director, Communications). (**White House,** *HSPD-1*, 2001)

Homeland Security Council (HSC) Principals Committee (HSC/PC): "The HSC Principals Committee (HSC/PC) shall be the senior interagency forum under the HSC for homeland security issues. The HSC/PC is composed of the following members: the Secretary of the Treasury; the Secretary of Defense; the Attorney General; the Secretary of Health and Human Services; the Secretary of Transportation; the Director of the Office of Management and Budget; the Assistant to the President for Homeland Security (who serves as Chairman); the Assistant to the President and Chief of Staff; the Director of Central Intelligence; the Director of the Federal

Bureau of Investigation; the Director of the Federal Emergency Management Agency; and the Assistant to the President and Chief of Staff to the Vice President. The Assistant to the President for National Security Affairs shall be invited to attend all meetings of the HSC/PC. The following people shall be invited to HSC/PC meetings when issues pertaining to their responsibilities and expertise are discussed: the Secretary of State; the Secretary of the Interior; the Secretary of Agriculture; the Secretary of Commerce; the Secretary of Labor; the Secretary of Energy; the Secretary of Veterans Affairs; the Administrator of the Environmental Protection Agency; and the Deputy National Security Advisor for Combating Terrorism. The Counsel to the President shall be consulted regarding the agenda of HSC/PC meetings and shall attend any meeting when, in consultation with the Assistant to the President for Homeland Security, the Counsel deems it appropriate. The Deputy Director of the Office of Homeland Security shall serve as Executive Secretary of the HSC/PC. Other heads of departments and agencies and senior officials shall be invited, when appropriate." (**White House,** *HSPD-1*, Oct 30, 2001)

Homeland Security Data Network (HSDN): "A communications system and IT infrastructure used by the Department of Homeland Security to streamline and merge classified networks into a single, integrated network which is being designed to become a major secure information thoroughfare joining together intelligence agencies, law enforcement, disaster management, and front-line disaster response organizations." (**HSC,** *NCPIP*, August 2007, p. 63)

Homeland Security Digital Library (HSDL): "The HSDL is an authoritative gateway to a wide range of resources on the subject of Homeland Security.

- One central repository of record
- Relevant, qualified information
- Categorization of results
- Instruction & research support
- One stop shop.
- Sponsored by DHS Office for Domestic Preparedness
- July 2002 – Investigation and Testing began
- Sept 2003 – HSDL Prototype completed ….
- Initial Audience – the Naval Postgraduate School (CHDS masters program and NPS research
- Target Audience: DHS; federal, state, and local government; academic community." (**Woodbury**, *Securing the Homeland through the Power of Information*, 2004, slides 2-3)

Homeland Security Doctrine: "Doctrine describes the fundamental principles and concepts that shape the Nation's homeland security effort. It broadly tells us what planning is supposed to achieve, how it is structured and resourced, and how it is executed. Doctrine describes the systems, processes, intellectual underpinnings, and terminology that are the bedrock of homeland security planning. The doctrinal concepts and principles laid out here are consistent with planning systems already in place, or being considered for adoption. Specifically, this doctrine underpins and supports:

- Homeland Security Presidential Directive-5 (HSPD-5)
- Homeland Security Presidential Directive–8 (HSPD-8), Annex I
- National Response Framework (NRF)

- National Incident Management System (NIMS)
- National Preparedness Guidelines (NPG)
- National Strategy for Homeland Security (NSHS)

(**FEMA**, *(Interim) Integrated Planning System (IPS) for Homeland Security (Draft Version 2.3)*, July 3, 2008 copy, p. 2-1)

Homeland Security Domain Working Group: "The "Homeland Security Domain" includes those government agencies and activities involved in the prevention and mitigation of, preparation for, response to, and recovery from natural or man-made disasters, including terrorism, and other threats to the homeland. This domain can encompass the many operational and administrative components of DHS, as well as other federal, state, local, and tribal elements who partner with the department. Its work will complement the Civil Applications Working Group in areas like natural disaster response." (**DHS**, *Fact Sheet: NAO*, August 15, 2007)

Homeland Security Education: "In order to ensure the success of the Homeland Security Management System, our Nation must further develop a community of homeland security professionals. This requires establishing multidisciplinary education in homeland and relevant national security policies and strategies; the planning process; execution of operations and exercises; and overall assessment and evaluation. Furthermore, this should include an understanding and appreciation of appropriate regions, religions, cultures, legal systems, and languages." (**White House**, *National Strategy for Homeland Security*, October 2007, p. 45)

[Note: "Homeland Security," as defined in this 2007 Strategy, as well as in the 2002 Strategy, is exclusively within the province of terrorism.]

Homeland Security Exercise and Evaluation Program (HSEEP):
"A capabilities-based and performance-based program that furnishes standardized policies, doctrines, and terminologies for the design, development, performance, and evaluation of homeland security exercises. The National Exercise Program (NEP) uses the HSEEP as a common methodology for exercises. The HSEEP also provides tools and resources to facilitate the management of self-sustaining homeland security exercise programs." (**DHS**, *FCD 1*, Nov 2007, P-6)

Homeland Security Exercise and Evaluation Program (HSEEP):
"HSEEP is a *capabilities*- and performance-based exercise program that provides standardized policy, doctrine, and terminology for the *design, development*, conduct, and *evaluation* of homeland security exercises. HSEEP also provides tools and resources to facilitate the management of self-sustaining homeland security exercise programs." (**FEMA**, *HSEEP*, 2008)

Homeland Security Exercise and Evaluation Program (HSEEP):
"The HSEEP is the policy and guidance component of the NEP, and serves to standardize exercise design, development, conduct, and evaluation for all (National-level, Federal, State, and local) exercises by establishing common language and concepts to be adopted and used by various agencies and organizations. HSEEP aims to synchronize all exercises in the Nation in addition to providing tools and resources for States and local jurisdictions to establish self-sustaining exercise programs." (**FEMA**, *Statement of Dennis Schrader*, October 3, 2007, p. 5)

Homeland Security Exercise and Evaluation Program (HSEEP):
"The NEP [National Exercise Program] utilizes the HSEEP as the common methodology for exercises. HSEEP is a capabilities- and performance based exercise program that provides standardized policy, doctrine, and terminology for the design, development, conduct, and evaluation of homeland security exercises. HSEEP also provides tools and resources to facilitate the management of self-sustaining homeland security exercise programs." (**HSC**, *National Continuity Policy Implementation Plan*, Aug. 2007, p. 63; and **FEMA**, *Homeland Security Exercise and Evaluation Program* (HSEEP).)

Homeland Security Exercise and Evaluation Program (HSEEP) After-Action Reporting:
"AAR/IPs created for exercises must conform to the templates provided in HSEEP Volume III: Exercise Evaluation and Improvement Planning.
Following each exercise, a draft AAR/IP must be developed based on information gathered through use of Exercise Evaluation Guides (EEGs).
Following every exercise, an After-Action Conference (AAC) must be conducted, in which:

- Key personnel and the exercise planning team are presented with findings and recommendations from the draft AAR/IP.
- Corrective actions addressing a draft AAR/IP's recommendations are developed and assigned to responsible parties with due dates for completion.

A final AAR/IP with recommendations and corrective actions derived from discussion at the AAC must be completed within 60 days after the completion of each exercise." (**FEMA**, *About HSEEP*, 2008)

Homeland Security Exercise and Evaluation Program (HSEEP) Blended Approach:
"In addition to providing a standardized policy, methodology, and language for project management, HSEEP facilitates the creation of self-sustaining, capabilities-based exercise programs by providing program management resources such as policy and guidance, training, technology, and direct support. The elements of this blended approach include the following:

- Policy and Doctrine. HSEEP promulgates policy and doctrine for all exercises through HSEEP Volumes I-V, which provide exercise planners with common processes, consistent terminology, and tested policies that are practical and flexible enough to be applied regardless of the nature of the exercising entity. The HSEEP Volumes integrate language and concepts from the NRP, NIMS, the National Preparedness Goal, UTL, TCL, and existing exercise programs.

- Training. Training opportunities are provided to familiarize exercise planners, evaluators, facilitators, controllers, and participants in HSEEP policy and doctrine. *Independent Study (IS) – 120, An Introduction to Exercises* is an online, beginner-level HSEEP course that provides basic instruction in exercise design and terminology. The HSEEP Mobile Training Course is an intermediate-level training course that incorporates exercise guidance and best practices from the HSEEP Volumes to educate participants about exercise program management, design and development, conduct, evaluation, and improvement planning.

- Technology. The HSEEP Toolkit is a web-based system of tools which provides a seamless collaborative environment for exercise planners. The Toolkit provides integrated tools for the five phases of exercise project management, such as an exercise planning tutorial, templates for exercise documentation, and a tracking system for action items identified during exercise evaluation. The Toolkit also includes an exercise program management tool to assist with short, medium, and long-term program management.

- Direct Support. The Preparedness Directorate provides direct exercise support, in the form of vendor assistance, to help States and local jurisdictions with the design, development, conduct, and evaluation of exercises in accordance with HSEEP. Direct support is also available to help States and local jurisdictions conduct the HSEEP Mobile Training Course and Training and Exercise Plan Workshops (T&EPWs)." (**FEMA**, *About HSEEP*, 2008)

Homeland Security Exercise and Evaluation Program (HSEEP) Compliance:
"…HSEEP Compliance is defined as adherence to specific HSEEP-mandated practices for exercise program management, design, development, conduct, evaluation, and improvement planning. In order for an entity to be considered HSEEP compliant it must satisfy four distinct performance requirements:

- Conducting an annual Training and Exercise Plan Workshop and developing and maintaining a Multi-year Training and Exercise Plan.
- Planning and conducting exercises in accordance with the guidelines set forth in HSEEP Volumes I-III.
- Developing and submitting a properly formatted After-Action Report/Improvement Plan (AAR/IP). The format for the AAR/IP is found in HSEEP Volume III.
- Tracking and implementing corrective actions identified in the AAR/IP." (**FEMA**, *About HSEEP*, 2008)

Homeland Security Exercise and Evaluation Program (HSEEP) Coordination:
"DHS has sought both Intra- and Inter-Agency HSEEP buy-in through and National Exercise Program (NEP) Charter and Implementation Plan:

- Addresses Katrina Report recommendations
- Distributed HSEEP Volumes for Intra- and Inter-Agency Review
- Provides framework for Federal Inter-Agency exercise coordination
- Establishes Five Year Exercise Schedule
- Mandates HSEEP as standardized methodology and policy for all Intra-agency exercises
- Establishes NEP Executive Steering Committee
- Establishes National Exercise Schedule (NEXS) and the Corrective Action Program (CAP)
- The Deputy Secretaries across the Federal Government reviewed and approved the HSEEP Volumes on January 26th [2007]
- President approved the NEP in April [2007]." (**FEMA**, *HSEEP*, and **DHS/FEMA NRF Resource Center**, *National Exercise Program*, 2007)

Homeland Security Exercise and Evaluation Program Design and Development System:
"The Homeland Security Exercise and Evaluation Program (HSEEP) Design and Development System (DDS) is an online comprehensive planning tool designed to assist in the development, conduct, and evaluation of exercises. This interactive application provides suggested project timelines, templates, task and planning team lists, and associated guidance throughout an exercise design and development cycle…. Planners may use the DDS to design discussion-based (seminars, workshops, tabletops and games) and operations-based (drill, functional, full-scale) exercises. Throughout the planning process, the DDS provides users with populatable templates and samples for all key and supporting exercise documentation. It also provides users customized dynamic task list tracking, design and development tips and instructions, HSEEP volume references, and definitions.

"Exercise documentation, created either from the DDS templates or otherwise, can be stored in a unique exercise-specific database on the DDS for all members of the planning team with the appropriate permissions to view and edit. A running status of exercise progress is tracked on both graphical and interactive timelines." (**FEMA**, *HSEEP Toolkit DDS*, Sep 13, 2007)

Homeland Security Exercise and Evaluation Program (HSEEP) Evaluation Process:
"There are eight HSEEP steps in the evaluation process:

Step 1: Plan and organize the evaluation
Step 2: Observe the exercise and collect data
Step 3: Analyze data
Step 4: Develop the draft After Action Report (AAR)
Step 5: Conduct an After Action Conference
Step 6: Identify improvements to be implemented
Step 7: Finalize the AAR and Improvement Plan (IP)
Step 8: Track implementation." (**FEMA**, IS 120.A, *An Intro to Exercises*, Feb 2008, 49)

Homeland Security Exercise and Evaluation Program (HSEEP) Improvement Planning:
"An improvement plan will include broad recommendations from the AAR/IP organized by target capability as defined in the Target Capabilities List (TCL).

- Corrective actions derived from an AAC are associated with the recommendations and must be linked to a capability element as defined in the TCL.
- Corrective actions included in the improvement plan must be measurable.
- Corrective actions included in the improvement plan must designate a projected start date and completion date.
- Corrective actions included in the improvement plan must be assigned to an organization and a point of contact (POC) within that organization.
- Corrective actions must be continually monitored and reviewed as part of an organizational Corrective Action Program. An individual should be responsible for managing a Corrective Action Program to ensure corrective actions resulting from exercises, policy discussions and real-world events are resolved and support the scheduling and development of subsequent training and exercises." (**FEMA,** *About HSEEP,* 2008)

Homeland Security Exercise and Evaluation Program Methodological Background:

"The methodology of HSEEP was based on proven exercise design, development, and evaluation methods from other programs. There are three exercise programs that had a significant influence on HSEEP during its development. These programs include the following:

- Chemical Stockpile Emergency Preparedness Program (CSEPP). The key ties to HSEEP are the recognition of increased hazards associated with critical infrastructure and hazardous materials and contribution of evaluation methodology.

- Radiological Emergency Preparedness (REP) Program. The key ties to HSEEP are that REP was the first major exercise program to involve local first responders in biannual exercise activities and that it helped contribute to the evaluation methodology.

- Nunn-Lugar-Domenici (NLD) Domestic Preparedness Program. The key tie to HSEEP was that NLD was the springboard to the NEP and was the first program to recognize an increased hazard in the Nation's urban centers. It contributed many of the lessons learned and best practices for the design and development methodology." (**FEMA**, *About HSEEP*, 2008)

Homeland Security Exercise and Evaluation Program (HSEEP) Benefits: "HSEEP features consistent terminology that can be used by all exercise planners, regardless of the nature and composition of their sponsoring agency or organization. It reflects lessons learned and best practices of existing exercise programs, and can be adapted to a variety of scenarios and incidents. HSEEP is also consistent and in line with all of the current national initiatives and policies including the National Incident Management System (NIMS), the National Preparedness Goal, the Target Capabilities List (TCL,) and the Universal Task List (UTL)." (**FEMA**, *Homeland Security Exercise and Evaluation Program Frequently Asked Questions*, 2008)

Homeland Security Exercise and Evaluation Program (HSEEP) Mission: "The Homeland Security Exercise and Evaluation Program (HSEEP) constitutes a national standard for all exercises. Through exercises, the National Exercise Program, supports organizations to achieve objective assessments of their capabilities so that strengths, and areas for improvement are identified, corrected and shared as appropriate prior to a real incident." (**FEMA**, *HSEEP Mission*, 2008)

Homeland Security Exercise and Evaluation Program (HSEEP) Planning and After Action Conferences: "The HSEEP methodology defines a variety of planning and after action conferences. The need for each of these conferences varies depending on the type and scope of the exercise. They include:

- Concepts and Objectives Meeting
- Initial Planning Conference (IPC)
- Mid-Term Planning Conference (MPC)
- Master Scenario Events List (MSEL) Conference
- Final Planning Conference (FPC)
- After Action Conference (AAC)" (**FEMA**, *About HSEEP*, 2008)

Homeland Security Exercise and Evaluation Program Policy & Doctrine Documents:
"HSEEP policy and doctrine is organized into several volumes:
• *HSEEP Volume I: HSEEP Overview and Exercise Program Management* provides guidance for building and maintaining an effective exercise program and summarizes the planning and evaluation process described in further detail in Volumes II through V.
• *HSEEP Volume II: Exercise Planning and Conduct* helps planners outline a standardized foundation, design, development, and conduct process adaptable to any type of exercise.
• *HSEEP Volume III: Exercise Evaluation and Improvement Planning* offers proven methodology for evaluating and documenting exercises and implementing an improvement plan.
• *HSEEP Volume IV: Sample Exercise Documents and Formats* provides sample exercise materials referenced in HSEEP Volumes I, II, III, and V.
• *HSEEP Volume V: Prevention Exercises* contains guidance consistent with the HSEEP model to assist jurisdictions in designing and evaluating exercises that test pre-incident capabilities such as intelligence analysis and information sharing." (**DHS**, *TCL* 2007, p. 16)

Homeland Security Exercise and Evaluation Program (HSEEP) Purpose:
"The purpose of HSEEP is to facilitate the creation of self-sustaining, capabilities-based exercise programs by providing tools and resources such as policy, guidance, training, technology, and direct support. This blended approach to HSEEP implementation increases exercise expertise, while advancing a standardized means of assessing and improving preparedness across the Nation." (DHS, *HSEEP Quarterly Newsletter*. March 2007, Issue 6)

Homeland Security Exercise and Evaluation Program (HSEEP) Training and Exercise Plan Workshop (T&EPW): All HSEEP compliant entities conduct a T&EPW each calendar year in which they develop a Multi-year Training and Exercise Plan, which includes:

- The entities' training and exercise priorities (based on an overarching strategy and previous improvement plans).
- The capabilities from the TCL that the entity will train for and exercise against.
- A multi-year training and exercise schedule which:
    - Reflects the training activities which will take place prior to an exercise, allowing exercises to serve as a true validation of previous training.
    - Reflects all exercises in which the entity participates.
    - Employs a "building-block approach" in which training and exercise activities gradually escalate in complexity.
- A new or updated Multi-year Training and Exercise Plan must be finalized and implemented within 60 days of the T&EPW.
- All scheduled exercises must be entered into the National Exercise Schedule (NEXS) System.

The Multi-Year Training and Exercise Plan must be updated on an annual basis (or as necessary) to reflect schedule changes." (**FEMA**, *About HSEEP*, 2008)

Homeland Security Exercise and Evaluation Program (HSEEP) Volumes:

- Volume I: Oversight and Exercise Program Management
- Volume II: Exercise Planning and Conduct
- Volume III: Exercise Evaluation and Improvement Planning
- Volume IV: Sample Exercise Documents and Formats

- Volume V: Prevention Exercises (Draft) (**FEMA**, *HSEEP Slides*, 2008, 7)

Homeland Security Four Foundations: "The *Strategy* [NSHS]…describes four foundations…that cut across all of the mission areas, across all levels of government, and across all sectors of our society. These foundations…

law,
science and technology,
information sharing and systems, and
international cooperation

provide a useful framework for evaluating our homeland security investments across the federal government." (**White House**, *National Strategy for Homeland Security*, July 2002, p. 4)

Homeland Security Grant Program (HSGP): "One of the core missions of the Department of Homeland Security (DHS) is to enhance the ability of state, local, and tribal governments to prevent, protect against, respond to, and recover from terrorist attacks and other disasters. The Homeland Security Grant Program (HSGP) is a primary funding mechanism for building and sustaining national preparedness capabilities. HSGP is comprised of five separate grant programs:

· Urban Areas Security Initiative (UASI)
· State Homeland Security Program (SHSP)
· Law Enforcement Terrorism Prevention Program (LETPP)
· Metropolitan Medical Response System (MMRS)
· Citizen Corps Program (CCP)

Together, these grants fund a range of preparedness activities, including planning, organization, equipment purchase, training, exercises, and management and administration costs. HSGP programs support objectives outlined in the National Preparedness Guidelines and related national preparedness doctrine, such as the National Incident Management System, National Response Plan, and the National Infrastructure Protection Plan. Current and prior year funding levels for each of the grants is detailed in the following table." (**DHS**, *Fiscal Year 2007 Homeland Security Grant Program*, July 18, 2007, p. 2)

Homeland Security Grant Program (HSGP) FY 2008 Changes and Priorities:

- The department focuses on three funding priorities for FY 2008:
  - measuring progress against the National Preparedness Guidelines
  - strengthening preparedness planning
  - strengthen IED prevention, protection and recovery
- Law Enforcement Activities will become part of both the State Homeland Security Program (SHSP) and Urban Areas Security Initiative (UASI) programs, with a requirement to spend at least 25 percent of each award on these important prevention and protection activities. This will result in an increase of more than $66 million dollars from FY 2007 on prevention activities alone
- The department is more narrowly focusing the funding priorities this year, with the goal of targeting funding where the largest gaps reside
- As a result of the Post Katrina Emergency Management Reform Act, the 10 FEMA regions will have an enhanced role in grant activities

- The burden on grantees will be reduced as the Enhancement Plan portion of the application has been replaced by the State Preparedness Report
- The department's risk methodology for the grants has been revised to reflect input from the 9/11 Act, including the use of Metropolitan Statistical Areas
- The department's port-wide risk management activities have expanded this year, and include ports in Group 2, instead of only Group 1." (**DHS**, *Fact Sheet FY08 Grants*)

Homeland Security Higher Education: "One concern often noted by university leaders that have, or have considered, establishing a homeland security academic program was defining what the discipline[3] entails. The federal government defines homeland security as "a concerted national effort to prevent terrorist attacks within the United States, reduce America's vulnerability to terrorism, and minimize the damage and recover from attacks that do occur."[59] The National Strategy for Homeland Security lists essential areas of focus that appear to have been considered by many academic programs.[60] However, it is important to note that the current national strategy for homeland security definition was largely developed by the federal government and is void of issues relating to natural disasters. If the federal definition of homeland security is to be the basis of homeland security programs, but lacks recognition of the non-federal entities with homeland security responsibilities and is also shortsighted in recognizing the all-hazards nature of incidents, academia may wish to expand its view of the homeland security environment when establishing relevant curriculum.

As the discipline evolves, issues deemed homeland security-related appear to be expanding outside the current working definition of homeland security. Whether a terrorist incident, natural disaster, or incident of unknown cause, one might argue that the current trend is to deem any activity that may have tangential negative societal security implications as having a nexus to homeland security. If the future of homeland security continues the trend toward a boundless view of the field, school administrators may struggle with determining the courses to be taught in a program that purports to prepare students for this new discipline." (**Rollans and Rowan**, *The Homeland Security Academic Environment: A Review of Current Activities and Issues for Consideration*. September 2007, pp. 8-9)

Homeland Security Higher Education Fundamentals (**HSDEC & TAMU**, *After Action Report, Workshop on National Needs: What Employers Want from Graduate Education in Homeland Security*, May 17-18, 2007, p. 8):

- History and basic principles of homeland security
- History of homeland security and terrorism
- Structures and functions of DHS
- Demonstrated ability to apply national response planning documents
- Deep understanding of threat environment—emerging threats, nature of four main threats, prevention, response, impact

---

[59] White House, National Strategy for Homeland Security, July 2002.

[60] Critical Mission Areas: Intelligence and Warning, Border and Transportation Security, Domestic Counterterrorism, Protecting Critical Infrastructure and Key Assets, Defending Against Catastrophic Threats, and Emergency Preparedness and Response. Supportive Foundations of Homeland Security: Law, Science and Technology, Information Sharing and Systems, and International Cooperation.

- Globalization and homeland security
- Federal, state and local issues that impact preparedness, including varying state homeland security structures/systems
- Tools available and their uses
- Training and exercises—participating in or leading mock incidents
- Intelligence warning process
- How constitution and legal framework affect homeland security.

Homeland Security Information: "Experience has shown that there is no single source for information related to terrorism. It is derived by gathering, fusing, analyzing, and evaluating relevant information from a broad array of sources on a continual basis. Important information can come through the efforts of the Intelligence Community, Federal, State, tribal, and local law enforcement and homeland security authorities, other government agencies (e.g., the Department of Transportation, the Department of Health and Human Services), and the private sector (e.g., the transportation, healthcare, financial, and information technology sectors). Commonly referred to as homeland security information, terrorism information, or law enforcement information, this wide-ranging information can be found across all levels of government as well as in the private sector." (**White House**, *National Strategy for Information Sharing*, 2007, p. 2)

Homeland Security Information Bulletins: "Guidance for Federal, State, local, and other governments; private sector organizations; and international partners concerned with our Nation's critical infrastructures that do not meet the timeliness, specificity, or significance thresholds of warning messages. Bulletins often include statistical reports, periodic summaries, incident response or reporting guidelines, common vulnerabilities and patches, and configuration standards or tools." (**HSC**, *National Continuity Policy IP*, 2007, p. 63)

Homeland Security Information Network (HSIN): "A communications system and IT infrastructure used by…[DHS] to transmit sensitive but unclassified information. The HSIN serves as a nationwide information-sharing and collaboration tool and is intended to offer real-time chat and instant messaging capability as well as a document library that contains reports from multiple Federal, State, and local sources. HSIN features suspicious incident information and analysis of terrorist threats, tactics, and weapons. HSIN includes over 35 communities of interest, such as emergency management, law enforcement, counterterrorism, States, and private sector communities. Each community of interest has Web pages that are tailored for the community and contain general and community-specific news articles, links, and contact information. HSIN features include a document library, a discussion thread/bulletin board capability, and a chat tool among others." (**HSC**, *NCPIP*, August 2007, p. 63)

Homeland Security Information Network (HSIN): "HSIN is the primary internet-based technology platform for information sharing between CI/KR businesses, sector leadership and the NICC/DHS." (**DHS**, *Pandemic Influenza CIKR Guide*, 2006, p. 69)

Homeland Security Information Network (HSIN) Critical Sectors (CS): "In 2005, DHS launched HSIN-Critical Sectors (CS) to communicate real-time information to critical infrastructure owners and operators. The mission of the HSIN-CS program is to ensure the protection and reliable performance of the nation's CI/KR sectors through the strategic use of

information sharing and communication capabilities. Additionally, HSIN creates an enhanced partnership between the owners and operators of the nation's critical infrastructures, DHS and the Sector-Specific Agencies (SSAs)…. Through HSIN-CS, participating users receive the following functionality: timely broadcast alerts, threats, warnings, and incident reporting; sharing critical documents and analyses; real-time collaboration on key issues or crises; support best practices and protective strategies and the growth of 'communities of interest'." (**DHS**, *Pandemic Influenza CIKR Guide*, 2006, p. 69)

Homeland Security Institute (HSI): First announced on April 23, 2004 and operational in June 2004, the HSI was DHS's first federally funded research and development center or "think tank." (**DHS**, *DHS Today*, Vol. 6, Issue No. 14, April 21, 2008; see, also, DHS, *Fact Sheet: Homeland Security Establishes Its First Government "Think Tank" HSI*, April 23, 2004)

Homeland Security Institute (HSI): "The Homeland Security Institute (HSI) is a Studies and Analysis Federally Funded Research and Development Center established pursuant to Section 312 of the Homeland Security Act of 20021. HSI delivers independent and objective analyses and advises in core areas important to its sponsor in support of policy development, decision-making, analysis of alternative approaches, and evaluation of new ideas on issues of significance." (**HSI**, *Welcome to the HSI*, 2007)

Homeland Security Management System: "In order to continue strengthening the foundations of a prepared Nation, we will establish and institutionalize a comprehensive Homeland Security Management System that incorporates all stakeholders. Relevant departments and agencies of the Federal Government must take the lead in implementing this system, and State, local, and Tribal governments are highly encouraged to ultimately adopt fully compatible and complementary processes and practices as part of a full-scale national effort. Our current approach to managing homeland security has focused on doctrine and planning through the National Preparedness Guidelines (NPG)…. This new Homeland Security Management System…will involve a continuous, mutually reinforcing cycle of activity across four phases:

• ***Phase One: Guidance.*** The first phase in our Homeland Security Management System encompasses overarching homeland security guidance. It is the foundation of our system, and it must be grounded in clearly articulated and up-to-date homeland and relevant national security policies, with coordinated supporting strategies, doctrine, and planning guidance flowing from and fully synchronizing with these policies…. [Such as can be found in;

- Applicable Homeland Security Presidential Directives
- Applicable National Security Presidential Directives
- *National Strategy for Homeland Security (2007)*
- *National Implementation Plan for the Global War on Terror*
- *National Infrastructure Protection Plan*
- *National Response Framework*
- *National Incident Management System*]

• ***Phase Two: Planning***. The second phase is a deliberate and dynamic system that translates our policies, strategies, doctrine, and planning guidance into a family of strategic, operational, and tactical plans….

• ***Phase Three: Execution.*** The third phase in the Homeland Security Management System encompasses the execution of operational and tactical-level plans….

• ***Phase Four: Assessment and Evaluation.*** The fourth phase involves the continual assessment and evaluation of both operations and exercises. This phase of the system will produce lessons learned and best practices that must be incorporated back into all phases of the Homeland Security Management System." (**White House**, *National Strategy for Homeland Security*, Homeland Security Council, October 2007, pp. 43-45)

Homeland Security Management System: "For the Homeland Security Management System to be effective and address long-range challenges across multiple disciplines, all homeland security partners should develop a planning capability that may also be employed during times of crisis." (**White House**, *National Strategy for Homeland Security*, Homeland Security Council, Oct 2007)

Homeland Security Mission Areas: "The *National Strategy for Homeland Security* aligns and focuses homeland security functions into six critical mission areas:

intelligence and warning,
border and transportation security,
domestic counterterrorism,
protecting critical infrastructure and key assets,
defending against catastrophic terrorism, and
emergency preparedness and response.

The first three mission areas focus primarily on preventing terrorist attacks; the next two on reducing our Nation's vulnerabilities; and the final one on minimizing the damage and recovering from attacks that do occur." (**White House**, *National Strategy for HS*, 2002, p. 4)

Homeland Security National Training Program (HSNTP): "The HSNTP provides funding through cooperative and inter-agency agreements to the National Domestic Preparedness Consortium, Rural Domestic Preparedness Consortium, and Continuing and Emerging training providers for the purposes of the development and delivery of all-hazards training for Federal, State, local, and tribal emergency responders." (**DHS**, *Fact Sheet: FY07 HSNTP*, Sep. 28, 2007)

Homeland Security National Training Program (HSNTP): The HSNTP consists "of more than 70 training partners to include civic organizations, academic insittuions, corporations, among others." (**FEMA**, *90 Day Update to Congress on National Preparedness* (Dennis R. Schrader, Deputy Administrator for National Preparedness), April 2008, slide 56)

"The Homeland Security National Training Origran (under development) will oversee and coordinate homeland security training programs, increase training capacity, and ensure standardization across programs.

"Training is delivered to appropriate State and local personnel in emergency management, public health, clinical care, public works, public safety, the private sector, nonprofits, faith-based, and community organizations.

"During FY2007 over $182M in cooperative and interagency agreements was awarded through the HSNTP to applicants to design, develop, and deliver training content and support for Federal, State, local, and tribal jurisdictions."

"Since FY 2005, more than $521.5 million has been allocated for the concept and design of HSNTP." (Ibid., slide 57)

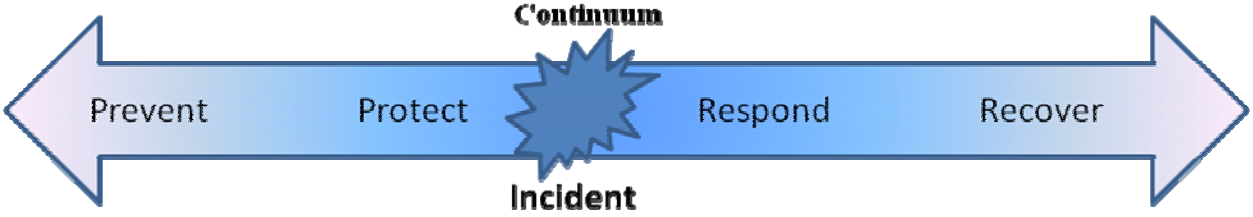
Homeland Security Objectives: "Homeland security is an exceedingly complex mission. It involves efforts both at home and abroad. It demands a range of government and private sector capabilities. And it calls for coordinated and focused effort from many actors who are not otherwise required to work together and for whom security is not always a primary mission. This *Strategy* establishes three objectives based on the definition of homeland security:

• Prevent terrorist attacks within the United States;
• Reduce America's vulnerability to terrorism; and
• Minimize the damage and recover from attacks that do occur.

The order of these objectives deliberately sets priorities for America's efforts to secure the homeland." (**White House**, *National Strategy for Homeland Security*, July 2002, p. 3)

Homeland Security Operational Continuum: "The operational continuum for homeland security consists of prevent, protect, respond, and recover. It represents phases of operations that homeland security officials and stakeholders take to address potential and actual homeland security incidents. Operations commence with prevention and protection efforts to, if possible, stop bad things from happening and minimize consequences. If bad things cannot be prevented, protection efforts continue, while response operations commence. Recovery operations build on response operations and are necessary to mitigate the consequences of incidents." (**DHS**, Chapter 2, *Capstone Doctrine Pub Draft*, 2008, p. 2-5)

Figure 2-1: Homeland Security Operational Continuum



Homeland Security Operations Center (HSOC) DHS: "The HSOC is the primary national-level hub for operational communications, information and resource coordination pertaining to domestic incident management." (**DHS**, *NRP* (Draft #1), Feb. 25, 2004, 22) [Note: Renamed the National Operations Center. (**DHS**, *Notice of Change to the NRP*, May 22, 2006, p. 9)

Homeland Security Planning Levels: "There are three levels of homeland security planning – Strategic, Operational and Tactical.

Strategic. At this level, executive decision makers determine strategic homeland security objectives. From these objectives, they develop overall, high-level guidance for planners. Using this guidance, planners develop their strategic plans designed to apply resources to accomplish these objectives. These are the widest scoped, least detailed plans in the planning hierarchy.

Operational. Strategic plans provide guidance for operational planning. Operational objectives support strategic objectives, sequence events, initiate action and apply resources to begin and sustain activities. It is at this level that operational planning is conducted and sustained across the homeland security operational continuum (e.g., Prevent, Protect, Respond and Recover). Plans written at this level include concept of operations plans (CONPLAN) and organizational operations plans (OPLAN). These plans are more narrowly scoped and more detailed than strategic plans.

Tactical. Tactical plans are more focused and detailed than operational plans. Activities are focused on the arrangement of resources in relation to each other and to the threat or natural disaster. Tactical plans are developed to support the objectives of operational plans. The IPS is not intended to replace NIMS or the Incident Command System (ICS)." (**FEMA**, *Interim IPS* (Draft 2.3), July 3, 2008 copy, p. 2-10)

Homeland Security Policy Institute, GWU: "The Homeland Security Policy Institute draws on the expertise of its partners from the academic, nonprofit, policy, and private sectors for a common goal of better preparing the Nation for the threat of terrorism. The Institute frames the debate, discusses policy implications and alternatives, and recommends solutions to issues facing America's homeland security policymakers. By linking academicians and scientists to decisionmakers at all levels of government, the private sector, and the communities we live in, the Institute is working to build a bridge between theory and practice in the homeland security arena." (**DHS OIG**, *Fiscal Year 2008 Annual Performance Plan*, 2007, p. 24)

Homeland Security Preparedness: See Department of Homeland Security HSP.

Homeland Security Presidential Directive (HSPD-1), Organization of the Homeland Security Council: "…established the Homeland Security Council to ensure coordination of all HS-related activities among the executive departments and agencies and promote the effective development and implementation of all HS policies." (**JCS/DOD**, *CBRNE CM*, 2006, A-1)

Homeland Security Presidential Directive (HSPD-3), The Homeland Security Advisory System: "…provides the guidelines for a comprehensive and effective means to disseminate information regarding the risk of terrorist acts to Federal, state and local authorities and the American people. This document establishes the five threat conditions and their respective protective measures." (**JCS/DOD**, *CBRNE Consequence Management*, 2007, p. A-1)

Homeland Security Presidential Directive (HSPD-4/NSPD-17), National Strategy to Combat Weapons of Mass Destruction (December 2002): "HSPD-4 describes three pillars for our national strategy to combat WMD: counterproliferation to combat WMD use, strengthen nonproliferation to combat WMD proliferation, and consequence management to respond to WMD use. Each pillar iterates specific actions to be pursued within the pillar." (**JCS/DoD**, *Homeland Security*, 2005, p. A-1)

Homeland Security Presidential Directive 5 (HSPD-5) Domestic Incident Management: "Homeland Security Presidential Directive – 5, Management of Domestic Incidents, February 28, 2003, is intended to enhance the ability of the United States to manage domestic incidents by establishing a single, comprehensive national incident management system. In HSPD-5 the President designates the Secretary of Homeland Security as the principal federal official for domestic incident management and empowers him to coordinate Federal resources used in response to or recovery from terrorist attacks, major disasters, or other emergencies in specific cases. The directive assigns specific responsibilities to the Attorney General, Secretary of Defense, Secretary of State, and the Assistants to the President for Homeland Security and National Security Affairs, and directs the heads of all Federal departments and agencies to provide their "full and prompt cooperation, resources, and support," as appropriate and consistent with their own responsibilities for protecting national security, to the Secretary of Homeland Security, Attorney General, Secretary of Defense, and Secretary of State in the exercise of leadership responsibilities and missions assigned in HSPD-5. The directive also notes that it does not alter, or impede the ability to carry out, the authorities of Federal departments and agencies to perform their responsibilities under law. (**DHS**, *NRP* (Draft #1), Feb. 25, 2004, 72)

[Note: Annex I, "National Planning," December 2007 struck "prevent, prepare for, respond to, and recover from" in section 3 and inserted "prevent, protect against, respond to, and recover from."]

Homeland Security Presidential Directive 5 (HSPD-5) Domestic Incident Management: "The purpose of this policy is to enhance the capability of all levels of government across the Nation to work together efficiently and effectively using a national approach to domestic incident management. The policy requires an "all hazards approach," which refers to preparedness for domestic terrorist attacks, major disasters, and other emergencies. Toward this end, HSPD-5 mandated DHS create two plans that define the specific requirements to ensure the necessary level of coordination—the National Incident Management System (NIMS) and the National Response Plan (NRP)." (**DOT**, *Catastrophic Hurricane Evacuation Plan Evaluation: Report to Congress*, June 1, 2006, p. 2-3)

Homeland Security Presidential Directive 5 (HSPD-5) Domestic Incident Management: "The NRP was developed as a result of HSPD-5 to integrate the Federal Government current family of Federal domestic prevention, preparedness, response, and recovery plans into a single, all-discipline, all-hazards plan to unify the domestic incident management process. When the NRP is used, national interagency plans such as the National Oil and Hazardous Substances Pollution Contingency Plan, Mass Migration Emergency Plan, National Search and Rescue Plan, National Infrastructure Protection Plan, and National Maritime Transportation Security Plan are incorporated as supporting and/or operational plans. In addition to consolidating Federal plans, other modifications within the NRP that impact DOD are the establishment of a National

Operations Center (NOC), the establishment of an Interagency Advisory Council (IAC), and the creation of a principal Federal official (PFO), who may be appointed to represent the Secretary of Homeland Security at the incident site. A national incident management system (NIMS) to provide a consistent nationwide approach for Federal, state, and local governments to work effectively and efficiently together to prepare for, respond to, and recover from domestic incidents was also a result of HSPD-5." (**JCS/DOD**, *CBRNE CM* (JP 3-41) 2006, p. II-2)

Homeland Security Presidential Directive 5 (HSPD-5), Roles and Responsibilities, DOJ:

"According to HSPD-5, the Attorney General "has lead responsibility for criminal investigation of terrorist acts or terrorist threats by individuals or groups inside the United States [.]" HSPD-5 also states that

> following a terrorist threat or an actual incident that falls within the criminal jurisdiction of the United States, the full capabilities of the United States shall be dedicated, consistent with United States law and with activities of other Federal departments and agencies to protect our national security, to assisting the Attorney General to identify the perpetrators and bring them to justice.

This language, which grants the Attorney General broad authority within the sphere of law enforcement, has fueled intense turf battles over roles and authorities during the subsequent drafting of guidance documents such as the National Response Framework. It suggests that the Secretary of Homeland Security, as the federal coordinator for domestic incident management, may not have the authority to determine during a catastrophic terrorist incident whether other aspects of crisis management and response could be prioritized above law enforcement activities. HSPD-5 appears to leave the resolution of such possibly conflicting priorities to the President of the United States." (**Wormuth**, *Ready or Not*, 2008, 4)

Homeland Security Presidential Directive (HSPD-6), Integration and Use of Screening Information (16 September 2003). "HSPD-6 provides for the development and maintenance of accurate and current information about individuals known or appropriately suspected to be or have been engaged in conduct related to terrorism; and that information, as appropriate and permitted by law, can be used to support screening and protective processes via the Terrorist Screening Center." (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. A-2)

Homeland Security Presidential Directive–7 (HSPD–7), Critical Infrastructure Identification, Prioritization, and Protection: "HSPD–7 directed DHS to establish a national policy for Federal departments and agencies to identify and prioritize critical infrastructure and key resources in order to prevent, deter, and mitigate the effects of deliberate efforts to destroy, incapacitate, or exploit them. Federal departments and agencies are to work with State, tribal, and local governments, the private sector, and NGOs to accomplish this objective. This effort includes completion and implementation of the National Infrastructure Protection Plan." (**FEMA**, *National Incident Management System* (FEMA 501/Draft), August 2007, p. 11)

Homeland Security Presidential Directive 8 (HSPD-8), National Preparedness (December 17, 2003)**:** "HSPD–8 directed DHS to lead a national initiative to develop a National Preparedness System—a common and unified approach to "strengthen the preparedness of the

United States to prevent and respond to threatened or actual domestic terrorist attacks, major disasters and other emergencies." The requirements of HSPD–8 led to the National Preparedness Guidelines, which was developed to provide the means for the Nation to answer three fundamental questions:

- How prepared do we need to be?
- How prepared are we?
- How do we prioritize efforts to close the gap?

HSPD–8 also required DHS to develop mechanisms for the improved delivery of Federal preparedness assistance to State, tribal, and local governments and to strengthen the Nation's preparedness capabilities. Fifteen National Planning Scenarios were developed to illustrate the range, scope, magnitude, and complexity of incidents for which the Nation should prepare. Using this wide range of possible scenarios, including terrorism, natural disasters, and health emergencies, helps reduce uncertainty in planning." (**FEMA**, *National Incident Management System* (FEMA 501/Draft), August 2007, p. 11)

Homeland Security Presidential Directive 8 (HSPD-8), National Preparedness (2003):
"This directive is a companion to HSPD-5, which identifies steps for improved coordination in response to incidents. This directive describes how Federal departments and agencies will prepare for such a response, including prevention activities during the early stages of a terrorism incident. It establishes policies to strengthen the preparedness of the US to prevent and respond to threatened or actual domestic terrorist attacks, major disasters, and other emergencies by requiring a national domestic all-hazards preparedness (including CBRNE) goal, establishing mechanisms for improved delivery of Federal preparedness assistance to state and local governments, and outlining actions to strengthen preparedness capabilities of Federal, state, and local entities." (**JCS/DOD**, *CBRNE Consequence Management* (JP 3-41), 2006, p. II-2)

Homeland Security Presidential Directive 8, National Preparedness (2003) Approach:

- Employ a risk-balancing, hedging strategy to reduce strategic risk and compensate for uncertainty.
- Build a task and capability-based common language.
- Measure task-based performance and the adequacy and sufficiency of capabilities against key risk scenarios.
- Achieve objective assurance of national preparedness and a rational methodology to allocate limited resources." (**DHS**, *HSPD-8 "National Preparedness" Status Update*, 7Dec2004, slide 5)

Homeland Security Presidential Directive 8, National Preparedness (2003) Requirements:

- Develop a National Preparedness Goal (SLGCP)
- Develop a National Preparedness Assessment and Reporting System (SLGCP)
- Establish a Single Point of Access for Assistance (SLGCP)
- Review and Approve Comprehensive All-Hazards Statewide Preparedness Strategies (SLGCP)
- Allocate Assistance Based on Population Density, Critical Infrastructure, Other Risk Factors (SLGCP)

- Report Annually on Assistance Programs (SLGCP)
- Develop First Responder Equipment Standards (S&T)
- Plan for Equipment Research and Development (S&T)
- Establish a National Training Program (SLGCP)
- Establish a National Exercise Program (SLGCP)
- Develop a National Lessons Learned System (SLGCP)
- Adopt Federal Performance Measures (All Federal Departments and Agencies)
- Maintain Specialized Federal Assets (EP&R)
- Maintain a Federal Response Capability Inventory (EP&R)
- Encourage Citizen Participation (PA/SLGCP)
- Plan to Provide Preparedness Information (PA/SLGCP) (**DHS**, *HSPD-8 "National Preparedness" Status Update*, December 7, 2004, slide 9)

Homeland Security Presidential Directive 8 (HSPD-8), Annex 1: National Planning:
"This Annex is intended to further enhance the preparedness of the United States by formally establishing a standard and comprehensive approach to national planning. It is meant to provide guidance for conducting planning in accordance with the Homeland Security Management System in the National Strategy for Homeland Security of 2007….

Policy… It is the policy of the United States Government to enhance the preparedness of the Nation by developing and maintaining a standardized approach to national planning to integrate and effect policy and operational objectives to prevent, protect against, respond to, and recover from all hazards, and comprises:
(a) a standardized Federal planning process;
(b) national planning doctrine;
(c) resourced operational and tactical planning capabilities at each Federal department and agency with a role in homeland security;
(d) strategic guidance, strategic plans, concepts of operations, and operations plans and as appropriate, tactical plans; and
(e) a system for integrating plans among all levels of government…
There is established a planning process involving three levels of planning:
(a) strategic;
(b) operational; and
(c) tactical.
The planning process will result in the development of a family of related planning documents to include strategic guidance statements, strategic plans, concepts of operations, operations plans, and as appropriate, tactical plans.
(33) No later than 2 months after the issuance of this Annex, the Secretary of Homeland Security (Secretary) shall submit to the President for approval, through the Assistant to the President for Homeland Security and Counterterrorism, an Integrated Planning System (IPS) that is developed in coordination with the heads of Federal agencies with a role in homeland security and that
(a) provides common processes for developing plans,
(b) serves to implement phase one of the Homeland Security Management System, and
(c) includes the following:
(i) national planning doctrine and planning guidance, instruction, and process to ensure consistent planning across the Federal Government;

(ii) a mechanism that provides for concept development to identify and analyze the mission and potential courses of action;
(iii) a description of the process that allows for plan refinement and proper execution to reflect developments in risk, capabilities, or policies, as well as to incorporate lessons learned from exercises and actual events;
(iv) a description of the process that links regional, State, local, and tribal plans, planning cycles, and processes and allows these plans to inform the development of Federal plans;
(v) a process for fostering vertical and horizontal integration of Federal, State, local, and tribal plans that allows for State, local, and tribal capability assessments to feed into Federal plans; and
(vi) a guide for all-hazards planning, with comprehensive, practical guidance and instruction on fundamental planning principles that can be used at Federal, State, local, and tribal levels to assist the planning process." (**DHS**, *HSPD 8 Annex 1: National Planning*, 10 Jan 2008)

Homeland Security Presidential Directive (HSPD-9), Defense of United States Agriculture and Food: "Purpose: This directive establishes a national policy to defend the agriculture and food system against terrorist attacks, major disasters, and other emergencies. Background: The United States agriculture and food systems are vulnerable to disease, pest, or poisonous agents that occur naturally, are unintentionally introduced, or are intentionally delivered by acts of terrorism. Americas agriculture and food system is an extensive, open, interconnected, diverse, and complex structure providing potential targets for terrorist attacks. We should provide the best protection possible against a successful attack on the United States agriculture and food system, which could have catastrophic health and economic effects." (**White House**, *HSPD-9*, January 30, 2004)

Homeland Security Presidential Directive (HSPD-10), Biodefense for the 21st Century (28 April 2004): "HSPD-10 provides a comprehensive framework for the Nation's biodefense and, among other things, delineates the roles and responsibilities of Federal agencies and departments in continuing their important work in this area." (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. A-2)

Homeland Security Presidential Directive (HSPD-11), Comprehensive Terrorist-Related Screening Procedures (27 August 2004): "HSPD-11 establishes procedures to enhance terrorist-related screening through comprehensive, coordinated procedures that detect, identify, track, and interdict people, cargo, conveyances, and other entities and objects that pose a threat to homeland security." (**JCS/DoD**, *Homeland Security* (JP 3-28), 2005, pp. A-2 & 3)

Homeland Security Presidential Directive (HSPD-12), Policy for a Common Identification Standard for Federal Employees and Contractors (27 August 2004): "HSPD-12 establishes a policy of the United States to enhance security, increase Government efficiency, reduce identity fraud, and protect personal privacy by establishing a mandatory, Government-wide standard for secure and reliable forms of identification issued by the Federal Government to its employees and contractors (including contractor employees)." (**JCS/DoD**, *Homeland Security*, 2005, A-3)

Homeland Security Presidential Directive (HSPD-13), Maritime Security Policy (21 December 2004): "HSPD-13 establishes US policy, guidelines, and implementation actions to

enhance US national security and homeland security by protecting US maritime interests." (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. A-3)

Homeland Security Presidential Directive (HSPD-21), Public Health and Medical Preparedness. "This directive establishes a National Strategy for Public Health and Medical Preparedness (Strategy), which builds upon principles set forth in *Biodefense for the 21st Century* (April 2004) and will transform our national approach to protecting the health of the American people against all disasters." (**White House**, *HSPD*-21, October 18, 2007)

Homeland Security Professional Development and Education: From the White House Hurricane Katrina Lessons Learned Report: "Lesson Learned: The Department of Homeland Security should develop a comprehensive program for the professional development and education of the Nation's homeland security personnel including Federal, state and local employees as well as emergency management persons within the private sector, non-governmental organizations…This program should foster a "joint" Federal interagency, state, local and civilian team.

"Recommendation #112: Each Federal department and agency assigned specific homeland security roles should establish a homeland security professional development program that encompasses career assignments, education, exercises and training.

"Recommendation #116: DHS should establish a national Homeland Security University (NHSU) for senior officials that serves as a capstone to other educational and training opportunities." (**DHS**, *Establishing a DHS University System*, 28Sep2007, p. 6)

Homeland Security Professionalism: (See "Homeland Security Education")

Homeland Security Science and Technology Advisory Committee (HSSTAC): See Department of Homeland Security, HSSTAC.

Homeland Security Spectrum of Operations: "Homeland security planning will address each of the four mission areas identified in the National Strategy for Homeland Security: to prevent, protect against, respond to, and recover from terrorist attacks or natural disasters.[61] In addition, planners must also consider the range of transnational threats not typically considered within the scope of these four mission areas, yet are no less imperative to our homeland security.[62]

- Prevention. Prevention comprises actions taken and measures put in place to reduce risk of threats and vulnerabilities, to intervene and stop an occurrence, or to mitigate effects of a potential incident, be it naturally occurring or man-made.[63]
    - Prevention planning will identify actions that minimize the possibility of a natural or man-made disaster adversely affecting the safety, security, or continuity of the

[61] HSPD-8/Annex 1, National Planning, Approved 03 December 2007.
[62] National Strategy for Homeland Security, 2007. pgs. 5 & 21.
[63] DHS Lexicon Terms and Definitions, Approved October 23, 2007.

Nation, its critical infrastructures, its inhabitants, and their civil rights and liberties.

- Prevention planning for terrorist attacks will focus on reducing the likelihood or consequence of threatened or actual terrorist attacks.[64] These planning efforts will be aligned with the broader efforts of the National Implementation Plan for the War on Terror to disrupt and prevent terrorist attacks on the homeland, deny terrorist and terrorist weapons entry to the United States and disrupt terrorist ability to operate within the borders of the United States. Prevention planning must ensure the complete exploitation of classified and unclassified information to increase the likelihood of successfully thwarting terrorists' plans.[65]

- Many aspects of prevention planning are sensitive and must be produced in and controlled in a classified or law enforcement sensitive environment.

- Protection. Protection is the ability to protect critical infrastructure and key resources (CI/KR) and is vital to the national security, public health and safety, economic vitality, and way of life of the United States. It preserves life and property during a natural disaster or terrorist attacks. Protection safeguards citizens and their freedoms, critical infrastructure, property and the economy from acts of terrorism, natural disasters, or other emergencies.[66]

  - Protection includes actions to mitigate the overall risk to CI/KR assets, systems, networks, functions, or their interconnecting links resulting from exposure, injury, destruction, incapacitation, or exploitation.[67] It involves actions or measures taken to cover or shield from exposure, injury, or destruction. Protective actions may occur before, during, or after an incident and are designed to prevent, minimize, or contain the impact of an incident.[68]

  - Protection planning will address structures and processes that are adaptable to incorporate lessons learned and best practices and adjust quickly within the time constraints of a fast-moving crisis or threat environment. This planning should manage risk and address known and potential threats and hazards.[69]

- Response. Response embodies the actions taken in the immediate aftermath of an incident to save lives, meet basic human needs, reduce the loss of property, and impact to the environment. Following an incident, either naturally occurring or man-made, response operations are essential to reduce the immediate psychological, social, and economical effects of an incident.[70] Response planning will provide rapid and disciplined incident assessment to ensure response is quickly scalable, adaptable, and

flexible.[71] It will incorporate the national response doctrine as presented in the National Response Framework, which defines basic roles and responsibilities for incident response across all levels of government and the private sector.[72]

- Recovery. Recovery encompasses both short-term and long-term efforts for the rebuilding and revitalization of affected communities. Response and recovery operations are closely related. Recovery planning must provide for a near-seamless transition from response activities to short-term recovery operations — including restoration of interrupted utility services, reestablishment of transportation routes, and the provision of food and shelter to displaced persons.[73]

    - Recovery planning must ensure a successful transition from short-term recovery to the long-term recovery, including rebuilding and revitalization. These long-term recovery efforts differ from short-term recovery efforts by scope, complexity of efforts required, and the effect on the social fabric of the community. These efforts can take several months to several years to complete, depending on the extent of the catastrophic incident and how extensively CI/KR assets require redevelopment and reconstruction.[74]

    - Long-term recovery plans must be designed to maximize results through the efficient use of finite resources. These plans must coalesce both public and private partnerships and integrate collective recovery efforts.[75]

- Transnational Threats. A significant and enduring threat to U.S. homeland security emanates from a wide range of transnational problems originating both from within our hemisphere and from the larger global commons. Transnational threats[76] include those homeland security challenges not usually associated with terrorism, critical infrastructure protection, or catastrophic incident response, but focused instead on illicit activities (for example, drug trafficking, piracy, illegal immigration, trafficking in persons, and organized crime), impersonal forces (infectious diseases such as pandemic influenza and SARS, natural resource shortages, and environmental disasters), and humanitarian disasters (within our hemisphere and as a precursor to potential mass migration directed at the U.S. homeland). Transnational threats require both contingency and longer-term planning in crafting these homeland security plans; planners consider the integrity of our borders, national institutions and governmental systems and integrate planning across the air, maritime, land, and cyber domains."

Homeland Security Strategic Objectives, Proposed: "A comprehensive and balanced strategy to protect the homeland encompasses five strategic objectives:

- prevent terrorist attacks;
- reduce our vulnerability to terrorism;
- prepare to respond and recover from an attack or natural or man-made disasters;
- sustain homeland security consistent with American values; and
- shape the global environment to reduce the threat of terrorism." (**Center for American Progress,** *Safe at Home: A National Security Strategy*…, February 25, 2008, p. 3)

Homeland Security Strategic Planning, Mission Area Analysis:

- Goal
  - Secure the Homeland
- Mission
  - Prevent
    - Objective A: Detect Threats
      - Function 1: Direct Intelligence Activities
    - Objective B: Control Access
      - Function 1: Pre-Screen People *& Materials
    - Objective C: Eliminate Threats
      - Function 1: Investigate Terrorism Suspects
  - Protect
    - Objective A: Assess Critical Infrastructure & Key Assets
      - Function 1: Catalogue Assets & Systems
    - Objective B: Implement Protective Programs for Assets & Systems
      - Function 1: Manage Risk
      - Function 2: Defend CVKR
    - Objective C: Mitigate Risk to Public
      - Function 1: Safeguard Public Health
  - Respond
    - Objective A: Access Incident
      - Function 1: Investigate Incident
    - Objective B: Minimize Impact
      - Function 1: Manage Incidents
    - Objective C: Care for Public
      - Function 1: Provide Medical Care
  - Recover
    - Objective A: Assist Public
      - Mission 1: Provide Long-Term Healthcare
    - Objective B: Restore Environment
      - Mission 1: Conduct Site Cleanup
    - Objective C: Restore Infrastructure
      - Objective 1: Reconstitute Government Services

(**Homeland Security Institute**, *HS Strategic Planning* (for DHS), March 2007, p. 10)

Homeland Security Strategic Threat Environment:

- Diminished protection afforded by geographic distances
- Traditional threats remain
- Greater risk of a weapons of mass destruction attack
- Increased potential for miscalculation and surprise
- Increased potential for terrorist attacks
- Increased challenges from weak and failing states and non-state actors
- Increasing diversity in sources and unpredictability of the locations of conflict
- Threats to US vital interests overseas." (**JCS/DoD**, *Homeland Security*, 2005, p. I-6)

Homeland Security Strategy and Guidance Documents:

- Applicable Homeland Security Presidential Directives
- Applicable National Security Presidential Directives

- *National Strategy for Countering Weapons of Mass Destruction*
- *National Strategy for Homeland Security* (2007)
- *Post-Katrina Emergency Management Reform Act*
- *Target Capabilities List*
- *Universal Task List* (Blanchard, 2008)

Homeland Security Threat Advisories: "Guidance provided to Federal, State, local, and other governments; private sector organizations; and international partners with actionable information about an incident involving, or a threat targeting, critical national networks, infrastructures, or key assets. The Threat Advisories includes products formerly named alerts, advisories, and sector notifications." (**HSC**, *National Continuity Policy Implementation Plan*, Aug 2007, p. 63)

Homeland Security Threat Assessment (HSTA): "The HSTA identifies major threats to the homeland, including current strategic threats, emerging or evolving threats, and threats of uncertain probability but potential high consequences." (**DHS**, *IPG FY 2011-2015 Draft*, 2008)

"The 2008 HSTA is a strategic assessment looking out five years. It represents the consensus judgment of the DHS Intelligence Enterprise. It assesses the major threats for which DHS must prepare and to which it may need to respond. To maximize its utility to DHS leaders, components and Federal, State and local officials, the 2008 HSTA organizes these threats into six major categories:

- Demographic and travel security threats
- Threats to the borders
- Chemical, Biological, Radiological and Nuclear (CBRN) threats

- Health security threats
- Threats to critical infrastructure
- Threats posed by homegrown extremism and radicalization." (**DHS**, *IPG FY 2011-2015 Draft*, 2008, p. 7)

Homeland Security Threat Families:

1. Chemical
2. Biological
3. Radiological
4. Nuclear
5. Explosives
6. Cyber,
7. Assault
8. Emerging (**HS Institute**, *HS Strategic Planning for DHS*, March 2007, p. 6)

Homeland Security Threat Level System: "A color-coded system used to communicate with public safety officials and the public at-large through a threat-based, color-coded system so that protective measures can be implemented to reduce the likelihood of impact of an attack. [See "Color Coded Threat Level System," and "Homeland Security Advisory System"]

Hopley Report: October 1948 Report of the War Department Office of Civil Defense Planning, Directed by Russell J. Hopley, to Secretary of Defense James Forrestal, recommending "for adoption a permanent peacetime system of civil defense which will round out our defense structure and which, in the event of an emergency, can be quickly and easily expanded to meet the exigencies of a given situation. Such an organization can also be of great value in support of existing agencies in meeting devastating peacetime disasters such as fires, floods, earthquakes, tornadoes, hurricanes, explosions and similar catastrophies." (**OCDP**, *Civil Defense for National Security*, 1948, p. v)

Hospital Emergency Incident Command System: (See Hospital Incident Command System)

Hospital Incident Command System (HICS): "HICS applies the principles of incident management to health care facilities. The system helps coordinate emergency response between hospitals and other emergency responders with a system based on a predictable chain of management, defined responsibilities, prioritized response checklists, clear reporting channels for documentation and accountability, and a common nomenclature to facilitate communications." (**AHRQ/HHS**, *Mass Medical Care*, 2007, p. 58)

Hospital Preparedness Program (HPP): "The Hospital Preparedness Program (HPP) enhances the ability of hospitals and health care systems to prepare for and respond to bioterrorism and other public health emergencies. Current program priority areas include interoperable communication systems, bed tracking, personnel management, fatality management planning and hospital evacuation planning. During the past five years HPP funds have also improved bed and personnel surge capacity, decontamination capabilities, isolation capacity, pharmaceutical supplies, training, education, drills and exercises.

"Hospitals, outpatient facilities, health centers, poison control centers, EMS and other healthcare partners work with the appropriate state or local health department to acquire funding and develop healthcare system preparedness through this program. Funding is distributed directly to the Health Department of the State or political subdivision of a State (cities and counties are considered political subdivisions of States)." (**HHS,** *The Hospital Preparedness Program*, August 22, 2007 update)

Hot Site: "An alternate facility that already has in place the computer, telecommunications, and environmental infrastructure required to recover critical business functions or information systems." (**DHS**, *Federal Continuity Directive 1*, November 2007, P-6)

Hot Wash: Informal debriefing after an exercise or after an exercise phase or segment. "This hotwash is an opportunity for important evaluative and procedural (i.e., safety-related) issues to be recorded while they are fresh in the participants' minds." (**DHS**, *HSEEP*, Vol. V, p. 63)

Hot Wash: "A hot wash is a *facilitated discussion* held immediately following an exercise among exercise *players* from each functional area. It is designed to capture feedback about any issues, concerns, or proposed improvements players may have about the exercise. The hot wash is an opportunity for players to voice their opinions on the exercise and their own performance. This facilitated meeting allows players to participate in a self-assessment of the exercise play and provides a general assessment of how the jurisdiction performed in the exercise. At this time, evaluators can also seek clarification on certain actions and what prompted players to take them. Evaluators should take notes during the hot wash and include these observations in their analysis. The hot wash should last no more than 30 minutes." (**FEMA**, *HSEEP Glossary*, 2008)

Hot Zone: "Area immediately surrounding a dangerous goods incident which extends far enough to prevent adverse effects from released dangerous goods to personnel outside the zone. This zone is also referred to as exclusion zone, red zone or restricted zone in other documents. (EPA Standard Operating Safety Guidelines, OSHA 29 CFR 1910.120, NFPA 472)." (**DOT**, *Emergency Response Guidebook…Hazardous Materials Incidents*, 2004, p. 361)

Household Pet: "A domesticated animal, such as a dog, cat, bird, rabbit, rodent, or turtle that is traditionally kept in the home for pleasure rather than for commercial purposes, can travel in commercial carriers, and be housed in temporary facilities. Household pets do not include reptiles (except turtles), amphibians, fish, insects/arachnids, farm animals (including horses), and animals kept for racing purposes." (**FEMA**, *Eligible Costs Related to Pet Evacuations*…, 2007)

Household Pet Management Unit (FEMA): "…our Household Pet Management Unit works with United States Department of Agriculture, OFAs, NGOs and others to ensure that household pet needs are coordinated during large mass evacuations or sheltering events." (**FEMA**, *Statement of Paulison, Hearing on: "Nuclear Terrorism: Providing Medical Care and Meeting Basic Needs in the Aftermath – the Federal Response,"* Washington, DC: June 26, 2008)

Household Pet Rescue: "State and local governments may conduct rescue operations for household pets directly or they may contract with other providers for such services. Eligible costs include, but are not limited to, the following:
1) Overtime for regular full-time employees.
2) Regular-time and overtime for contract labor (including mutual aid agreements) specifically hired to provide additional support required as a result of the disaster.
3) The use of applicant-owned or leased equipment (such as buses or other vehicles) to provide eligible pet transportation to congregate pet shelters may be reimbursed according to 44 CFR § 206.228(1)(a) (does not include operator labor). The cost of leasing equipment for this purpose may also be eligible for reimbursement." (**FEMA**, *Eligible Costs Related to Pet Evacuations, Sheltering*, 2007)

HSEEP: Homeland Security Exercise and Evaluation Program. (**DHS,** *NIPP* 2006, p. 101)
[See, also, "Homeland Security Exercise and Evaluation Program"]

HSEEP Compliance: "HSEEP compliance involves four steps: development and maintenance of an annual Training and Exercise Plan Workshop (T&EPW) and Multi-year Training and Exercise Plan, to include use of the National Exercise Schedule (NEXS); planning and designing exercises in accordance with HSEEP Volumes I-IV, to include the development of documentation and follow planning timelines; development and submission of an After-Action Report (AAR); and implementation of action items identified in the Improvement Plan. These four steps are cyclical and lead to the successful implementation of a self-sustaining exercise program." (**FEMA**, *Homeland Security Exercise and Evaluation Program Frequently Asked Questions*, 2008)

HSEEP Prevention Exercises: "*HSEEP Prevention Exercises* (formerly known as HSEEP Volume V) provides an overview of prevention exercises, information on the Terrorism Prevention Exercise Program (TPEP), and guidance and instruction on how to plan, conduct, and evaluate a prevention-focused exercise. The TPEP used a series of pilot exercises to develop and validate prevention exercise tools and methodologies. Now that these have been developed and published in *HSEEP Prevention Exercises*, the intent is to push them out for use by the HSEEP community. This document is intended to be used by Federal, State, local, and tribal preparedness officials and exercise planners who are interested in prevention-focused exercises. *HSEEP Prevention Exercises* presumes that standard HSEEP methodology as outlined in HSEEP Volumes I-III will be followed, and therefore focuses only on those areas in which prevention exercise tools and methodologies diverge from or supplement standard HSEEP guidance."

HSEEP Toolkit: The HSEEP Toolkit is an interactive, on-line tool for exercise scheduling, design, development, conduct, evaluation and improvement planning. The HSEEP Toolkit can be accessed from the HSEEP website, and includes the following sub-component systems:

- National Exercise Schedule (NEXS) System - the Nation's online comprehensive tool that facilitates scheduling, deconfliction, and synchronization of all National-Level, Federal, State, and Local exercises.

- Design and Development System (DDS) - a project management tool and comprehensive tutorial for the design, development, conduct, and evaluation of exercises. The DDS provides users with the appropriate templates and guidance for developing timelines, planning teams, and exercise documentation (e.g. Situation Manuals, Exercise Plans, etc.)**.**
- Corrective Action Program (CAP) System - a web-based application that enables Federal, State, and local officials to identify, prioritize, track, and analyze the recommendations and improvement plans developed from exercises and real-world events. Features of the CAP System include IP creation and maintenance, corrective action assignment and tracking, and reporting and analysis. The CAP System is the technological backbone for the improvement planning process described in *HSEEP Volume III: Exercise Evaluation and Improvement Planning*." (**FEMA**, *HSEEP Glossary*, 2008)

Human Intelligence (HUMINT): "Intelligence information acquired by human sources through covert and overt collection techniques. (**FEMA**, *IIFOG Version 3 Draft*, February 2008, p. 35)

Human-Made Disasters: are disasters or emergency situations where the principal, direct cause(s) are identifiable human actions, deliberate or otherwise. Apart from "technological" and "ecological" disasters, this mainly involves situations in which civilian populations suffer casualties, losses of property, basic services and means of livelihood as a result of war or civil strife, for example: Human-made disasters/emergencies can be of the rapid or slow onset types, and in the case of internal conflict, can lead to "complex emergencies" as well. Human-made disaster acknowledges that all disasters are caused by humans because they have chosen, for whatever reason, to be where natural phenomena occurs that result in adverse impacts of people. This mainly involves situations in which civilian populations suffer casualties, losses of property, basic services and means of livelihood as a result of war, civil strife, or other conflict. (**Simeon Institute**)

HUMINT: Human Intelligence. (**FEMA**, *IIFOG Version 3 Draft*, February 2008, p. 36)

HURREVAC: HURREVAC stands for "HURRicane EVACuation" and is a restricted-use computer program funded by FEMA and USACE for government emergency managers to track hurricanes and assist in evacuation decision-making for their communities. This real-time data analysis tool allows state and local emergency management officials to make prudent and informed decisions based on information developed during the FEMA Hurricane Evacuation

Studies process and realtime forecast data distributed by the National Weather Service (NWS) and the Tropical Prediction Center/National Hurricane Center (NHC). (**FEMA**, *HURREVAC*, 2007)

Hurricane: "Hurricanes are violent storms which bring intense winds, heavy rain, a storm surge, floods, coastal erosion, landslides, and tornadoes. While it is difficult to predict the exact time, place, and force of hurricanes, residents of the Atlantic and Gulf Coast states must be prepared. The season for hurricanes is June through November, with most hurricanes occurring mid-August to late October. Each season, on average, six hurricanes form in the Atlantic Ocean of which two become major hurricanes." (**FEMA**, "Fact Sheet – Hurricane," July 2006, p. 1)

Hurricane / Typhoon: "A tropical cyclone in which the maximum sustained surface wind (using the U.S. 1-minute average) is 64 kt (74 mph or 119 km/hr) or more. The term hurricane is used for Northern Hemisphere tropical cyclones east of the International Dateline to the Greenwich Meridian. The term typhoon is used for Pacific tropical cyclones north of the Equator west of the International Dateline." (**NHC**, *Glossary of NHC Terms*, 2007)

Hurricane Category 1: The lowest of five levels of relative hurricane intensity on the Saffir/Simpson hurricane scale. A Category 1 hurricane is defined by winds of 74 to 95 MPH, or a storm surge of 4 to 5 feet above normal. This category normally does not cause real damage to permanent structures, although damage to unanchored mobile homes, shrubbery, and trees can be expected. Also some coastal road flooding and minor pier damage. (**NOAA**. *The Saffir/Simpson Hurricane Scale*. August 17, 2007 update)

Hurricane Category 2: The second of five levels of relative hurricane intensity on the Saffir/Simpson hurricane scale. A Category 2 hurricane is defined by winds of 96 to 110 MPH, or a storm surge of 6 to 8 feet above normal. This category normally causes some roofing material, door, and window damage to buildings. Considerable damage to vegetation, mobile homes, and piers can be expected. Coastal and low lying escape routes can be expected to flood 2 to 4 hours before arrival of storm center. Small craft in unprotected anchorages will bread mooring. (**NOAA**. *The Saffir/Simpson Hurricane Scale*. August 17, 2007 update)

Hurricane Category 3: The third of five levels of relative hurricane intensity on the Saffir/Simpson hurricane scale. A Category 3 hurricane is defined by winds of 111 to 130 MPH, or a storm surge of 9 to 12 feet above normal. This category normally does some structural damage to small residences and utility buildings, with a minor amount of curtain wall failures. Mobile homes are destroyed. Flooding near the coast can be expected to destroy smaller structures, with larger structures damaged by floating debris. Terrain continuously lower than 5 feet above sea level may be flooded inland as far as 6 miles. (**NOAA**. *The Saffir/Simpson Hurricane Scale*. August 17, 2007 update)

"Statistics show that the largest loss of life and property occur in locations experiencing the core of a category 3 or stronger hurricane." (Blake, Rappaport, Landsea, *The Deadliest…*, 2007, 3)

Hurricane Category 4: The fourth of five levels of relative hurricane intensity on the Saffir/Simpson hurricane scale. A Category 4 hurricane is defined by winds of 131 to 155 MPH, or a storm surge of 13 to 18 feet above normal. This category normally causes more extensive curtain

wall failures, with some complete roof structure failure on small residences. Major erosion will occur at beach areas. Major damage to lower floors of structures near the shore can be expected. Terrain continuously lower than 10 feet above sea level may be flooded, requiring massive evacuation of residential areas inland as far as 6 miles. (**NOAA**. *The Saffir/Simpson Hurricane Scale*. August 17, 2007 update)

Hurricane Category 5: The severest of five levels of relative hurricane intensity on the Saffir/Simpson hurricane scale. A Category 5 hurricane is defined by winds greater than 155 MPH, or a storm surge greater than 18 feet above normal. This category normally causes complete roof failure on many residential and industrial buildings; some are blown over or away. Major damage to lower floors of all structures located less than 15 feet above sea level and within 500 yards of the shoreline can be expected. Massive evacuation of residential areas on low ground within 5 to 10 miles of the shoreline may be required. (**NOAA**. *The Saffir/Simpson Hurricane Scale*. 17Aug07)

Hurricane Day: "Hurricane Day – (HD) A measure of hurricane activity, one unit of which occurs as four 6-hour periods during which a tropical cyclone is observed or estimated to have hurricane intensity winds." (**Klotzbach and Gray**, *Extended Range Forecast of Atlantic Seasonal Hurricane Activity and U.S. Landfall Strike Probability for 2008*, April 9, 2008, p. 6)

Hurricane, Direct Hit: "Direct Hit - Using "R" as the radius of maximum winds in a hurricane (the distance in miles from the storm's center to the circle of maximum winds around the center), all or parts of coastal counties falling within approximately 2R to the right and R to the left of a storm's track were considered to have received a direct hit. (This assumes an observer at sea looking toward the shore. If there was no landfall, the closest point of approach was used in place of the landfall point). On average, this direct hit zone extended about 50 miles along the coastline (R≈15 miles)." (**Blake, Rappaport, Landsea**, *The Deadliest…*, 2007, 3)

Hurricane Evacuation Studies (HES): "The National Hurricane Program (NHP) conducts Hurricane Evacuation Studies (HES) that guide the decision-making process for protecting the public when a hurricane threatens an area. These studies help State and local communities establish evacuation plans by determining:

- The probable effects of a hurricane
- Predicting public response to the threat and advisories
- Identifying appropriate shelters.

Specifically, NHP conducts hazard and vulnerability analyses for coastal communities considering different types of storm threats. This includes:

- Assessment of storm surge and wind impacts
- Existing road and other transportation systems
- Population (e.g., demographics, behavior analysis)
- Shelters

This information helps officials determine where individuals are most likely to go when evacuating from a storm. The NHP assists coastal communities by developing evacuation zones, which helps determine where and when the public should be ordered to evacuate as a storm approaches. This recommendation is negotiated among decision-makers within each community. Once the evacuation zones are established, the NHP provides each community with corresponding evacuation maps and suggested clearance times for the various types of storm

categories. The communities determine how to utilize these tools and recommendations, in developing their evacuation plans." (**FEMA**, *NHP*, Dec 2007)

Hurricane, Intense: "Intense Hurricane - (IH) A hurricane which reaches a sustained low-level wind of at least 111 mph (96 knots or 50 ms-1) at some point in its lifetime. This constitutes a category 3 or higher on the Saffir/Simpson scale (also termed a "major" hurricane)." (**Klotzbach and Gray**, *Extended Range Forecast of Atlantic Seasonal Hurricane Activity and U.S. Landfall Strike Probability for 2008*, April 9, 2008, p. 6)

Hurricane Liaison Team (HLT). "The HLT is a small team designed to enhance hurricane disaster response by facilitating information exchange between the National Hurricane Center in Miami and other National Oceanic and Atmospheric Administration components and Federal, State and local government officials." The HLT is an initial response and coordination tool deployed by FEMA in conjunction with declared emergencies and disasters." (**DHS**, *National Response Framework Comment Draft*, September 2007, p. 59)

Hurricane Season: "The portion of the year having a relatively high incidence of hurricanes. The hurricane season in the Atlantic, Caribbean, and Gulf of Mexico runs from June 1 to November 30. The hurricane season in the Eastern Pacific basin runs from May 15 to November 30. The hurricane season in the Central Pacific basin runs from June 1 to November 30." (**NHC**, *Glossary of NHC Terms*, 2007)

Hurricane Strike: "During the years 1851-1914 and 1990 to 2006, a hurricane strike is defined as a hurricane that is estimated to have caused sustained hurricane-force winds on the coastline, but does not necessarily make landfall in the area of hurricane-force winds. One example of a hurricane strike is Hurricane Ophelia in 2005, which remained offshore of the North Carolina coast but still brought sustained hurricane-force winds to the coastline…During the years 1915 to 1989, a hurricane strike is defined as a hurricane whose center passes within the direct hit definition area provided above." (**Blake, Rappaport, Landsea**, *The Deadliest*…, 2007, p. 4)

Hurricane Watch: "A hurricane is possible within 24 to 36 hours. Stay tuned for additional advisories. Tune to local radio and television stations for additional information. An evacuation may be necessary." (**FEMA**, *EM Guide for Business and Industry*, 1993, p. 57)

Hurricane Watch: "An announcement for specific coastal areas that hurricane conditions are possible within 36 hours." (**National Hurricane Center**, *Glossary of NHC Terms*, 2007)

Hurricane Warning: "A warning that sustained winds 64 kt (74 mph or 119 km/hr) or higher associated with a hurricane are expected in a specified coastal area in 24 hours or less. A hurricane warning can remain in effect when dangerously high water or a combination of dangerously high water and exceptionally high waves continue, even though winds may be less than hurricane force." (**National Hurricane Center**, *Glossary of NHC Terms*, Sep 10, 2007)

Hydrology: Science that deals with the waters above and below the land surfaces of the Earth, their occurrence, circulation and distribution, both in time and space, their biological, chemical and physical properties, their reaction with their environment, including their relation to living beings. (**WMO** 1992, 306)

Hyogo Framework for Action and the main components of Disaster Risk Reduction: "At the World Conference on Disaster Reduction in Kobe, Japan, in 2005, the international community signed up to a 10-year DRR strategy, the Hyogo Framework for Action (HFA). The HFA sets out three strategic goals and outlines five priorities for action, which cover the main areas of DRR. It also suggests important areas for intervention within each theme." (**Twigg,** *Characteristics of a Disaster-resilient Community A Guidance Note*, August 2007, p. 4)

Hyogo Framework for Action: "In effect an updating of the Yokohama Strategy [1994], the conference culminated in the signing by 168 governments of a plan of action to reduce the impact of natural hazards on populations. Since its adoption the "*Hyogo Framework for Action 2005-2015: Building the resilience of Nations and Communities to Disasters*", has led to many countries revising their policies to put disaster risk reduction at the top of their political and development agendas. The Hyogo Framework includes in section B (Priorities for action), section (4) on reducing underlying risk factors, which states: *(i) Environmental and natural resource management (b) Implement integrated environmental and natural resource management approaches that incorporate disaster risk reduction, including structural and non-structural measures, such as integrated flood management and* ***appropriate management of fragile ecosystems***." Immediate Response (DOD): "The DOD policy on immediate response addresses the authority delegated to DOD component or military commanders to provide immediate assistance to civil authorities to save lives, prevent human suffering, or mitigate great property damage in the event of imminently serious conditions resulting from any civil emergency or attack. Immediate response is situation-specific and may or may not be associated with a declared or undeclared disaster. The potentially catastrophic nature of CBRNE incidents would most likely lead to DOD forces conducting CBRNE CM under immediate response authority, but there are no policy exceptions or special authorities for CBRNE CM. A JFC, responding to a SecDef approved DSCA mission and/or execute order (EXORD), is like any other DOD military commander and may find the need to exercise his/her immediate response authority with available forces. This is particularly relevant in the event of a second terrorist attack or TIM release within the JOA, since trained medical and specialized CBRNE assessment/response teams are on the scene and able to rapidly respond to time-sensitive requests from the civil sector. It is important for commanders to understand that the policy is limited, restrictive, and conditional. The situation is a bona fide emergency which overwhelms the ability of civilians to respond and meets the restrictions criteria within DOD and Service directives. As soon as practical, the military commander, or responsible official of a DOD component or agency rendering such assistance, shall report the request, the nature of the response, and any other pertinent information through the chain of command to the National Military Command Center, so that the information is received within a few hours of the local commander's decision to provide immediate response support. Immediate response requests in the event of a CBRNE incident may include, but are not limited to:

1. Rescue, evacuation, and emergency medical treatment of casualties, maintenance or restoration of emergency medical capabilities, and safeguarding the public health.

2. Emergency clearance of debris, rubble, and explosives ordnance from public facilities and other areas to permit rescue or movement of people and restoration of essential services.

3. Detection, assessment, and containment (initial steps taken to facilitate emergency evacuation and public awareness warnings).

4. Roadway movement control and planning.

5. Emergency restoration of essential public services (including fire-fighting, water, communications, transportation, power, and fuel).

For more information on hazard immediate response authority see JP 3-26, Homeland Security*, and JP 3-28,* Civil Support*.*" (**JCS/DOD**, *CBRNE Consequence Management* (JP 3-41), 2006, pp. II-5, II-6 and II-7)

Impact: "The effect, acceptable or unacceptable, of an event on an organization. The types of business impact are usually described as financial and non-financial and are further divided into specific types of impact." (**DigitalCare**, *State of OR Business Continuity Workshop*, 2006, 57)

Impact: "Evaluated consequence of a particular outcome." (**ISO 22399**, *Societal Security*, 2007, 3)

Impact Analysis: "Process of analyzing all operational functions and the effect that an operational interruption might have upon them." (**ISO 22399**, *Societal Security*…, 2007, p. 3)

Impact Analysis: "Impact Analysis [Business Impact Analysis (BIA)]. A management level analysis that identifies the impacts of losing the entity's resources." (**NFPA 1600**, 2007, p. 7)

"This analysis measures the effect of resource loss and escalating losses over time in order to provide the entity with reliable data upon which to base decisions concerning hazard mitigation, recovery strategies, and continuity planning." (**NFPA 1600**, 2007, p. 11)

"The impact analysis is a broad description and quantification of a potential event that can impact an entity. This analysis should give a clear idea of what hazards are most likely to occur; what entity facilities, functions, or services are affected based on their vulnerability to that hazard; what actions will most effectively protect them; and the potential impact on the entity in quantifiable terms. Within the impact analysis, the entity should consider the impact external to its area of influence that can affect the entity's ability to cope with an emergency. One example is the cascade effects of a hurricane. Direct impacts can include wind and flood damage. Secondary impacts can include communications, power, and transportation disruptions, both inside and outside the direct impact area, and the potential impact on the entity in quantifiable terms.

A.5.3.3(3) In order to maintain continuity of operations, the entity should identify essential or critical functions and processes, their recovery priorities, and internal and external interdependencies, so that recovery time objectives can be set.

A.5.3.3(7) An economic and financial impact analysis allows the quantification of the impacts without considering the cause of the emergency. This analysis is closely related to the process of identifying essential or critical functions or processes and helps decide where to place the emphasis in planning efforts. The analysis examines potential economic or financial loss resulting from disruption of the functions, processes, or services over time. The purpose of an economic and financial impact analysis is to arrive at a general loss expectancy that demonstrates what is at risk and to guide measures to mitigate the effects of an emergency….

An impact analysis could include a cost-benefit analysis. The cost-benefit analysis should not be the overriding factor in establishing a prevention strategy." (**NFPA 1600**, 2007, p. 15)

Impact Analysis: "The practice of identifying and evaluating the negative and positive consequences of disasters on natural and human systems (i.e., environment, economic, financial, and social). Includes methodologies and standards for damage and needs assessments.
The benefits of the technique are the identification of linkages between disaster vulnerability and disaster impact and the ability to then create measures to reduce vulnerabilities to those disasters. The limitations of the technique include a reliance on historical disaster data (limitations as stated in *historical analysis*); the current focus on post-event impact assessment and not promoting its use as part of the planning process, although the results can feed into future planning; and finally the need for social and economic analysis of disaster impacts." (**UNDAP**, *Techniques Used in Disaster Risk Assessment*, 2008)

Implementing the 9/11 Commission Recommendations Act of 2007. Signed into law by President George Bush, August 7, 2007, 278 pages. At: http://www.speaker.gov/pdf/HR1.pdf

Improvised Nuclear Devise: "Nuclear weapons that are fabricated by an adversary State or terrorist group from illicit nuclear material and that could produce nuclear explosions." (**Federal Register** (71/4, 3Jan2006), *Protective Action Guides for Radiological Dispersal Device (RDD) and Improvised Nuclear Device (IND) Incidents; Notice*, p. 196)

Improvement Plan: "The portion of an After Action Report that converts lessons learned from the exercise or incident response into concrete, measurable steps that result in improved response capabilities." (**FEMA**, *NIMS Compliance Metrics Terms of Reference*, October 23, 2006, p. 4)

IMPT: Incident Management and Planning Team, DHS, National Operations Center.

IMS: Incident Management System. (**Christen**, *An Overview of IMS*, 2001, 1)

IMSI: Incident Management Systems Integration Division, FEMA, NIC. (**FEMA**, *Welcome to the National Integration Center (NIC) Incident Management Systems* Division 11 Sep 2007)

IMT: Incident Management Team. (**DHS**, *NRF Comment Draft*, September 2007, p. 34)

Incident: An event, accidentally or deliberately caused, which requires a response from one or more of the statutory emergency response agencies. (**Australian Fire Authorities** *Glossary* 1996)

Incident: "An occurrence or event, natural or human-caused, that requires an emergency response to protect life or property. Incidents can, for example, include major disasters, emergencies, terrorist attacks, terrorist threats, wildland and urban fires, floods, hazardous materials spills, nuclear accidents, aircraft accidents, earthquakes, hurricanes, tornadoes, tropical storms, war-related disasters, public health and medical emergencies, and other occurrences requiring an emergency response." (**DHS,** *NIMS***,** 2004, 130; **DHS,** *National Infrastructure Protection Plan*, 2006, p. 103; **FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 53)

Incident: "In this document, incidents include actual or potential emergencies or all-hazard events that range from accidents and natural disasters to actual or potential terrorist attacks. They include modest events wholly contained within a single community to others that are catastrophic in nature and national in their scope or consequences." (**DHS**, *NRF Dft*, Sep07, 45)

Incident: "For the purpose of this document, the term "incident" refers to an actual or potential occurrence or event." (**DHS**, *NRP*, Jan 2008, 27)

Incident: "Any condition that meets the definition of major disaster or emergency which causes damage or hardship that may result in a Presidential declaration of a major disaster or an emergency." (**FEMA** *Disaster Dictionary* 2001, 62-63, citing Title 44 CFR 206.32)

Incident: "Under the ICS concept, an incident is an occurrence, either human-caused or by natural phenomena, that requires action by emergency service personnel to prevent or minimize loss of life or damage to property and/or natural resources." (**FEMA** *Disaster Dictionary* 2001, 62-63, citing National Wildfire Coordinating Group, Incident Command System, National Training Curriculum, *ICS Glossary* (PMS 202, NFES #2432), October 1994)

Incident: "An actual or impending hazard impact, either human caused or by natural phenomena, that requires action by emergency personnel to prevent or minimize loss of life or damage to property and/or natural resources." (**HHS,** *Medical Surge Capacity and Capability* Handbook, August 2004, p. D-5, Glossary)

Incident: "Event that might be, or could lead to, an operational interruption, disruption, loss, emergency or crisis." (**ISO 22399**, *Societal Security*…, 2007, p. 3)

Incident: "An emergency involving the release or potential release of a hazardous material, with or without fire." (**NFPA 471**, 1997, p. 9)

Incident: A minor situation. (**Oxford Canadian Dictionary**, 1998)

Incident: "An occurrence either human-caused or natural phenomenon, that requires action or support by emergency service personnel to prevent or minimize loss of life or damage to property and/or natural resources." (**USCG**, *IM Handbook*, 2006, Glossary 25-10; **DHS**, *Lexicon*, 2007, p. 12)

Incident Action Plan (IAP): "A verbal or written plan that establishes the overall strategic decisions and assigned tactical objectives for the incident." (**Capital Health Region**, Edmonton Canada, *ICS Training SM*, 2007, 54)

Incident Action Plan (IAP): "Incident action plans (IAPs) provide a coherent means of communicating the overall incident objectives in the contexts of both operational and support activities." (**DHS**, *National Incident Management System*, March 2004, p. 10)

"Under UC [Unified Command, ICS/NIMS] the IAP is developed by the Planning Section Chief and is approved by the UC. A single individual, the Operations Section Chief, directs the tactical implementation of the IAP. The Operations Section Chief will normally come from the agency with the greatest jurisdictional involvement. UC participants will agree on the designation of the Operations Section Chief." (**DHS**, *NIMS*, 2004, p. 15)

Incident Action Plan (IAP): "Contains objectives reflecting the overall incident strategy, specific tactical actions and supporting information for the next operational period. The Plan may be oral or written. When written, the Plan may have a number of forms as attachments (e.g., traffic plan, safety plan, communications plan, map, etc.)." (**DHS**, *NRP*, Feb 25, 2004, p. 75)

Incident Action Plan (IAP): "A clear, concise IAP template is essential to guide the initial incident management decision process and the continuing collective planning activities of incident management teams. The planning process should provide the following:

- current information that accurately describes the incident situation and resource status;
- predictions of the probable course of events;
- alternative strategies to attain critical incident objectives; and
- an accurate, realistic IAP for the next operational period.

Five primary phases should be followed in sequence to ensure a comprehensive IAP. These phases are designed to enable the accomplishment of incident objectives within a specified time. The IAP must provide clear strategic direction and include a comprehensive listing of the tactics, resources, reserves, and support required to accomplish each overarching incident objective. The comprehensive IAP will state the sequence of events in a coordinated way for achieving multiple incident objectives. However, the IAP is a living document prepared based on the best available information at the time of the planning meeting. Planning meetings should not be delayed in anticipation of future information…. The five primary phases in the planning process are:

  - to understand the situation;
  - establish incident objectives and strategy;
  - develop the plan;
  - prepare and disseminate the plan; and
  - execute, evaluate, and revise the plan."

(**FEMA**, *National Incident Management System* (FEMA 501/Draft), August 2007, p. 120)

Incident Action Plan (IAP): "A verbal plan, written plan, or combination of both, that is updated throughout the incident and reflects the overall incident strategy, tactics, risk management, and member safety that are developed by the incident commander." (**NFPA 1600**, 2007, pp. 7-8)

Incident Action Plan (IAP): "An oral or written plan containing general objectives reflecting the overall strategy for managing an incident. It may include the identification of operational resources and assignments. It may also include attachments that provide direction and important information for management of the incident during one or more operational periods." (**USCG**, *IM Handbook* 2006 Glossary 25-10)

Incident Advisory Council (IAC): The replacement to the precious IIMG (Interagency Incident Management Group, which was reorganized and renamed to the IAC, while retaining the functions of the IIMG). (**DHS**, *Notice of Change to the NRP*, May 25, 2006, p. 8; and **DHS**, *Cyber Storm Exercise Report*, September 12, 2006, p. 1)

Incident Advisory Council (IAC): "The IAC is a tailored group of senior Federal interagency representatives that adjudicates matters that cannot be resolved by the NOC-NRCC and provides strategic advice to the Secretary of Homeland Security during an actual or potential incident requiring Federal coordination. Activated at the discretion of the Secretary of Homeland Security, or his representative, the core group of the IAC includes representatives from Federal departments and agencies, DHS components, and other organizations as required. Affected States may be represented on the IAC either through the DHS Office of State and Local Government Coordination (OSLGC) or, if needed, through a State liaison to the IAC. For advice concerning affected critical infrastructures, the IAC may draw upon advice from the CIPAC." (**DHS**, *Notice of Change to the NRP*, May 25, 2006, p. 11)

Incident Annexes: "The *Incident Annexes* describe how the Framework [NRF] is applied to various types of incidents and the unique incident-specific aspects of that response. Specifically, the Incident Annexes describe incident-specific policies and procedures for biological, cyber, food and agriculture and nuclear/radiological incidents, for incidents involving mass evacuation, and for terrorism incident law enforcement and investigation, and for catastrophic incidents." (**DHS**, *NRF Comment Draft*, 2007, 71)

Incident Awareness Assessment (IAA): "The Department of Defense has a robust capability for space-based and airborne Incident Awareness Assessment in order to perform our many and varied missions. Some platforms are capable of transmitting full-motion video anywhere in the world, in real-time, using existing DoD communication networks. These assets can also be used to help support US Northern Command's (USNORTHCOM) defense support of civil authorities during times of national crisis. Specific intelligence oversight rules strictly govern these assets when they are gathering visual information of U.S. territory…. Incident Awareness Assessment is the process of gathering information on a geographic area, often as full-motion video in real-time, or infrared imagery in a timely manner, to provide appropriate local, state and federal authorities situational awareness of what is in a given area. In this instance, IAA is being conducted at the request of FEMA to provide state and other firefighters the ability to determine where fires are, so they can direct their efforts where needed." (DoD, *Public Affairs Strategic*

Planning Document-- For media access to Full Motion Video (FMV) and Incident Awareness Assessment (IAA), June 27, 2008, pp. 1 & 4)

Incident Base (ICS): "An Incident Base is the location at which primary support activities are conducted. A single incident base is established to house all equipment and personnel support operations. The Logistics Section, which orders all resources and supplies, is also located at this base. The Incident Base should be designed to be able to support operations at multiple incident sites." (**DHS**, *NIMS*, 2004, ICS Annex, p. 95)

Incident Command: "Responsible for overall management of the incident and consists of the Incident Commander, either single or unified command, and any assigned supporting staff." (**FEMA**, *NIMS* (FEMA 501/Draft), 2007, p. 152)

Incident Command Post (ICP): Under the Incident Command System, "At the tactical level, on-scene incident command and management organization are located at an Incident Command Post**,** which is typically comprised of local and mutual aid responders. When multiple command authorities are involved, the Incident Command Post may be led by a *unified command comprised of officials who have jurisdictional authority or functional responsibility for the incident under an appropriate law, ordinance or agreement.* The unified command provides direct, on-scene control of tactical operations." (**DHS**, *NRF Comment Draft*, 2007, p. 48)

Incident Command Post (ICP): "The field location at which the primary tactical-level, on-scene incident command functions are performed. The ICP may be collocated with the incident base or other incident facilities." (**USCG**, *IM Handbook*, 2006, Glossary 29-11)

Incident Command System (ICS): The combination of facilities, equipment, personnel, procedures, and communications operating within a common organizational structure with responsibility for management of assigned resources to effectively direct and control the response to an incident. Intended to expand as the situation requires greater resources without requiring new, reorganized, command structures.

Incident Command System (ICS): "The ICS is a management system designed to enable effective and efficient domestic incident management by integrating a combination of facilities, equipment, personnel, procedures, and communications operating within a common organizational structure, designed to enable effective and efficient domestic incident management. A basis premise of ICS is that it is widely applicable. It is used to organize both near-term and long-term field-level operations for a broad spectrum of emergencies, from small to complex incidents, both natural or manmade. ICS is used by all levels of government – Federal, State, local, and tribal – as well as by many private-sector and nongovernmental organizations. ICS is also applicable across disciplines. It is normally structured to facilitate activities in five major functional areas: command, operations, planning, logistics, and finance and administration." (**DHS**, *National Incident Management System*, March 2004, p. 7)

According to NIMS (2004), beneficial characteristics of ICS are:

- ICS is Modular and Scalable.

  - Suitable for operations within a single jurisdiction or single agency, a single jurisdiction with multiagency involvement, or multiple jurisdictions with multiagency involvement;
  - Applicable and acceptable to users throughout the country;
  - Readily adaptable to new technology;
  - Adaptable to any emergency or incident to which domestic incident management agencies would be expected to respond; and
  - Have a scalable organizational structure that is based on the size and complexity of the incident.
- ICS Has Interactive Manageme4nt Components
- ICS Establishes Common Terminology, Standards, and Procedures that Enable Diverse Organizations to Work Together Effectively.
- ICS Incorporates Measurable Objectives.
- The Implementation of ICS Should Have the Least Possible Disruption on Existing Systems and Processes.
- ICS Should be User Friendly and be Applicable Across a Wide Spectrum of Emergency Response and Incident Management Disciplines. (**DHS,** *NIMS*, 2004, pp. 8-9)

Incident Command System (ICS): "A standardized on-scene emergency management concept specifically designed to allow its user(s) to adopt an integrated organizational structure equal to the complexity and demands of single or multiple incidents without being hindered by jurisdictional boundaries. The national standard for ICS is provided by NIMS." (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, p. 75 (Glossary))

Incident Command System (ICS): "A standardized organizational structure used to command, control, and coordinate the use of resources and personnel that have responded to the scene of an emergency. The concepts and principles for ICS include common terminology, modular organization, integrated communication, unified command structure, consolidated action plan, manageable span of control, designated incident facilities, and comprehensive resource management." (**FEMA**, *Guide For All-Hazard Emergency Operations Planning*, 1996, GLO-7)

Incident Command System (ICS): "A multi-discipline, multi-jurisdictional command system in which the responsibilities and duties of those persons holding key positions within the command structure have been designated by formal agreement and a system which is capable of expanding or shrinking as the situation warrants." **(FEMA** *IEMC Terrorism*, 11-5)

Incident Command System (ICS): "A standardized on-scene emergency management construct specifically designed to provide for the adoption of an integrated organizational structure that reflects the complexity and demands of single or multiple incidents, without being hindered by jurisdictional boundaries. ICS is the combination of facilities, equipment, personnel, procedures, and communications operating within a common organizational structure, designed to aid in the management of resources during incidents. It is used for all kinds of emergencies and is applicable to small as well as large and complex incidents. ICS is used by various jurisdictions and functional agencies, both public and private, to organize field-level incident management operations." (**FEMA**, *National Incident Management System* (FEMA 501/Draft), 2007, p. 152)

Incident Command System (ICS): "One of the most important 'best practices' that has been incorporated into the NIMS is the Incident Command System (ICS), a standard, on-scene, all-hazards incident management system already in use by firefighters, hazardous materials teams, rescuers and emergency medical teams. The ICS has been established by the NIMS as the standardized incident organizational structure for the management of all incidents." (**FEMA**, *NIMS and the ICS*, November 23, 2004, p. 1)

Incident Command System (ICS): "…a component of an overall incident management system." (**NFPA 1600**, 2007, p. 11)

Incident Command System (ICS): A standardized on-scene emergency management concept specifically designed to allow it's users to adopt an integrated organizational structure equal to the complexity and demands of single or multiple incidents, without being hindered by jurisdictional boundaries." (**NWCG,** 1994)

Incident Command System (ICS): "ICS is a management system…. ICS is a incident management tool to assist in the management of incidents or events, not a skills course to teach individuals how to do a specific job, i.e., to operate a piece of equipment (a skills course)… it teaches the skills essential to incident management. The objective of the ICS National Training Curriculum is not to solve your local political problems. However, adopting ICS may solve some political problems in the long run. ICS is seldom implemented successfully until a clear, definitive decision has been made by the Agency Administrator or Executive." (**NWCG**, *ICS National Training Curriculum: Instructor Curriculum Guide*, 1994, 10)

Incident Command System (ICS): "A standardized on-scene emergency management concept specifically designed to allow its user(s) to adopt an integrated organizational structure equal to the complexity and demands of single or multiple incidents, without being hindered by jurisdictional boundaries" (**USCG**, *IM Handbook*, 2006, Glossary 25-11)

Incident Command System (ICS): "Our current system for incident command has five major functional areas: command, operations, planning, logistics, and finance and administration. Although a sixth area – intelligence – is currently applied on an *ad hoc* basis, we must institutionalize this area throughout our new approach in support of prevention and protection activities." (**White House**, *National Strategy for Homeland Security*, October 2007, p. 46)

Incident Command System (ICS) Core Concepts and Principles (for DHS Purposes): "ICS in DHS – Concepts and Principles -- The core concepts and principles of the ICS as taught by DHS and as defined in the NIMS Document and consistent with the National Wildfire Coordinating Group (NWCG) incorporate the following components:

- The overwhelming majority of incidents nationwide are typically handled by a single jurisdiction. Most responses need go no further. In other instances the response may rapidly expand requiring additional resources and operational support. Whether for incidents which additional resources are required or are provided from different organizations within a single jurisdiction or outside the jurisdiction, or for complex incidents with state-level or national-

level implications, the ICS provides a core mechanism for coordinated and collaborative incident management.

- The NIMS requires that field command and management functions be performed in accordance with a standard set of ICS organizations, doctrine, and procedures. However, the incident commanders generally retain the flexibility to modify procedures or organizational structure as necessary to accomplish the mission.

- ICS is modular and scalable and is readily adaptable to any emergency or incident to which domestic incident management agencies would be expected to respond.

- ICS has interactive management components that set the stage for effective and efficient incident management and emergency response.

- ICS establishes common terminology, standards, and procedures that enable diverse organizations to work together effectively.

- ICS incorporates measurable objectives to ensure fulfillment of incident management goals.

- The implementation of ICS should have the least possible disruption on existing systems and processes

- The ICS should be user friendly and be applicable across a wide spectrum of emergency response and incident management disciplines." (**FEMA**, *National Incident Management System National Standard Curriculum Training Development Guidance*, October 2005, p. 7)

Incident Command System (ICS) Effectiveness: "The use of a standardized incident command system for disaster response increases collaboration as well as the consistency and effectiveness of response operations. Ninety-four percent of city, county and tribal jurisdictions participating in this study report using an Incident Command System (ICS) for disaster response. The survey and research findings in this report confirm that the adoption of ICS is broad, leading to greater statewide consistency in disaster response." (**WA State EM Council**, *A Study of Emergency Management at the Local Program Level*, 2004, p. 16)

Incident Command System (ICS) Flexibility: "Though highly bureaucratic, the incident command system seems to serve as the basis for the exceptional organizational flexibility required for reliable performance under highly variable and risk circumstances." (**Bigley**, "The Incident Command System…," 2001, p. 1283)

Incident Command System (ICS) History: "The concept of ICS was developed more than thirty years ago, in the aftermath of a devastating wildfire in California. During 13 days in 1970, 16 lives were lost, 700 structures were destroyed and over one-half million acres burned. The overall cost and loss associated with these fires totaled $18 million per day. Although all of the responding agencies cooperated to the best of their ability, numerous problems with communication and coordination hampered their effectiveness. As a result, the Congress mandated that the U.S. Forest Service design a system that would "make a quantum jump in the

capabilities of Southern California wildland fire protection agencies to effectively coordinate interagency action and to allocate suppression resources in dynamic, multiple-fire situations."

The California Department of Forestry and Fire Protection, the Governor's Office of Emergency Services; the Los Angeles, Ventura and Santa Barbara County Fire Departments; and the Los Angeles City Fire Department joined with the U.S. Forest Service to develop the system. This system became known as FIRESCOPE (FIrefighting RESources of California Organized for Potential Emergencies).

In 1973, the first "FIRESCOPE Technical Team" was established to guide the research and development design. Two major components came out of this work, the ICS and the Multi-Agency Coordination System (MACS). The FIRESCOPE ICS is primarily a command and control system delineating job responsibilities and organizational structure for the purpose of managing day-to-day operations for all types of emergency incidents.

By the mid-seventies, the FIRESCOPE agencies had formally agreed upon on ICS common terminology and procedures and conducted limited field-testing of ICS. By 1980, parts of ICS had been used successfully on several major wildland and urban fire incidents. It was formally adopted by the Los Angeles Fire Department, the California Department of Forestry and Fire Protection (CDF), the Governor's Office of Emergency Services (OES), and endorsed by the State Board of Fire Services.

Also during the 1970s, the National Wildfire Coordinating Group (NWCG) was chartered to coordinate fire management programs of the various participating federal and state agencies. By 1980, FIRESCOPE ICS training was under development. Recognizing that in addition to the local users for which it was designed, the FIRESCOPE training could satisfy the needs of other state and federal agencies, the NWCG conducted an analysis of FIRESCOPE ICS for possible national application.

By 1981, ICS was widely used throughout Southern California by the major fire agencies. In addition, the use of ICS in response to non-fire incidents was increasing. Although FIRESCOPE ICS was originally developed to assist in the response to wildland fires, it was quickly recognized as a system that could help public safety responders provide effective and coordinated incident management for a wide range of situations, including floods, hazardous materials accidents, earthquakes and aircraft crashes. It was flexible enough to manage catastrophic incidents involving thousands of emergency response and management personnel. By introducing relatively minor terminology, organizational and procedural modifications to FIRESCOPE ICS, the NIIMS ICS became adaptable to an all-hazards environment.

While tactically each type of incident may be handled somewhat differently, the overall incident management approach still utilizes the major functions of the Incident Command System. The FIRESCOPE board of directors and the NWCG recommended national application of ICS. In 1982, all FIRESCOPE ICS documentation was revised and adopted as the National Interagency Incident Management System (NIIMS). In the years since FIRESCOPE and the NIIMS were blended, the FIRESCOPE agencies and the NWCG have worked together to update and maintain the Incident Command System Operational System Description (ICS 120-1). This document

would later serve as the basis for the NIMS ICS….

When Homeland Security released the NIMS on March 1, 2004, Secretary Tom Ridge and Under Secretary Brown specifically highlighted compliance with the ICS as being possible fairly quickly. They recognized that in some cities, the fire and police departments have worked together using ICS for years. In other places, only the fire department used ICS. Although law enforcement, public works and public health were aware of the concept, they regarded ICS as a fire service system. The NIMS ends this discrepancy because HSPD-5 requires state and local adoption of NIMS as a condition for receiving federal preparedness funding. While ICS was first pioneered by the fire service, it is, at its core, a management system designed to integrate resources to effectively attack a common problem. This system is not exclusive to one discipline or one set of circumstances; its hallmark is its flexibility to accommodate all circumstances. Some purists may claim that a particular application of ICS is not consistent with the NIMS. Yet, we need not approach ICS with the same mathematical precision used by an engineer. We are changing the culture of organizations and first responders at all levels of government. As long as implementation of ICS is consistent with the basic principles expressed in the NIMS, we will have made significant progress. Further refinements can be achieved over time based on experience with its use." (**FEMA**, *NIMS and ICS*, 2004)

Incident Command System (ICS) Incident Commander Tasks: "The incident commander assesses the situation, identifies contingencies, develops objectives, ascertains resournce needs, and generates an initial actin plan. Then he or she begins to build an organization by assigning roles and tasks to incoming resources." (**Bigley and Roberts**, "The Incident Command System: High-Reliability Organizing for Complex and Volatile Task Environments," 2001, p. 1287)

Incident Command System (ICS) Management Characteristics (14): "ICS is based upon 14 Management Characteristics:

Common Terminology
Modular Organization
Management by Objectives
Incident Action Planning
Manageable Span of Control
Incident Facilities and Location
Comprehensive Resource Management
Integrated Communications
Establishment and Transfer of Command
Chain of Command and Unity of Command
Unified Command
Accountability
Dispatch/Deployment
Information and Intelligence Management" (**FEMA**, *NIMS* (FEMA 501/Draft), 2007, pp. 45-47)

Incident Command System (ICS) Organization:

- Command

- Operations
- Planning
- Logistics
- Finance/Administration (**DHS**, *NIMS*, 2004, p. 13)

Incident Command System (ICS) Structure: "In the abstract, the ICS appears to exhibit many of the hallmarks of bureaucracy identified by Weber (1947). The system is highly formalized, characterized by extensive rules, procedures, policies, and instructions. Jobs within the system are specialized, are based on standeardized routines, and require particularized training. Positions are arranged hierarchically aned related to one another on the basis of formal authority. Basic system objectives and plans are established at or near the top of the hierarchy and used as bases for decisions and behaviors at lower levels." (**Bigley**, "The Incident Command System: High-Reliability Organizing for Complex and Volatile Task Environments," 2001, p. 1282)

Incident Commander (IC): "The **Incident Commander** is the individual responsible for all incident response activities, including the development of strategies and tactics and the ordering and release of resources. The Incident Commander has overall authority and responsibility for conducting incident operations and is responsible for the management of all incident operations at the incident site." (**DHS**, *NRF Comment Draft*, September 2007, 48)

Incident Commander (IC): ICS term for the person, usually from the local jurisdiction, who is responsible for overall management of an incident. On most incidents, the command activity is carried out by a single IC. The IC may be assisted by a deputy from the same agency or from an assisting agency. (**FEMA**, *Urban Search and Rescue Response System Field Ops Guide* 1993)

Incident Commander: "Public sector official (usually fire or police) in charge of coordinating resources and developing strategies to resolve the critical incident." (**Jones**, *Critical Incident* Protocol, 2000, 37)

Incident Commander (IC): "The person responsible for all decisions relating to the management of the incident. The incident commander is in charge of the incident site. This term is equivalent to the on-scene incident commander." (**NFPA 471**, 1997, p. 9)

Incident Commander (IC): "The individual responsible for all incident activities, including the development of strategies and tactics and the ordering and release of resources. The IC has overall authority and responsibility for conducting incident operations and is responsible for the management of all incident operations at the incident site. (See also: Unified Command)." (**USCG**, *IM Handbook*, 2006, Glossary 25-10)

Incident Communications Emergency Policy & Procedures (ICEPP): "…provides detailed guidance to Federal incident communicators on activities to be initiated in conjunction with incidents requiring a coordinated Federal response. It is applicable to all Federal departments and agencies responding under the *NRF*. The ICEPP establishes mechanisms to prepare and deliver coordinated and sustained messages regarding these incidents, and provides for prompt Federal acknowledgement of an incident and communication of emergency information to the public

during incident management operations." (**DHS**, *Overview: ESF and Support Annexes Coordinating Federal Assistance In Support of the National Framework* (Draft), Sep.2007, 53)

Incident Complex: "An Incident Complex refers to two or more individual incidents located in the same general area that are assigned to a single IC or UC. When an Incident Complex is established over several individual incidents, the general guideline is that the previously identified incidents would become Branches within the Operations Section of the IMT." (**FEMA**, *National Incident Management System* (FEMA 501/Draft), August 2007, p. 60)

Incident Communications Emergency Policy & Procedures (ICEPP): "…detailed guidance to Federal incident communicators on activities to be initiated in conjunction with incidents requiring a coordinated Federal response. It is applicable to all Federal departments and agencies responding under the *NRF*. It establishes mechanisms to prepare and deliver coordinated and sustained messages regarding incidents requiring a coordinated Federal response, and provides for prompt Federal acknowledgement of an incident and communication of emergency information to the public during incident management operations. The ICEPP is comprised of two annexes contained in the *NRF*:

- Public Affairs Support Annex: Describes the interagency policies and procedures for incident communications with the public.

- ESF #15 – External Affairs Annex: Outlines the functions, resources, and capabilities for external affairs." (**DHS**, *NRF Public Affairs Support Annex*, Jan 2008, 1)

Incident Decision Making Process (IDMP): The IDMP is the employment of NPES [National Planning and Execution System] in response to an actual threat or incident. It creates courses of action that achieve objectives for specific incidents. (**DHS**, 2007)

Incident Information: "While timely information is valuable, it also can be overwhelming. We must be able to identify what is required to assist decision makers and then rapidly summarize and prioritize the information we receive from multiple reporting systems. In order to be successful, our new approach to incident management also must have an information management system that integrates key information and defines national information requirements." (**White House**, *National Strategy for Homeland Security*, October 2007, p. 47)

Incident Joint Information Center (JIC): "A virtual JIC is established when a physical co-location is not feasible. It connects PIOs through e-mail, cell/land-line phones, faxes, video teleconferencing, web-based information systems, etc. For a pandemic incident where PIOs at different locations communicate and coordinate public information electronically, it may be appropriate to establish a virtual JIC." (**FEMA**, *Basic Guidance for PIOs*, Nov 2007, 16)

Incident Management: "The organized process of responding to an emergency event (or incident), protecting lives (human and animal) from further harm, and creating a safe environment for restoring order to critical infrastructures." "Good (i.e. effective) IM answers the four big questions of emergency response: (1) Who is in charge? (2) How are we going to respond? (3) What resources are available? And (4) How are we going to pay for the response." (**Biby** 2005, 62)

Incident Management: "The management and coordination of activities in response to an occurrence (natural or man-made) that requires action to prevent or minimize loss of life or damage to property and/or natural resources. Includes the provision of services to rebuild and restore affected communities." (**DHS**, *IPG FY 2011-2015 Draft*, 2008, p. 16)

Incident Management: "Definition: the management and coordination of prevention, protection, and emergency management activities associated with a specific threat, or an actual occurrence." (**DHS**, *Lexicon: Terms and Definitions*, October 23, 2007, p. 13)

Incident Management: "…the three phases of incident management [are]: *prepare, respond* and *recover*." (**DHS**, *NRF Comment Draft*, 2007, p. 25) "Preparedness is discussed in the *National Response Plan* thusly: "the *NRP* focuses on those *activities that are directly related to an evolving incident or potential incident* rather than *steady-state preparedness or readiness activities* conducted in the absence of a specific threat or hazard." (**DHS**, *NRF Comment Draft*, 2007, 26)

Incident Management: "Incident management refers to how incidents are managed across all homeland security activities, including *prevention, protection, and response and recovery*." (**DHS**, *NRF*, Jan 2008, 6; emphasis added)

Incident Management: "The *Framework* [National Response Framework] is intended to strengthen, organize, and coordinate ***response actions*** across all levels," (**DHS**, *NRF*, Jan 2008, 27; emphasis in original.)

Incident Management: "The **Secretary of Homeland Security** is the principal Federal official for domestic incident management. By Presidential directive and statute, the Secretary is responsible for coordination of Federal resources utilized in the prevention of, preparation for, response to, or recovery from terrorist attacks, major disasters, or other emergencies. The role of the Secretary of Homeland Security is to provide the President with an overall architecture for domestic incident management and to coordinate the Federal response, when required, while relying upon the support of other Federal partners. Depending upon the incident, the Secretary also contributes elements of the response consistent with DHS's mission, capabilities, and authorities.

"The **FEMA Administrator**, as the principal advisor to the President, the Secretary, and the Homeland Security Council on all matters regarding emergency management, helps the Secretary in meeting these HSPD-5 responsibilities." (**DHS**, *NRF*, Jan 2008, 25; emphasis in the original)

Incident Management: "The process by which an organization responds to and controls an incident using Emergency Response Procedures." (**DigitalCare**, *State of Oregon Business Continuity Workshop*, 2006, 57)

Incident Management: "The broad spectrum of activities and organizations providing effective and efficient operations, coordination, and support applied at all levels of government, utilizing both governmental and nongovernmental resources to plan for, respond to, and recover from an

incident, regardless of cause, size, or complexity." (**FEMA**, *National Incident Management System* (FEMA 501/Draft), 2007, p. 152)

Incident Management: "A national comprehensive approach to preventing, preparing for, responding to, and recovering from terrorist attacks, major disasters, and other emergencies. Incident management includes measures and activities performed at the local, state, and national levels and includes both crisis and consequence management activities." (**JCS/DoD**, Civil *Support* (JP 3-28), 2007, p. GL-9; *DOD Dictionary of Military and Related Terms*, 2007)

Incident Management: "HSPD-5states that the US Government shall establish a single, comprehensive approach to domestic incident management that treats CrM and CM as a single integrated function. Incident management includes measures and activities performed at the national level and includes crisis and consequence management activities. The overarching policy of incident management can be thought of in two overlapping phases, crisis and consequence management." (**JCS/DoD**, *Homeland Security* (JP 3-26), 2005, p. IV-7)

Incident Management: "…the response to a major event or emergency…" (**Joint Commission**, *Standing Together*, 2005, p. 4)

Incident Management: "The entity shall develop an incident management system to direct, control, and coordinate response and recovery operations." (**NFPA 1600**, 2007, 10)

Incident Management: "(g) Incident Management. The Assistant to the President for Homeland Security shall be the individual primarily responsible for coordinating the domestic response efforts of all departments and agencies in the event of an imminent terrorist threat and during and in the immediate aftermath of a terrorist attack within the United States and shall be the principal point of contact for and to the President with respect to coordination of such efforts...." (**White House**, *EO 13228*, *Establishing Office of Homeland Security*, Oct. 8, 2001)

Incident Management (Versus Response): "The homeland security community has used the terms "incident management" and "response" in complementary and occasionally interchangeable manners. Within this *Strategy*, "response" refers to actions taken in the immediate aftermath of an incident to save lives, meet basic human needs, and reduce the loss of property. "Incident management," however, is a broader concept that refers to how we manage incidents and mitigate consequences across all homeland security activities, including prevention, protection, and response and recovery. (**White House**, *National Strategy for Homeland Security*, Homeland Security Council, October 2007, p. 31)

Incident Management Assist Team (IMAT): "In coordination with the RRCC [Regional Response Coordination Center], FEMA may deploy an IMAT. IMATs are interagency teams composed of subject-matter experts and incident management professionals. IMAT personnel may be drawn from national or regional Federal department and agency staff according to pre-established protocols. IMAT teams make preliminary arrangements to set up Federal field facilities and initiate establishment of the JFO." (**DHS**, *NRF Comment Draft*, 2007, pp. 48, 59)

Incident Management Assistance Team (IMAT): "The Post-Katrina Emergency Management Reform Act (PKEMRA) of 2006 required FEMA to "establish 3 or more national emergency

response teams, sufficient regional response teams and any other response teams…and ensure that target capability levels are established for Federal emergency response teams."

- FEMA is establishing 3 National Incident Management Assistance Teams (IMAT) with 26 fulltime staff, and 10 Regional IMATs that will be staffed with 15 fulltime personnel.

- The IMATs will subsume the existing FIRST and ERT missions and capabilities and will represent the highest level of Incident Command System (ICS) expertise in FEMA.

- The primary missions of the IMAT are to rapidly deploy to an incident or incident-threatened venue (within 12 hours), provide leadership in the identification and provision of Federal assistance, improve situational awareness, and coordinate the integrated inter-jurisdictional response in support of the affected State(s) or territories. IMATs will be designed to:
  - Establish command, control, communications and coordination (C4) with a State.
  - Support local governments in all-hazard planning and command and control.
  - Task other federal agencies through unity of effort in emergency response activities.
  - Provide broad-based expertise in all emergency management functional areas of the National Response Framework (NRF).
  - Execute Stafford Act authorities and FEMA missions to direct the support, integration and coordination of federal resources.
  - Be self-sufficient for a minimum of 48 hours so as not to drain local resources." (**FEMA**, *NEMA Initiatives and Issues From the Disaster Operations Directorate*, August, 20, 2007, p. 8)

Incident Management Background and Historical Problem Areas: "The Incident Command System (ICS) was developed in the 1970s following a series of catastrophic fires in California's urban interface. Property damage ran into the millions, and many people died or were injured. Response problems could rarely be attributed to lack of resources or failure of tactics. Surprisingly, studies found that response problems were far more likely to result from inadequate management than from any other single reason.

Weaknesses in incident management were often due to:

- Lack of accountability, including unclear chains of command and supervision.
- Poor communication due to both inefficient uses of available communications systems and conflicting codes and terminology.
- Lack of an orderly, systematic planning process.
- No common, flexible, pre-designed management structure that enabled commanders to delegate responsibilities and manage workloads efficiently.
- No predefined methods to integrate inter agency requirements into the management structure and planning process effectively.

Emergency managers learned that the existing management structures, frequently unique to each agency, did not scale or adjust to dealing with massive mutual aid responses involving dozens of distinct agencies. As a result, the Incident Command System (ICS) was collaboratively developed to provide a consistent, integrated framework for the management of all incidents from small incidents to large, multi-agency emergencies." (**Zuber**, *Type 3 All-hazard Incident Management Teams*, circa 2006-2008)

Incident Management Plan: "Clearly defined and documented plan of action for use at the time of an incident or disruption, typically covering the key personnel, resources, services and actions needed to implement the incident management process." (**ISO 22399**, *Societal Security*…, 2007, p. 3)

Incident Management Planning Team (IMPT), DHS: "DHS, supported by a wide range of interagency resources, has established an interagency Incident Management Planning Team that will be a nucleus around which…interagency planning work will be drafted for wider review and, ultimately, for incorporation into the [NRF] Resource Center." (**DHS**, *NRF Comment Draft,* 2007, p. 76)

Incident Management Planning Team (IMPT), DHS: "In August of 2006, the Secretary [DHS] directed the creation of the Interagency Incident Management Planning Team (IMPT)…The mission of the IMPT is to provide national-level contingency and crisis-action incident management planning through a collaborative, interagency process. The IMPT's planning focus is designed to be at the strategic level, whereas FEMA's planning focus is at the operational level, as laid out in the Post Katrina Emergency Management Reform Act. The IMPT comprises two components: (1) a core group of 15 full-time planning representatives from key DHS elements (e.g., FEMA, TSA, CBP, Coast Guard, I&A, as well as other key interagency members (e.g., DoD, DOJ/FBI, HHS, DOE, EPA, DOT, and the American Red Cross); and (2) an 'on-call' staff of 38 planners that includes other members from both DHS and the interagency community. Each member assigned to the IMPT has undergone a robust training program to prepare each of them for their planning responsibilities.

"The IMPT's initial actions have focused on the development of national, strategic interagency concept plans (CONPLANS) that address each of the 15 National Planning Scenarios. These all-threats and all-hazards scenarios include nuclear, chemical, biological, natural disaster, and cyber incidents….Each plan developed by the IMPT identifies the actions that individual departments and agencies, including DoD, will take in the event a given scenario were to occur. A critical function of the IMPT is to identify the national level commitments of the entire interagency in one comprehensive document. This effort serves two distinct purposes: First, it facilitates the ability of the Secretary to fulfill his coordination responsibilities under HSPD-5 by providing awareness of the individual capabilities that a specific agency plans to deliver; and (2) it identifies existing seams and gaps that exist within the interagency for a particular scenario." (**DHS**, *Statement of VADM Roger Ruff*, July 19, 2007, pp. 2-3)

Incident Management Planning Team (IMPT), DHS: "There are many ways that preparedness directly affects response - though few are as important as planning. The draft NRF states that operational planners from multiple agencies have been assigned to the IMPT - an

interagency group managed by the Department's Director of Operations Coordination - to develop strategic guidance and plans for the 15 National Planning Scenarios. The draft NRF assigns FEMA the responsibility to conduct operational planning to support these strategic plans. This construct raises important issues that the Department must clarify in the final NRF: what is FEMA's role with respect to the strategic guidance and plans being developed by the IMPT, and how does the draft NRF ensure that those strategic plans will be consistent with FEMA's operational plans? Perhaps more importantly, how does this construct ensure that the Department does not repeat the same mistakes it made prior to Hurricane Katrina when it split preparedness from response?" (**Lieberman**, *Letter to DHS Secretary Chertoff*, October 22, 2007)

Incident Management Planning Team (DHS) CONPLAN Development Process:

- Six step process for each Concept Plan (CONPLAN)
    - CONPLAN Development
    - Interagency Action Officer Review
    - Feedback/Adjudication
    - DRG Review
    - Feedback/Adjudication
    - CONPLAN Approval
- Each step conducted using a collective interagency focus
- Two formal reviews
    - Action Officer
    - Domestic Readiness Group (DRG)
- Plan refinement continues after the plan is reviewed." (**DHS**, *IWG*, Nov. 29, 2007, 33)

Incident Management Planning Team (DHS) Mission: "To provide contingency and crisis-action incident management planning in support of the Department of Homeland Security's national level domestic incident management responsibilities articulated in the Homeland Security Act of 2002 and HSPD-5." (**DHS**, *Interagency Planning Workshop*, 29 Nov 2007, 29)

Incident Management Planning Team (DHS) Plans:

National Planning Scenarios (NPS)

- 10 KT Improvised Nuclear Device (IND)
- Radiological Dispersal Device (RDD)
- Pandemic Influenza
- Improvised Explosive Device
- Hurricane/Typhoon

Related Plans and Planning Documents

- National Planning and Execution System
- Pandemic Influenza Border Management Concept Plan (CONPLAN)
- Planning 'Playbooks'
- Planning Checklists
- Planning Decision Support Templates" (**DHS**, *Interagency Planning Workshop*, 29Nov07, slide #32)

Incident Management Planning Team (DHS) Strategic Planning:

- Focus is Federal roles and responsibilities at the *Strategic Level*
- Developed using the NPES (standard planning process and format)
- Identifies the specific Federal roles and responsibilities to coordinate the Federal response to a specific national level domestic incident
- Establishes the framework to facilitate planning at the operational level (e.g., Department/Agency Supporting plans)
- Does not change existing authorities nor grant new authorities." (**DHS**, *Interagency Planning Workshop*, 29Nov07, slide # 31)

Incident Management Principles and Requirements:

Incident Command System
Unified Command
Crisis Action Planning Resources
Situational Awareness
Prioritization of Information
Multi-Agency Coordination Centers
Skilled Leaders and Partners
Training and Exercises

(**White House**, *National Strategy for Homeland Security*, October 2007, p. 46)

Incident Management System: (See "Federal Disaster Assistance and Relief Centers" for note on 1st Federal IMS)

Incident Management System: "IMS is a generic term for the design of ad hoc emergency management teams that coordinate the efforts of more than one agency under a unified command. It is a functionally based organizational template that facilitates information flow, decision-making, and operational coordination. The basic idea is that an incident commander or a unified command team is responsible for the successful resolution of the emergency through a process of authority delegation and coordination among many participating agencies. IMS emphasizes joint problem solving to meet the needs of the emergency situation. What makes the system distinctive is that it creates a clear chain of authority that can quickly orchestrate collaborative operations by diverse organizations that have had little or no previous operational relationships." (**Christen**, *An Overview of IMS*, 2001, p. 1)

Incident Management System: "An organized system of roles, responsibilities, and standard operating procedures used to manage and direct emergency operations. Such systems are sometimes referred to as incident command systems (ICS)." (**NFPA 471**, 1997, p. 9)

Incident Management System: "A system that defines the roles and responsibilities to be assumed by personnel and the operating procedures to be used in the management and direction of emergency incidents and other functions." (**NFPA 1561**, 2002, p. 8)

Incident Management System: "The combination of facilities, equipment, personnel, procedures, and communications operating within a common organizational structure, designed to aid in the management of resources during incidents." (**NFPA 1600**, 2007, 8)

"5.9.2 The incident management system shall describe specific organizational roles, titles, and responsibilities for each incident management function.
5.9.3 The entity shall establish applicable procedures and policies for coordinating response, continuity, and recovery activities with stakeholders directly involved in response, continuity, and recovery operations.
5.9.4 The entity shall establish applicable procedures and policies for coordinating response, continuity, and recovery activities with appropriate authorities and resources, including activation and deactivation of plans, while ensuring compliance with applicable statutes or regulations. Emergency operations/response shall be guided by an incident action plan or management by objectives." (**NFPA 1600**, 2007, p.10)

"An incident management system is designed to enable effective and efficient domestic incident management by integrating a combination of facilities, equipment, personnel, procedures, and communications operating within a common organizational structure. It is normally structured to facilitate activities in five major functional areas: command, operations, planning, logistics, and finance and administration." (**NFPA 1600**, 2007, 17)

Incident Management System Standard Organization:

Operations Section
Planning Section
Logistics Section
Finance and Administration Section (**DHS**, *NRF Comment Draft*, September 2007, p. 61)

Incident Management Systems Integration (IMSI): "The IMSI oversees response policy by maintaining, revising, and disseminating the NIMS and NRF, and related materials." (**FEMA/NPD/NIC**, slide 5)

Incident Management Systems Integration (IMSI) Division, FEMA, NIC: "The National Integration Center (NIC) Incident Management Systems Integration Division was established by the Secretary of Homeland Security to provide "strategic direction for and oversight of the National Incident Management System (NIMS)... supporting both routine maintenance and the continuous refinement of the system and its components over the long term." The Center oversees all aspects of NIMS including the development of compliance criteria and implementation activities at federal, state and local levels. It provides guidance and support to jurisdictions and incident management and responder organizations as they adopt the system." (**FEMA**, *Welcome to the National Integration Center (NIC) Incident Management Systems Division.* September 11, 2007 update)

Incident Management Tasks: "This level includes resource management and support tasks. Tasks may be prior to the incident, such as preparation and prevention tasks, or after the incident. These tasks are typically performed by a mayor, city manager, a city council, or Emergency Operations Center (EOC). This level includes the support systems that facilitate prevention and

response. These activities include the support of incident management policies, facilitation of logistic support and resource tracking, resource allocation decisions, and coordination of incident-related information." (**DHS**, *Universal Task List 2.0*, December 2005, p. 48)

Incident Management Team (IMT): "An Incident Management Team (IMT) is an incident command organization made up of the Command and General Staff members and other appropriate personnel in an ICS organization and can be deployed or activated, as needed. National, State, and some local IMTs have formal certification and qualification, notification, deployment, and operational procedures in place. In other cases, ad hoc IMTs are formed at an incident or for specific events. The level of training and experience of the IMT members, coupled with the identified formal response requirements and responsibilities of the IMT, are factors in determining the "type," or level, of IMT." (**FEMA**, *NIMS* Draft, August 2007, p. 60)

Incident Management Team (IMT): "The private sector response team at the scene to resolve the critical incident. If a company Crisis Management Team is available, the IMT may request additional private sector resources. May also be known as Emergency Response Team (ERT) (**Jones**, *Critical Incident* Protocol, 2000, 37)

Incident Management Team (IMT): "An IC and the appropriate Command and General Staff personnel assigned to an incident. The level of training and experience of the IMT members, coupled with the identified formal response requirements and responsibilities of the IMT, are factors in determining "type," or level, of IMT."

Incident Management Team (IMT): "The Incident Commander and appropriate Command and General Staff personnel assigned to an incident." (**USCG**, *IM Handbook*, 2006, Glossary 25-11)

Incident Management Team (IMT) Types:

"Type V IMTs are a "pool" of primarily fire officers from several neighboring departments, trained to serve in Command and General Staff positions during the first 6-12 hours from a major or complex incident and possibly transition to a Type IV or Type III IMT." (**DHS**, *TCL*, 2007, p. 206)

"Type IV IMTs are designated teams of fire, EMS, and/or law enforcement officers from a region or single jurisdiction (city or county), activated to manage a major or complex incident during the first 6-12 hours and possibly transition to a Type III IMT. Capable of functioning in an incident management function that may involve resources from multiple agencies from the discovery of and arrival at an incident up to and including a full operational period as defined by the agency or jurisdiction."

"Type III IMTs are standing teams of trained personnel from different departments, organizations, agencies, and jurisdictions within a State or metropolitan region, deployed within a State or region to manage or support incident management at incidents that extend beyond one operational period and possibly transition to a Type II or Type I IMT. Capable of functioning in an incident management function that involves resources from multiples agencies and jurisdictions from local to Federal levels for multiples operational periods."

"Type II IMTs are Federally or State-certified standing team comprised of up to approximately 38 members qualified and certified through the National Wildfire Coordinating Group (NWCG) qualification process. A Type II IMT may be self-contained and is typically deployed to incidents of regional significance. Capable of functioning in an incident management function that involves utilization of significant numbers of State and Federal-level resources."

"Type I Incident Management Teams (IMTs) are Federally or State-certified standing teams comprised of approximately 38 members qualified and certified through the NWCG qualification process. A Type I IMT is the most robust IMT with the most experience; is fully equipped and self-contained and is typically deployed to catastrophic events. Capable of functioning in an incident management function that involves utilization of significant numbers of Federal-level resources." (**DHS**, *TCL*, 2007, p. 205)

Incident Objectives: "Statements of guidance and direction necessary for selecting appropriate strategy(s) and the tactical direction of resources. Incident objectives are based on realistic expectations of what can be accomplished when all allocated resources have been effectively deployed. Incident objectives must be achievable and measurable, yet flexible enough to allow strategic and tactical alternatives." (**DHS**, *NIMS*, 2004, pp.130-131)

Incident Objectives: "Statements of guidance and direction necessary for the selection of appropriate strategies, and the tactical direction of resources. Tactical incident objectives address the tactical response issues while management incident objectives address the incident management issues. Tactical incident objectives are based on realistic expectations of what can be accomplished when all allocated resources have been effectively deployed. Incident objectives must be achievable and measurable, yet flexible enough to allow for strategic and tactical alternatives." (**USCG**, *IM Handbook*, 2006, Glossary 25-12)

Incident of National Significance: "Based on criteria established in HSPD-5 (paragraph 4), an actual or potential high-impact event that requires a coordinated and effective response by an appropriate combination of Federal, State, local, tribal, non-governmental, and/or private sector entities in order to save lives and minimize damage, and provide the basis for long-term community recovery and mitigation activities. (**DHS**, *NPG*, December 2005 Draft, p. A-1; cites: **DHS**, *NRP*, December 2004)

Incident of National Significance: "The "Incident of National Significance" term utilized in the *NRP* caused significant confusion. Many readers understood that a declaration of an Incident of National Significance by the Secretary of Homeland Security was a requirement for the *NRP* to be invoked or Federal assistance or interagency incident management support to be provided. This was not true, but efforts to clarify the Incident of National Significance term were not completely successful. And since the actual declaration of an Incident of National Significance brought no new authorities to the incident response, the decision was made to eliminate the term. (**DHS**, *NRF FAQs*, Jan 08, 5)

Incident of National Significance: "An actual or potential high-impact event that requires a coordinated and effective response by and appropriate combination of Federal, state, local, tribal, nongovernmental, and/or private-sector entities in order to save lives and minimize damage, and

provide the basis for long-term community recovery and mitigation activities." (**DoD**, DOD *Dictionary of Military and Related Terms*, 2007)

Incident of National Significance: "For the purpose of this plan, incidents that require DHS operational and/or resource coordination are termed **Incidents of National Significance** (also referred to as nationally significant incidents or national incidents in this plan). DHS establishes reporting requirements and conducts ongoing communications with Federal, State, local, tribal, and private sector and non- governmental organizations to maintain situational awareness, analyze threats and assess national implications of potential or actual incidents. Incidents of National Significance requiring DHS action can include the following:

1. Credible threats, indications of terrorism or acts of terrorism within the United States;
2. Major disasters or emergencies as defined under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, as amended, to include hurricanes, tornadoes, storms, earthquakes, fires, flood, or explosion regardless of cause; or any other occasion or instance for which the President determines that Federal assistance is needed to supplement State, local and tribal efforts to save lives and to protect property and public health and safety;
3. Catastrophic incidents, which, for the purposes of the NRP, are any natural or manmade incidents, including terrorism that leaves extraordinary levels of mass casualties, damage, and disruption severely affecting the population, infrastructure, environment, economy, and government functions. A catastrophic event results in sustained national impacts over a prolonged period of time; exceeds resources normally available in the local, State, Federal, and private sectors; and significantly interrupts governmental operations and emergency services to such an extent that national security could be threatened; or
4. Unique situations that may require involvement of the Secretary of Homeland Security to aid in coordination of incident management efforts."

(**DHS**, *National Response Plan* (Draft #1), February 25, 2004, pp. 4-5)

Incident of National Significance: "An actual or potential high-impact event that requires robust coordination of the Federal response in order to save lives and minimize damage, and provide the basis for long-term community and economic recovery." (**National Search and Rescue Committee**, *National Search and Rescue Plan of the United States*, 2007, p. 1)

Incident of National Significance (INS): "An actual or potential high-impact event that requires a coordinated and effective response by an appropriate combination of Federal, State, local, tribal, nongovernmental, and/or private-sector entities in order to save lives and minimize damage and provide the basis for long-term community recovery and mitigation activities." (**USCG**, *IM Handbook*, 2006, Glossary 25-11/12)

Incident Officer: "When the damage caused by enemy action at a specific location is so extensive that a number of services, such as fire, police, medical, and rescue, may be required, and where there might be confusion unless some one in authority exercises coordination and control, the local Director of Civil Defense would dispatch to the incident a representative designated as Incident Officer. At the scene of the incident he would exercise coordination and control over the separate services to the same extent that the Director would exercise if he were present. He would not direct the technical services but he would coordinate their activities." (**OCDP**, *Hopley Report*, 1948, 248)

Incident Operating Systems (IOS): "IOS provide a mechanism of reviewing preparations or execution of incident response in specific categories to ensure a coordinated Federal response to any Incident of National Significance. Critical to this review is the synchronization and coordination activities within each IOS. The Department's seven IOS include:

- Domestic Counter-Terrorism/Law Enforcement.
- Border, Maritime and Transportation Security.
- Critical Infrastructure Protection.
- Medical/Public Health.
- Emergency Response and Recovery.
- Weapons of Mass Destruction (WMD) Detection/Preparedness.
- Risk Communication and Preparedness." (**DHS**, 2007)

Incident Period: "The time interval during which the disaster-causing incident occurs. No Federal assistance under the Stafford Act shall be approved unless the damage or hardship to be alleviated resulted from the disaster-causing incident that took place during the incident period or was in anticipation of that incident. The incident period is established by FEMA in the FEMA/State agreement, and is published in the Federal Register." (**FEMA**, *Mission Statement SOPs Operating Draft*, July 2007, p. 53)

Incident Phases (See "Phases of Incident Management")

Incident Preparedness: "Activities, programs, and systems developed and implemented prior to an incident that may be used to support and enhance mitigation of, response to, and recovery from disruptions, disasters, or emergencies." (**ISO 22399**, *Societal Security*…, 2007, 3)

Incident Preparedness and Operational (Business) Continuity Management (IPOCM): "IPOCM is a holistic management process that identifies potential impacts that threaten an organization and provides a framework for minimizing their effect." (**ISO 22399**, 2007, p. v)

"IPOCM establishes a strategic and operational framework to implement, proactively, an organization's resilience to disruption, interruption, or loss in supplying its products and services. It should not be a purely reactive measure taken after an incident has occurred." (**ISO 22399**, *Societal Security*…, 2007, p. v)

"Systematic and coordinated activities and practices through which an organization optimally manages its risks, and the associated potential threats and impacts there from." (**ISO 22399**, *Societal Security*…, 2007, p. 3)

Incident Preparedness and Operational (Business) Continuity Management Policy: "Overall intentions and direction of an organization, related to its incident preparedness and operational continuity, as formally expressed by top management." (ISO 22399, Societal Security…, 2007, 3)

Incident Response: "The response of an organization to a disaster or other significant event that may significantly impact the organization, its people, or its ability to function productively. An

incident response may include evacuation of a facility, initiating a disaster recovery plan, performing damage assessment, and any other measures necessary to bring an organization to a more stable status." (**DigitalCare**, *State of Oregon Business Continuity Workshop*, 2006, 57)

Incident Scene: "The location where activities related to a specific incident are conducted." (**Capital Health Region**, Edmonton Canada, *ICS Training SM*, 2007, 55)

Incident Support Teams (IST): "The US&R IST was developed to provide a group of highly qualified specialists readily available for rapid assembly and deployment to a disaster area. The mobilization and use of US&R task forces provides a significant capability for disaster response and mitigation. The multi-disciplinary FEMA US&R task forces afford search, rescue, medical, and technical capabilities, and a wide variety of services for catastrophic events. To maximize the speed with which task forces are mobilized and utilized, a FEMA US&R IST was developed.

"The IST must be available on short notice to mobilize within 2 hours of request. IST members must be self sufficient for at least 24 hours and prepared for a response assignment of up to 14 days. An IST equipment cache is organized into functional kits and is available for dispatch with the IST. FEMA maintains these kits to support the IST with communications equipment (including telephones and radios), computers, printers, and administrative office supplies. An inventory of the IST equipment cache is provided in Appendix E to this document. (**FEMA**, *US&R IST In Federal Dis. Ops.* 2000p. 1)

Incident Support Teams (IST): "ISTs are pre-existing elements that make up the management cells for USAR." (**FEMA**, *US&R IST Training Student Manual*, Mod 1, Unit II)

Incident Termination: "The conclusion of emergency service operations at the scene of an incident, usually the departure of the last unit from the scene." (**Capital Health Region**, Edmonton Canada, *ICS Training SM*, 2007, 55)

Incidents of National Significance: "Incidents which require DHS operational coordination and/or resource coordination. Includes:

- Credible threats, indications of or acts of terrorism within the United States
- Major disasters or emergencies (as defined by the Stafford Act)
- Catastrophic incidents
- Unique situations that may require DSHS to aid in coordination of incident management

Unique Situations may include:

- Federal department/agency acting under its own authority has requested the assistance of the Secretary
- President directs the Secretary to assume responsibility for managing the incident
- Events that exceed the purview of other established Federal plans
- Events of regional or national importance involving one or more Federal agencies (at the discretion of the Secretary of DHS)
- National Special Security Events (NSSE)"

(**DHS**, *Office of Operations Coordination Interagency Planning Workshop*, November 29, 2007, slide 23)

Increased Cost of Compliance: "The Standard Flood Insurance Policy has a provision that will pay the policy holder to comply with a State or local floodplain management law or ordinance affecting repair or reconstruction of a structure suffering flood damage. Mitigation activities eligible for payment are: elevation, floodproofing, relocation, or demolition (or any combination of these activities) of the structure. Policyholders may receive up to $20,000 under this coverage. The structure must meet certain eligibility criteria, including a substantial damage or repetitive loss determination by a local official." (**FEMA,** *Increased Cost of Compliance*, May 19, 2007)

Increased Readiness Operations: "Increased Readiness Operations includes overall local plans for operations in periods of heightened risk (e.g., hurricane watch, or international crisis). Where the locality must bring its EOC, public shelters, or other facilities to full operational status during a crisis, or conduct accelerated training, the IR plan shall spell out who/what where. (See Standards Four and Five [Standards for Local Civil Preparedness].) Standard Four describes requirements for crisis shelter marking and stocking plans, as part of overall local Increased-Readiness plans. IR plans for periods of severe international crisis cover general operations to improve readiness, in both high-risk and low-risk jurisdictions, applicable primarily to readiness to protect the population in-place. Should States or localities be advised that operations are contemplated for crisis relocation of population from high-risk areas…, crisis relocation plans would be implemented." (**DCPA,** *Standards for Local Civil Preparedness*, 1978, p. 18)

IND: Improvised Nuclear Device. (**HSC**, *National Planning Scenarios*, 2006 Final, p. 1-1)

INDCP: Improvised Nuclear Devise Contingency Plan, DHS/IMPT. (**DHS**, *Statement of Frank DiFalco, NOC Director,, Office of Operations Coordination*, June 20, 2007 9)

Individual and Family Grant (IFG) Program: A program through which the Federal government makes a grant to a State for the purpose of making grants to individuals and families adversely affected by a major disaster. Individual and family grants are intended to meet disaster-related necessary expenses or serous needs in those cases where such individuals or families are unable to meet their expenses or needs through assistance under other provisions of the Stafford Act or through other means. (**Stafford Act**)

Individual Assistance: Supplementary Federal assistance provided pursuant to a Presidential Declaration of emergency or major disaster under the Stafford Act to individuals and families adversely affected. Such assistance may be provided directly by the Federal Government or through State or local governments or disaster relief organizations.

Individual Assistance: "This includes those services and programs that benefit individuals, households, businesses, and farmers. FEMA's Individual Assistance programs include "Assistance to Individuals and Households" (providing for housing assistance and other needs), crisis counseling, legal services, disaster unemployment assistance, and referrals to other appropriate forms of aid. Other Federal agencies' Individual Assistance programs include: tax refund assistance (Internal Revenue Service), disaster loans (the Small Business Administration

and Farm Service Agency), veterans' assistance (Veterans Affairs), and health and social security recipients' assistance (Health and Human Services)." (**FEMA**, *Disaster Basics* (IS-292), May 24, 2007 update, p. A-6, Glossary)

Individual Mobilization Augmentee: "An individual reservist attending drills who receives training and is preassigned to an Active Component organization, a Selective Service System, or a Federal Emergency Management Agency billet that must be filled on, or shortly after, mobilization. Individual mobilization augmentees train on a part-time basis with these organizations to prepare for mobilization. Inactive duty training for individual mobilization augmentees is decided by component policy and can vary from 0 to 48 drills a year. Also called IMA." (**DoD**, *DOD Dictionary of Military and Related Terms*, 2007)

Individual With a Disability: "The term 'individual with a disability' means an individual with a disability as defined in section 3(2) of the Americans with Disabilities Act of 1990 (42 U.S.C. 12102(2))." (**Stafford Act**, June 2007 (FEMA 592), p. 14)

Individuals and Households Program, FEMA: "FEMA's Individuals and Household Program which provides temporary help in the form of alternative housing and financial assistance with other needs.

- Rental assistance for temporary housing for those whose homes are unlivable.
- Grants for home repairs and replacement of essential household items not covered by insurance to make damaged dwellings safe, sanitary and functional.
- Grants to replace personal property and help meet medical, dental, funeral, transportation and other serious disaster-related needs not covered by insurance or other federal, state, and charitable aid programs.
- Unemployment payments for workers who temporarily lost jobs because of the disaster and who do not qualify for regular state unemployment benefits including self-employed individuals.
- Low-interest loans to cover homeowners, renters, and businesses for losses not fully compensated by insurance. (Source: U.S. Small Business Administration)
- Low-interest loans for businesses and non-profits that have suffered disaster-related cash flow problems and need funds for working capital to recover from the disaster's economic impact. (Source: U.S. Small Business Administration)
- Loans for farmers, ranchers and aquaculture operators to cover production and property losses. (Source: Farm Service Agency, U.S. Department of Agriculture.)
- Other relief programs: Crisis counseling for those traumatized by the disaster; income tax assistance for filing casualty losses; advisory assistance for legal issues; veterans benefits; and social security matters." (**FEMA**, *FEMA'S Individuals And Households Program Provides Full Spectrum Of Recovery Assistance*, 2005)

Individuals with Disabilities in Emergency Preparedness (Executive Order #13347): "…signed in July 2004, [EO13347] requires the Federal Government to support safety and security for individuals with disabilities in situations involving disasters, including earthquakes, tornadoes, fires, floods, hurricanes, and acts of terrorism. Consequently, Federal agencies are required to: 1) encourage consideration of the unique needs of employees and individuals with

disabilities served by State, local, and tribal governments and private organizations and individuals in emergency preparedness planning; and 2) facilitate cooperation among Federal, State, local, and tribal governments and private organizations and individuals in the implementation of emergency preparedness plans as they relate to individuals with disabilities." (**DHS/ODP**, *FY 2006 EMPG Program Guidance*, November 2005, p. 18)

Induced Seismicity: "Earthquake activity resulting from man-made activities such as mining, large explosions, or forcing large quantities of liquid deep into the ground, e.g. oil-fields, waste disposal or reservoir filling." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 46)

Inductive Analysis: "The analysis of risk by integrating layers of information (e.g., visualizing disaster information in relation to other socio-economic parameters by geographical features such as administrative units, ecological zones, towns and streets) in GIS techniques. Data can be presented on maps, with the variable of interest divided into classes or categories, and plotted within each geographic unit." (**UNDAP**, *Techniques Used in Disaster Risk Assessment*, 2008)

Industrial Security: "This includes precautions which may be taken in plants and other large facilities againist espionage and sabotage, such as the security indoctrination of employees, safe-guarding of classified security information, and protection of vital documfents. With regard to employees, these measures include preemployment screening, finger-printing, and the discharge of security risks. Plant property is protected by the establishment of restricted areas, the limitation of access to these areas by employee and visitor identification and control, the establishment of adequate guard forces, and the use of fencing and other anti-personnel barriers." (**FCDA**, *1954 Annual Report*, p. 135)

Infectious Disease: "The term `infectious disease' means a disease potentially caused by a pathogenic organism (including a bacteria, virus, fungus, or parasite) that is acquired by a person and that reproduces in that person." (*Pandemic and All-Hazards Preparedness Act*, 2006, Sec. 403 (a) (2) (B).)

Infestation: "A pervasive influx and development of insects or parasites affecting humans, animals, crops and materials." (**UNDHA**, *Disaster Management Glossary*, 1992, p. 46)

Inflow Design Flood (IDF): "The IDF for a dam is the flood hydrograph used in the design or evaluation of a dam and its appurtenant works… In some older documents, this may be referred to as the spillway design flood. The upper limit of the IDF is the PMF. (**USACE**, *Water Resources Policies…*, 1999, 13-3)

Information Collection Plan (ICP): An ICP "is designed to serve as a reference document for the National Response Coordination Center, Regional Response Coordination Centers, and Joint Field Offices when conducting…response operations. The Information Collection Plan is not designed to be used "as is" and must be field modified for maximum benefit. The plan is based on 38 Essential Elements of Information and may be expanded or contracted to meet the information needs of the event….An Information Collection Plan with the current information needs must be distributed for every Operational Period (OPeriod). It is preferable to distribute the plan prior to the start of the next Operational Period to allow providing agencies and

elements the time for planning and acquisition. " (**FEMA**, *Federal Interim Contingency Plan – Predecisional Draft: NMSZ*, December 15, 2007, p. 22)

Information Management: "(Army) The provision of relevant information to the right person at the right time in a usable form to facilitate situational understanding and decision making. It uses procedures and information systems to collect, process, store, display, and disseminate information." (**DA**, *WMD-CST Operations*, December 2007, Glossary 12)

Information Management: "The collection, organization, and control over the structure, processing, and delivery of information from one or more sources and distribution to one or more audiences who have a stake in that information." (**FEMA**, *NIMS* Draft, 2007, p. 152)

Information Security: "Refers to the policies, practices and procedures that are applied to information systems to ensure that data and information that is held within or communicated along those systems is not vulnerable to inappropriate or unauthorized discovery, use, access, export or modification and that the networks that are used to store, process or transmit information are kept operational and secure against unauthorized access." (**FEMA**, *IIFOG Version 3 Draft*, Feb 2008, p. 36)

Information Sharing and Analysis Center (ISAC): (**DHS,** *NIPP* 2006, p. 101)

Information Sharing Environment (ISE): "In December 2004, Congress passed and the President signed the Intelligence Reform and Terrorism Prevention Act of 2004 (IRTPA). IRTPA calls for, among other things, the creation of the Information Sharing Environment (ISE) – a trusted partnership among all levels of government, the private sector, and our foreign partners to detect, prevent, disrupt, preempt, and mitigate the effects of terrorism against the territory, people, and interests of the United States through the appropriate exchange of terrorism information." (**White House**, *National Strategy for Homeland Security*, October 2007, p. 49)

Information Sharing Environment Analysis (ISEA): "The Information-Sharing Environment Analysis (ISEA) is a process jurisdictions can use to identify and chart their information-sharing environment as it pertains to standard operating procedures (SOPs), policies, and systems. A comprehensive ISEA can be conducted in coordination between DHS's Office of Grants and Training (G&T) Exercise Division and the Prevention Technical Assistance Program (PTAP). The ISEA should be administered at the appropriate level (e.g., State, local, or regional) prior to an Initial Planning Conference (IPC) of a prevention exercise.

The ISEA is an informative method that seeks to develop the picture of the jurisdiction's prevention landscape by answering the following questions:

- What activities encompass all of the exercising jurisdiction's antiterrorism efforts (e.g., outreach programs, internal initiatives, personnel job responsibilities)?

- What agencies, departments, units, and programs support and lead these activities?

- What are the narrowly defined purposes of each of these organizations' participation in these activities?

- What are the administrative, communication, implementation, and interoperable systems that connect these organizations?

- How are these systems physically built, populated with information, accessed by partners, and trained upon? What is the narrowly defined purpose of each system?" (DHS, *Homeland Security Exercise and Evaluation Program, Volume V: Prevention Exercises* (Draft), December 2005, p. 6)

Information Sharing Environment Analysis (ISEA): "Prior to a prevention exercise, jurisdictions can use this process to identify, describe, and depict their State or local information-sharing environment as it pertains to standard operating procedures (SOPs), policies, and systems." (**FEMA**, *HSEEP Glossary*, 2008)

InfraGard: "InfraGard - a partnership between the Federal Government, an association of businesses, academic institutions, State and local law enforcement agencies, and other participants dedicated to sharing information and intelligence to prevent hostile acts against the United States." (**White House**, *National Strategy for Information Sharing*, October 2007, p. 23)

Infrastructure: "The underlying foundation, basic framework, or interconnecting structural elements that support an organization." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 58)

Infrastructure: "The framework of interdependent networks and systems comprising identifiable industries, institutions, and distribution capabilities that provide a continual flow of goods and services essential to the defense and economic security of the United States, the smooth functioning of government at all levels, or society as a whole." (**DoD**, *CAAP*, 1998)

Infrastructure: "The framework of networked assets that comprise identifiable industries, institutions, or distribution capabilities that enable a continued flow of goods and services. (**DoD**, *Defense Critical Infrastructure Program (DCIP)*, (DODD 3020.40), Aug. 2005, p. 12)

Infrastructure: "The manmade physical systems, assets, projects, and structures, publicly and/or privately owned, that are used by or provide benefit to the public. Examples of infrastructure include utilities, bridges, levees, drinking water systems, electrical systems, communications systems, dams, sewage systems and roads." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, p. 53)

Infrastructure Asset: "Any Infrastructure facility, equipment, service or resource that supports a DoD Component. A Critical Infrastructure Asset is an infrastructure asset deemed essential to DoD operations or the functioning of a Critical Asset." (**DoD**, *CAAP*, 1998)

Infrastructure Asset Assurance: "In the context of CAAP [Critical Asset Assurance Program], assurance is a process of identifying assets deemed critical to the Department of Defense in peacetime, crisis and war; assessing the potential threats to these assets and the capabilities they provide; quantifying the likely non-availability to the Department of Defense under various hazard scenarios; identifying potential actions that can be taken to restore those assets (or

functionality they provide) if they are lost, damaged, corrupted, or compromised; and identifying and recommending options to protect, mitigate, and improve the availability of these Critical Assets to the DoD organizations that own, use, and control them. It includes a range of activities to systematically inform planners and decisionmakers of the probability of availability and quality (e.g., integrity, reliability, confidentiality, survivability, endurability, capacity, adequacy) of specific assets or services under given scenarios; quantifying the likely impact of non-availability to the military operation or defense activity; and identifying and prioritizing options to improve the likelihood of the availability of specific assets or services in specific scenarios. Examples of assurance activities that can improve the likelihood of asset availability include protection (preventing, by whatever means, the disruption or corruption of an asset); mitigation or moderation of the effects of disruption or corruption (by controlling the damage, providing alternative services, and reducing demand on the asset); and planning for and providing timely restoral or recovery. Alternatively, plans can be made to absorb the loss of otherwise anticipated services. Assurance of a Critical Asset is the responsibility of the owning or controlling DoD Component." (**DoD**, *CAAP*, 1998)

Infrastructure Liaison: "The Infrastructure Liaison is assigned by the DHS Office of Infrastructure Protection and advises the Unified Coordination Group [within Joint Field Office] on regionally or nationally significant CIKR issues." (**DHS**, *NRF*, 2008, 64)

Infrastructure Protection Program (IPP) DHS. See Department of Homeland Security, IPP.

Infrastructure Risk Management: "Infrastructure risk management is a process of analyzing trends, threat and capabilities, vulnerabilities, and dependencies of systems and assets supporting the U.S. Army core competencies. The results of this analysis are twofold. The first result is a better understanding of the environment within which the U.S. Army operates; the second provides the basis for the development of risk management strategies. Infrastructure risk management brings to bear all the skills and abilities residing within the U.S. Army, both organizationally and individually, in order to ensure its continued functioning as an institution. This means that the effort is not specifically focused on protection but that it considers protection as one of many methods for mitigating risk resulting from vulnerabilities." (**DOD**, *Infrastructure Risk Management (Army)*, Army Regulation 525-26, June 22, 20040

Inherent Risk: "A risk which it is impossible to be managed or transferred away is said to be an *inherent risk*." (**Risky Thinking**, *Risk Glossary*, 2007)

Initial Action: "The actions taken by those responders first to arrive at an incident site." (**DHS**, *NIMS*, 2004, p. 131)

Initial Isolation Distance: "The "Initial Isolation Distance" is a distance within which all persons should be considered for evacuation in all directions from the actual spill/leak source. It is a distance (radius) which defines a circle (Initial Isolation Zone) within which persons may be exposed to dangerous concentrations upwind of the source and may be exposed to life threatening concentrations downwind of the source. For example, in the case of Compressed gas, toxic, n.o.s., ID No. 1955, Inhalation Hazard Zone A, the isolation distance for small spills is 600

meters, therefore, representing an evacuation circle of 1200 meters in diameter." (**DOT**, *Emergency Response Guidebook*, 2004, p. 2)

Initial Isolation Zone: "The Initial Isolation Zone defines an area SURROUNDING the incident in which persons may be exposed to dangerous (upwind) and life threatening (downwind) concentrations of material." (**DOT**, *Emergency Response Guidebook,* 2004, p. 295)

Initial Nuclear Radiation: "Nuclear radiation (essentially neutrons and gamma rays) emitted from the fireball and the cloud column during the first minute after a nuclear (or atomic) explosion. The time limit of one minute is set, somewhat arbitrarily, as that required for the source of part of the radiations (fission products, etc., in the radioactive could) to attain such a height that only insignificant amounts of radiation reach the earth's surface." (**Glasstone**, *The Effects of Nuclear Weapons*, 3rd Ed., 1977, Glossary, p. 635)

Initial PFO: "For an actual incident, the Secretary may designate a local Federal official as an "initial PFO" until the primary PFO is in place. The initial PFO is accountable for the same responsibilities as the PFO. In certain scenarios, a PFO may be pre-designated by the Secretary of Homeland Security to facilitate Federal domestic incident planning and coordination at the local level outside the context of a specific threat or incident." (**DHS**, *Notice of Change to the National Response Plan* (Version 5.0), May 25, 2006, p. 5)

Initial Planning Conference (IPC): "The IPC is typically the first step in the planning process and lays the *foundation* for the exercise (unless a *C&O Meeting* is held). Its purpose is to gather input from the exercise planning team on the *scope*; design requirements and conditions (such as assumptions and artificialities); *objectives*; level of participation; and *scenario* variables (e.g., location, threat/hazard selection), and *MSEL*. During the IPC, the exercise planning team decides on exercise location, schedule, duration, and other details required to develop exercise documentation. Planning team members should be assigned responsibility for the *tasks* outlined in the conference." (**FEMA**, *Homeland Security Exercise and Evaluation Program Glossary*, 08)

Initial Response: "Resources initially committed to an incident." (**DHS**, *NIMS*, 2004, p. 131)

Initial Response Phase: "For the purposes of this guidebook, the "initial response phase" is that period following arrival at the scene of an incident during which the presence and/or identification of dangerous goods is confirmed, protective actions and area securement are initiated, and assistance of qualified personnel is requested." (**DOT**, *Emergency Response Guidebook*, 2004, p. 2)

Initial Response Resources (IRR): "Disaster support commodities that may be pre-staged, in anticipation of a catastrophic event, at a Federal facility close to a disaster area for immediate application through an NRP ESF operation. The initial response resources are provided to victims and all levels of government responders immediately after a disaster occurs. They are designed to augment State and local capabilities. DHS/EPR/FEMA Logistics Division stores and maintains critically needed initial response commodities for victims and responders and pre-positions supplies and equipment when required. The initial response resources include supplies (baby food, baby formula, blankets, cots, diapers, meals ready-to-eat, plastic sheeting, tents, and

water) and equipment (emergency generators, industrial ice-makers, mobile kitchen kits, portable potties with service, portable showers, and refrigerated vans)." (**FEMA**, *Mission Assignment SOPs Operating Draft*, July 2007, pp. 53-54)

Initial Strategy Implementation Plan (ISIP), Office of Domestic Preparedness.

Inject: "Injects are *MSEL* entries that *controllers* must simulate—including directives, instructions, and decisions. Exercise controllers provide injects to exercise *players* to drive exercise play towards the achievement of *objectives*. Injects can be written, oral, televised, and/or transmitted via any means (e.g., fax, phone, e-mail, voice, radio, or sign). Injects can be contextual or contingency:

- A controller introduces a **contextual inject** to a player to help build the exercise operating environment. For example, if the exercise is designed to test information-sharing capabilities, a MSEL inject can be developed to direct a controller to select an *actor* to portray a suspect. The inject could then instruct the controller to prompt another actor to approach a law enforcement officer and inform him/her that this person was behaving suspiciously.

- A controller verbally introduces a **contingency inject** to a player if players are not performing the actions needed to sustain exercise play. This ensures that play moves forward, as needed, to adequately test performance of activities. For example, if a simulated secondary device is placed at an incident scene during a terrorism response exercise, but is not discovered, a controller may want to prompt an actor to approach a player to say that he/she witnessed suspicious activity close to the device location. This should prompt the discovery of the device by the responder, and result in subsequent execution of the desired notification procedures." (**FEMA**, *HSEEP Glossary*, 2008)

INRP: Initial National Response Plan, 2003.

INS: Incident of National Significance.

INSS: Institute for National Strategic Studies, National Defense University.

Institute for Business and Home Safety (IBHS): "The Institute for Business & Home Safety's mission is to reduce the social and economic effects of natural disasters and other property losses by conducting research and advocating improved construction, maintenance and preparation practices…. The Institute for Business & Home Safety envisions a nation that promotes resiliency from natural disasters and other property losses by developing an infrastructure that is damage-resistant and through personal and corporate action that helps minimize disruption to normal life and work patterns… Our members are insurers and reinsurers that conduct business in the United States or reinsure risks located in the United States. Associate membership is open to all others who support our mission." (**IBHS**, *About the IBHS*, 2008)

Insurance: "The business of insurance centers around the pooling of risks individual participants might not be able to handle on their own. Two main parameters govern the pricing

and availability of insurance: the frequency of the risk event (or the probability of loss), and the size of the loss given the occurrence of the event. In statistical terms, event frequency or probability of loss is modeled as a "loss distribution." The most common distribution is a "normal" one, which has the familiar inverted "U" shape, with a peak in the middle, and "tails" at the two extremes. For routine events, like auto accidents, and most risks to homes (fire and tornadoes), the loss distribution is well known. Much of the probability is centered on the peak in the middle, and the tails at the end – the low frequency events – are spread out rather thinly. Insurers have relatively little difficulty pricing the insurance for such events, since the average loss can be readily predicted (it is generally the "peak" of the loss distribution), and there is not a lot of uncertainty or "variance" around the average.

"The events or risks that create difficulties for insurers are those where the loss distribution is spread out over a large range, reflecting large uncertainties around the likely costs in each year. A further complication is that the shape of the loss distribution itself may be uncertain. In these cases, insurance prices are more difficult to determine, and in some cases, insurers may be reluctant to provide any insurance coverage at all.

"Large natural catastrophes – hurricanes and earthquakes – present these sorts of difficulties. They are difficult to predict and when they occur they can generate claims that substantially deplete, or in a worst case exceed, the accumulated capital that the insurer has built up over time. In technical terms, large mega-CATs therefore pose "timing" risks (the event happens before sufficient premiums have been collected to fund payment of claims) and "ambiguity" risks (the shape of the loss distribution itself is not well known or understood).[77] Terrorism risks are especially difficult for insurers to price and to cover, since it is essentially impossible to statistically model the likelihood of terrorist incidents or the magnitude of losses, should they occur." (**Financial Services Roundtable**, *Nation Unprepared for Mega-Catastrophe*, 2007, 45)

"Higher insurance premiums understandably are unwelcome to homeowners and owners of commercial properties. But to the extent they reflect, or are permitted to reflect, the true risks of future damage from all sorts of catastrophes, then high premiums do serve a socially useful function: they send appropriate signals to individuals and businesses of the social costs of their decisions to locate in hazard-prone areas and to the consequences of investing, or not investing, in various mitigation measures that may be available. Indeed…if the marketplace, rather than regulators, set premiums, the effect will be to lower future disaster losses – suffered by individuals and absorbed by taxpayers through disaster relief – by inducing private actors in invest in mitigation measures, or in some cases to move, to reduce their exposure to catastrophic losses.

"But higher insurance rates also can lead to public policy problems and challenges, and these constitute additional concerns with the current system. As homeowner insurance premiums continue to rise in areas facing above-average catastrophe risks, increasing numbers of

[77] The larger the losses from an insured event, the more significant the timing risk. For example, according to information supplied by the Insurance Information Institute,
homeowners' losses in Louisiana from Katrina wiped out 25 years of insurance premiums collected in the state. In Mississippi, the damages from Katrina wiped out 17

individuals may choose either to drop their insurance or buy policies with considerably higher deductibles. Where this occurs, homeowners are exposed to higher and potentially devastating losses in the event of future catastrophic events. Because the federal government always responds out of humanitarian concern to catastrophes by providing disaster relief to help cover uninsured losses of victims, any reduction in private insurance coverage induced by higher premiums most likely will raise future federal disaster relief costs.

"Any increase in disaster relief payments caused by insufficient insurance coverage leads to a second problem with the current financing system. Unlike insurance premiums, which are paid by homeowners directly exposed to catastrophe risks, disaster relief costs are borne by taxpayers (either currently or more likely in the future, because the costs of relief typically are financed by additional federal borrowing) who live outside the damaged regions. This raises an issue of fairness: why should residents of the Midwest, for example, bear disaster costs incurred by those who choose to live on the coasts? There are also potential efficiency costs. To the extent that homeowners do not insure or under-insure because they expect at least some disaster relief, then they will have less incentive to invest in mitigation.

"Mounting insurance premiums for catastrophe risks, even if actuarially appropriate, lead to a third policy-related concern. As insurance rates rise, so does political pressure on state insurance regulators to suppress them artificially – that is, to not permit insurers to charge premiums based on actuarial experience or the best available scientific evidence, or to not allow insurers to pass on fully the costs of reinsurance. In either of these events, more insurers will find it unprofitable not only to write new policies, but to renew existing ones. The net result will be a reduction in the availability of privately-supplied insurance, aggravating one of the main problems that now exists in coastal communities along the Gulf and East coasts. Further, if insurers cannot charge actuarially and scientifically appropriate premiums, then there is a higher risk of insurer insolvencies in the event of future Mega-CATs (thus placing greater burdens on state guaranty funds, and on the surviving insurers who finance these funds, and their policyholders who most likely will ultimately bear these costs)." (**Financial Services Roundtable**, *Nation Unprepared for Mega-Catastrophe*, 2007, 48-49)

Insurance: "`Insurance' is a practical method of handling a major risk. It is the pooling of potential losses by transferring the risk to insurers that agree to indemnify those they insure against such losses." (**GAO**, *Natural Disasters: Public Policy Options*, Nov 2007, 2)

Insurance, Home Insurance and Disasters: "A homeowner's damage can include roofs, doors, garages, windows, patio decks, swimming pools, outdoor furniture, small boats, automobiles and personal property that may be destroyed due to floods, but what coverage is determined by the type of policy you have. Insurance industry experts note that it's important to obtain both hurricane and flood insurance when it comes to protecting your home.

"Homeowners, renters and business insurance policies have coverage for wind," says Jeanne Salvatore, a spokesperson for III. "Insurance covers a list of disasters, but the biggest is floods and earthquakes, in which case you need a separate policy. If a tree hits your house or a fallen object hits due to a storm, that type of coverage typically comes with your standard homeowner's insurance. If you live down in the Gulf, you should get flood insurance. Since 90 percent of all

natural disasters result in some form of flooding, everybody should ask their agent about it." A homeowner's policy does not protect you for the range of threats that accompany a hurricane or tropical storm. While some homeowner's policies cover wind damage, they will only cover water damage that is the direct result of a burst pipe or rain entering through a damaged area. Home insurance also generally covers fire or vandalism, debris removal and repairs, and cash or replacement value of damaged property as well as additional living expenses when you can't live at home. Flood insurance primarily covers repair and restoration costs to homes and businesses, protecting against losses to buildings and their contents. What it does not cover is the land surrounding them." (*Insure.com*, "Hurricane Gustav Losses at Least $4 Billion," Sep 2, 2008)

Insured Loss: "The term "insured loss" means any loss resulting from a natural disaster that is covered by primary and excess property and casualty insurance by an insurer that can be filed as a claim. Commercial and business property losses include roofing materials (such as tiles, awnings, siding, etc.) and other exterior materials such as windows, signs and piers/docks used for loading and unloading, as well as business losses due to mandatory evacuation." (*Insure.com*, "Hurricane Gustav Losses at Least $4 Billion, September 2, 2008)

Insurrection Act: "The Insurrection Act governs when the President can declare a form of martial law. When the act is invoked, the military, including the National Guard, can carry out law enforcement functions without the consent of a Governor. *Posse comitatus*, a broad law that generally prevents the military from policing within the domestic United States, does not apply when the act is invoked.

Until the "Insurrection Act Rider" was enacted in the fall of 2006, U.S. law focused on enabling the President to invoke the Insurrection Act during violent situations where the states or local communities were resisting lawful orders. The intent of the law, as the title suggests, was to deal with insurrection from individuals or groups. The law was not designed to address other situations, including natural disasters, or attacks from outside the country.

In its original form, the Act has been invoked sparingly -- only ten times in the past five decades. Over the past 40 years, the act has only been invoked with the consent of the governors, using authorities under other sections of the U.S. Code that allow states to invite in federal military forces for police functions.

Under the new language, added to the law in the fall of 2006, the President can invoke the act and declare martial law in cases where public order breaks down as a result of a natural disaster, epidemic, terrorist attack, or under the nebulous term of "other conditions."

This change makes it easier for the President to invoke the Act in cases beyond an insurrection – cases which were not intended under the previous purpose of the Act. With these succinct but sweeping changes, the President now does not have to contact or collaborate with any state agency in taking control of the Guard and injecting federal military forces, to carry out patrols or make arrests. The President has to notify but not explain to Congress that he or she believes that states cannot handle the situation.

The change goes against practical and historical arrangements for handling emergencies, which constitutionally and practically have been headed and handled by governors and local officials. When operating under a governor in a state status, the National Guard is not bound by *posse comitatus* and can integrate seamlessly with local, state, and federal law enforcement agencies and first responders." (**Leahy**, "Insurrection Act," 2007)

Insurrection Act: "The Insurrection Act (enacted in 1807) delegates authority to the President to federalize and deploy the National Guard domestically during an insurrection or civil disturbance (10 U.S.C. Sections 331-335). Section 331 authorizes the President to use federal military forces to suppress an insurrection at the request of a state government. Section 332 authorizes the President to use armed forces in such manner as he deems necessary to enforce the laws or suppress a rebellion. Section 333 authorizes the President to use federal military forces to protect individuals from unlawful actions that obstruct the execution of federal laws or which impede the course of justice under federal laws. Section 333 was enacted to implement the Fourteenth Amendment and does not require the request or consent of the governor of the affected state." (**Lowenberg**, "Statement by Major General Timothy Lowenberg, April 24, 2007)

Insurrection Act Rider of 2006: [Section 1076 of the 2007 National Defense Authorization Act (Public Law 109-364), 2006.]

"In [Congressional] conference, the chairs…[adopted a] provision that simultaneously amended the federal Insurrection Act and authorized the President to take control of the Guard in response to any "natural disaster, epidemic or other serious public emergency, terrorist attack or incident, or other condition in any State or possession of the United States….." Because this was done under an expansion of the President's Insurrection Act powers, military forces operating at the President's direction in such circumstances are not subject to the Posse Comitatus Act and can be used to force compliance with laws by any rules for use of lethal force (RUF) or rules of engagement (ROE) authorized by the President or those acting under his delegated authority. The conference report was agreed to in the House on the same day as its filing (September 29, 2006) and in the Senate the following day (September 30, 2006). Without any hearing or consultation with the governors and without any articulation or justification of need, Section 1076 of the 2007 NDAA changed more than 100 years of well-established and carefully balanced state–federal and civil -military relationships. One hundred years of law and policy were changed without any publicly or privately acknowledged author or proponent of the change. As written, the Act does not require the President to contact, confer or collaborate in any way with a governor before seizing control of a state's National Guard forces. It requires only notice to Congress that the President has taken the action but no explanation, justification or consent of congress is required." (**Lowenberg**, "Statement by Major General Timothy Lowenberg, April 24, 2007).

Insurrection Act Rider of 2006: "The changes made to the "Insurrection Act" by Section 1076 of the National Defense Authorization Act confuse the issue of who commands the Guard during a domestic emergency. By granting the President specific authority to use the Guard during a natural disaster or emergency without the consent of a governor, Section 1076 could result in confusion and an inability to respond to residents' needs. As currently written, it calls into question whether the governor or the President has primary responsibility during a domestic

emergency." (Easley, "Statement of [NC] Governor Michael F. Easley, Before Senate Judiciary Committee, Hearing on "`The Insurrection Act Rider'…", April 24, 2007, p. 4)

Insurrection Act Rider of 2006: "I can assure you that outside parties such as the military and National Guard lack the familiarity with a particular community which is necessary to effectively and efficiently secure its residents during a time of disaster or emergency. To provide a blanket authority to such federal agencies and individuals to conduct domestic law enforcement functions, as the new language of the Insurrection Act does, jeopardizes the likelihood of a timely response and effective assistance to our citizens in times of need." (**Kamatchus**, "Statement of …President, National Sheriffs' Association, Senate Hearing on 'The Insurrection Act Rider'." April 24, 2007, p. 3)

Insurrection Statutes: "The Insurrection Statutes, 10 U.S.C. 331-334. Recognizing that the primary responsibility for protecting life and property and maintaining law and order in the civilian community is vested in State and local governments, the Insurrection Statutes authorize the President to direct the armed forces to enforce the law to suppress insurrections and domestic violence. Military forces may be used to restore order, prevent looting, and engage in other law enforcement activities. Given this specific statutory authority, the Posse Comitatus Act does not apply to such civil disturbance missions." (**DHS**, *National Response Plan* (Draft #1), February 25, 2004, p. 70)

Intangible Elements of Emergency Operational Capability: "Those elements of organization, training, experience, and expertise which make up the ability to make effective emergency use of existing tangible assets. Emphasis is on the ability of key local officials to make appropriate decisions in response to a disaster situation and to direct and control coordinated lifesaving operations in emergencies of any type. Included are the organization, training, and exercising needed in areas such as (a) damage assessment capability to determine the effects of peacetime or attack-caused disasters, including what assistance is needed where, and a radiological defense organization adequately staffed, trained, and exercised to identify and analyze radiological hazards resulting from peacetime radiological incidents or enemy attack; (b) operational reporting capability within the disaster area and to the local EOC and the next higher level, including the ability to develop prompt, accurate, and complete information as to the effects of the disaster on the population; and (c) other organization training needed to conduct effective, coordinated operations in major disasters or emergencies, such as emergency medical care, emergency public information, or the operation of the shelter system." (**DCPA**, *On-Site Assistance* (MP 63), 1974, p. 5)

Integrated (Core Principle of Emergency Management): "Integrated: emergency managers ensure unity of effort among all levels of government and all elements of a community." (**EM Roundtable**, 2007, p. 4)

Integrated Emergency Management (IEM): Integrated emergency management (IEM) comprises six related activities: anticipation, assessment, prevention, preparation, response and recovery. United Kingdom, Cabinet Office. (*UK Resilience* (website). June 23, 2008 Update)

Integrated Emergency Management System is an all-hazards concept for improving the program implementation and development of emergency management capabilities. It is based on identifying functional activities needed to handle all types of emergency situations and augmenting them with specific event planning as needed. The IEMS concept recognizes that emergency management activities occur in four separate but related phases and are based on an analysis of potential hazards [Mitigation, Preparedness, Response, and Recovery].

Integrated Emergency Management System (IEMS): A strategy for implementing emergency management activities which builds upon those functions common to preparedness for any type of occurrence and provides for special requirements of individual emergency situations.

Integrated Emergency Management System (IEMS): "FEMA published interim guidance in FY 1984 to introduce State and local jurisdictions to the concepts of hazards analysis, capability assessment, and multi-year development planning…. The interim guidance was developed as part of the initial implementation of an integrated approach to emergency management that would broaden the application of emergency management resources to all hazards to capitalize on the similarities that exist in the planning and response functions of both peacetime and attack emergencies." (**FEMA**, *Hazard Identification, Capability Assessment, and Multi-Year Development Plan* (CPG 1-34), Integrated Emergency Management System, 1985, p. 1-1)

Integrated Emergency Management System (IEMS): "Within FEMA the evolution of the Integrated Emergency Management System (IEMS) is a movement towards an integrated approach to the management of the full spectrum of emergencies, hazards and disasters. IEMS stresses using the resources available to all agencies in dealing with the elements common to all emergency related situations. There is general satisfaction that the under-one-roof concept being pursued here that IEMS is leading to will, if allowed to continue, eventually meet the mandate to create a national capacity to assist state and local governments in dealing with natural and manmade disasters." (**Conner**, *An Assessment of FEMA Today*, 1986)

Integrated Emergency Management System (IEMS) Concept and Goal: "FEMA is continually reassessing the delivery of program funds and technical assistance in an attempt to become more responsive to State and local emergency management needs and to reduce the number of response plans required without sacrificing program integrity. The agency believes that the most effective way to do this is through increased emphasis on developing the common and unique capabilities require to perform specific functions across the full spectrum of hazards, rather than focusing on the requirements of specific hazards. The approach FEMA is taking to accomplish this reorientation is characterized by the Integrated Emergency Management System (IEMS). The goal of the system is to develop and maintain a credible emergency management capability nationwide by integrating activities along functional lines at all levels of government and, to the fullest extent possible, across all hazards.

State and local governments can begin to achieve this goal by (1) determining the hazards and magnitude of risk in a logical, consistent manner; (2) assessing the existing and required capability with respect to those hazards; and (3) establishing realistic local and State-tailored plans that lay out necessary actions for closing the gap between existing and required levels of

capability. These efforts are related and must be undertaken sequentially. The identification of hazards forms the basis for assessing capability and determining the capability shortfall. The shortfall, in turn, leads to preparation of a multi-year development plan. These initial steps are the starting point for integrated emergency management activities on a multihazard, functional basis. " (**FEMA**, *IEMS Process Overview*, 1983, p. 5)

Integrated Emergency Management System (IEMS): "Fiscal Year 1984 marks the initial implementation of the Integrated Emergency Management System at all levels of government nationwide. The material provided by the Federal Emergency Management Agency (FEMA) to support this implementation has been labeled INTERIM GUIDANCE. The word interim should not be interpreted to mean tentative. FEMA is totally committed to the concept and direction exemplified by the IEMA process." (**FEMA**, *IEMS Multi-Year Development Planning*, 1984, Director Louis O. Giuffrida Foreword)

Integrated Emergency Management System (IEMS) 13-Step Process: "FEMA instituted IEMS in 1983. Its objective was to develop and maintain a credible emergency management capability nationwide by integrating activities along functional lines at all levels of government and, to the fullest extent possible, across all hazards. Through a 13-step process, IEMS collected basic information from State and local emergency management organizations on which reasonable and justifiable plans could be made and implemented to increase emergency management capabilities nationwide. The 13 steps in the IEMS process were:

1) Hazards analysis,
2) Capability assessment,
3) Emergency operations plan development,
4) Capability maintenance,
5) Mitigation efforts,
6) Emergency operations,
7) Emergency operations evaluation,
8) Capability determination shortfall,
9) Multi-year development plan for annual increments,
10) Modification of multi-year development plan for annual increments,
11) Estimate of State/local financial resource requirements,
12) Estimate of Federal financial resource requirements, and
13) Annual review of completed work." (**FEMA**, *Multi Hazard Identification and Risk Assessment*, 1997, p. xxii)

[Note: IEMS was replaced by the Capability and Hazard Identification Program (CHIP) in 1989. (**FEMA**, *Multi Hazard Identification and Risk Assessment*, 1997, p. xxii)]

Integrated Exercise: "An exercise conducted on multiple interrelated components of a Business Continuity Plan, typically under simulated operating conditions. Examples of interrelated components may include interdependent departments or interfaced systems." (**DigitalCare**, *State of OR BC Workshop*, 2006, p. 58)

Integrated Federal Support Plan (IFSP): Required for all Special Event Assessment Report Events (formerly Special Event Homeland Security events). (**DHS**, *Interagency Planning Workshop*, Nov. 29, 2007, 26)

Integrated Federal Support Plan (IFSP): "For every SEAR Level 1 and 2 event, an IFSP is also prepared. The IFSP is a collaborative effort of the SEWG and is designed to:

- Inform the Secretary and FC of all the Federal activities and support in preparation for and execution of a Special Event

- Facilitate the FC's ability to initially participate within the Unified Coordination Group in case of an incident to support the Secretary's incident management responsibilities

- Educate federal interagency partners on Federal resource application." (**DHS**, *Statement of Rufe*, July 9, 2008, pp. 4-5)

Integrated Financial Management Information System (IFMIS): FEMA's "key financial reporting system, and has several feeder subsystems (budget, procurement, accounting, and other administrative processes and reporting)." (**DHS/OIG**, *IT Management Letter for FY 2005*, 17)

Integrated Planning Guidance (IPG): "The IPG is intended to translate national homeland security strategy and policy into actionable guidance for programming, budgeting, and execution, including investment and acquisition. The IPG starts from the four goals of the *National Homeland Security Strategy* (2007), focuses on the Secretary's goals and priorities as articulated in *One Team, One Mission, Securing the Homeland: U.S. Department of Homeland Security Strategic Plan, Fiscal Years 2008-2013*, and sets forth strategic guidance for development of capabilities in accordance with the *Homeland Security Enterprise Architecture*." (DHS, *Integrated Planning Guidance (IPG) FY 2011-2015* (FOUO Pre-Decisional Draft), Oct 2008, 3)

Integrated Planning System (IPS): "The goal of RCP [Regional Catastrophic Preparedness Grant Program] is to support an integrated planning system that enables regional all-hazard planning for catastrophic events and the development of necessary plans, protocols, and procedures to manage a catastrophic event." (**DHS**, *Fact Sheet FY08 Preparedness Grants*)
